[2] From report made by the governor of the National Bank of Belgium in the name of the administrative counsel, upon the operations of the year 1911, and report of the counsel of censors, Brussels, Feb. 26, 1912.

9. Royal decree of May 2, 1911, prolonging the time for the exchange at the colonial treasury and at the public pay offices of the Kongo of the silver coins struck for the Independent State of the Kongo:

ALBERT, ETC.

In consideration of article 11, of the law of October 18, 1908, over the Government of the Belgian Kongo:

In consideration of the royal decree of April 14, 1909, relative to the demonetization of the silver coins struck for the Independent State of the Kongo;

Upon the proposal of our minister of the colonies,

We have decreed and ordered:

ART. 1. The delay fixed by article 2 of the royal decree of April 14, 1909, which prescribed the time during which the silver coins of 5 francs, 2 francs, 1 franc, and of 50 centimes, struck for the Independent State of the Kongo would be exchanged against the moneys of payment by the first colonial treasury at Brussels and by the public pay offices of the Kongo, is prolonged up to July 1, 1912.

Up to the prescribed date, these coins will continue to be received at all public pay offices of the colony in settlement of customs duties or taxes, and for all other payments.

ART. 2. Our minister for the colonies is in charge of the execution of this decree.

11. Imports and exports of gold and silver during 1910:

Classification.	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
	Kilograms.	*Kilograms.*	*Kilograms.*	*Kilograms.*
Ore	1,200	.....	79,000	10,100
Unwrought [1]	2,300	400	21,500	28,600
Coins	2,600	2,300	907,350	327,200
Total	6,100	2,700	1,007,850	365,900

[1] The item gold and silver "unwrought" includes gold and silver in dust, bars, ingots, beaten in sheets, drawn or rolled wire, beaten in books, single or twisted threads, on threads of silk, as well as engravings on shells, gold and silver plate, and articles of goldsmiths' wares.

The amounts of coin mentioned in the above tables are only those which have been declared in importation and exportation. They circulate to the knowledge of the customs in rather considerable amounts by reason of the facility for concealment and the advantage one has in the security of the ships, and they need not be declared. They consider also as coin the gold and silver ore as well as unwrought gold and silver. (From report of the "Commissaire des Monnaies," 1911, Brussels, 1912.)

BULGARIA.

1. Number of pieces and nominal value of coins manufactured and put in circulation:

THE COINAGE OF COMMEMORATIVE COINS IN BULGARIA.

[From L'Economiste Europeen, Paris, Aug. 9, 1912.]

In commemoration of the proclamation of its independence, Bulgaria made a coinage on September 22, 1908, as follows: 5,000 gold pieces of 100 francs and 75,000 gold pieces of 20 francs.

These pieces were put in circulation August 2, 1912, the twenty-third anniversary of the accession of Prince Ferdinand, of Saxe-Coburg-Gotha, to the rank of Prince of Bulgaria.

DENMARK.

2. (*b*) None.

4. None.

5. Unknown.

6. I transmit the statistics forwarded by the French director of the mint, bearing upon the output of precious metals of the mines of France for the year 1910, these being the latest figures obtainable:

He states that the production of gold by the mines of France for 1910 was 2,568 kilograms, valued at 8,845,000 francs ($1,707,085); production of factories 133 kilo-

grams, valued at 458,000 francs ($88,394); output of silver by mines, 17,455 kilograms, valued at 1,995,000 francs ($387,315); output of silver in factories 52,967 kilograms, valued at 5,932,000 francs ($1,144,876). (The value of the gold is calculated on the basis of 3,444 francs 44 centimes per 100 kilograms, and that of the silver 112 francs.)

The output of factories relates to the treatment of both domestic and imported minerals and should therefore not be added to that of the mines to form the total output of the country.

French colonies.—West Africa produced 18,350 kilograms of gold, valued at 45,900 francs ($8,838); Madagascar, 3,235 kilograms, valued at 9,058,000 francs ($1,748,194); Indo-China, 113,589 kilograms, valued at 284,918 francs ($54,989); Guiana, 3,850 kilograms, valued at 11,550,000 francs ($2,229,150).

The statistics for 1911 are not yet available.

7. Stock of gold and silver on December 31, 1911:

Character.	In Bank of France.	In other banks.	In circulation.
	Francs.	*Francs.*	*Francs.*

Silver coin	810,000,000	.....	1,000,000,000
Total	4,000,000,000	[1] 100,000,000	5,700,000,000

[1] Approximate amount of gold and silver coin.

NOTE.—There are no public treasuries in France as in the United States, the Banque de France with branches in all the large cities of France, being the officially designated depository and bank of issue for the French Government. The other French banks, at the close of business each day, turn over to the Banque de France such of the day's receipts as are deemed not absolutely essential to meet the calls for the following day. It is estimated that the amount of currency thus retained by the other banks daily amounts to 100,000,000 francs. The governor of the Banque de France in transmitting the data for this reply informs me that these figures are somewhat "conjecturable" and are given under great reserve, but are the result of investigations by their specialists.

8. Stock of bank notes, December 31, 1911:

Items.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
	Francs.	*Francs.*	*Francs.*
Bank of France	5,664,000,000	3,190,000,000	805,000,000

NOTE.—As the Banque de France is the only bank authorized to issue notes and paper money, and the Government issues none except through this bank, the information supplied relates only to that institution. Besides the amounts of gold and silver covering the note issue, the Banque de France had other commercial assets to the value of 1,669,000,000 francs at the close of business December 31, 1911.

9. No.

Monetary Circulation in France.

[From "L'Économiste Européen," Paris, Mar. 22, 1912.]

We extract the following information from the last annual report of the control commission of the monetary circulation:

There was coined at the French mint in 1911 a little less than 129 millions (128,736,230) francs in French gold coins. The issue of fractional silver coins amounted to 6,206,751.50 francs (struck from metal proceeding from remelting of 5,822,821 francs of silver écus of date previous to 1830, by application of the convention of November 4, 1908, in 1-franc and 50-centime pieces). By the lowering of fineness (0.900 to 0.835) this amount of 5,822,821 francs produced 6,206,751.50 francs.

GERMANY.

Gold coined during the calendar year 1911:

Imperial gold coins:	Marks.
Double crowns (20 marks)	101,732,520
Crowns (10 marks)	5,348,610
Total	107,081,130

The Imperial silver coinage was as follows:

	Marks.
5 marks	800,000
3 marks	24,354,933
2 marks	4,628,150
1 mark	8,447,420
50 pfennigs	2,408,166
Total	40,638,669

Other coins struck at Berlin during 1911:

FOR GERMAN EAST AFRICA.

	Rupees.
Silver coins, 1-rupee pieces	299,934.00
Nickel coins, 10-heller pieces	50,036.30

FOR GERMAN POSSESSIONS IN KIAO CHAU (CHINA).

Nickel coins:	
10-cent pieces	$24,970.30
5-cent pieces	10,049.35
Total	35,019.65

Coins struck at the Hamburg Mint during 1911:

FOR GERMAN EAST AFRICA.

	Rupees.
Silver coins, 1-rupee pieces	1,400,000
Bronze coins, 1-heller pieces	64,200

German Banks of Issue Since 1904.

From Bulletin de Statistique, Paris, September, 1912.]

The German Economist has published the annual statistics upon the comparative condition of the German banks of issue.

The circulation of bank notes and the disposable funds at the end of each year were as follows:

Years.	Notes in circulation.	Metallic reserve.
	Marks.	*Marks.*
1904	1,757,130,000	1,034,041,000
1905	1,825,138,000	909,449,000
1906	1,954,933,000	808,436,000
1907	2,052,496,000	863,411,000
1908	2,126,058,000	1,135,134,000
1909	2,241,893,000	1,066,936,000
1910	2,224,619,000	1,063,837,000
1911	2,407,245,000	1,133,519,000

GRAND DUCHY OF LUXEMBURG.

1 and 2. No mint. (In the Grand Duchy of Luxemburg, German and French gold and silver currency is in circulation.)

3, 4, and 5. No reply.

6. No gold, silver, copper, or lead mines.

7. Stock of gold and silver in public treasuries on December 31, 1911: Gold and silver coins, $2,300,000, divided as follows:

Gold of Latin Union	$16,000
Silver of Latin Union	12,000
Gold from Germany	2,000,000
Silver from Germany	165,000
Nickel and bronze coins	150,000

In circulation, nickel 10 and 5 centimes, coined at the mint in Brussels, $100,000 in 1900; $15,000 in 1908. Bronze 2½ centimes, coined at the mint in Brussels, $2,000 in 1908. German currency, notes, gold, silver, nickel, and bronze, at nominal value; all the silver and gold coins of the "Latin Union," at nominal value, at about 101.50 per cent; French bank notes at about 101.50 per cent; Belgium bank notes at about 101.50 per cent; and bank notes of the Luxemburg (International Bank) at about 100 per cent.

8. Bank notes in circulation on December 31,1911:

Bank of France	$50,000
Bank of Belgium	60,000
Reichsbank, of Germany	5,000,000
International Bank of Luxemburg	600,000
Total	5,710,000

9, 10, and 11. No.

NOTE.

I. In order to simplify the replies to the interrogatories, a few words on the monetary system might be given.

The Grand Duchy has the power of coining money. This principle is set forth in our constitution, but till now no use has been made of this power, except in the making of various coins of 10, 5, and 2½ centimes. These are current legal tender among private persons up to 5 francs for every payment. State financial offices must accept the same to a larger quantity in the payment of taxes. In execution of the laws of 1852, 1854, 1859, 1864, 1869, and 1870, 600,000 francs' worth of bronze money was

circulated throughout the Grand Duchy. A law of the 29th of December, 1900, authorized the withdrawal of all bronze money, with exception, however, of the 2½ centimes, and the substitution therefor of 500,000 francs' worth of nickel pieces of 10 and 5 cents each. By the law relating to the budget of 1908 the Government authorized the coining of 75,000 francs' worth of 5 and 10 cents nickel pieces and 10,000 francs' worth of 2½ centimes bronze pieces.

The Grand Duchy having no money, the emission of 1870 and of 1900 and 1908 were provided by the Bank of Brussels, and other issues were furnished by the Bank of Paris. In order to obviate the absence of gold and silver money, moneys of the Latin Union have become current to the nominal value. German pieces, which have been introduced in commercial and financial transactions, are current at the rate of 1 fr. 25., per mark. United States gold and silver pieces are vary rarely met with, and only in isolated cases in our public treasuries. To complete this statement respecting legal money, it should be added that in 1869 the values enumerated were expressed in Netherlands florins in all public and administrative documents. By the law of December 20, 1848, the franc was adopted as the unit in the carrying out of obligations prior to 1849, stipulated in florins, the value of the franc was fixed at 47¼ per florin. The Luxemburg franc does not exist; it is only represented by metallic circulation.

It is a term in exchange—the unit adopted in commerce and public administration in the management of their accounts. The value of the Grand Ducal franc, which custom has retained, is eight-tenths of the German mark, or 80 pfennig. Now, however, in cases of agreement expressly stipulating that the payment be made in effective francs, the rule at the State treasury is that they are made in German silver. At any rate, the liberality granted to all moneys admitted in our country is the same as in the country of origin.

II. According to information furnished me in regard to the consumption of fine gold and silver in industrial art, it should be added that for the last ten years no rings, bracelets, and chains have been made in the country; the importation of these metals is almost unknown. Fine jewelry is imported from France and ordinary jewelry from Germany.

III. The importation and exportation of gold and silver coin of the Grand Duchy (the importation and exportation of gold and silver ingots are insignificant), speaking for the public treasuries, remains apparently the same as may be approximately fixed as follows:

Gold from the Latin Union	francs..	80,000
Silver from the Latin Union	do....	60,000
German gold	marks..	8,000,000
German silver	do....	700,000

As I have already had the honor to state, the importation of gold and silver from the United States is hardly anything. There are no gold or silver mines in the Grand Duchy, and consequently no refineries of these precious metals. The amount of gold and silver in store in the State treasury, the banks, and in circulation may be approximately stated at 10,000,000 marks.

IV. The Grand Duchy does not issue bank notes. Nevertheless, bank notes of the Bank of France, the National Bank of Belgium, the Reichsbank of Berlin, and of the International Bank of Luxemburg are accepted and given in our public treasuries, at their equal value in gold. The treasury is authorized to accept and give bank notes in payment; private persons are not obliged to accept them in the public treasuries.

The financial establishment founded at Luxemburg, under the company name of the Banque Internationale, is only authorized to issue bank notes payable to bearer, the refunding of which is guaranteed by a security.

At the office of the company the bank notes must be changed at their face value. To insure the exchange of these notes the bank is under the obligation to retain at all times in its treasury, in current silver or in gold and silver ingots destined exclusively for this purpose, a sum equal to one-third at least of the sum of the notes in circulation.

The sum total of the bank notes in circulation in the Grand Duchy (this of course according to the report of the circulation in the State treasury) may be stated approximately as follows:

Bank of France	francs..	250,000
National Bank	do....	300,000
Reichsbank	marks..	20,000,000
International Bank	do....	3,000,000

In conclusion I would add that in regard to the haus of gold, compared with the actual rate of the country, there have been no fluctuations for several years.

ORDER IN COUNCIL APPROVING PROCLAMATION DIRECTING THAT CERTAIN GOLD AND SILVER COINS OF THE UNITED STATES OF AMERICA SHALL CEASE TO BE LEGAL TENDER IN THE COLONY OF THE BAHAMAS.

[From Forty-second Annual Report of the Deputy Master and Comptroller of the Mint, 1911.]

At the council chamber, Whitehall, the 16th day of December, 1911.

Present: His Royal Highness Prince Arthur of Connaught; Archbishop of Canterbury; Lord Chancellor; Lord President; Prime minister, Earl Beauchamp; Master of the Horse, Lord Emmott.

The following draft proclamation was this day read at the board and approved.

ALMERIC FITZROY.

BY THE COUNSELLOR OF STATE.

A PROCLAMATION.

Directing that certain gold and silver coins of the United States of America shall cease to be legal tender in the colony of the Bahamas.

Whereas His Majesty was pleased by his commission dated the 10th day of November, 1911, to nominate and appoint His Royal Highness Prince Arthur of Connaught, K. G., G. C. V. O., His Grace the Lord Archbishop of Canterbury, G. C. V. O., the Lord High Chancellor of Great Britain, and the Lord President of the Council, or any two of them, in His Majesty's absence from the United Kingdom, to summon and hold on His Majesty's behalf His Privy Council and to signify thereat His Majesty's approval of any matter or thing to which His Majesty's approval in council is required;

And whereas by a proclamation of Her late Majesty Queen Victoria, dated the 3d day of February, 1898, certain parts of the coinage act, 1870, as amended by section 2 of the coinage act, 1891, were applied with the modifications specified in the proclamation to His Majesty's colony of the Bahamas;

And whereas it is provided by the said proclamation that any coins coined in a foreign country which, at the date of the promulgation of the said proclamation, were by law current and a legal tender in any colony or possession to which the said proclamation extended should until by proclamation otherwise directed continue to be so current and a legal tender at the same rate and up to the same amount as heretofore;

And whereas under the provisions so applied His Majesty may by proclamation regulate any matters relative to the coinage and the mint within the present prerogative of the Crown which are not provided for by the coinage act, 1870, and may revoke or alter any proclamation previously made;

And whereas by virtue of a proclamation of Her late Majesty Queen Victoria, dated the 19th day of August, 1853, it was provided that throughout the whole of His Majesty's West India colonies certain gold coins of the United States mentioned in the proclamation should circulate and be received in payment as being of the full value and equivalent to current money of the United Kingdom at the rates mentioned in the proclamation;

And whereas by a proclamation of Her late Majesty Queen Victoria, dated the 9th day of March, 1854, it was provided that the provisions of the said proclamation dated the 19th day of August, 1853, should extend to certain other gold coins of the United States not specified in that proclamation;

And whereas by a proclamation of Her late Majesty Queen Victoria, dated the 1st day of March, 1864, it was provided that certain silver coins of the United States should circulate and be received in payment as being of the full value and equivalent to current money of the United Kingdom at the rates mentioned in the proclamation;

And whereas it is expedient that the said gold and silver coins of the United States mentioned in the said recited proclamations of the 19th day of August, 1853, the 9th day of March, 1854, and the 1st day of March, 1864, should no longer be legal tender in His Majesty's colony of the Bahamas.

Now, therefore, we, the said Prince Arthur of Connaught, Lord Archbishop of Canterbury, Lord High Chancellor of Great Britain, and Lord President of the Council, being authorized thereto by His Majesty's said commission, do hereby, by and with the advice of His Majesty's Privy Council, on His Majesty's behalf, order, and it is hereby ordered, that the said gold and silver coins of the United States shall, as from the 1st day of January, 1912, cease to be current or legal tender in His Majesty's colony of the Bahamas;

Given at Whitehall, this 16th day of December, in the year of our Lord 1911, and in the second year of His Majesty's reign.

God save the King.

GREECE.

Decree of May 27, 1911.

The provisional Government of the Portuguese Republic has made known in the name of the Republic that they have decreed the following:

Article 1. Throughout the territory of the Republic, excepting India, the monetary unit shall be the gold écu, which will contain the same weight of fine gold as the present gold piece of 1,000 reis. In this way the relation between the present and the new monetary system will be 1,000 reis per écu.

Art. 2. There shall be coined and issued gold pieces of 10, 5, 2, and 1 écus, of which the equivalants in reis, the diameter, fineness, and tolerance are given in the following table:

GOLD.

Denomination.	Value in reis.	Diameter.	Fineness.		Weight.		Tolerance allowed for wear below that of manufacture.
			Lawful.	Tolerance.	Lawful.	Tolerance.	
	Reis.	*Millimeters.*	*Thousandths.*	*Thousandths.*	*Grams.*	*Thousandths.*	*Thousandths.*
10 écus	10,000	30	900	2	18.0650	2	5
5 écus	5,000	24			9.0325		
2 écus	2,000	19			3.6130		
1 écu	1,000	15			1.8065		

These coins will have a grooved edge; they will bear upon one face a composite or symbolical figure with the inscription "Republica Portuguesa" and the date; and upon the other face, national écu and designation of their value.

Separate paragraph.—A competition will be opened between national artists for models and engravings of designs.

Art. 3. The coinage and issue of the gold coins shall be unlimited. Individuals, banks, and all other corporations may have any amount of gold coined at the mint, according to the types established in the preceding article. The mint shall fix the rate for the exchange of foreign gold coins, upon authorization from the Government.

Art. 4. The English gold coins denominated sovereigns and half-sovereigns of the fineness of 0.916⅔ and the respective weights of 7.98805 and 3.99402 grammes, shall continue to have lawful currency throughout the territory of the Republic with the respective values of 4.5 and 2.25 écus.

Separate paragraph.—These coins will be allowed the tolerance indicated in article 2 for the national coins.

Art. 5. The écu will be divided into 100 equal parts called *centavos;* each centavo will thus correspond to ten reis of the present system.

Art. 6. There shall be coined and issued silver coins with lawful values of 1 écu, 50, 20, and 10 centavos, of which the value in reis, the diameter, fineness, weight, and tolerance are given in the following table:

SILVER.

Denomination.	Value in reis.	Diameter.	Fineness.		Weight.		Tolerance allowed for wear below that of manufacture.
			Lawful.	Tolerance.	Lawful.	Tolerance.	
	Reis.	*Millimeters.*	*Thousandths.*	*Thousandths.*	*Grams.*	*Thousandths.*	*Thousandths.*
1 écu	1,000	37	900	2	25.0000	3	10
50 centavos	500	30	835	3	12.5000	5	50
20 centavos	200	24	835		5.0000	7	
10 centavos	100	19	835		2.5000		

These coins will have a grooved edge and will bear upon one face a composite or symbolical figure with the inscription "Republican Portuguesa" and the date; and upon the other face national écu and designation of their value.

Separate paragraph.—The models and engravings of the designs for these coins, for which a competition will also be opened between national artists, must be different from the models designed for the gold coins.

ART. 7. The coinage and issue of the silver coins, exclusively reserved by the State, must not exceed the amounts fixed in the following table:

Denomination.	Pieces.	Amounts.
		Écus.
1 écu	5,000,000	5,000,000
50 centavos	50,000,000	25,000,000
20 centavos	15,000,000	3,000,000
10 centavos	20,000,000	2,000,000
Total	90,000,000	35,000,000

Art. 8. No person shall be obliged to receive in all payments, of whatever character and amount, more than 10 écus in silver coins.

Art. 9. There shall be coined and issued pieces of bronze nickel with the lawful values of 4, 2, 1, and ½ centavos, of which the value in reis, the diameter, fineness, weight, and tolerance are given in the following table:

BRONZE-NICKEL.

Denomination.	Value in reis.	Diameter.	Fineness.		Weight.	
			Lawful.	Tolerance.	Lawful.	Tolerance.
	Reis.	*Millimeters.*	*Thousandths.*	*Thousandths.*	*Grams.*	*Thousandths.*
4 centavos	40	23	Bronze 750, nickel 250.	10	5.000	15
2 centavos	20	21			4,000	
1 centavo	10	19			3,000	
½ centavo	5	17			2,000	

These coins will not be grooved; they will bear upon one face a composite or symbolical figure with the inscription "Republica Portugueza" and the date; and upon the other face the designation of their value suitably ornamented.

The first three millions of each kind of coins will have a different ornamentation from the others and the date of October 5, 1910, in commemoration of the proclamation of the Republic.

Separate paragraph.—A competition between national artists will also be opened for the models and engravings for the designs of these coins.

Art. 10. The coinage and issue of the bronze-nickel coins are exclusively reserved by the State and must not exceed the limits fixed in the following table:

Denomination.	Pieces.	Amounts.
		Écus.
4 centavos	25,000,000	1,000,000
2 centavos	100,000,000	2,000,000
1 centavo	50,000,000	500,000
½ centavo	50,000,000	250,000
Total	225,000,000	3,750,000

ART. 11. No one will be obliged to receive in all payment, of whatever amount or character, more than 1 écu in bronze-nickel coins.

ART. 12. The Government is authorized to retire from circulation the present gold, silver, and copper-nickel, and bronze coins, which will be exchanged against corresponding kinds of the new system, following the equivalants mentioned in articles 2, 6, and 9.

Separate paragraph.—The coins commemorative of the centenaries of India and of the Peninsular Wars and the Marquis of Pombal, which will remain in circulation, according to the equivalants indicated in article 6, are excepted from the provision of the preceding article.

ART. 13. The coinage to which article 7 relates will be effected within a period of three or four years, to be reckoned from the date of the publication of this law, upon the condition that they will suitably improve the means therefor with which the mint is provided.

Separate paragraph.—The Government will open the necessary credits to the account of the profits from this coinage for the execution of this article.

ART. 14. The Government is authorized to acquire, by public contract, the silver, copper, and nickel necessary for the coinage to which the preceding article refers, and to sell at public auction the metals existing in the mint and those resulting from the retirement of the present coins, which will not be necessary for the above-mentioned coinage.

ART. 15. The Government will publish the necessary instructions for the full execution of this law and will designate in a suitable time the economical year in which the public accountability will commence to be held according to the new monetary system.

ART. 16. All contrary legislation is repealed.

Consequently, we have constituted all the authorities, to which the knowledge and execution of this decree pertains, with lawful power to comply with and make compliance with and protect it in all its tenor.

The minister of finances shall have it printed, published, and circulated.

Given in the Palace of the Government of the Republic, May 27, 1911.

PORTUGUESE INDIA.

DECREE OF DECEMBER 31, 1902.

[From Report to the Minister of Finances by the Administration of Coins and Medals, Paris, 1911.]

Authorizing the coinage of silver rupees for Portuguese India.

ARTICLE 1. The Government is authorized to make coinage, by successive issues of 50,000 rupees, a contingent of 300,000 rupees in silver designed to reenforce the private circulation of the States of India.

ART. 2. The rupee shall bear upon its obverse the royal effigy and the inscription "Carlos I Rei de Portugal" ("Carlos I King of Portugal"), and the date; on its reverse, the national arms within a wreath of oak and laurel leaves, with the inscription above "India Portuguesa," and below, "Uma rupia."

Separate paragraph.—The rupees will be of the type established in 1880, with the fineness of 0.916⅔, and the diameter of 30 millimeters and will weigh 11.66 grams, with the tolerance of 5/1000 in weight and 2/1000 in fineness.

ART. 3. The quota of bronze coins, of which the issue was authorized by the decree of June 28, 1902, is carried to 40 contos of reis (40,000,000 reis).

ART. 4. The net profits of these operations shall be carried to the account of the State of India, especially and particularly designed for the construction of barracks for the European troops and to the urgent repairing of the historic monuments of Goa.

ART. 5. All legislation contrary to this decree is repealed.

ROUMANIA.

1 and 2 (*a*). The Roumanian Government gets its coins from foreign mints.

2 (*b*). Silver coinage, 5,073,065 lei, executed half in Brussels and half in Hamburg.

4, 5, 6, 9, 10, and 11. None.

7. Stock of coin in circulation in the country on December 31, 1911:

	Lei.
Gold coin	10,725,800
Silver coin	65,260,065
Total	75,985,865

There are also in circulation: Nickel coins, 10,500,000 lei, and bronze coins, 995,000 lei.

8. The Government is not allowed to emit bank notes; only the National Bank can do this. The amount of bank notes emitted by the National Bank during the year 1911 was, 382,360,193 lei, covered by a reserve of gold of 158,337,810.18 lei.

12 (*a*). Imports and exports of gold during the calendar year 1911:

9. Premium on gold during 1911:

	Per cent.
Highest	55
Lowest	Par.
Average	25

12 (*a*). Imports of gold during 1911:

Classification.	Country.	Imports.
Gold coin	Austria-Hungary	$7,545.33

No statistics can be obtained for the last three months of 1911.

There are no statistics for the imports and exports of silver during 1911.

SPAIN.

1. Amount of silver coined during the calendar year 1911:

Coinage.	Pieces.	Value.
Recoinage (domestic): 50 centomos	573,843	*Pesetas.*[1] [2] 286,843

[1] Value given in silver pesetas worth $1.788 each.
[2] 151,945 pesetas in 5-peseta pieces and 103,055 pesetas in fractional currency were melted to use in the manufacture of this money. It will be noted that the recoinage value was 31,843 pesetas greater than that of the coins melted.

7. Monetary stock:

Character.	In banks.	In circulation.
	Pesetas.	*Pesetas.*
Gold coin	[2] 418,103,499.10	[3] 715,868,125.25
Silver coin	(387,836,804.75)	(772,759,442.20)
	753,824,992.67	576,764,814.53
Total	1,171,928,491.77	1,292,632,939.78

[1] Gold does not circulate, and none is coined at present. The stock of coin is only theoretically in circulation, as it is hoarded or, at least, it has disappeared, and the greater part may have been consumed in the arts.
[2] Value of the gold peseta is given in silver pesetas. The actual value of the gold pesetas is 0.926447 of this amount, and it is given in parentheses below.
[3] The actual value of the gold is given in gold pesetas on the top line, and its equivalent in silver pesetas at the rate of 1.0795 silver pesetas for each gold peseta is given in parentheses below.

8. Stock of bank notes, legal-tender silver holdings:

	Pesetas.
Banks of issue	1,762,771,725

9. Premium on gold during 1911:

	Per cent.
Highest	9.20
Lowest	7.25
Average	8.32

The actual currency is silver peseta, worth 0.926447 of the gold peseta or franc, on December 31, 1911.

10. No laws were passed.

12 (*a*). Imports of gold during the calendar year 1910; statistics for 1911 not available.

Classification and country.	Imports.
Gold coin:	*Pesetas.*
Argentina	500,000
Philippine Islands	9,220
Total	509,220
Gold bullion, France	190,800

No exports appear in any of the Government reports.
NOTE.—Advance customs statistics for 1911 give totals of importations as follows: Gold coin, none; gold bullion, 282,600 gold pesetas.

12 (*b*). Imports of silver during 1910; statistics for 1911 are not available.

Classification and country.	Imports.
Silver coin:	*Pesetas.*
Brazil	6,150
France	3,195
Great Britain	6,100
Holland	16,000
Morocco	545,000

Oman (Maskat).

7. Stock of gold and silver in circulation on December 31, 1911:

Gold coin	$5,000
Silver coin	100,000
Total	[1] 105,000

8. There are no banks or bank notes.

9. Actual currency of the country: Maria-Theresa dollars (bullion value); quotation of the Bombay exchange are followed. Rupees are used in seaports.

12 (*a*). No figures.

12 (*b*). Imports and exports of silver during the calendar year 1911:

Country.	Imports.	Exports.
Silver coin:		
India	$1,378,839	$802,740

NOTE.—The estimates of silver imports and exports are those furnished by the Sultan's customhouse authorities and are not reliable.

[1] United States currency.

CHINA.

HONGKONG.

2 (*b*). Refer to consul's Bombay report for total British dollars coined.

7. Stock of gold and silver coin and bullion (Hongkong currency), December 31, 1911:

	Yen.
Gold coin (in banks)	1,755,706
Silver coin (in banks)	21,881,824
Silver bullion	102,000

8. The notes (Government) outstanding amounted to 27,732,229 yen (Hongkong currency), against which there was a special silver reserve of 16,500,000 yen (Hongkong currency).

9. The actual currency is silver.

12 (*b*). Refer to Shanghai for total of silver imported from America, i. e., 7,630,000 Haikwan taels, and refer to San Francisco for total silver exported to China. The difference between these two amounts is chiefly accountable for imports of American silver into Hongkong, although a small percentage has been continued to India.

CHUNGKING PROVINCE.

1 to 8 (inclusive). There are both ordinary and extraordinary reasons why information of value in this connection is not obtainable now. The extraordinary reasons have mostly to do with the revolution which has caused great confusion and disorder in all departments of Chinese life. Deposits of gold and silver have been looted and large quantities of Government and bank notes have been burned and books of record have been destroyed. It is altogether impossible, therefore, to give even approximate answers to questions numbered 7 and 8. Even under normal conditions these statistics can not be given with any accuracy. At no time can the amount of gold and silver mined here be ascertained. No records whatever are kept and as the mines are widely scattered and operated by small owners there is no way of estimating their output. This is especially true just now as communications throughout this district are broken. The same applies to metals used in the industrial arts or taken from such use. No United States gold coin was imported here in 1911 and no coinage was executed at foreign mints for this district.

As simple negative or affirmative replies could not have been adequately used on the circular hereto attached I have been obliged to answer questions 1 to 8 by submitting the foregoing explanation. In response to question 9 I would state that no premium can be said to exist here with reference to the local currency for there is no standard or par value upon which to base a calculation. Local currency, which is the Ssuchuan dollar, and gold are simply treated as ordinary commodities and their prices fluctuate accordingly. There is no standard rate of exchange between the two—hence no "premium"; it is simply a case of supply and demand.

Questions numbered 10 and 11, as applied to this particular district, must be answered in the negative. No gold or silver was shipped in 1911 from this district to other countries or vice versa.

E. CARLETON BAKER, *Consul.*

MUKDEN.

1. Amount of silver coined during the calendar year 1911:

Denomination.	Pieces.	Value.
Old currency: 20-cent pieces	63,687,300	[1] $12,737,460
New currency:

MEMORANDUM CONCERNING THE NANKING MINT.

* * * * * * *

The manager and metallurgist, Mr. Chen Tsu-fan, is a native of Shensi Province, who has finished an 11 years' course of study in Japan, from where he returned last December.

The mint coined the new standard dollar (see reports dated July 27 and Aug. 11, 1911) up to the time that the city was placed under martial law last November. When Gen. Chang Hsun assumed charge of local affairs, just previous to the attack on the city by the revolutionists, he discontinued coining the new Ta Ching dollar, and coined about 50,000 Kuang Hsu dollars daily. These dollars are now being used very extensively in Nanking on a par with the Ta Ching and other imperial dollars.

The mint is now coining the republican commemoration dollar, and has been turning out 80,000 daily for the past four months. The silver bullion for this new dollar is entirely native, being sent in from the Government mines in Yunnan, Shensi, and other places in China. I was informed that the original die for this coin was made at Nanking, and copies were sent to the other mints. The mints at Wuchang and Canton are reported to have been steadily coining the republican copper cash since last February—the mint here has coined 280,000 daily since the republicans assumed charge. The face of this coin bears the two flags crossed, and the bean and wheat design is included in the design on the other side. The copper cash is being put into circulation as fast as coined, but the commemoration dollar is being shipped to Peking,

[1] Small coin dollar, about 40 cents gold.
[2] Mukden tael, about 57 cents gold.
[3] Small coin dollar.
[4] Mukden taels.
[5] Impossible to obtain.

and is of the same standard (900 fine) as was the Ta Ching standard dollar. The manager stated that they were preparing a new design for the commemoration dollar, altering somewhat the impression of Dr. Sun Yat Sen, which is not satisfactory on the present coin. They expect to begin coining the subsidiary coins this month.

NANKING, CHINA, *July 9, 1912.*

AMOY CUSTOMS DISTRICT.

7. Stock of silver on December 31, 1911:

Items.	In banks.	In circulation.
Silver coin:

NOTE.—Imports and exports to and from Hongkong are included in this statement, since Hongkong, while not a part of China, geographically or politically, is so commercially.

SHANGHAI CUSTOMS DISTRICT.

1, 2 (*a* and *b*), 4 and 5. None.

7. Stock of silver on December 31, 1911:

Character.	In banks.	In circulation.
Silver coin	$2,792,100	[2] $2,000,000
Silver bullion	14,644,980	.....
Total	17,437,080	2,000,000

8. Notes outstanding on December 31, 1911:

Government (supported banks)	$369,410
Banks of issue:	
Chinese	[2] 1,000,000
Foreign	2,650,080
Total	4,019,490

9. Premium on gold during 1911:
Highest premium, $1 gold = 1.74 Shanghai tael.
Lowest premium, $1 gold = 1.66 Shanghai tael.
Average premium, $1 gold = 1.70 Shanghai tael.

Exchange rates employed:
1 Haikwan tael = $0.65 gold.
1 Shanghai tael = $0.59 gold.
1 Mexican dollar = $0.41 gold.

Actual currency (from report for 1910): "Hard to define."

There is the Hai Kuan tael for customs purposes, but is not coined; merely a standard weight of silver.

[1] Haikwan taels at $0.65.

[2] Estimated.

There is the Kuping tael for Government transactions, other than customs, not coined; merely a standard weight of silver.
There is the Shanghai tael, not coined; merely a standard weight of silver.
There is the Mexican dollar.
There are the various provincial dollars.
There are the subsidiary silver coins—10 and 20 cent pieces.
There is the copper 10-cash piece.
There is the brass 1-cash piece.
There are the Chinese bank notes.
There are the foreign bank notes.

The Shanghai tael is 1⅓ ounces of silver, and its value depends upon the value of the metal.

The Kuping tael is worth 10 per cent more than the Shanghai tael; the Haikwan tael is worth 11.4 per cent more than the Shanghai tael.

The parity between the tael and Mexican dollar varies, but the dollar is worth about 73 per cent of a tael.

The provincial dollars are all at a discount outside of their own locality.

The subsidiary silver coins are at a discount, $1.10 being given by exchange shops for 1 Mexican dollar.

Business is done principally on tael quotation, but the Mexican dollar is the coin that circulates most freely. The currency that affects the masses most closely is the subsidiary silver, copper, and brass coins. The people's needs being small and all their daily wants satisfied by "cash" standard, the value of the small coins interests them as much as the value of the tael does the merchant.

Bank notes, both foreign and Chinese, pass at face value at the point of issue, but are discounted from 2 per cent to 5 per cent in other localities.

10. No laws passed locally.

11. None.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1911:

Total	17,381,566	2,149,437

Swatow Customs District.

1, 2 (*a* and *b*), 4, 5, 6, 10, and 11. None.

7. Stock of silver on December 31, 1911:

Character.	In banks.	In circulation.
Silver coin	[1] $1,000,000	[1] $200,000

[1] Mexican dollars.

8. Bank notes outstanding at the end of the year 1911:

	Mexican dollars.
Banks of issue	1,500,000

9. Premium on gold during 1911:

	Per cent.
Highest	2.24
Lowest	2.17
Average	2.215

Note.—Owing to heavy fluctuations in coast exchange, the local silver-gold exchange, which must be done through Hongkong, does not always follow closely the exchange ruling at principal ports.

The actual currency is Mexican dollars.

12 (*a*). Imports of gold during the calendar year 1911:

Classification.	From whence imported.	Imports.
Gold coin	Hongkong	$9,023

12 (*b*). Imports and exports of silver during the calendar year 1911:

Classification and country.	Imports.	Exports.
Silver coin:		
Hongkong	$1,140,211	$1,080,225
Japan	108	
Siam		147,499
Dutch Indies		3,213
Total	1,140,319	1,230,937

Tientsin Customs District.

1. Amount silver coined during the calendar year 1911:

Denomination.	Pieces.	Value.
New coinage (domestic):		
1 dollar	9,720,742	$9,720,742
20 cents	100,000	20,000
Total	9,820,742	[1] 9,740,742

[1] Mexican dollars at $0.459 equals $4,471,000 gold. No recoinage of any kind.

All coinage in the consular district is at the head mint at Tientsin. Gold coins not being used, no gold was coined here last year.

In addition, the mint reports that they turned out last year 95,000,000 copper cents.

4. None. All silver presented at the mint for coinage was in the form of "sycee" or bullion.

5. No statistics. No United States gold coin melted at mint.

7. No statistics.

8. The Government notes in use are notes of the Ta Ch'ing Bank. Relating to the above inquiry the manager of the local branch of the bank stated that "since the disturbances of last year the notes of the local bank have been regularly recalled, that at the end of last year there were left unrecalled more than $10,000 worth, which were covered by the same amount of reserves for redemption."

9. There is a premium on gold. The actual currency is the tael (uncoined) as the unit.

CEYLON.

COLOMBO.

2 (*b*). Coinage executed at foreign mints (made by the Crown agents, London, and received by us in 1911):

Silver:	Rupees.
50 cents	100,000
25 cents	100,000
10 cents	100,000
Total	300,000

7. Stock of gold and silver on December 31, 1911:

Silver coin	[1] 3,242,943	[1] 677,000

[1] According to customs monthly returns.

ORDER IN COUNCIL REGULATING THE CURRENCY OF CEYLON.

At the court at Osborne House, Isle of Wight, the 6th day of February, 1892.

Present, the Queen's Most Excellent Majesty in Council.

Whereas Her Majesty the Queen has power to make laws for the peace, order, and good government of Her Majesty's colony of Ceylon;

And whereas by virtue of the order in council and proclamation rescinded by this order certain silver rupees and other coins of silver and copper are legal tender in Her Majesty's said colony;

And whereas it appears to Her Majesty, by the advice of her privy council, that it is expedient to rescind the said proclamation, and to make a law respecting the coins which are to be the subject of contract, and to constitute legal tender in Her Majesty's said colony;

Now, therefore, Her Majesty, by and with the advice of her privy council, and by virtue of all powers vested in Her Majesty in that behalf, doth hereby ordain that the law hereinafter mentioned shall take effect in Her Majesty's said colony:

And the lords commissioners of Her Majesty's treasury, and the Right Honourable Lord Knutsford, one of Her Majesty's principal secretaries of state, are to give the requisite directions for causing proclamation of the said law to be made in Her Majesty's said colony.

1. (1) The silver rupee of British India of the standard weight and millesimal fineness specified in the first schedule to this order shall be the standard coin of Her Majesty's colony of Ceylon and its dependencies, in this order referred to as the colony.

(2) Every contract, sale, payment, bill, note, instrument, and security for money, and every transaction, dealing, matter, and thing whatever relating to money, or involving the payment of, or the liability to pay, any money, shall, in the absence of express agreement to the contrary, be held to be made, executed, entered into, done, and had in the colony according to the standard coin of the colony.

(3) The coin mentioned in the second schedule to this order shall be treated as equal to the standard coin.

2. (1) Subsidiary coins may be from time to time coined for the colony under the direction of the master of Her Majesty's mint, or at one of Her Majesty's mints in British India, of the denominations, weights, and fineness specified in the third schedule to this order.

(2) Those coins shall have for the obverse impression Her Majesty's effigy with the inscription "Victoria Queen" and for the reverse impression the representation of a talipot palm and an inscription with the word "Ceylon" and the date of the year, and with the value of the piece in cents or hundredths of a rupee indicated in English, Sinhalese, and Tamil.

(3) Each coin so coined shall be a legal tender for the amount of its denomination.

(4) Each of the subsidiary coins mentioned in the fourth schedule to this order shall be a legal tender for the amount in that behalf in that schedule mentioned.

3. (1) If the governor of the colony from time to time requests any new coins of less value than the rupee, whether of silver, copper, or mixed metal, to be coined, and the commissioners of Her Majesty's treasury approve such request, those new coins may be so coined, under the direction of the master of Her Majesty's mint, or at one of Her Majesty's mints in British India.

(2) Such new coins shall have either the impressions directed by this order for the coins specified in the third schedule (in this order referred to as existing coins) or such other impressions as may be approved of by the master of Her Majesty's mint and the commissioners of Her Majesty's treasury.

(3) Any such new coin may be of the same denomination as any existing coin, or of a different denomination.

(4) Every such new coin, if of silver, shall be of the same fineness as the existing silver coins, and of a weight bearing the same proportion to the weights of the existing silver coins as the denomination of the new coin bears to the denominations of the existing coins.

4. In the making of any existing or new coin a "remedy" or variation from the standard weight, and in the case of silver coins from the standard fineness, required by this order shall be allowed for any existing coin of an amount not exceeding that specified in the third schedule to this order, and for any new coin—

(*a*) As regards fineness (if the coin is of silver), of the amount specified in the third schedule to this order; and

(*b*) As regards weight, of an amount bearing the same proportion.

(*i*) If of silver, to the weight of the twenty-five-cent piece mentioned in the said schedule; and

(*ii*) If of copper or mixed metal, to the weight of the five-cent piece mentioned in the said schedule, as the denomination of the new coin bears to those pieces, respectively.

5. (1) A tender of payment of money in the colony, if made in standard coins or in any coins specified in the second, third, or fourth schedule to this order, shall, provided that the coins have not been illegally dealt with and provided that in the case of silver coins such coins have not become diminished in weight by wear or otherwise so as to be of less weight than the weight (if any) specified as the least current weight in the schedules to this order, be a legal tender—

(*a*) In the case of rupees, for the payment of any amount;

(*b*) In the case of other silver coins, for the payment of an amount not exceeding five rupees, but for no greater amount;

(*c*) In the case of coins of copper or mixed metal, for the payment of an amount not exceeding one-half of a rupee, but for no greater amount.

(2) If any new coins are coined, this article shall, after the date fixed by the governor in a proclamation made with the approval of the commissioners of Her Majesty's treasury and one of Her Majesty's principal secretaries of state, and setting forth in a schedule the same particulars with respect to each coin as are set forth in the third schedule to this order, apply to the new coins as if the schedule to the proclamation were added in that third schedule.

6. For the purpose of this order a coin shall be deemed to have been illegally dealt with where the coin has been impaired, diminished, or lightened otherwise than by fair wear and tear, or has been defaced by having any name, word, device, or number stamped thereon, whether the coin has or has not been thereby diminished or lightened.

7. On the commencement of this order the order in council and proclamation specified in the fifth schedule to this order and all such colonial laws and all such proclamations, whether issued by Her Majesty or by the governor, as regulate legal tender in the colony, other than the Ceylon paper-currency ordinance, 1884 (No. 32 of 1884), shall cease to be in force.

8. Nothing in this order, nor any repeal of laws or rescinding of proclamations by this order, shall affect any liability incurred, contract made, or other thing done before the commencement of this order.

9. In this order—

The expression "governor" means the governor of the colony and includes the officer for the time being administering the government of the colony.

Words in the singular include the plural and words in the plural include the singular.

10. This order shall come into operation on the first day of July, 1892, or any earlier day on which it is proclaimed in the colony by the governor, and that day is in this order referred to as the commencement of the order.

11. This order may be cited as the Coinage (Ceylon) Order, 1892.

C. L. PEEL.

BRITISH INDIA.

1. Amount of silver coined during 1911:

	Pieces.
Recoinage (domestic):	
Rupees	15,266,335
Half rupees	3,426,338
Quarter rupees	5,973,234
Eighth rupees	10,847,704
Total	35,513,611

Value, 19,828,775 rupees.

The face value of coins received into the mints for recoinage during the year 1911 was 20,154,619 rupees. The face value of coins actually melted during the year is not available.

2 (*a*). Silver coinage executed for other Governments during 1911:

Description.	Value.
British dollars for exchange banks	$31,446,858
Subsidiary coins for the Government of the Straits Settlements:	
10-cent pieces	29,116
5-cent pieces	597,426
Total	32,073,400

2 (*b*). Gold sovereigns and half sovereigns are imported into this country in the ordinary course.

4. Gold and silver returned from use in the industrial arts and deposited at the mints for coinage. No gold coins are coined at the Indian mints. The Indian mints do not receive old bullion from the public for coinage.

5. Nil.

7. Stock of gold and silver on December 31, 1911:

Location.	Gold coin.	Silver coin.	Silver bullion (quantity in tolas).
		Rupees.	
In public treasuries	£220,901	49,053,000	.....
Against note circulation	8,381,992	219,574,150	1,100,000
In the gold standard reserve	.....	29,014,532	.....
By presidency banks	463,160	2,294,321	.....
In the mints	107,156	259,000	11,405,310
Total	9,173,209	300,195,003	12,505,310

Details of the amounts in circulation are not available.

8. Government notes outstanding at the end of the year 1911:

Item.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings (coin and bullion).
	Rupees.	*Rupees.*	*Rupees.*
Government	561,765,945	201,404,879	220,361,120

The amount of Government notes outstanding at the end of the year 1911 not covered by gold, silver coin, and bullion was 139,999,946 rupees.

No bank in India has a note issue. The only notes in circulation are those of the Government.

9. Throughout the year 1911 gold was for the purposes of foreign exchange at a discount.

The par is 16d.=1 rupee=7.53344 grains of fine gold.

Highest discount, grains of fine gold, 0.057 (corresponding to 1 rupee=16.122d.).

Lowest discount, grains of fine gold, 0.004 (corresponding to 1 rupee=16.008d.).

Average discount, grains of fine gold, 0.031 (corresponding to 1 rupee=16.065d.).

10. The only act affecting paper currency passed during the year was Act VII of 1911. By it power was taken to raise the invested portion of the paper currency reserve from 12 to 14 crores of rupees and to make the investment in sterling securities if desired. An investment of 2 crores in consols was made in April, 1911.

The hundred-rupee note was also universalized with effect from April 1, 1911, by an executive order.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1911:

Mint and Coinage.

The Indian mints were closed to the unrestricted coinage of silver for the public from the 26th of June, 1893, and Act VIII of 1893, passed on that date, repealed sections 19 to 26 of the Indian coinage act of 1870, which provided for the coinage at the mints for the public of gold and silver coins of the Government of India. After 1893 no Government rupees were coined until 1897, when, under arrangements made with the Native States of Bhopal and Kashmir, the currency of those States was replaced by Government rupees. The recoinage of these rupees proceeded through the two years 1897 and 1898. In 1899 there was no coinage of rupees; but in the following year it seemed that coinage was necessary, and it was begun in February, 1900, the Government purchasing the silver required, and paying for it mainly with the gold accumulated in the paper-currency reserve. In that and the following month a crore of rupees was coined and over 17 crores of rupees in the year ending the 31st of March, 1901, including the rupees issued in connection with the conversion of the currencies of Native States. From the profit accruing to Government on the coinage it was decided to constitute a separate fund called the gold reserve fund as the most effective guaranty against temporary fluctuations of exchange. The whole profit was invested in sterling securities, the interest from which was added to the fund. In 1906 exchange had been practically stable for eight years, and it was decided that of the coinage profits devoted to this fund, 6 crores should be kept in rupees in India, instead of being invested in gold securities. The gold-reserve fund was then named the gold-standard reserve. It was ordered in 1907 that only one-half of the coinage profits should be paid into the reserve, the remainder being used for capital expenditure on railways. The gold-standard reserve was called into action before the year 1907–8 was out. Exchange turned against India, and in March, 1908, the Government of India offered bills on the secretary of state up to half a million sterling, while the secretary of state sold £1,000,000 consols in order to meet such demands. During April to August, further sterling bills were sold for a total amount of £8,058,000. On a representation by the Government of India, the secretary of state agreed in July, 1909, to defer the application of coinage profits to railway construction until the sterling assets of the gold-standard reserve and the gold in the currency reserve combined amounted to £25,000,000. Exchange became again weak in September, 1909, and bills on the secretary of state of the value of £156,000 were sold during that month. On the 31st of March, 1910, the reserve amounted to £19,764,047.

As stated in the preceding paragraph, arrangements were made in 1897 with Bhopal and Kashmir for the conversion of the local currency. These States agreed to cease further coinage and to withdraw their currency, substituting Government rupees for the State coinage in circulation. The Government of India agreed to take over all the coin circulating in the States, giving to Bhopal 100 Government rupees for every 124 Bhopal rupees and to Kashmir 59 Government rupees for every 100 Chilki rupees and $47\frac{3}{16}$ Government rupees for every 100 Kham rupees.

Similar arrangements have since been made with Baroda, Jodhpur, Navanagar, Radhanpur, Kotah, Jhalawar, Indore, Khairpur, Cambay, Sirohi, Dungarpur, Banswara, Partabgarh, Karauli, Tonk (as regards Muhammad Khani currency in the Sironj Parganah), and Shahpura (as regards the Phulia Parganah). These States have introduced Government coin as the sole legal tender. The rates of exchange given were: Baroda, 100 rupees for 130 Babushahi coins; Jodhpur, 100 rupees for 150 Iktisandas and for 110 Bujeshahis; Navanagar, 100 rupees for 435 Koris; Radhanpur, 100 rupees for 112½ Jorawarsai coins; Kotah, 100 rupees for 114 Kotah rupees: Jhalawar, 100 rupees for 118 Jhalawar rupees; Indore, 100 rupees for 118 Hali rupees; Khairpur, 100 rupees for 140 Chalan rupees; Cambay, 100 rupees for 129 Cambay rupees; Sirohi, 100 rupees for 120 Bhilari rupees; Dungarpur, 100 rupees for 136 Chitori rupees or 200 Salim Shahi rupees; Banswara and Partabgarh, 100 rupees for 200 Salim Shahi rupees; Karauli, 100 rupees for 105 Karauli rupees; Tonk (Sironj Parganah), 100 rupees for 101 Muhammad Khani rupees; and Shahpura (Phulia Parganah), 100 rupees for 127 Chitori rupees.

NATIVE MINTS.

With the fall in the price of silver, which preceded the closure of the Calcutta and Bombay mints in 1893, there was a very large importation of the metal into India and excessive quantities were coined by some of the Native States during that period and for some years following the closure. It was found, thereafter, that the coinages were greatly in excess of the needs of the States, and operations abated in 1898. The arrangements made with some of the States for the substitution of the British for the local rupee, which have been mentioned earlier in this summary, had led to the closing of the local mints. The only States in which coinage was carried on to any considerable extent during the year 1909 were Hyderabad, Cutch, Jaipur, and Maler Kotla. The total coinage from new silver in 1909 amounted to 850,780 tolas. (Statistics of British India, Part IV (*a*), Finance and Revenue, 1911.)

JAPAN.

1. Amount of gold and silver coined during the calendar year 1911:

Denomination.	Pieces.	Value.
GOLD.		
		Yen.
20 yen	1,473,000	29,460,000
5 yen	60,000	300,000
Total	1,533,000	[1] 29,760,000
SILVER.		
50 sen	9,907,376	4,953,688
20 sen	500,305	100,061
10 sen	38,751,020	3,875,102
Total	49,158,701	[2] 8,928,851

[1] Of which amount 27,761,771 yen was new coinage and 83 yen was from recoinage of domestic coins, and 1,998,146 yen was from recoinage of foreign coins; total, 1,998,229 yen.

[2] Of which amount, 7,003,930 yen was from recoinage of domestic coins and 1,365,410 yen was from recoinage of foreign coins; total, 8,369,340 yen. The remainder, 559,511 yen, was new coinage.

NOTE.—Values of coinage and recoinage are face values. Values of old Japanese and foreign coins melted are face values.

2 (*a* and *b*). None.

5. United States gold coin imported during 1911, $10; melted, none.

7. Stock of gold and silver on December 31, 1911:

CHOSEN.

Chinese silver coin	.....	454
Silver bullion	425	3,891

[1]All were exported from and imported to China.

13. There is no change in the coins of Japan except the following under "Formosa": Since the adoption of the gold standard in Japan in 1897 the Government decided to authorize the circulation of silver coins in Formosa for a certain time, at a rate fixed by gold exchange. However, the exchange of the old 1-yen silver coins for gold coins was completed on April 30, 1909. The coinage law (law No. 16 of 1897) took effect in Formosa on April 1, 1911, and since then the same system as that in Japan proper has been in force.

KOREA.

7. Stock of gold and silver in the country on December 31, 1911:

[1] The amount of Australian Government notes outstanding in the State of Victoria at end of 1911 can not be ascertained, but the amount for the whole of Australia is £10,156,358.

[2] Fully covered.

9. No.

10. Act No. 21: To amend section 9 of Australian notes act, 1910. Under act No. 21, passed on December 22, 1911, section 9 of the Australian notes act 1910, is amended by omitting subsection (1) therefrom and by inserting in its stead the following subsection: "(1) The treasurer shall hold in gold coin a reserve of not less than one-fourth of the amount of Australian notes issued. This act shall come into operation on the first day of July, one thousand nine hundred and twelve."

NOTE.—At the time the act of 1910 was passed the prime minister gave Parliament a formal undertaking that in practice the coin reserve would be maintained at not less than 40 per cent.

PART II.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION OF THE PRECIOUS METALS IN THE UNITED STATES DURING THE CALENDAR YEAR 1911.

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1911.

The official estimate upon the production of gold and silver in the United States is made by the Bureau of the Mint and the Geological Survey working in conjunction, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the figures of the mine production made by the survey. The two systems thus verify and support each other.

The total yield of gold in the United States was greater in 1911 than in 1910 by $621,900, but with the exception of South Dakota, the changes in any one State were relatively small. South Dakota made a record production of $7,429,500, an increase of over $2,000,000, but this was due in the main to full operations of the Homestake mine, which was closed for a part of 1910. Nevada showed a shrinkage of about $800,000 from its record production of 1910, due to falling off in the latter part of the year by its heaviest producer, the Goldfield Consolidated. Colorado showed a loss of approximately $1,400,000, and here again the result is in part due to the waning of a famous producer, the Camp Bird mine. The decadence of these two great mines are pertinent reminders that new discoveries must be continually made to maintain the present rate of output. There is nothing in sight in the mining situation of the United States that promises any material increase in gold production.

The yield of silver in the United States showed an increase in 1911 of more than 3,000,000 fine ounces, Idaho leading in the increase, but Nevada, Utah, Arizona, and Colorado contributing. The production from the three classes of ores was as follows: Dry or siliceous ores, 25,375,833 ounces; lead ores, 18,995,208 ounces; copper ores, 16,736,799 ounces.

A brief review of mining conditions by States follows, for which acknowledgment is made to the Geological Survey.

ALASKA.

About three-quarters of the production of Alaska is still from placers and the bulk of the remainder is from deep lodes, mainly the Treadwell. The tendency is for the total placer output to slowly decrease and the total lode production to increase. The gold yield increased from the Pacific Coast belt of Alaska, and from the Yukon and Kuskokwim Basins, but declined from the Copper River and Cook Inlet regions, and from the Seward Peninsula, Fairbanks, and northwestern Alaska. The increased gold output of Alaska in 1911 was due mainly to materially greater placer output from the Iditarod-Innoko region, and from the Hot Spring district, and to much greater

output of copper ores. Twenty-four dredges in all were operated in the Seward Peninsula in 1911, against 16 in 1910. Dredging is becoming of increasing importance.

The silver yield of Alaska in 1911 was about 500,000 ounces, mainly from refining of copper produced and of gold placer bullion.

ARIZONA.

The gold and silver yields of Arizona in 1911 were larger than in any other year for seven years, but there were very important developments. The gold increase was chiefly in Mohave County, from the Tom Reed and Gold Road properties, that county producing 40 per cent of the State's output. Nearly two-thirds of the total gold came from dry or siliceous ores, nearly one-third from copper ore, and about 4 per cent from lead ore. Nearly 56 per cent of the gold was recovered in bullion at gold and silver mills, and nearly 90 per cent of this total was won by cyanidation, while 10 per cent was won by amalgamation. Arizona had 160 milling plants, of which only 46 were active. Of the total, 43 were equipped for concentration alone and the others were constructed to treat gold-silver ores either by amalgamation or cyanidation, or both.

As in the past, most of the silver, or nearly 70 per cent, came from copper ores, nearly 20 per cent from lead ore, and most of the remainder from siliceous ores. The bulk of the State's metal output is derived not from the precious metals but from copper. Arizona remained the leading copper-producing State in 1911, with a production of over 306,000,000 pounds. A good quantity of gold and silver was contained in lead ores, which increased to an unusual extent from Warren district to Cochise County. Appreciable amounts of gold and silver were also contained in zinc ores. With the exception of the Imperial smelter in Pima County and the Arizona Consolidated smelter in Gila County, all of the important smelting plants were in operation, and a new one at Hayden to treat the Ray ore was under construction. A new plant equipped with roasters for the sulphide ore will also be erected for the Calumet & Arizona Co. at Douglas. Production from the Commonwealth and Tombstone mines was slight.

CALIFORNIA.

The mine reports from the State of California show that there were 1,181 producing mines in 1911, of which 596 were deep mines and 585 placers of various kinds. There were also some 2,000 more mines on which development work was being carried on. Of the placer mines producing 169 are hydraulic, 65 dredges, 141 drift, and 210 surface placers or sluicing properties. There are now 32 counties of California which are producing gold. The largest county production of the year came from Yuba County (mainly from dredging operations). In deep mining the most productive in gold is now Amador County. The greatest producer of gold from hydraulic mining is Trinity County, and from drift mines, Placer County.

The deep mines of California produced more than $1,500,000 more gold in 1911 than all the combined placers, the proportion of gold to the total yield being 54.47 per cent from the deep mines, as compared with 45.53 per cent from the combined placers. As to

deep mining in the State, there is little change to be noted for 1911, except in the case of copper mines, several large ones of which have been closed down owing to the smelter fume troubles, and this affects materially the silver output, and to a lesser degree the gold yield. The deep mines of California produced 2,797,261 tons of ore in 1911, of which 2,296,347 tons were siliceous ore carrying gold and silver. The average value per ton varies slightly from year to year.

No new gold-mining districts worthy of special mention have been discovered of late in California, the gold and silver continuing to come from the old districts which have been its source for years. The dredging industry shows some slight increase in gold production, but this is not expected to continue long as in some fields the best ground has been worked out. Of the total placer gold yield the dredges furnished 85.32 per cent; hydraulic mines, 7.51 per cent; drift mines, 5.34 per cent, and surface placers, 1.8 per cent. Since the system of mining by dredges began in California in 1891 there has been produced a total of nearly $48,000,000 in gold from this source. The ground worked by them was either too low for drainage or too poor in grade to be worked by other placer mining systems, so that these areas where dredges now operate were virtually idle or waste.

COLORADO.

The total value of the production of Colorado mines yielding gold, silver, copper, lead, and zinc, in 1911, as compared with the yield in 1910, showed a decrease of about 4 per cent. The yield of gold showed the heaviest decrease and the output of silver a considerable decrease.

The smelting situation in 1911 in Colorado remained practically as it was at the close of 1910. The Globe, Leadville, and Pueblo smelters were operated continuously, but, as has been the case for several years, not at full capacity. Owing to the floods in the San Juan region and the consequent damage to the railroads, ore from Silverton, Rico, and Telluride was not available, and the Durango smelter was closed in November for the winter. The Salida smelter was active during the year. The semipyritic plant at Golden was in operation almost continuously until November, and treated a larger tonnage than in 1910.

The Salida plant of the Ohio & Colorado Smelting Co. has added three Godfrey mechanical roasters and Dwight-Lloyd sintering machines. The Huntington-Heberlein roasters are used at Leadville and Pueblo, but the installation of the Dwight-Lloyd machines is in prospect at Leadville, Pueblo, and Globe.

The yield of gold from the Cripple Creek district decreased about $440,000 in 1911. Conditions in the district were much the same in 1911 as in 1909 and in 1910. Although the Roosevelt tunnel, as originally planned, was completed early in 1911, the subsidence of the water was very slight, and it became apparent that the tunnel must be driven farther. Work was resumed in October, with satisfactory results to all except those mines in the far eastern portion of the district. In March, the Stratton's Independence mill reached a capacity of 10,000 tons of dump ore per month, and in December the Portland mill at Victor treated over 12,000 tons. A new mill using the Clancy process was completed in December on the Ajax property.

Lake County (chiefly Leadville) produced a smaller tonnage in 1911 than in 1910, with comparatively small decrease in the yield of gold, silver, and lead.

The San Juan region—Dolores, La Plata, Ouray, San Juan, and San Miguel Counties combined—showed a decreased yield in all the metals, except zinc, San Juan County contributing most heavily to the decrease. For gold, San Juan County showed a decrease of $374,064; Ouray, a decrease of $242,889; and La Plata, a decrease of $103,907. The Camp Bird mine, in the Sneffels district, Ouray County, produced a somewhat decreased tonnage, with a material decrease in gold-silver bullion and a decreased tonnage of concentrates. San Juan County showed heavy decreases for all the metals. San Miguel County's total yield showed a comparatively small decrease for the year 1911, as compared with the output of 1910, but a considerable increase, as compared with the yield of 1909. The upper San Miguel district, in which are the three large properties of the Liberty Bell, Smuggler-Union, and Tomboy companies (these yielding 90 per cent and more of the county yield), showed a slight increase for 1911. La Plata County's gold and silver yield showed a material decrease because of litigation between two of its principal properties. Dolores County showed a small total increase for 1911, there being important increases for lead and zinc, but decreases for the other metals.

Hinsdale County, also part of the San Juan group of counties, showed a heavy decrease in output of all the metals except zinc. In Mineral County (Creede) also part of the San Juan region, silver, lead, and zinc yields decreased considerably, while the output of gold made a comparatively large increase.

The yield of gold bullion and also the ore and concentrates shipments of Boulder County increased, with an increase in total output. Clear Creek County showed an increased yield of the base metals, but a decrease for gold and silver output. Owing to the closing of all but three custom amalgamating mills near Black Hawk, the output of bullion in Gilpin County fell off considerably, but the tonnage of concentrates increased very heavily, particularly from the treatment of ores from the Russell district, the contents showing heavy gains in all the metals, resulting in appreciable increases in total metal output for the county.

DREDGING IN COLORADO IN 1911.

There were four dredges operating in Colorado in 1911. At Breckenridge three dredges were operated. The Colorado Gold Dredging Co. operated one of its two Bucyrus dredges of open-connecting type with buckets of a capacity of 9½ cubic feet. The Reliance dredge, of the double-lift, open-connecting type, with buckets of a capacity of 9 cubic feet, and the French Gulch Dredging Co.'s Bucyrus dredge, both in French Gulch, were also operated.

The Colorado Gold Dredging Co. operated during part of the year at Russell, Costilla County, its Hammond dredge of the close-connected type, of 54 buckets of 4 cubic feet capacity. The total quantity of gold recovered by dredges in Colorado in 1911 was roughly 13,000 ounces.

IDAHO.

The total value of Idaho's metal output in 1911 was greatly increased, principally as a result of the greater lead output and partly from increased gold, silver, and zinc productions. The total quantity of ore mined was over 2,000,000 tons, of which nearly 72 per cent was lead ore, nearly 21 per cent zinc and lead-zinc ore, over 5 per cent siliceous ore, and nearly 2 per cent copper ore. The production of gold represented not quite $1,500,000, of which over 57 per cent came from siliceous ore, over 29 per cent from placers, over 6 per cent from copper ores, and nearly 6 per cent from lead ores. The mines of Idaho have a comparatively large number of milling plants, of which only 36 per cent were active in 1911. More gold and silver bullion was recovered by the use of cyanidation than by the use of amalgamation. The increase in gold output, however, was not from deep-mine bullion, but from the operation of dredges. There was a marked increase in silver output to a production of over 8,000,000 ounces, which is greater than any output since 1907. This was due to the increased production of lead ore in Shoshone and Lemhi Counties. Over 92 per cent of the total silver output came from lead ore and lead-zinc ore; siliceous ore produced only about 4 per cent and copper ore 3 per cent of the total.

There was more copper produced in Custer County in 1911 than in 1910, and this contained considerable value in gold, but a large decrease in Shoshone County lessened the State total nearly 2,000,000 pounds. The lead output increased to the extent of 44,000,000 pounds. There were 5 dredges operated during the year, of which 2 were new boats. One near Salmon, in Lemhi County, treats 5,000 cubic yards, and another at Idaho City, in Boise County, treats 8,000 cubic yards per day. Sixty-four per cent of the placer gold produced was won by dredges.

MONTANA.

There were decreases in the production of gold, silver, and copper, principally the last, in Montana in 1911. The output of gold was only slightly less than that of 1910, and while that from deep mines decreased, that from placers increased to the extent of about $100,000. The total gold output was nearly $4,000,000, and, as formerly, the siliceous ores supplied most of this total, or 62 per cent. Copper ore was the source of over 17 per cent, lead ore only 1.5 per cent, and placers over 18 per cent; and of the total placer gold output 87 per cent was won by 8 dredges. Montana had 105 milling plants, of which 54 were active, 3 under construction, and the remainder idle. Of the operating mills, 7 used concentration alone, and the others were equipped for amalgamation, cyanidation, or both.

The total production of silver, which was nearly 12,000,000 ounces in 1911, represented a slight decrease from that of 1910. There was an increase in silver output from copper ores, but large decreases from siliceous ores and zinc ores. In 1911 most of the silver, or 80 per cent, came from copper ore, over 13 per cent from siliceous ore, 4 per cent from zinc ore, and only 1.5 per cent from lead ore. Nearly 65 per cent of the silver had its source in concentrates smelted, 34 per cent from first-class ores smelted, and only 1 per cent from ores treated in gold and silver mills. Mines in Silver Bow and Jefferson Counties

supplied over 92 per cent of the State output, which was the third largest in the United States, Nevada being first and Utah second.

Dredges were used in Missoula, Powell, Lewis and Clark, and Madison Counties, but the operations of greatest importance were at Ruby, in Madison County, where 4 large boats were active. One of these, with a rated capacity of 300,000 cubic yards per month, is the largest dredge now in use.

NEVADA.

There were record productions of silver in Nevada in 1911, but a slight decrease in the output of gold. In gold output Nevada was exceeded only by California and Colorado, the former having eclipsed all the other States in 1911. There has been a steady increase in annual gold production from nearly $5,000,000 in 1904 to $18,000,000 in 1911. Excepting about 1 per cent from placers and over 2 per cent from copper ore, all the gold is produced from siliceous ores. The bulk of the gold output, or 83 per cent, was recovered in mills equipped for amalgamation or cyanidation. Of this gold in bullion, the greater part, or 69 per cent, was won by cyanidation, while 31 per cent was recovered by amalgamation. Nevada has fewer idle mills than several of the adjoining States. Out of a total number of 141 mills, 89 were in operation and 12 were under construction, leaving 40 idle. The Goldfield district produced 56 per cent of the total gold output of Nevada in 1911.

In 1911 Nevada not only made a record output of silver, but produced more of the metal than any other State. The total production, valued at $7,000,000, represented an increase of $250,000. With the gold, it came almost entirely from siliceous ore, copper ore supplying a little less than 1 per cent and lead ore over 1 per cent. Siliceous ore averaged 0.63 of an ounce of gold and 9.56 ounces of silver per ton. Ore smelted supplied over one-fourth of the total silver, concentrates nearly one-fifth, and ores treated in gold and silver mills 54 per cent. Of the last amount, which was over 7,000,000 ounces, only 2.4 per cent was won by amalgamation, and the remainder was won by cyanidation. Mines in the Tonopah district alone produced 82 per cent of the total silver output of Nevada in 1911.

NEW MEXICO.

The yield of gold and silver in New Mexico in 1911 increased materially over that of 1910. The Mogollon district, Socorro County, is the most important in the production of the precious metals. The output for 1911 was one and three-fourths times that of 1910. The process used in the district is concentration and sliming, agitation with cyanide, and treatment in filter presses. There were four operating mills in this district in 1911. White Oaks, Lincoln County, is an important gold district, the ore being found in auriferous pyritic quartz veins. The gold has been recovered by amalgamation and cyanidation, but in 1911 the lessened output was from amalgamation alone, the plan being to change the cyanidation from leaching to agitation. Elizabethtown, Colfax County, once an important lode mine district, again entered the producing stage, through the reopening of three old mines and mills, the cyanide process being added to the amalgamation equipment. Placers in this district also made a

small increase in gold output. Heavily increased shipments of siliceous gold and silver bearing copper of the Jarilla district, near Oro Grande, Otero County, yielded an increased gold output, but the cessation of placer operations caused a decrease for the district. The base ores of Las Animas district, near Hillsboro, Sierra County, chiefly sulphides of copper carrying gold and silver with some free gold, yielded an increased output of gold, and the shipment of manganese ore carrying silver and lead from the dump of the Lake Valley Mines Co.'s property yielded an appreciable quantity of silver. Lead-zinc ores from Magdalena, Socorro County, furnished some silver.

There were no smelters in operation in New Mexico in 1911. The bulk of the smelting lead and copper ores and concentrates was shipped to the El Paso, Tex., smelter and to the Copper Queen smelter at Douglas, Ariz. Copper ore was also shipped to the Shannon smelter, Clifton, Ariz.

OREGON.

There is little change to be noted in the mining conditions of the State in the last two years. The number of deep mines producing in 1911 was less by 24 than in 1910, while there was an increase of 20 producing placers. The number of producing placers of different kinds in 1911 was 136, while the number of producing deep mines was only 40. Of the placer mines, 88 were worked by the hydraulic system and these produced over $110,000 out of a total placer gold yield of nearly $170,000. The largest gold producer among the counties of the State was Baker County, which yielded $633,047 in 1911. The other counties in rank of production in the order named were Josephine, Jackson, Grant, Lane, and Malheur. Gold is being produced in 11 counties of the State.

As to silver, all the Oregon mines combined only produced about 45,000 fine ounces in 1911, which is, however, an increase over the output of the previous year of over 9,000 ounces. By far the larger proportion of the total silver yield was derived from the deep mines of Baker County.

SOUTH DAKOTA.

The labor difficulties of 1909–10 in the Black Hills were adjusted at the end of 1910, and all the large gold mines of the Black Hills, chiefly in Lawrence County, were steadily operated in 1911, and, in addition, several mines not operated in 1910 were productive in 1911. The resulting output was only slightly below that of the record output in 1908.

The Homestake mine, which produces the bulk of the gold bullion from this State, at the beginning of the year was again operating at the full capacity of its plant of 1,000 stamps, with cyanide, slime, and sand plants. Construction work on the Homestake hydroelectric plant was advanced toward completion, the operation of one of the mills being changed from steam to electricity in April, 1912.

In the Bald Mountain area the mines were operated steadily. The oxidized ore from the Golden Reward group was milled at the company's plant and sulphide ore was shipped to smelters. The erection of a roaster at the mine to handle the newly developed sulphide body is in prospect, and the increasing of the capacity of the mill at Deadwood is contemplated. The Lundberg, Dorr and Wilson mill was

operated on ores from the company's Buxton and Bonanza properties and also on those from the Trojan mine, and from Bertschy's lease on the McGovern mine of the Imperial property. Crude ore to smelters at Omaha and Denver was also shipped from the Trojan and McGovern mines. The New Reliance Co. changed its mill from 4 Huntington mills and rolls to 20 stamps, and after reconstructing the mill, operated from July throughout the rest of the year.

In the Bear Butte (or Galena) district, lead ore was shipped from the Richmond-Sitting Bull property. The Gilt Edge Consolidated Mines Co. was engaged in the construction of a 250-ton concentration mill for the concentration of its pyritous ore, the concentrates to be shipped to the new smelter being erected by the Black Hills Smelting Co.

The 500-ton dry-crushing cyanide plant of the Wasp No. 2 Mining Co., in the Yellow Creek area, was operated continuously. The Bismark Consolidated Mines Co., in the same district, was engaged in opening up its mine and building a 300-ton mill.

There was a small placer yield from Custer, Custer County. The placer yield in Pennington County increased greatly. Near Mystic, on Castle Creek, the Castle Creek Hydraulic Gold Mining Co. operated from June to November the first dredge in the Black Hills. Other operations in Pennington County were at the Golden Slipper mine and mill, at Hill City; at the Columbia and Bismark mine, at Keystone; at the Clara Belle property, at Oreville; and some placering at Keystone and Pactola.

TEXAS.

The yield of silver in Texas, which has always represented practically the total precious metal production of this State, showed an increase for 1911. The gold yield, as usual, was only nominal; the copper production was negligible, and the output of lead, while showing an increase, was comparatively of little moment. The greater part of the State silver yield was from the Shafter district, Presidio County.

UTAH.

In the last eight years the average annual production of gold in Utah has been about 220,000 ounces, variance from year to year not being great. In 1911 a little more than half of the total gold output was derived from copper ores, nearly 35 per cent from siliceous ores, over 11 per cent from lead ores, and 2 per cent from lead-zinc ore. There was a very small placer output and no dredges were operated. Siliceous, copper, and lead ore that was directly smelted supplied nearly 64 per cent of the total gold output; and concentrates of various kinds, but largely copper concentrates, supplied 22 per cent of the total. In bullion from gold and silver mills about 13 per cent of the total State gold output was recovered, and nearly all of this, or over 97 per cent, was won by cyanidation, principally in Tooele County. A summary of mills in Utah in 1911 shows that from a total of 65 plants 36 were in operation, 3 being built, and the remainder idle. Forty were equipped for straight concentration, of which 27 were active. Of the others, 24 were designed for amalgamation or cyanidation, or both, and 9 of these were active.

Utah made a record production of silver in 1911, aggregating nearly 12,500,000 ounces, which is close to the output of Nevada, the leading silver-producing State. Nearly half of this Utah output had its source in lead ore. Various kinds of crude ore smelted supplied 79 per cent of the total silver production, concentrates nearly 20 per cent, and ore treated in gold and silver mills, principally in Salt Lake County, somewhat less than 1 per cent. Nearly 21 per cent of the silver yield was from siliceous ores, 19 per cent from copper ores, and nearly 11 per cent from lead-zinc ores. The Park City region supplied a silver production 33 per cent greater than that of 1910.

WASHINGTON.

Eighty per cent of the value of the total metal output of Washington in 1911 was represented by gold, about 12 per cent by silver, and the remainder by copper, lead, and zinc. A comparatively small amount of ore and tailings was treated in mills equipped for amalgamation or cyanidation, and only a few tons of concentrates were made. Over 90 per cent of the tonnage treated was a siliceous ore containing gold and silver, mined in great part at Republic, in Ferry County, and shipped to smelters. Gold production from placers was unimportant. Only 8.5 per cent of the gold and 1 per cent of the silver output came from ores treated in gold and silver mills, but 91 per cent of the gold and 98 per cent of the silver production were contained in crude ore shipped directly to smelters. There were 33 mills in the State, of which 8 were active and 4 in course of construction. Of the total, 18 were concentration mills and 15 were built for amalgamation or cyanidation. In the Republic district, two new cyanide plants were being constructed, one for the San Poil mine and another for custom work. The latter plant of the North Washington P. & R. Co. is being equipped with Chilian and tube mills, agitation tanks, and vacuum filtration.

Bullion, as well as smelting ore, will doubtless be an important product of the district in the future.

WYOMING.

The production of gold in Wyoming in 1911 showed a material increase over that of 1910. The yield of silver, usually small and dependent on the output of copper ore, decreased. The tonnage of copper ore and concentrates combined showed a considerable decrease for copper-bearing smelting tonnage, and the yield of copper decreased heavily. The copper yield, usually of chief importance in this State, represented only 43 per cent of the State total in 1911, gold representing 56 per cent of the value.

The Atlantic City (or South Pass) district was the chief precious metal district in Wyoming in 1911. An appreciable quantity of placer gold was recovered from various sluicing operations in this district.

Several carloads of copper ore from Hartville and a car of copper ore from Saratoga were shipped to smelters. Experiments at the Rambler mill, near Holmes, resulted in the output of some platiniferous copper concentrates. There was a considerable tonnage of crude copper ore shipped from this mine in 1910, and the decrease

in copper yield for 1911 is attributed to lessened operations at this mine. Small lots of placer gold were recovered at Holmes, Encampment, and Hurricane.

An interesting feature about the coal mined at Cambria, Wyo., is that it is claimed to be gold bearing. Some of the coal has contained as much as $2 per ton in gold, and the coal was sold for only $1.50 per ton. When coke made at Cambria was selling for $3.50 per ton samples were taken from 31 cars during a period of 3 weeks and assayed. The samples showed an average of $2.46 per ton in gold and $0.28 in silver. The explanation offered for the presence of gold in this coal is that the sands which submerged the old peat bog and now form the roof of the coal bed were derived in part from gold-bearing alluvium. While the sand was being deposited the gold worked down into the underlying bog and is now found in the coal.

This is one of the interesting statements made in a report published by the Geological Survey. It is Bulletin 499, entitled "Coal near the Black Hills, Wyoming-South Dakota," by R. W. Stone, and may be had free on request to the United States Geological Survey, Washington, D. C.

SOUTHERN APPALACHIAN STATES.

The combined gold output of Alabama, Georgia, North Carolina, South Carolina, Tennessee, and Virginia in 1911 was about $20,000 below that of 1910. North Carolina maintained the lead in gold production, with an output of nearly half the total of all these States, followed by Georgia and South Carolina in order named. The output of the Southern States was mainly from gold-quartz ores, especially from North Carolina, and placers, mainly from Georgia.

The silver output of the Southern Appalachian States increased in 1911 and was almost entirely from the refining of copper produced from the copper ores of the Ducktown district, Tennessee, the small remainder coming chiefly from refining of gold bullion from gold-quartz ores, particularly of North Carolina, and from placers, mainly from Georgia.

APPROXIMATE GOLD PRODUCT.

Approximate gold product of the United States during the calendar year 1911.

Items.		Weight.
		Fine ounces.
Domestic product of fine bars reported by private refineries		2,968,160
Unrefined gold of domestic production deposited at the mints and assay offices		1,695,946
	Fine ounces.	
Domestic gold contained in ores, copper matte., etc., exported for reduction	24,152	
Less Mexican ores exported in matte from El Paso smelter	1,203	
		22,949
Total domestic product for 1911		4,687,055

Approximate disposition of the gold product of the United States during the calendar year 1911.

Items.		Weight.

[1] Includes 170,084 ounces of silver in placers.

[2] Includes 630,573 ounces of silver from zinc ores from Arizona, Colorado, Idaho, Montana, Nevada, and Utah. Includes 285,006 ounces of silver from copper-lead ores from Arizona, Colorado, Montana, Nevada, New Mexico, and Utah. Includes 2,460,152 ounces of silver from lead-zinc ores from Arizona, Colorado Idaho, Nevada, New Mexico, Utah, and Washington

[3] Includes gold recovered by dredges in Georgia, Oregon, and South Dakota.

DREDGE PRODUCTION.

The possible production of gold by dredges has been the subject of much discussion during the past 10 years, and some very sensational predictions have been made of the probable yield from this source. The production by dredges in the United States has been mainly in California and Alaska. The total yield during the last six years has been as follows:

Dredge output of gold.

TOTAL PRODUCTION OF GOLD IN THE APPALACHIAN STATES.

The following statement exhibits the quantity of gold received from those districts of the United States which have thus far produced it in quantities sufficient to attract notice, commencing with the year 1824. Up to that period it had been received at the mint only from North Carolina, from which quarter gold was first transmitted for coinage in the year 1804. During the interval, however, from 1804 to 1823, inclusive, the amount had not exceeded$2,500 yearly.

Calendar years.	Virginia.	North Carolina.	South Carolina.	Georgia.	Alabama.	Tennessee.	Total.
1804–1823		[1] $47,000					$47,000
1824		5,000					5,000
1825		17,000					17,000

MINE PRODUCTION.

The production of gold and silver from the mines of the United States since 1792 is shown in the following table.

The commercial value of the silver product is reckoned at the average yearly market price of silver on the New York market.

Product of gold and silver in the United States from 1792 to 1844 and annually since.

[The estimate for 1792–1873 is by R. W. Raymond, commissioner, and since by Director of the Mint.]

Calendar years.	Gold.		Silver.

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1911.

Among the purveyors of gold and silver bars for use in the industrial arts the United States mint at Philadelphia and the United States assay office at New York hold the foremost place; consequently, the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1911, with the class of material from which they were made:

Gold and silver bars issued by the Government institutions and manufactured by private refineries for use in the industrial arts during the calendar year 1911.

Materials used.	Value of gold issued by—			Weight of silver issued by—		
	Government institutions.	Private refineries.	Total.	Government institutions.	Private refineries.	Total.
	Dollars.	*Dollars.*	*Dollars.*	*Fine ounces.*	*Fine ounces.*	*Fine ounces.*
Bullion, old plate, etc	35,147,183	2,187,109	37,334,292	1,990,352	29,945,989	31,936,341
United States coin		166,666	166,666		7,000	7,000
Total	35,147,183	2,353,775	37,500,958	1,990,352	29,952,989	31,943,341

Estimating that the total amount of gold coin used in the arts during the calendar year 1911 has been $3,500,000, and silver coin $100,000, equivalent to 77,344 fine ounces, the total industrial consumption of gold was $40,834,292, and of silver, 32,013,685 fine ounces.

In order to arrive at the net consumption in the industrial arts, there should be deducted from the foregoing totals the amount of old jewelry, plate, etc., included in the private refinery returns, and also the same class of material returned to coinage use. In the year 1911 these amounts aggregated $7,731,238 in gold, and 1,480,582 fine ounces in silver, which leaves $33,103,054 of gold and 30,533,103 fine ounces of silver as the net amount of new bullion devoted to industrial use.

The following table gives the amounts and classification of the gold and silver used in the industrial arts in the United States since 1880:

Gold and silver bars furnished for use in manufactures and the arts and classification of the material used, by calendar years, since 1880.

GOLD.

THE WORLD'S INDUSTRIAL CONSUMPTION.

Since 1893 this bureau has endeavored to obtain, through the United States representatives abroad, official estimates from the various countries of the world of the consumption of precious metals in the arts and industries.

The results of the inquiries, though at times incomplete, are considered sufficient to warrant efforts.

The interrogatories sent out by this bureau for 1911 were as follows:

What was the estimated weight of fine gold and silver used in the industrial arts during the calendar year 1911? What amount of gold and silver in the form of old plate, jewelry, and other old material was returned from use in the industrial arts to monetary use by being deposited at the mint for coinage?

The following replies from all the countries reporting as to their consumption of precious metals in the arts during 1911 are submitted:

Australasia.—A communication from Australia states that the amount of gold and silver used in the arts during 1911 was: Gold, $1,837,800, from which a deduction of 25 per cent is made for old material; and silver, 60,200 fine ounces. The amount of gold and silver issued from the Melbourne mint to jewelers and others for industrial purposes was for gold 7,038 standard ounces, and silver 30,103 fine ounces.

Austria.—The United States consul general at Vienna, Austria, reports that the amount of gold used in the arts during 1911 was 5,134 kilograms in domestic coin and 58,760 kilograms of silver. The gold represents 165,058 fine ounces, of a value of $3,412,052, and the silver 1,889,134 fine ounces, which, after deducting 25 per cent for old material, leaves 1,416,850 fine ounces for new material.

Hungary.—In the absence of any official information regarding the industrial consumption for 1911 the estimate for 1910 is repeated for 1911, viz, 4,293.53 kilograms, or 138,037 fine ounces of gold, and 21,121.66 kilograms, or 679,061 fine ounces of silver. The gold is valued at $2,853,482, and the silver is equivalent to 679,061 fine ounces.

The net value of the gold used by Austria and Hungary is estimated at the same figures given last year, viz, $5,750,000, and the fine ounces of silver, 2,095,911.

Canada.—The American consul general at Ottawa states that there were 97,500 fine ounces of gold and 718,000 ounces of silver used in the arts during 1911. The value of the gold is $2,015,500. The following table is submitted as showing the consumption of gold and silver in industrial arts during 1911:

Material.	Gold.		Silver.
	Weight.	Value.	
	Fine ounces.		*Ounces.*
New bullion (0.999 fine)	95,000	$1,900,000	718,000
Old plate, jewelry, etc.[1]	1,550	31,000	[2]
Foreign coin [1]	2,500	50,000	.....
Total	99,050	1,981,000	718,000

[1] Approximate.

[2] Negligible quantity.

NOTE.—The Director of the Mint states that he feels there is more accuracy in the bullion, fine, than in the scrap in the second and third items under the head of gold.

China.—Foochow customs district: The United States vice consul in charge at Foochow reports that the new material used in the arts during the year was 193 pounds of gold and 306 pounds of silver.

Muckden customs district: The United States consul general states that there were used in the arts 5,468 fine ounces of gold and 200,504 fine ounces of silver.

The Swatow district says that owing to local disturbances gold and silver smiths have temporarily closed shops; therefore no expert opinion is obtainable.

Shanghai customs district: The American vice consul general in charge at Shanghai states that there were consumed in the industrial arts during 1911, 40,500 ounces of gold and 193,500 ounces of silver.

As returns have been received from only three provinces of China, the estimate for that country is included in the estimate for the total Asiatic countries in the table at the end of this article.

Finland.—The United States Ambassador at St. Petersburg reports that the amount of gold used in the arts was 8,624 fine ounces, and silver, 7,664 fine ounces; deducting 25 per cent for old material, leaves for the new material used 6,468 ounces of gold, valued at $133,705, and 5,748 ounces for the silver.

France.—The United States consul general at Paris reports that the director of the French mint states that the quantity of silver used in the industrial arts during 1911 was 352,000 kilograms, and gold, 39,500 kilograms; deducting 33⅓ per cent for old material, gives 7,544,534 fine ounces for the silver and 846,617 ounces for the gold ($17,501,126) for the new material.

Hon. Myron T. Herrick, ambassador extraordinary and minister plenipotentiary for the United States at Paris, sends us the following information, officially prepared, regarding the production and industrial consumption of gold and silver in France in 1910:

REPORT IN REPLY TO THE QUESTIONS CONCERNING THE STATISTICS OF GOLD AND SILVER IN FRANCE IN 1910.

It is quite difficult to reply in a positive manner to the questions that have been submitted on this subject; we can only arrive at approximations and in certain cases at estimates which, although based on plausible hypotheses, could not serve as a basis for working out exact statistics, such at least as the questions appear to demand.

To know how much of the annual production of the mines, how much gold and silver metal has been employed for minting purposes, and how much for industrial (we speak here of new metals), it is sufficient to deduct from the general statistics of the world's mining production (statistics published in London) the total for France and other countries of the money coined.

INDUSTRIAL CONSUMPTION.

If one wishes to know exactly how much new metal and how much melted down metal enter the composition of the consumption of precious metal in France, it is impossible to answer this question. The statistics published by the ministry of finance give only the valuation of the total consumption, and the difference between the new metal and that melted down and refined is practically impossible to determine on exact and scientific bases.

The quasi impossibility of giving this information results from the fact that the French jewelers as well as the goldsmiths make use not only of new metal but also make use of metal coming from the melting of their wastes and leavings. This metal melted down is rarely enough employed by them, it is more often sold by them to smelters of gold and silver, who mix it and make of it ingots that they resell to commerce.

It is almost impossible to arrive at a precise result; however, a very serious inquiry made of the principal firms occupying themselves with the melting, sale, and purchase

of leavings, fallings, and filings in France, has permitted us to reach an evaluation of one-third of old metal for two-thirds of new metals.

Thus, if one turns back to these statistics of 1911, there has been sold as silver the following total:

Silver:	Kilograms.
First title	78,600
Second title	34,800
Virgin	66,000
Compound	34,700
Total	214,100

The old silver can be estimated at one-third of this weight, or old silver melted down 71,366 kilograms.

	Kilograms.
Fine gold	22,700
Gold at 1,000	700
Alloyed gold	24
Prepared gold	3,700
Total	27,124

The old gold melted down can be estimated at one-third, or 9,041 kilograms.

Platinum.—There has been sold 700 kilograms of platinum. The old platinum can then be estimated at one-third of this weight, or 233 kilograms.

It is only a question here, for the above figures, of the quantities of metal sold by the merchants and smelters of gold and silver in France.

As to how much of the metal is diverted from monetary to industrial use, in our calculation we include either domestic or foreign coin melted for use in the arts and manufactures.

The president of the Syndical Chamber of Jewelry Manufacturers in France assures us that the quantity of money melted to be employed in the arts is practically nonexistent, the quantity being so infinitesimal that there is, for France, no need to occupy one's self with it.

We regret not to be able to give exact information, but we believe that it is not possible in the actual state of these statistics to ascertain the details that have been pointed out to us.

Germany.—No official information has been received from Germany relating to the uses of the precious metals in the industries since 1907, and in the absence of later figures the 1907 figures are repeated in the table for 1911.

Great Britain.—"Dr. T. K. Rose, chemist and assayer of the royal mint in London, reports that the gold and silver wares presented for assay and stamping from July 1, 1910, to June 30, 1911, at Birmingham, Sheffield, and Chester amounted to 501,547 ounces for gold and 6,812,196 ounces for silver." The report also states that "the amount of fine gold contained in these wares was 262,489 ounces." Assuming that 25 per cent of this amount was from old material, the value of the new material is $4,069,600. Deducting 25 per cent for old material, of the silver and assuming that it is 0.925 fine (British standard), gives 4,725,961 ounces, fine.

These are the actual figures showing the amounts contained in wares presented to Government institutions for assaying and stamping, but are known to be far from the total amounts consumed in the arts during the calendar year 1911.

It will be seen that practically no recent data exists upon which to base an estimate for the United Kingdom. It is to be presumed, however, that this line of industry in Great Britain has not fallen behind the development in France and Germany and that it bears some relation to that of the United States. Having regard for the figures made for these countries, the industrial consumption of gold in the United Kingdom for 1911 is estimated arbitrarily at $18,000,000 and at 12,000,000 fine ounces for silver.

British India.—The under secretary to the Government of India states regarding the amount of gold and silver used in the arts in India yearly: "It is regretted that no information is at present available. Special difficulties are experienced in this country in procuring the information, as the trade is organized on extremely petty lines. The large importation of gold in the last two years, however, has directed special attention to the subject and it is possible that the inquiries we are making may add to our information before the statistics of the current year are prepared, though no very definite or quantitative results can be expected." It is understood that the uncoined gold imported into India is all used in the industrial arts. The amount imported in 1911 was £8,943,546 ($43,523,767). There are no available figures showing the amount of silver used in the industrial arts in India. Usually the imports of silver bullion, minus the amount used in coinage, is taken as the amount consumed in the arts. The imports of silver bullion were 74,930,977 ounces and the exports 33,241,396 ounces. The net imports were 41,689,581 fine ounces.

All of the coinage during the year was recoinage.

Italy.—In the absence of any official figures for 1911 the figures for 1907 are repeated, viz, $3,000,000 for gold and 2,028,400 fine ounces for silver.

There are no sure elements to answer this question, as in Italy free regime is in force for working metals.

Madagascar.—The American consul at Tamatave reports that there were used in the industrial arts 804.17 ounces of gold (new material) and 596.96 ounces of foreign gold coin. The value ($28,964) represents the gold industrial consumption. No silver is reported.

Netherlands.—The American minister at The Hague reports that there were used 32,665 ounces of gold and 367,412 ounces of silver, old plate, jewelry, etc., domestic and foreign coin. Deducting 25 per cent for old material, the gold value would be $506,434, and the silver 275,560 fine ounces.

Portugal and Spain.—Portugal used in the arts 4,575.7399 kilograms of gold and 16,191.6416 kilograms of silver.

Neither the mint officials nor those of the Bank of Spain would venture an opinion as to the amount consumed in industrial arts in Spain, as there are absolutely no statistics upon which it might be based. The figures for Portugal are used for the net consumption of new material by Portugal and Spain.

Russia.—The American ambassador at St. Petersburg reports that there were used in the arts 691.4 poods of gold and 10,941.3 poods of silver. (Pood is a weight of 40 Russian pounds, equaling 16.380496 kilograms.) This weight represents 364,122 ounces of gold and 5,762,182 ounces of silver. Deducting 25 per cent for old material, gives for the new material used gold $5,645,310, silver 4,321,637 fine ounces. There were further produced for testing and stamping 65,971 gold and 163,659 silver watches.

Sweden.—The consul general at Stockholm states that the amount of gold and silver used in the arts in Sweden in 1911 was 1,650 pounds of gold and 15,400 pounds of silver. The weight of gold is equivalent to 19,800 ounces, valued at $409,302, and the silver to 184,800 fine ounces.

Switzerland.—The amount of gold and silver reported as having been used for industrial purposes in Switzerland during 1911 was valued at 39,000,000 francs for the gold and 5,000,000 francs for silver, equivalent in United States money to $7,527,000 for the gold and $965,000 for the silver, representing 1,787,037 fine ounces, as per the following:

	Francs.
No statistics available, but gold bullion was imported during 1911 to the value of	50,000,000
Less gold coin melted	8,000,000
	42,000,000
Less gold bullion exported	3,000,000
Leaves for industrial purposes during 1911	39,000,000

The same calculation for silver bullion leaves 5,000,000 francs for industrial purposes during 1911.

Southeastern Europe.—Practically no information is available for Turkey, Bulgaria, Roumania, and the smaller Balkan States. A communication was received from the director of the mint at Constantinople which reads as follows:

The actual quantities of gold and silver used in this country for industrial purposes are not known, because the stamping of gold has not yet been effected, while silver articles are supervised only in part. The amounts of silver checked and stamped as the mint are as follows:

	Drams.
1908	1,322,327
1909	1,588,635
1910	1,763,173
1911	1,793,108
1912 (to Oct. 27)	837,587

The dram equals 3.207362 grams.

The imperial mint does not supply gold or silver to gold and silver smiths.

There is no Government office in the Ottoman Empire charged with the function of special guarantee, but the mint exercises this duty. At present only silver articles are stamped, the charge being 4 paras (0.0044) per dram. The standard adopted for silver goods is 900 F 10.

In addition to this, everyone has a right to have a gold article verified at a charge of 15 piasters (3 francs or $0.58) and a silver article at a charge of 5 piasters (1 franc or $0.193).

The test of silver is made by dry or wet methods, according to Gay-Lussac or Charpentier and Volhard.

There is but slight basis for an estimate, but these countries have a population of over 13,000,000, with important cities and no inconsiderable wealth. A provisional estimate is made of $500,000 gold and 800,000 ounces of silver.

Mexico, Central and South America.—Returns from a few of these States have been received, but in the absence of full returns the estimate for 1910 is repeated for 1911.

Asiatic countries.—An estimate was made last year for these countries based upon the net absorption of the metals less the amounts known to have been used in coinage. The estimate is repeated for 1911, viz, gold, $50,000,000; silver, 66,371,100 fine ounces.

The following table is submitted as a rough estimate of the world's consumption of the precious metals in the industrial arts for the year 1911:

Country.	Gold.	Silver.
		Fine ounces.
United States	$31,439,300	29,897,000
Germany	15,536,000	10,000,000
France	17,501,100	7,544,500
United Kingdom	18,000,000	12,000,000
Switzerland	7,527,000	1,787,000
Italy	3,000,000	2,028,400
Austria-Hungary	5,750,000	2,095,900
Russia	5,645,300	4,321,600
Belgium	700,000	4,013,200
Netherlands	506,400	275,600
Denmark	250,000	200,000
Norway	200,000	75,000
Sweden	409,300	184,800
Finland	133,700	5,800
Portugal and Spain	2,280,800	390,400
Africa and Madagascar	500,000	.....
Southeastern Europe	500,000	800,000
Australasia	1,378,300	60,200
Canada	2,015,500	718,000
Mexico, Central and South America	1,000,000	1,000,000
Total	114,272,700	77,397,400
Asia	50,000,000	66,371,100
Total	164,272,700	143,768,500

EXPORTS OF SILVER TO THE EAST.

The exports of silver from London to India, China, and the Straits since 1881 have been as follows:

Calendar years.	India.	China.	Straits.	Total.
1881	$12,375,612	$3,898,860	$3,577,729	$19,852,201
1882	18,604,945	1,584,318	7,354,255	27,543,518
1883	18,040,140	4,212,574	11,189,631	33,442,345
1884	26,073,909	5,018,714	8,136,097	39,228,720
1885	30,913,667	3,160,315	3,108,146	37,182,128
1886	21,159,591	1,769,425	2,892,064	25,821,080
1887	19,798,328	1,427,179	2,766,946	23,992,453
1888	21,162,116	1,153,002	3,219,321	25,534,439
1889	28,392,786	2,731,861	8,181,141	39,305,788
1890	35,673,177	1,284,498	4,441,197	41,398,872
1891	21,717,992	1,177,620	10,754,800	33,650,412
1892	35,180,897	719,668	18,622,825	54,523,390
1893	34,319,877	11,635,650	7,847,295	53,802,822
1894	24,391,351	13,279,564	6,002,565	43,673,480
1895	17,638,610	8,042,003	3,668,772	29,349,385
1896	23,874,942	3,602,597	4,025,257	31,502,796
1897	28,250,305	2,721,522	3,597,331	34,569,158
1898	20,984,625	3,721,656	1,971,443	26,677,724
1899	25,597,912	6,929,117	1,396,223	33,923,252
1900	37,916,065	11,252,496	3,922,477	53,091,038
1901	36,987,395	4,101,764	3,150,630	44,239,789
1902	30,987,195	991,793	5,363,710	37,342,698
1903	36,125,636	1,508,907	3,999,674	41,634,217

NOTE.—The quantities in the column "net imports" for both gold and silver for the years 1873–74 to 1886–87 are estimated only, deduced from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

STOCK OF MONEY IN THE UNITED STATES.

On December 31, 1911, the stock of domestic coin in the United States was $2,350,199,483, as shown by the following official table:

Item.	Gold.	Silver.	Total.
Estimated stock of coin Dec. 31, 1910	$1,589,309,137	$725,819,460	$2,315,128,597
Net imports, United States coin, calendar year 1911		2,099,385	2,099,385
United States coin returned in transports from the Philippine Islands not recorded at the customhouse, calendar year 1911		[1] 11,578	11,578
Coinage, calendar year 1911	56,176,823	6,457,302	62,634,125
Total	1,645,485,960	734,387,725	2,379,873,685
Less: United States coin melted for recoinage (face value), calendar year 1911	3,275,721	627,218	3,902,939
United States coin estimated to have been used in the arts, calendar year 1911	3,500,000	100,000	3,600,000
Net exports, United States coin, calendar year 1911	22,171,263		22,171,263
Total	28,946,984	727,218	29,674,202
Estimated stock of coin in United States, Dec. 31, 1911	1,616,538,976	733,660,507	2,350,199,483

[1] Of this amount $3,179 were in one dollar pieces.

NOTE.—The number of standard silver dollars coined to Dec. 31, 1911, was 570,272,610, which, added to the Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 571,419,469. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000; and since 1883 the number melted has been 190,284 (see Report of the Director of the Mint), and the number of Hawaiian dollars melted to Dec. 31, 1911, has been 454,818, a total disposition of 3,140,102, leaving in the United States on Dec. 31, 1911, 568,279,367 standard silver dollars and $165,381,140 in subsidiary silver coins.

The value of the gold and silver bullion held by the Government institutions on December 31, 1911, was as follows:

Gold and silver bullion in the mints and assay offices on Dec. 31, 1911.

Bullion.	Value.
Gold	$183,088,870
Silver (cost)	2,230,107
Total	185,318,977

The total metallic stock in the United States was as follows:

Metallic stock in the United States on Dec. 31, 1911.

Bullion and coin.	Value.
Gold	$1,799,627,846
Silver	735,890,614
Total	2,535,518,460

The location of the stock of metallic and paper money in the United States on December 31, 1911, was as follows:

Money.	In Treasury.	Outside of Treasury.	Total.
Metallic:			
Gold bullion	$183,088,870	.....	$183,088,870
Silver bullion	2,230,107	.....	2,230,107

THE COURSE OF SILVER.

The following review of the London market for silver during the calendar year 1911 is from the annual circular issued by Messrs. Pixley & Abell, bullion brokers of London, England.

Fluctuations in quotations of spot silver during the past year have been rather smaller than in 1910. The highest quotation of the year was 26⅛d. on November 23, and the lowest 23$\frac{11}{16}$d. on February 9, a range of 2$\frac{7}{16}$d. against 3$\frac{1}{16}$d. in 1910, 1$\frac{13}{16}$d. in 1909, 5d. in 1908, and 8¼d. in 1907.

The average price of spot silver for the year which has just closed is 24$\frac{19}{32}$d. against 24$\frac{11}{16}$d. in 1910, 23$\frac{11}{16}$d. (the lowest on record) in 1909, 24$\frac{13}{32}$d. in 1908, and 30$\frac{3}{16}$d. in 1907. On January 1 the quotation was 25¼d., and that of December 30, 25$\frac{1}{16}$d.

The very large amount of silver under the control of the Indian group of speculators has again been a dominating influence on the market throughout the year which opened with a steady tone. Prices were maintained at about 25¼d., China giving some support to the market until about the middle of January, when an outbreak of plague in Manchuria and northern China interfered with the export of soya beans and other produce, whilst at the same time there was a brisk business doing in imports in Shanghai and other China ports. China became a seller on this market, which at once assumed a weak tone, and quotations declined steadily until February 9, when 23$\frac{11}{16}$d., the lowest price of the year, was quoted. The Indian bazaars, which had been buying moderately, now began to support the market, there being in some quarters an unfounded apprehension lest the import duty on silver into India should again be increased. At the same time the plague in Manchuria showed signs of abating, so that the export of beans was resumed on a normal scale. China also became a buyer, and quotations steadily improved to about 24¼d. early in March. From this point until the middle of July fluctuations were small, quotations being steady in the neighborhood of 24⅛d. with a short-lived upward movement during the latter part of April which carried the price up to 24$\frac{15}{16}$d.

At this time it was anticipated that the crops in India would be satisfactory, as the monsoon at the opening had been favorable, but during July a spell of dry weather, which lasted for some weeks, set in, and as the prospect of India securing good average crops became improbable, Indian and other speculators began to sell silver, and the market sagged until 23$\frac{15}{16}$d. was touched. From this point it recovered slightly, and remained between 24d. and 24$\frac{5}{16}$d. until the outbreak of the rebellion in China in October. A demand for dollars in the interior of China caused large purchases of silver to be made in London and India, which, after being coined into British dollars in the Bombay mint, were sent on to Hongkong. At about the same time there were satisfactory late rains in India, which greatly improved the prospects of the crops and removed all fear of a famine. This with the demand from China lifted the price of spot silver to 25d., at about which figure it remained until early in November. Finding China a good buyer of spot silver, the Indian speculators, who have been large holders of silver throughout the year, then began to take delivery of their contracts as they came due, and the grip which they had on the market was sharply felt. Those who had sold "short"

found great difficulty in securing the silver necessary to cover their contracts, and as the "Bear" account open in London was undoubtedly very large, there was a further sharp rise and as high as 26⅛d. was quoted for spot silver, the forward quotation at one time being as much as ¾d. below that of spot. This tempting premium caused some shipments from China to be made to this market, whilst America sent increased supplies, silver, which in normal times finds its way from San Francisco to China, being diverted to this country. These larger supplies, whilst consumers as far as possible delayed their purchases, served to relieve the strain, and the premium on spot gradually decreased until the middle of December, when the spot quotation declined to about 25½d., whilst forward was ⅛d. to $\frac{3}{16}$d. lower. During these weeks China had been a moderate buyer of forward silver, but its purchases were never very large. During the third week of December the market sagged further, whilst at the same time the Indian speculators stopped taking delivery of their contracts with the result that the premium on spot silver rapidly disappeared, and on the 20th of the month was again quoted below forward as it had been throughout the year until the squeeze began in November. At this date the quotation had fallen to 25⅛d., supplies of spot silver being more than ample, and the market remained at about this figure to the end of the year, China continuing to buy steadily though India was selling.

The popularity of silver as an investment in India seems to be waning as the following figures, published by the commercial intelligence department of the Government of India, indicate. After deducting the amounts reexported from the amounts imported it appears that India has retained for home consumption during the year ending on October 31 last, 44,000,000 ounces against 56,400,000 ounces during the year ending October 31, 1910, and 60,843,000 ounces during the year ending October 31, 1909. How far these decreases are to be attributed to the increase in the import duty, which was made last year, and how much to larger investments in gold, is difficult to determine. The poorer classes probably find it impossible to invest their small savings in anything but silver, but the wealthier classes are possibly finding gold a more convenient and steadier holding than silver. The stock in Bombay which amounted to 20,000 bars on January 1 of this year was reduced to 13,400 bars on October 31, and now amounts to 13,200 bars. The prolonged period of dry weather during the summer did great damage to the crops, but fortunately the autumn rains were good and prevented the disaster of a famine. The demand for silver rupees has been smaller than last year, and the Indian Government has again made no purchases of silver, whilst it seems probable that it will not be obliged to buy for coinage this season, though the Burmah rice crop has yet to be dealt with. The total holdings of silver rupees in the treasury is now 25¾ crores (at the exchange of 16d. to the rupee equaling £17,166,009) against 32 crores (£21,400,000) at the end of 1910 and 38½ crores (£25,833,000) at the end of 1909. The holdings of silver in the gold standard reserve which at the end of 1910 amounted to 3¾ crores now amounts to 3 crores.

The past year has been one of disaster and disturbance in China. The plague in Manchuria and north China, the floods in the Yangtse Valley and in Manchuria which have caused severe damage to the

bean crop, and during the closing months of the year the rebellion which has spread over the whole of the Empire, have all been heavy blows to the immediate prosperity of this country. Still China has withstood these buffets of fate better than could have been expected and has again been an important buyer, whilst if the negotiations now in progress for the political settlement of the country result in a stable form of government resting on a popular basis, it is very probable that the material prospects of the Empire will steadily improve and that the awakening of China will be more rapid than could have been deemed possible a few weeks since. A larger field for the use of silver should be opened up, especially if the reform of the currency which had been commenced, but which has been in abeyance during the rebellion, should be energetically taken in hand by the new Government, as is very probable. A large sum of money will be required to carry through this reform of the currency and for this and other purposes a loan of £10,000,000, of which £6,000,000 was to be devoted to currency reform in China, and £2,000,000 to that of Manchuria, had been arranged for with a group of British, French, German, and American banks. The negotiations for this loan will in all probability be renewed with the new Government as soon as it is firmly established. The Peking Government had during the year secured a stock of silver from various sources, which had been coined into dollars as a commencement of the reform of the currency as arranged with the above-mentioned foreign powers. These dollars, which are to be the basis of the new currency system of the Empire, are to weigh 414½ grains, with a fineness of 0.900. We understand that it had not been intended to issue these new dollars, of which a few specimens have been received here, until a much larger stock had been acquired and also until all the arrangements for the change had been completed, but the scarcity of currency owing to the rebellion, has forced the Government to issue them recently.

Shipments of silver bars to India and China have amounted to £9,835,000 in value, being an increase of £1,165,000 over the amount shipped last year. No figures are yet available to show how this amount was divided between the two countries. China also received £1,900,000 from San Francisco against £1,400,000 in 1910, whilst in March $10,000,000 from Indo-China were sent to Shanghai.

During this year the Bombay mint has coined a considerable quantity of British dollars for use in Hongkong, but no official statement of the amount has as yet been published. Stocks of bar silver and sycee in Shanghai show a remarkable increase during the year as, according to the latest figures available, there are now in Shanghai 243 lacs of taels in sycee and 1,590 bars with a sterling value of about £3,300,000. There is also a stock of nearly 9,000,000 Mexican dollars. At the beginning of the year the holdings were 123 lacs of taels in sycee and 6,370 bars, with a value of £2,302,000.

Purchases by Russia and Germany have again been important, the former country having taken £1,752,647 from this market and the latter £1,725,335 against £1,110,000 and £1,257,780 respectively in 1910. Shipments to France have been £940,283 and to Brazil £216,136 against £533,740 and £53,000 last year. British silver coin to the value of £1,751,896, of which £1,069,652 has gone to West Africa, has been exported, against £1,406,500 in 1910.

The world's production of silver seems to be maintained though no exact figures for a later year than 1909 are yet obtainable. In that year the total production was 211,215,633 fine ounces, whilst in 1908 it was 203,236,861 fine ounces. The production of Canada, which has of late years been steadily increasing, owing to the output of the Cobalt mines, is estimated to amount this year to about 33,000,000 ounces. The production of Canada in 1909 has been officially stated as 27,878,590 fine ounces, whilst in 1910 it was estimated to amount to nearly 31,000,000 fine ounces.

The total value of the imports of silver bars into this country during the year amounts to £13,948,960, against £12,660,000 in 1910. In addition silver ores valued at £1,700,000 have been imported, whilst last year the value of these ores was £1,862,333.

At the close of the year the stock of silver in London is estimated to amount to £1,900,000, whilst at the beginning of the year it was about £2,000,000, which was probably considerably underestimated.

Highest, lowest, and average price of silver bullion and value of a fine ounce each month during the calendar year 1911.

Month.	Highest.	Lowest.	Average price per ounce, British standard, 0.925 fine.	Equivalent value of a fine ounce with exchange at par, $4.8665.	Average monthly price at New York exchange on London.	Equivalent value of a fine ounce based on average monthly price and average rate of exchange.	Average monthly New York price of fine bar silver.

WORLD'S PRODUCTION.

The following table shows, by calendar years, the production and value of gold and silver in the world since 1860:

Production of gold and silver in the world since 1860.

[The annual production of 1860 to 1872 is obtained from 5-year period estimates, compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint.]

Calendar years.	Gold.		Silver.

WORLD'S COINAGE.

In the appendix to the report of the director on the operations of the mint service will be found a table revised from the latest information received, exhibiting the coinages of the various countries of the world during the calendar years 1909, 1910, and 1911.

While the figures in the following table represent, as accurately as the bureau has been able to ascertain, the total value of and the fine ounces consumed in the gold and silver coinage of the world since 1873, they do not accurately represent the value of the coinage from new material alone, but include the value of the recoinage of foreign and domestic coins and that derived from old material, plate, jewelry, etc., melted and used in coinage. Many foreign Governments in their reports to the bureau have failed to separate the values of the coinage derived from these various sources:

Coinage of gold and silver of the mints of the world for the calendar years since 1873.

Calendar years.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Coining value.
1873	12,462,890	$257,630,802	101,741,421	$131,544,464
1874	6,568,279	135,778,387	79,610,875	102,931,232
1875	9,480,892	195,987,428	92,747,118	119,915,467
1876	10,309,645	213,119,278	97,899,525	126,577,164
1877	9,753,196	201,616,466	88,449,796	114,359,332
1878	9,113,202	188,386,611	124,671,870	161,191,913
1879	4,390,167	90,752,811	81,124,555	104,888,313
1880	7,242,951	149,725,081	65,442,074	84,611,974

1911	18,002,444	372,143,555	117,237,838	148,156,282
Total	442,240,139	9,141,915,089	4,286,623,272	5,549,354,648

PRODUCTION OF GOLD AND SILVER IN FOREIGN COUNTRIES.

NORTH AMERICA.

British North America.

According to the figures furnished this bureau by the statistical department of mines, Ottawa, Canada, the production of gold and silver in British North America in 1911, by Provinces, was as follows:

Provinces.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
1911.				
Nova Scotia	7,781	$160,847	.....	.....
Quebec	613	12,672	18,435	$9,955
Ontario	2,062	42,625	30,540,754	16,492,007
Alberta	10	207	.....	.....
British Columbia	238,496	4,930,150	1,887,147	1,019,059
Yukon	224,197	4,634,563	112,708	60,862
Total	473,159	9,781,064	32,559,044	17,581,883

Smelter products shipped outside of Canada for refining were: Blister copper carrying gold and silver values 10,710 tons in 1911 as compared with 13,918 tons in 1910; copper matte carrying gold and silver values 11,320 tons in 1911 as against 11,519 tons in 1910; Bessemer nickel copper matte carrying small gold and silver values as well as metals of the platinum group 32,607 tons in 1911 as compared with 35,033 tons in 1910.

GOLD.

The gold production in 1911 is estimated as approximately $9,762,096, which, compared with the 1910 production, $10,205,835, shows a falling off of $443,739. The Yukon placer production in 1911 is estimated at $4,580,000 as against $4,550,000 in 1910, the total exports on which royalty was paid during the calendar year, according to the records of the Interior Department, being 277,430.97 ounces in 1911 and 275,472.51 ounces in 1910. The British Columbia production in 1911 was $4,989,524, of which the placer production, as estimated by the provincial mineralogist, was $468,000, smelter recoveries and bullion obtained from milling ores being valued at $4,521,524.

The production in Nova Scotia is estimated at $142,000, all from milling ores. In Quebec there was a small recovery from alluvial workings and a small content in the pyrite ores shipped, the total value of production being $12,443. Returns so far received from Ontario show a production of $37,929.

The exports of gold-bearing dust, nuggets, gold in ore, etc., in 1911 were valued at $7,493,523.

Gold was imported during 1911 in bars, blocks, ingots, etc., to the value of $924,233.

SILVER.

The silver production of Canada, which has been very rapidly increasing during the past few years, will probably show but little change in 1911.

Returns so far received appear to indicate a falling off of about 128,516 ounces. The total production of the year is estimated at 32,740,748 ounces valued at $17,452,128, of which 30,761,690 ounces were from Ontario, 1,910,323 ounces from British Columbia, 50,300 ounces from the Yukon, and 18,435 ounces from Quebec.

The production in Ontario was slightly greater than that of the previous year and in British Columbia a falling off of nearly half a million ounces is shown.

For British Columbia the figures represent the recovery as silver bullion or silver contained in smelter products, while for Ontario the figures represent the total silver content of ore and concentrates shipped less 5 per cent allowed for smelter losses, together with bullion shipments.

The total shipments of ore and concentrates from the Cobalt district and adjacent mines were about 16,234 tons, containing approximately 28,817,198 ounces in addition to which 3,334,052 ounces were shipped as bullion. The average silver content of ore and concentrates shipped was thus about 1,744 ounces or $929.62 per ton, as compared with an average of 867 ounces in 1910 and 840 ounces in 1909. The 1911 shipments were chiefly high-grade ore averaging over 3,400 ounces and concentrates averaging over 850 ounces.

The shipments in 1910 were 28,864 tons of ore containing 23,797,111 ounces of silver, or an average of 830 ounces per ton; 6,943 tons of concentrates containing 7,111,579 ounces or an average of 1,024 ounces per ton, and bullion containing 1,003,111 fine ounces.

The exports of silver in ore, etc., as reported by the customs department, were 31,216,725 ounces, valued at $15,807,366. There was also an importation of silver in bars, blocks, sheets, etc., valued at $847,645.

Quantities and values of gold and silver produced in British Columbia in 1909, 1910, and 1911.

Classification.	1909		1910		1911	
	Ounces.	Value.	Ounces.	Value.	Ounces.	Value.
Gold placer	.....	$477,000	.....	$540,000	.....	$426,000
Gold lode	238,224	4,294,090	267,701	5,533,380	228,617	4,725,513
Silver	2,532,742	1,239,270	2,450,241	1,245,016	1,892,364	958,293

Mexico.

The United States consul general at Mexico City has furnished this bureau the following figures relating to the gold and silver production of that country for the year 1911: Gold, 37,470 kilograms, valued at $49,959,946; silver, 2,461,745 kilograms, valued at $85,697,827. The values are in Mexican dollars, which reduced to United States money would be, gold, $24,880,053, representing 1,203,573 fine ounces; silver, $42,677,518, equivalent to 79,032,440 fine ounces.

Cuba.

The American minister at Habana reports that the gold production of Cuba for 1911 was estimated at $20,000, which represents 967 fine ounces.

Central American States.

The production of gold and silver in the Central American States is usually arrived at by assuming that their export figures represent their product. The following table is compiled, for the most part, from United States import figures:

States.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Value.
Costa Rica	44,039	$910,370	33,735	$18,217
Guatemala	997	20,600		
Honduras	17,548	362,750	1,171,439	632,577
Nicaragua	37,204	769,086	1,846	997
Panama	3,944	81,533	3,440	1,858
Salvador	58,826	1,216,041	1,287	695
Total	162,558	3,360,380	1,211,747	654,344

Costa Rica.

The American consul at San Jose reports that the gold production of Costa Rica during 1911 was valued at $910,370 and the silver production at $18,217 United States currency. The gold value represents 44,039 fine ounces and the silver 33,735 fine ounces.

Government statistics give only amount of gold and silver bullion exported during 1911. The two metals are combined in the total. The American mining companies in Costa Rica ship most all of their output to the United States in the form of unrefined gold and silver bullion. The total amount exported during 1911 is shown in official statistics to be $1,190,406 United States currency. This was nearly all taken from deep mines, and the relative proportion of gold and silver mined can be approximated from the information furnished this consulate by the largest mining enterprise in the country, the Abangarez gold fields of Costa Rica, which is to the effect that the production from their mines during 1911 was as follows:

Item.	Gold.		Silver.	
	Kilograms.	Value.	Kilograms.	Value.
From deep mines	1,369.89	[1] $910,369.99	1,059.06	[1] $18,216.55

[1] United States currency.

GUATEMALA.

The American consul general at Guatemala city reports that the gold product from placer mining in Guatemala in 1911 was very small. The import figures show that the United States received from Guatemala $20,600 worth of gold, which represents 996.525 fine ounces.

HONDURAS.

The American consul at Tegucigalpa reports that there were produced in Honduras 7,944 ounces of gold and 1,433,123 ounces of silver. He does not give the fineness of these ounces but states that this was not the total production. This is the production of the New York & Honduras Rosario Mining Co., and the only statistics available. This is the only mine working on a large scale.

The United States imported from Honduras during the year 1911 gold in bullion and ore valued at $362,750, representing 17,548 fine ounces, and silver ore and bullion valued at $632,577, which represents 1,171,439 fine ounces.

[By Consul Arminius T. Haeberle, Tegucigalpa, from Daily Consular and Trade Reports, Nov. 14, 1912.]

"The most noteworthy accomplishment in the mining history of Honduras during 1911 was the erection of the new works of the New York & Honduras Rosario Mining Co., equipped with the most modern machinery, a mill of 20 stamps, or four batteries of five 1,800-pound stamps. During the last year 35,813 tons of ore were treated, producing 1,395,137 ounces of silver and 8,103 ounces of gold.

"A gold mine was opened up near San Marcos de Colon, in the department of Choluteca. Although this mine, called 'Cacamuya,' is only worked on a comparatively small scale, it has promising features. During 1911 a 5-stamp mill that can handle 25 tons of ore per day was installed; 100 men are employed, and it is said that $180,000 worth of ore is in sight."

The following table shows the value of gold and silver exports from Honduras to the United States and Germany during the fiscal year 1911:

Metal.	United States.	Germany.
Gold bullion	$12,868	$25,884
Ores not specified	2,660	
Gold and silver (cyanides)	852,224	
Silver:		
Coined	146,400	
Bars	1,979	
Bullion	3,020	250

The following figures show the value of the gold and silver invoiced for shipment to the United States from the consular agency at Amapala during the calendar years 1910 and 1911:

Metals.	1910	1911
Gold bullion	$30,896	$3,275
Silver bullion	4,402	2,174
Silver coin	7,216	.....
Gold concentrates	4,848	101
Silver concentrates	1,224	.....
Copper concentrates	368	602
Gold cyanide precipitates	199,788	154,474
Silver cyanide precipitates	627,504	602,177

NICARAGUA.

As no returns have been received from the American minister at Nicaragua regarding the product of gold and silver in that State for 1911, the figures of the United States imports from that State are taken to represent the product, as follows:

Classification.	Gold.	Silver.
In ore and base bullion	$653,460	.....
In refined bullion	115,626	$997
Total	769,086	997

The equivalent of the gold is 37,204 fine ounces, and the silver 1,846 fine ounces.

PANAMA.

The American consul general at Panama reports that Panama produced during 1911, $81,533 worth of gold; this represents 3,944 fine ounces. No silver is reported, but the United States imported in ore and bullion $1,858 worth of silver, representing 3,440 fine ounces. The Darien Gold Mining Co. is the only mine operating in the country.

SALVADOR.

The American consul general at San Salvador reports that gold and silver production for 1911 was, gold 700,000, and silver 800,000, Salvador pesos; he also reports that these amounts were exported to the United States. According to the figures furnished this bureau by the United States Bureau of Statistics, Department of Commerce and Labor, the value of the gold imported was $1,216,041, equivalent to 58,826 fine ounces, and the silver $695, representing 1,287 fine ounces.

SOUTH AMERICA.

ARGENTINA.

The American consul general at Buenos Aires reports the gold product of Argentina for 1911 to have been valued at $48,484, and the silver at $30,373. The United States import figures show that the United States received from Argentina $288,975 in gold ore and bullion and $109,680 in silver ore and bullion; these values represent 13,979 fine ounces for the gold and 203,111 fine ounces for the silver.

Bolivia and Chile.

In estimating the product of gold and silver in Bolivia and Chile by this bureau, it has been the custom to accept the import figures from those countries by other countries plus their coinages as the probable production.

Bolivia is compelled to export through some port of Peru or Chile and consequently does not get credit for her exports, thus making it almost impossible to separate Bolivia's product from Chile's.

The following table gives the value of gold and silver bullion and ore imported by other countries from Bolivia and Chile, during the calendar year 1911:

Country.	Gold.	Silver.
Great Britain	$36,402	$1,243,661
United States	201,687	1,176,359
Total	238,089	2,420,020

The above values represent for the gold 11,517 fine ounces and for the silver 4,481,518 fine ounces.

The gold coinage of Chile was 340,735 pesos and the silver 373,873 pesos. The value of the gold coinage in United States money is $124,368, representing 6,016 fine ounces, and the actual quantity of silver consumed in the silver coinage was 73,525 fine ounces.

The exports of gold plus the coinage is $362,457, equivalent to 17,533 fine ounces, and the exports of silver plus the quantity consumed in coinage was 4,555,043 fine ounces.

Brazil.

The American minister at Petropolis did not report any gold or silver product for Brazil for 1911 but noted the exports of gold and silver bars as follows:

Gold in bars valued at 7,022,964 milreis and silver in bars valued at 46,703 milreis.

These values are equivalent to $3,834,538, representing 185,496 fine ounces for the gold and $25,500, representing 47,222 fine ounces for the silver.

Production of Gold in Brazil from 1906 to 1911.

[From Bulletin of the Pan American Union, March, 1912.]

The production of gold in Brazil during the last six years was as follows:

1906	$2,463,275	1910	$1,972,885
1907	2,047,490	1911 (9 months)	1,769,020
1908	2,256,665	Total	12,835,380
1909	2,326,045		

COLOMBIA.

No official information has been received from Colombia regarding the production of gold and silver during 1911. The exports of ore and bullion from Colombia were as follows:

Country.	Gold.	Silver.
United States	$1,588,955	$26,568
Great Britain	1,551,559	414,845
Germany	27,249	.....
Total	3,167,763	441,413

The export figures are accepted and used temporarily as the production for Colombia. The values represent 153,241 fine ounces for gold and 817,431 fine ounces for the silver.

ECUADOR.

The chargé d'affaires at Quito reports that the value of the gold produced during the year 1911 was $276,781, which represents 13,389 fine ounces. As no information has been received regarding the silver product the figures for 1909 are repeated for 1911, viz, 22,642 fine ounces of the commercial value of $12,227.

THE GUIANAS.

BRITISH GUIANA.

The American consul at Georgetown states that the value of the gold production of British Guiana for 1911 was $891,966, representing 43,149 fine ounces.

DUTCH GUIANA.

The American consul at Georgetown reports the value of the gold product of Dutch Guiana for 1911 was $523,421, representing 25,320 fine ounces.

FRENCH GUIANA.

The American consul general at Paris reports the value of the gold product for the year 1910 of French Guiana at $2,229,150, which represents 107,835 fine ounces. These figures are repeated for 1911.

PERU.

The American minister at Lima reports that the gold production for 1910 was 685,898 kilograms, valued at £93,687 (Peruvian). This value represents $455,928, in United States currency, equivalent to 22,055 fine ounces. The silver product weighed 217,296 kilograms, valued at £735,343 (Peruvian), which equals $3,578,546 commercial value, representing 6,626,930 fine ounces. This product is repeated for 1911.

Production of Gold and Silver in Peru During the Year 1910.

The refined weight of the gold produced by the mineral industry of Peru during the year 1910 was 685,898 kilograms, distributed in the following form:

	Kilograms.
Gold metal in bars, nuggets, dust, etc	277,948
Gold contained in bars of red copper	377,433
Gold contained in sulphides from lixiviation	14,093
Gold contained in crude copper	9,899
Gold contained in ore exported in gross	25,625
Gold contained in unrefined silver ingots	10,900
Total	715,898

The value of this product was 93,687 Peruvian pounds.

The refined weight of the silver produced by the mineral industry of Peru during the year 1910 was 217,296 kilograms, distributed thus:

	Kilograms.
Silver metal in bars and ingots	9,897
Silver contained in bars of red copper	66,516
Silver contained in crude copper	91,589
Silver contained in sulphides from lixiviation	15,987
Silver contained in bars of lead	2,908
Silver contained in ores exported in gross	30,324
Silver contained in copper matte	75
Total	217,296

The value of this production was 735,343 Peruvian pounds.

Lima, November 23, 1911.

S. D.
Jose Bravo.

A seal of the office of the director of the "Cuerpo de Ingenieros de Minas" (corps of mining engineers).

This is a true copy:

Althaus,
The Chief Clerk of Foreign Relations.

Uruguay.

The American consul at Montevideo reports that the gold product for 1911 was valued at $68,320. The Uruguayan dollar or peso is valued in United States currency at $1.034, which gives the value of the product in United States currency at $70,644, representing 3,422 fine ounces.

Venezuela.

The imports of gold and silver bullion and ore from Venezuela into Great Britain and the United States in 1911 were as follows:

Countries.	Gold.	Silver.
Great Britain	$340,118	$235,928
United States	24,708	.....
Total	364,826	235,928

These values represent for the gold 17,648 fine ounces and for the silver 436,903 fine ounces.

GOLD DISCOVERIES IN VENEZUELA.

[From Consular Agent W. Henderson, Ciudad Bolivar, Daily Consular and Trade Reports, May 25, 1912.]

Some very rich discoveries of gold have been made in the interior of Venezuela. One, in the municipality of El Callao not far from the Yuruari River, has been named Salva la Patria. It is calculated that

up to now (Apr. 15) this mine has yielded over 35,000 ounces of fine gold. During the month of March more than 6,000 ounces arrived at Ciudad Bolivar, and in the first two weeks of April the arrivals amounted to more than that, and the gold is coming in all the time.

Near the Caroni River and also in the Paragua district gold has been taken out, but not in such large quantities. The extremely low level of the water in the Caroni River caused a small island to appear in its course, and from this some gold was taken; but the river is now rising and has covered the island, so that work there has necessarily ceased.

The following statement appeared in a letter from a merchant in the interior, in which he writes about the Salva la Patria.

> There are two barrancas (shafts) dug by a group, which are simple pools of gold. I have seen eight pieces of more than 40 ounces each, all containing more gold than stone. With such barrancas the greatest disorder prevails; outside people get in at night and have taken out more gold than the owners themselves, who have had to fence up the approaches and have an armed guard at night.

Of course the Government will soon restore order, and one does not now hear of any disturbance. There are some 2,000 men digging or exploring around the Salva la Patria, and of course all are not successful. From what I understand, the gold is found in pockets or chimneys 50 to 100 feet down, and not in true veins.

Permits to work may be granted by the jefe civil (mayor) of the district; afterwards the titles must be taken out in Caracas from the National Government. The maximum permit is for 200 hectares 494.2 acres and for a term of 90 years.

It is a well-known fact that the interior of Venezuela, even where gold has been discovered, has up to now only been scratched over, and the larger part has not been explored, so these discoveries must continue. The gold now coming in is of a very fine grade, and as it is almost a free gold there is very little expense in getting it out; but on account of various difficulties and high freight rates, due to inadequate transportation facilities, a quartz mine has a hard time trying to make both ends meet.

The only companies now working are the Gold Fields of Venezuela, an English concern which has not paid any dividends, but which is bringing in machinery and securing surrounding mines at low prices; and a French company, which is opening La Experiencia mine, situated between El Callao and Guasipati, with shafts and galleries, and expects to begin working in a few months.

EUROPE.

AUSTRIA-HUNGARY.

The American consul general at Vienna reports that the gold product of Austria was 256 kilograms, valued at 789,291 crowns. This is equivalent to $160,226, representing 7,751 fine ounces, and the silver product was 49,463 kilograms, valued at 3,025,512 crowns ($614,179), representing 1,137,368 fine ounces.

In the absence of any official information relative to the production of Hungary in 1911 the figures for 1910, viz, gold, $2,024,898; silver, $216,758, are used.

The products of both Austria and Hungary are estimated to have been as follows:

Country.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Value.
Austria	7,751	$160,226	1,137,368	$614,179
Hungary	97,954	2,024,898	401,404	216,758
Total	105,705	2,185,124	1,538,772	830,937

FRANCE.

The American consul general at Paris reports that the gold production of France for 1910 was valued at 8,845,000 francs, equivalent to $1,707,085, representing 82,580 fine ounces. The silver product was valued at 1,995,000 francs, equivalent in United States money to $385,035, representing 713,028 fine ounces.

GERMANY.

No official information has been received from Germany relative to the production of the precious metals during 1911. The official figures for 1910 are repeated for 1911, viz, 3,042 fine ounces of gold of a value of $62,898, and 5,597,026 ounces of silver of the commercial value of $3,022,404.

GREAT BRITAIN.

The American ambassador at London reports that the gold product of Great Britain for 1910 was valued at £8,131, which is equivalent to $39,570, representing 1,914 fine ounces. The silver product was valued at £15,132, equivalent to $73,640, representing 136,370 fine ounces.

In the absence of any information relating to the production for 1911 the 1910 figures are repeated.

GREECE.

According to the Statistique de L'Industrie Minerale, Paris, 1910, the silver product of Greece for the year 1910 was valued at 2,470,000 francs, equal to $476,710, representing 882,796 fine ounces. The figures are repeated for 1911.

ITALY.

The American embassy at Rome reports that the product of gold for 1911 was valued at 171,900 lire ($33,177), representing 1,605 fine ounces. The silver product was valued at 2,793,945 lire ($539,231), representing 998,576 fine ounces. The colonial production (Colony of Eritrea) of gold for 1911 was valued at 60,000 lire ($11,580), representing 560 fine ounces.

The product of Italy and the Colony of Eritrea was for the year 1911, gold, 2,165 fine ounces, valued at $44,757, and silver, 998,576 fine ounces of a commercial value of $539,231.

MINING INDUSTRY IN ITALY IN 1911.

[By Charles Will Wright, in the Mining and Scientific Press, San Francisco, Jan. 6, 1912.]

* * * * * * *

LEAD AND ZINC.

Nearly all the mines producing lead also produce a considerable amount of zinc and conversely. All of the lead ores contain from 100 to 1,000 grams of silver per ton. The total lead output in 1910 was 36,540 tons, containing 80 per cent lead and 400 grams silver, and valued at 145 lire per ton, or a total value of 5,303,855 lire. This shows a decrease of 1,405 tons and 453,036 lire from that of 1909. The decrease was attributed to the unfavorable market price for lead. In 1911, on the other hand, the market has been more favorable, and exploration for lead ore has been energetically carried on at many of the mines, and the lead output materially increased. The lead ores consist of about two-thirds galena and one-third carbonate ore.

* * * * * * *

GOLD AND SILVER.

These metals are produced only in relatively small quantities in Italy. The total value of the gold output was but 58,730 lire, and this was derived principally from the Valbianca mine in the Province of Turin. The ore is pyritiferous quartz. The only productive silver mine in Italy is the Giovanni Bonn mine, near Monte Narba in Sardinia, and from this but 32 tons were produced in 1910, carrying 1.53 per cent silver, and valued at 42,400 lire, a decrease of 25,400 lire from 1909. The main silver production is derived from the lead mines already mentioned. No new discoveries of gold or silver deposits were made in 1911. * * *

NORWAY.

The American consul general's office at Christiania reports the silver product for the fiscal year 1910–11 to have been 9,195 kilograms, valued at 588,508.84 crowns, equivalent to $157,720, representing 292,075 fine ounces.

PORTUGAL.

The American minister at Lisbon reports that the production of gold in 1911 was 3.5907 kilograms, valued at $673 per kilogram. The United States value of a kilogram, $664.60, gives the product a valuation of $2,386, representing 115 fine ounces. The silver product was 3,667 kilograms. This weight represents 117,894 fine ounces, of a commercial value of $63,663.

RUSSIA.

The American ambassador at St. Petersburg reports that the gold product of Russia for 1911 was 2,950.5 poods, valued at 62,423,801 rubles, equivalent to $32,148,258, representing 1,555,172 fine ounces. The silver product is stated to have been 906 poods, equivalent to

14,841 kilograms, or 477,140 fine ounces of a commercial value for 1911 ($0.54 per fine ounce) of $257,656.

The gold product of Finland for the year 1910 was 5 kilograms, or 161 ounces, valued at $3,328, which added to the Russian product of $32,148,258 equals $32,151,586, representing 1,555,333 fine ounces.

THE RUSSIAN EMPIRE IN 1911.

[By John Power Hutchins, M. E., in the Engineering and Mining Journal, New York, Jan. 6, 1912.]

The year 1911 was one of general progress in precious-metals mining in the Russian Empire. Particularly was the mining of platinum stimulated and aided by the high price, which averaged about twice as much as for gold.

TOTAL GOLD PRODUCTION EXCEEDS THAT OF SOUTH AFRICA.

In total gold production Russia and Siberia rank third, being surpassed by the United States and Australasia, but still remaining ahead of South Africa. This may surprise many, but when one pauses to remember the huge size of Russia and Siberia, and to note the wide distribution of gold, one may well be surprised, not that they have produced so much, but rather that they have produced so little. The gold producing region in the Urals is farthest west; thence, easterly across Siberia are scattered gold deposits to the east coast, about 4,000 miles, while a journey from the south Urals, through the Altai Mountains and southern Siberia, thence to the upper Amur, down the Amur, thence overland to Anadir, opposite Nome, all of which would be in gold-producing regions, would be about 6,000 miles long. This is the greatest length of auriferous series in an east and west direction in the world, and is only exceeded by the length of the north and south deposits of the Cordillera, continuing as they do from Tierra del Fuego, the southernmost part of South America, to the Arctic Ocean.

* * * * * * *

Russia and Siberia are the largest producers of platinum. Most of this metal is found in the Urals, where it is mined by dredging, by open cutting, and by drifting. The price of this metal has been very high during 1911 and it has stimulated an active search as well as the working of deposits that were impossible of profitable exploitation before the reign of the present high prices. The reserves of platinum-bearing gravel seem to be rather limited, and it is not thought that the rate of production can be greatly increased. French capital is largely interested in platinum mining and has achieved success with dredges.

It is worth noting that some of the foreign companies interested in platinum mining in Russia and Siberia are scouring North and South America for deposits of this metal. The estimated production for 1911 is 400,000 ounces.

Dredging is having a varied result. There are 63 dredges in Russia and Siberia, but most of these have not been successes. In many instances dredges have been installed where only failure could result. Bad design and weak construction have contributed to similar results. A general lack of capital for mining enterprises has resulted in installing cheap machinery. The last year witnessed the successful

operation of a drag-line excavator in conjunction with a floating washing plant containing, in addition to the trommel, tables and belt stacker of the California type of dredge, a large disintegrator of the log-washer type, to free the gold from an extremely clayey gravel. A second trommel was used to screen out large stones before the material passed to the disintegrator. This plant worked in material so clayey that it would be considered by most dredge operators to be impossible for dredging and in a climate almost as severe as that of the Klondike, but without perennially frozen ground with a working cost, not including administration, of about 17 cents per cubic yard.

SERVIA.

The American minister at Bucharest gives the value of the gold product of Servia for 1911 at $265,280, representing 12,833 fine ounces, and the value of the silver product $20,323, representing 37,635 fine ounces.

SPAIN.

In the absence of any official information relating to silver production in Spain during 1911, the figures for 1910 are repeated for 1911, viz, 129,158 kilograms, or 4,152,430 fine ounces, of a commercial value of $2,242,312.

SWEDEN.

No information has been received relative to the production of gold and silver in Sweden during 1911. The figures for 1910 are repeated, viz, gold, 95 ounces fine, value, $1,964; silver, 19,823 fine ounces, commercial value, $10,704.

TURKEY.

The American consul general at Constantinople reports the gold product of Turkey for 1909 was valued at $473, and the silver product at $927,664. The gold value represents 23 fine ounces and the silver 1,717,896 fine ounces. These figures are repeated for the years 1910 and 1911.

MINING IN TURKEY IN 1911.

[By Leon Dominian, in the Mining and Scientific Press, San Francisco, Jan. 6, 1912.]

The growing attention bestowed on prospecting and exploration work constituted the most noteworthy feature for 1911 in the Turkish mining industry. It is now realized in that country that possibilities of wealth exist in the resources of the subsoil, and this added to the newly-felt beneficial effects of a liberal government has led to active prospecting.

* * * * * * *

In the absence at this date of any precise figures for the year's mineral output, the following estimates, compiled from data available so far, represent fairly accurately the year's production: Gold, 45 kilograms; silver, 8,000 fine ounces.

ASIA.

British India.

The under secretary to the Government of India at Simla reports that the gold product of British India for 1911 was valued at £2,271,477, equal to $11,054,143, representing 534,744 fine ounces. The silver product from lead ores was valued at £11,576, or $56,335, representing 104,323 fine ounces.

[1] In Sterling at £3 17s. 6d. per ounce.
[2] No figures available.
[3] Not exported; reported to have been bought by gold buyers in Tapah.
[4] 130.59 ounces of gold produced at Kuala Lipis not exported.

China.

As China publishes no statistics of her production of gold and silver, recourse is had to the figures of the imports of gold bullion from China by other countries. Mr. A. Sauerbeck, of London, states that there were no importations of gold bullion or coin into the United Kingdom from China during 1911. He also states that Germany imported from China in 1911, 2,024 kilograms, or 65,071 fine ounces, of a value of $1,345,149.

The twelfth Financial and Economic Annual of Japan states that the value of gold bullion imported from China by Japan during 1911 was 890,004 yen, equivalent to $443,222, representing 21,441 fine ounces.

The under secretary to the Government of India reports that the gold bullion imported from China by India in 1911 was valued at £313,623, equivalent to $1,526,246, representing 73,832 fine ounces.

The following table is compiled from the above amounts:

Countries importing gold.	Fine ounces.	Value.
Germany	65,071	$1,345,149
Japan	21,441	443,222
British India	73,832	1,526,246
Total	160,344	3,314,617

LEGATION OF THE UNITED STATES OF AMERICA,
Peking, October 18, 1912.

Silver mining has been carried on in China from very ancient times, but until recently by crude native methods only. There is, even now, only one silver mine known to the legation in which western machinery is used, and that is the Sanch's mine near Kuei-hsien in Kuangsi Province.

Silver is found in 12 of the 18 Provinces of China proper and also in Manchuria. Statistics of production are entirely wanting, and there are no facts known to the legation upon which one can base an estimate of the output.

Only four permits to mine silver were issued up to 1909 by the ministry of agriculture, industries, and commerce, but it is well known that many old mines were in operation which were not registered.

It may possibly be of interest to you to know that gold is found in 11 of 18 Provinces as well as in Manchuria, Mongolia, and Tibet.

Copper is found in 10 of the Provinces of China proper and in Manchuria.

Eight permits to mine gold have been issued by the ministry of agriculture, industries, and commerce up to 1909 and three to mine copper, but, as intimated above, the issue of permits does not really indicate how many mines are being worked.

Most of the mines, just as in the case of silver, are worked by native methods and the output is probably small.

A gold-milling plant from Great Britain has been set up at Yaokai, near Lanchow, in Kansu. There is a Chinese-German company mining gold at Ichou in Shantung, and a purely native company working at Chao-yiian in the same Province is selling its gold ore to an American firm, which exports it to Tacoma, Wash., to be smelted.

The Chinese Government has copper-smelting works at Yaokai, Kansu, the machinery being of American and British manufacture. The engineer in charge is British. He has four assistants who are

Belgian and Spanish. This plant turns out 4 tons of copper in 24 hours from 7½ per cent ores.

The Chinese Government also has copper mines in Kanchow, Kiangsi. Samples of the ore show 40 per cent of copper. These mines are worked by native methods. There are also Government copper mines in two prefectures of Szechuen Province. In one of these are three Japanese assayists employed, and a smelting furnace was purchased in 1910. The copper slabs produced from these mines sell at about $0.22 (United States) per 1⅓ pounds for the red copper, and $0.42 for the same weight of white copper.

The total export of gold dust and bars from China in 1911 was valued at 2,103,515 Hongkong taels, or $1,367,234.75 (United States), but it is not certain that all of this was the product of Chinese mines. On the other hand a great deal of gold is used in the arts and much is hoarded in the shape of bars. No copper was exported.

W. J. CALHOUN,
Envoy Extraordinary and Minister Plenipotentiary.

INDO-CHINA.

The American consul general at Paris reports that the production of gold in Indo-China for 1910 was valued at 284,918 francs, equivalent to $54,989, representing 2,655 fine ounces. The above figures are used for the product of 1911.

JAPAN.

The American ambassador at Tokyo states that the gold product of Japan for 1911 was 4,511 kilograms, valued at 5,858,888 yen, equivalent to $2,917,726, representing 141,145 fine ounces, and the product of Formosa was 1,657 kilograms, valued at 2,188,375 yen, equivalent to $1,089,811, representing 52,720 fine ounces. The corrected figures for 1909 and 1910 according to the Twelfth Financial and Economic Annual of Japan were, for 1909, 1,048,559 momme, valued at 5,077,058 yen, equivalent to $2,528,375, representing 122,310 fine ounces. Formosa produced in 1909 gold and gold dust weighing 436,755 momme, or 52,656 ounces, valued at $1,088,496. For 1910 the gold production of Japan was 1,164,774 momme, valued at 5,671,806 yen, or $2,824,559, representing 136,638 fine ounces.

In 1910 Formosa produced 441,260 momme in gold and gold dust, representing 53,199 fine ounces, valued at $1,099,721.

The silver product of Japan for 1911 was 136,517 kilograms, valued at 4,721,670 yen, or $2,351,392, representing 4,354,430 fine ounces. The silver product in Formosa was 1,852 kilograms, valued at 65,050 yen, or $32,395, representing 59,991 fine ounces.

The corrected silver product of Japan for 1909 was 34,111,197 momme, valued at 4,261,481 yen, or $2,122,217, representing 4,081,186 fine ounces. The silver product of Formosa for the year 1909 was 412,946 momme, or 49,786 fine ounces, of a commercial value of $25,889.

The corrected figures of Japan silver product for 1910 were 37,763,443 momme, valued at 4,896,188 yen, or $2,438,302, representing 4,515,374 fine ounces. The Formosa product was 482,640

momme, or 58,188 fine ounces, the commercial value of which was $31,422.

MINING PROGRESS IN JAPAN.

[From Consul Carl F. Deichman, Nagasaki, in Daily Consular and Trade Reports, 1912.]

Mining is one of the most important industries of the Nagasaki consular district, and in point of value of products and number of men employed ranks next to agriculture.

The quantities and value of the gold and silver output of the Nagasaki consular district for the year 1911 are as follows:

Metals.	Quantity.	Value.
	Troy ounces.	
Gold	50,144	$1,034,641
Silver	90,618	34,800

Gold mining during 1911 showed a very fair increase (9,600 ounces troy) over the output for the previous year, due to the general development of the mines with modern machinery. The Hasami gold mines in Nagasaki prefecture installed some modern machinery about two years ago and increased their output for 1911 (which amounted to $77,400) by about 50 per cent over that of the preceding year. The Taiono gold mines in Otta prefecture produce about 2,400 ounces annually, the Urushi mine in Kagoshima prefecture 1,200 ounces, the Okuchi and Ushio mines in Kagoshima each about 4,800 ounces annually.

The Yamagano gold mines in Kagoshima prefecture are the largest producers of this metal in Kiushu, their output averaging over 15,600 ounces troy annually. The Serigano gold and silver mines located in the same prefecture are also showing increased production, their output being over 6,000 ounces per annum. The Kushikino gold and silver mines in Kagoshima prefecture, which were taken over and are being developed by the Mitsui Busan Kaisha, are showing good values, and with the installation of modern machinery, which is being ordered from the United States, this group of mines will probably be one of the best gold producers in Japan, the estimated output being placed at 2,400 ounces gold and 18,600 ounces silver monthly.

THE GOLD MINES OF FORMOSA.

[From Consul Samuel C. Reat, Tamsui.]

Gold mining in Formosa is no new enterprise. The discovery of the first gold dates back to the Chinese régime. In 1890, when Liu Ming-Chuan, that astute and progressive administrator, was carrying forward the first railroad construction, Chinese coolies found the yellow metal while excavating for the foundation of a railroad bridge over the Keelung River at Shichito. In all subsequent prospects no mines have been located outside of the Keelung River watershed.

Both placer and quartz mines have been operating for many years, but placer mining has been virtually abandoned. There are now just three quartz mines being worked, and their annual output appears to be diminishing. But the statistical information is somewhat misleading, for the supply of treatable ore at two of the mines will last for many years. Although undoubtedly the grade is growing less, the supply is good and the value is holding fairly well. By enlarging their plants and by installing improved machinery the companies will be able to treat lower-grade ore in larger quantities. These mines are located in north Formosa, within 10 or 12 miles of Keelung, the chief port of Formosa. They are called Botan-ko Kozan, Kinkwaseki Kozan, and Zuiho Kozan, the address of each being Keelung, Formosa.

In contradistinction to many enterprises in Formosa, these gold mines are being exploited by private capital. The following figures cover the product of the three mines for the quinquennial period, 1906 to 1910:

Year.	Botan-ko.	Kinkwaseki.	Zuiho.
1906	$318,324	$346,462	$243,369
1907	275,785	301,796	220,542
1908	191,535	694,859	186,707
1909	176,202	709,890	166,964
1910	134,147	693,947	231,895
Total	1,095,993	2,746,954	1,049,477

CHOSEN (KOREA).

The American ambassador at Tokyo reports that the gold product of Chosen for 1911 was 4,212 kilograms, valued at 5,901,978 yen, or $2,889,385, representing 139,774 fine ounces. The silver product was 278 kilograms, valued at 10,243 yen, or $5,101, representing 9,446 fine ounces.

SIAM.

The American minister at Bangkok reported last year that Siam produced 85 kilograms of gold, valued at 170,100 ticals during 1910. The kilograms represent 2,733 ounces, valued at $56,496. The figures are repeated for 1911.

East Indies.

BRITISH EAST INDIES.

The "Report of the Department of Mines of Western Australia, 1912," states that the product of gold of the Territory of Papua in 1911 was 14,622.40 fine ounces, valued at £62,112, equivalent to $302,268, representing 14,622 fine ounces.

BRITISH NORTH BORNEO.

No official information has been received giving the gold product of British North Borneo since 1907, when the product was estimated to have been 41,751 fine ounces, valued at $863,070, which figure is repeated as the product for 1911.

FEDERATED MALAY STATES.

The American vice consul general in charge at Singapore reports that the gold production of the Federated Malay States for 1911 was valued at £35,760, equivalent to $174,026, representing 8,418 fine ounces.

The total product of the British East Indies, viz, "Papue," "British North Borneo," and "Federated Malay States" is 64,791 fine ounces, of a value of $1,339,364.

DUTCH EAST INDIES.

As there has been no report received at this bureau relative to the Netherlands' Indies during 1911, the gold figures for 1910 and the silver figures for 1909 are repeated, viz, gold, 163,852 fine ounces, value $3,387,131; silver, 465,980 fine ounces, of a commercial value of $251,629.

AUSTRALASIA.

"The Report of the Department of Mines, 1912, Western Australia," gives the gold product of the Commonwealth of Australia for 1911 and the "Forty-second Annual Report of the Deputy Master and Comptroller of the Mint, London, 1911," gives the silver product as follows:

States.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
Western Australia	1,370,850	$28,337,994	162,599	$87,803
Victoria	503,994	10,418,471	26,719	14,428
Queensland	386,160	7,982,632	549,015	296,468
New South Wales	181,119	3,744,056	14,529,145	7,845,738
Tasmania	31,100	642,904	.....	.....
South Australia	3,531	72,997	.....	.....
Northern Territory	7,277	150,424	.....	.....
New Zealand	427,379	8,834,712	1,310,943	707,909
Total	2,911,410	60,184,190	16,578,421	8,952,346

WESTERN AUSTRALIA.

[From Report of the Department of Mines, 1911, Perth, 1912.]

GOLD.

The value of the gold yield in 1911 was £5,823,075. As in the previous year, the gold yield again shows a decrease, the output being 99,764 fine ounces less than for 1910, while the output for that year was 124,637 fine ounces less than that for 1909.

The average value per ton of ore treated in the State as a whole has fallen from 41.48 shillings in 1910 to 41.19 shillings in 1911, and in the East Coolgardie gold field, from which comes over 50 per cent of the State's yield, from 40.32 shillings to 38.14 shillings.

Comparing the tonnages of ore treated in 1910 and 1911 there is a decrease of 148,355 tons in the latter year, during which 2,735,943 tons were treated.

* * * * * * *

Quantity and value of gold and silver produced during 1910 and 1911.

AUSTRALASIAN GOLD PRODUCTION.

[From the Australasian Insurance and Banking Record, Melbourne and Sydney, January, 1912.]

During the past year the production of gold has again seriously fallen off in the three principal Australian States in which mining is carried on, viz, Victoria, Queensland, and western Australia. The decline has been continuous for several years past. It is attributable to the decrease of the yields from several western Australian mines, to the superior attractions offered by other occupations to miners, and to other causes. As far as Victoria is concerned, a further considerable decrease must be expected should the Wages Board now sitting materially raise wages, for a higher labor cost will mean the cessation of operations in many of the small mining properties. The Australian yields for the last four years are stated as follows:

Year.	Fine ounces.	Value.
1908	3,075,242	£13,062,789
1909	2,962,543	12,584,070
1910	2,719,945	11,553,584
1911	2,488,069	10,567,665

From 1908 to 1911, a period of three years, the decrease is 587,173 fine ounces, of a value of £2,495,124.

The New Zealand production is also declining, but not so rapidly as the Australian.

The Australasian production of gold for 1911 is approximately 2,915,902 fine ounces, as against 3,166,379 fine ounces for 1910, and 3,435,008 fine ounces for 1909.

A RICH AUSTRALIAN GOLD MINE.

[From the Mining World and Engineering Record, London, May 11, 1912. From our special correspondent, Sydney, Feb. 7, 1912.]

The richest gold mine in Australia at the present time is the Long Tunnel, near Gundagai, New South Wales, about 251 miles southwest of Sydney. The mine itself is about 7 miles from the township which is situate on the Murrumbudgee River. It was discovered in 1896 by a prospector who had been induced to undertake a systematic prospecting mission by reason of the finding at various times during the 20-odd previous years of very rich alluvial gold. The claim was taken up by the prospector and the owner of the station on which the discovery had been made. During the partnership several rich auriferous patches—including one at a depth of 100 feet which yielded about £4,000 of gold from less than a ton of stone—were met with. The formation was prospected a distance of 20 chains, rich gold being obtained at intervals of three or four chains, the total yield being about £20,000 in value. Then it was supposed that the rich ore had been cut out, and the mine was abandoned. Ultimately the lease was canceled for noncompliance of conditions, and in 1910 a local syndicate, including the discoverer, was formed to commence operations afresh. It now consists of five local men, including the owner of the station. Starting about the center of the working gold was struck at 50 feet. This, however, by means of tunnel and winze, has been extended about 280 feet. Altogether, there has been about 200 feet driving and 200 feet of winze sinking, from which 3,250 ounces of gold has been obtained, giving a profit of £9,000. Only two picks are employed, the face being too narrow. The lode formation runs from about a foot to 40 feet wide, and is made up of ferruginous quartz, decomposed diorite and calcite; while a characteristic of the mine is that it resembles the Wentworth Proprietary at Orange, from which during the last eight years of its life, gold to the value of £800,000 was won. There is no crushing battery. One parcel of 879 ounces of gold, value £3,500, in one of the Sydney banks represented the task of three of the five shareholders working 2½ hours per day for 5 days, each sitting down in front of a dolly-pot, i. e., a mortar, and beating the stone with iron tamping bars. No regular miners are employed. When a bonanza is struck, word is sent to the other shareholders, who proceed to the mine and see the stone taken out and dollied. The rich patches occur in the vicinity of the intersection of the cross-courses with the main lode. The surrounding country is richly auriferous, and several claims are being worked at a profit. One of these, a big low-grade proposition, is being developed by the principal shareholder in the Long Tunnel, and who is also a local newspaper owner. The formation of his lease is unique, being composed of ferruginous clay, slate, and talcose slate, the gold-carrying channels being fully

100 feet wide in one part. The gold, however, is very fine and may prove difficult to treat by battery process. The owners have not the slightest intention at present of putting their properties on the market. It pays them best to retain possession so long as the gold is plentiful and readily obtained.

New South Wales.

DREDGING.

[From Annual Report of the Department of Mines, New South Wales, for the year 1911.]

The yield of gold obtained by the dredges during the past 12 years is shown by the following statement:

Year.	Quantity.		Value.
	Crude ounces.	*Fine ounces.*	
1900	8,882	7,924	£33,660
1901	23,585	21,100	89,628
1902	25,473	23,046	97,891
1903	27,237	24,555	104,303
1904	32,345	29,111	123,656
1905	35,388	32,038	136,090

[1] Includes Madagascar, Algeria, and the French Sudan. For 1903 and 1904, Madagascar only. For 1905, figures for Madagascar and Egypt. For 1906 and 1907, Madagascar and Egypt for 1905 repeated.

[2] Includes Mozambique, Cape Colony, and Natal for all years except 1901, which does not include product of Mozambique or Natal. For 1903, includes Rhodesia, Cape Colony, and Natal. For 1904 and 1905, Rhodesia, Cape Colony, and Mozambique. For 1906 and 1907, Rhodesia, Cape Colony, Mozambique, Natal, and Bechuanaland.

[3] Previous to 1898 Rhodesia and Mozambique together produced 289 kilograms, fine, included in the Transvaal returns.

[4] Previous to 1897 the only figures obtainable were those for 1892—Madagascar only.

[5] Includes "Cape," "Orange Free State," and "Natal," constituting the "Union of South Africa."

Belgian Kongo.

The American consul general at Brussels reports that the gold and silver product of Belgian Kongo during the year 1911 was valued at $396,678 for the gold and $1,148 for the silver. These amounts represent for the gold, 19,189 fine ounces and for the silver 2,126 fine ounces.

Cape Colony.

The American vice consul general at Cape Town, South Africa, reports the gold product of the Province of Cape was valued at £310, or $1,509, representing 73 fine ounces.

Egypt.

The American agent and consul general at Cairo, reports the value of the gold production of Egypt at £21,609, equivalent to $105,161, representing 5,087 fine ounces.

Madagascar.

The American consul at Tamatave reports the gold production of Madagascar to have been valued at 9,120,143 francs, or $1,760,188, representing 85,149 fine ounces and the silver product at 400 francs or $77, representing 143 fine ounces.

Mosambique.

The annual statement of the trade of the United Kingdom gives the value and quantity of the imports of gold from Portuguese East Africa in gold ores, £5,240, and in bullion, 31,364 ounces; assuming these ounces to be 916⅔ fine the total value of the gold imports in United States money is $619,822, representing 29,984 fine ounces.

Natal.

The "Mines Department Annual Report of the Union of South Africa, 1912," gives the value of the gold product of Natal at £7,246, or $35,263, representing 1,706 fine ounces.

Rhodesia.

The annual report of the Rhodesia Chamber of Mines states that the production of gold for Southern Rhodesia in 1911 amounted to 628,521.37 ounces, valued at £2,647,896, equivalent to $12,885,986, representing 623,360 fine ounces. The report also states that silver of the value of £19,320 was produced ($94,021), representing 174,113 fine ounces.

Transvaal.

The American consul at Johannesburg, Union of South Africa, reports that the gold product for 1911 was valued at £35,041,485, and the silver contained in the gold bullion at £98,498. The value in United States money of the gold is $170,529,387, representing 8,249,359 fine ounces, and the value of the silver $479,341, representing 887,668 fine ounces.

West Africa.

The report of the West African Chamber of Mines states that the product of gold in West Africa for 1911 was valued at £1,069,442, equivalent to $5,204,439, representing 251,765 fine ounces.

The total product of gold and silver of Africa for 1911 was gold, 9,265,672 fine ounces, valued at $191,538,433, and silver, 1,064,050 fine ounces, at a commercial value of $574,587.

Union of South Africa.

[From Annual Report of Mines Department for the calendar year 1911.]

The net output of gold from all sources was:

Sources.	Fine ounces.	Value.[1]
For the Transvaal	8,249,461.418	£35,041,485
Cape	73.052	310
Natal	1,705.880	7,246
Total	8,251,240.350	35,049,041

[1] All values for gold are taken at the fixed rate of £4.24773 per fine ounce.

This represents 36 per cent of the world's production for 1911, estimated at £97,250,000, as compared with 33 per cent for 1910.

The total production of gold from the Union of South Africa since 1868, when gold was first discovered, amounts to approxi-

mately £325,102,222 up to the end of 1911, which was practically all produced in the Transvaal.

Monthly figures of the gold declarations are as follows for the Witwatersrand and the Transvaal for 1911:

Month.	Witwatersrand.		Transvaal.	
	Fine ounces.	Value.	Fine ounces.	Value.
January	623,346.354	£2,647,808	648,455.355	£2,754,463
February	586,159.140	2,489,845	610,712.841	2,594,145
March	651,366.310	2,766,828	678,793.938	2,883,332
April	636,775.460	2,704,851	664,618.707	2,823,121
May	659,585.154	2,801,738	687,615.957	2,920,806
June	658,128.008	2,795,550	685,656.697	2,912,484
July	681,063.330	2,892.974	711,651.640	3,022,904
August	682,653.103	2,899,725	713,449.118	3,030,538
September	669,375.613	2,843,327	700,023.746	2,973,511
October	677,669.910	2,878,559	707,775.473	3,006,438
November	691,325.660	2,936,564	720,769.982	3,061,637
December	698,552.908	2,967,264	727,046.526	3,088,298
Total	7,916,000.950	33,625,033	8,256,569.980	35,071,677
Net output [1]	7,910,033.981	33,599,689	8,249,461.418	35,041,485

[1] After adjustment of balances.

The output of gold for the Cape for the year was 73.052 fine ounces, of which 51.505 ounces were from the alluvial fields at Knysna.

There was no output of gold from the Orange Free State Province.

There were 1,705.88 fine ounces of gold produced in the Province of Natal. No gold was declared by companies working in Zululand, where development was carried on during the year. One mine only was crushing in December, 1911, with five stamps.

Witwatersrand mines.

SILVER.

There are no silver mines working in the Union. The output as shown hereunder represents the silver contained in the gold bullion and a small quantity of silver from base metal ores. The latter is returned only when accounted for by the smelters.

ALGERIA.

IMPORTS AND EXPORTS OF GOLD AND SILVER DURING 1911.

[From L'Economiste Europeen, Paris, Nov. 15, 1912.]

From official statistics published recently, there was imported into Algeria during the year 1911 gold, silver, and billon (minor) coins of the value of 6,467,000 francs, divided as follows:

Gold coins, 40,000 francs, from France.

Silver coins, 6,371,000 francs, of which 2,057,000 francs came from France and 4,314,000 francs from French colonies and foreign countries.

Billon (minor) coins, 56,000 francs, of which 55,000 francs were from France and 1,000 francs from French colonies and foreign countries.

The imports in 1910 amounted to 6,273,000 francs, of which 11,000 francs were in gold coins, 6,242,000 francs in silver coins, and 20,000 francs were in billon (minor) coins.

Regarding the exports of specie in 1911, they did not exceed the amount of 756,000 francs, of which 1,000 francs in gold coins went to France, 754,000 francs in silver coins and 1,000 francs in billon (minor) coins went to French colonies and foreign countries.

The amount of exportations corresponding in 1910 were 766,000 francs (9,000 francs in gold coins and 757,000 francs in silver coins).

RHODESIA.

PRODUCTION OF GOLD.

[From the Seventeenth Annual Report of the Rhodesia Chamber of Mines (Incorporated), for the year 1911.]

The production of gold from all sources totaled, as will be seen, 628,521 fine ounces, valued at £2,647,896. The increase as compared with the previous year was 18,566 ounces in weight, valued at £79,698. It constitutes the highest production for one year yet declared and brings the total value of the gold production of the country to the end of 1911 to £19,671,328. The tonnage treated was 1,603,478 tons, less by 66,000 tons than the tonnage treated in 1910. The average value recovered per ton crushed was 33.02 shillings, or 2.27 shillings greater than 1910. Since 1907 the average grade has steadly risen from 27.05 shillings per ton to 27.77 shillings in 1908, 29.03 shillings in 1909, and 30.75 shillings in 1910. Of the gold recovered, 496,557 ounces were derived from milling, 88,197 ounces from sands, 21,775 ounces from slimes, 19,881 ounces from concentrates, and 2,211 ounces from other sources. The tonnage in each case is given in the report, and shows that of slimes increased by 25,000 tons, while the tons of sands decreased by 29,000.

GREAT GOLD MINES.

Comparisons are always interesting, and the following from the Mining and Scientific Press, of San Francisco, about a few of the best known gold mines of the world and their output in 1911 is worthy of reproduction:

The greatest gold mine in the world, from the standpoint of tonnage, is the Randfontein Central, which hoisted 217,984 tons and milled 212,510 tons during October, 1911. The greatest dividend payer of the year was the Goldfield Consolidated, which declared dividends for the year amounting to over $7,000,000, having milled approximately 338,000 tons of ore of a gross value of over $10,000,000. The largest dividend payer of the year on the Rand was the Crown mines, which had declared dividends amounting to £517,058 for the 10 months ended in October. The largest mine in America from the tonnage standpoint is the Homestake, which milled over 1,500,000 tons in 1911, though this is equaled by the Alaska Treadwell mines, which milled 1,500,000 tons. The competition between these two companies is very close, and it is not unlikely that their relative positions may alter at any time. The Treadwell mines have 900 stamps at work, with a stamp duty of over 5 tons per day, and at the Homestake the 1,000 stamps have a duty of a little over 4.2 tons per day. The daily output of the Treadwell mines is therefore slightly greater, but working conditions permit the Homestake to operate more continuously, thus overcoming the handicap. The deepest gold mine of the world is the Morro Velho, in Brazil, owned by the St. John del Rey Mining Co., though the deeper mines along the Mother Lode in California are worthy companions, the Kennedy, which is the deepest gold mine

in America, having attained a depth of 3,550 feet. The United States takes, therefore, no mean place in the gold industry, being second in total production, having the largest dividend payer, and having more dredges at work than all the rest of the world combined.

In Siberia the Lena Goldfields is remarkable as the most productive alluvial gold mine in operation anywhere. The ground is permanently frozen, as in the Yukon, and the gold lies on bedrock 100 feet below the surface. Drift mining accompanied by steam thawing is employed. In the season of 1911 the output of gold was £1,619,406, or $8,047,030, from 881,000 cubic yards, or an average of 10 pennyweights per yard. The cost averaged $6.21 per yard. This seems appalling, but it is due largely to difficulties of administration and the expensive character of the methods required to extract the gravel. In the far east of Siberia the Orsk Goldfields has erected a dredge, from which much is expected. A preliminary run with a stacker scow has shown a yield of $1 per yard, but it is not likely that this is a correct average of the ground.

Commercial ratio of silver to gold each year since 1687.

[NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, and from 1879 to 1896 from daily cablegrams from London to the Bureau of the Mint, and since from daily London quotations.]

Production of gold and silver in the world since the discovery of America.

[From 1493 to 1885 is from a table of averages for certain periods, compiled by Dr. Adolph Soetbeer; for the years since the production is the annual estimate of the Bureau of the Mint.]

Period.	Gold.				Silver.				Percentage of production.			
	Annual average for period.		Total for period.		Annual average for period.		Total for period.		By weight.		By value.	
	Fine ounces.	Value.	Fine ounces.	Value.	Fine ounces.	Coining value.	Fine ounces.	Coining value in standard silver dollars.	Gold.	Silver.	Gold.	Silver.
1493–1520	186,470	$3,855,000	5,221,160	$107,931,000	1,511,050	$1,954,000	42,309,400	$54,703,000	11	89	66.4	33.6
1521–1544	230,194	4,759,000	5,524,656	114,205,000	2,899,930	3,740,000	69,598,320	89,986,000	7.4	92.6	55.9	44.1

REPORT

OF THE

DIRECTOR OF THE MINT.

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
January 6, 1911.

SIR: In compliance with the provisions of section 343, Revised Statutes of the United States, the following report covering the operations of the mints and assay offices of the United States during the fiscal year ended June 30, 1910, being the thirty-eighth annual report of the Director of the Mint, is respectfully submitted:

VOLUME OF COINAGE.

The value of the coinage executed at the mints in the fiscal year ended June 30, 1910, was less than in the preceding year, and considerably below the value of the gold deposits. The gold deposits in the fiscal year 1909 amounted to $142,124,941.59 and the gold coinage of that year was $120,399,953.35. The gold deposits in the fiscal year 1910 amounted to $126,767,967, and the gold coinage for the latter period was only $47,578,875. The principal reason for not doing more coinage was that automatic weighing machines were under construction which were expected to materially reduce the cost of weighing the individual coins, and pending their completion gold bullion was allowed to accumulate.

AUTOMATIC MACHINES.

For a number of years the machine shop of the Philadelphia Mint nad been at work developing an automatic weighing machine to do away with the hand weighing of each individual coin produced. The first machine was completed in 1907, was a success, and exhibited at the Jamestown Exposition. About that time, however, the experts who were engaged upon this machine were called upon to build a machine for the customs service, which they were successful in doing, but the task diverted them temporarily from the equipment of the mints. Four machines were completed by the end of 1908, and early in 1910 the Philadelphia machine shop began work upon four more. These machines have now been completed and are in use, three in

San Francisco, two in Denver, and three in Philadelphia. They are very satisfactory and have accomplished an important reduction in the number of employees in the mints.

During the year an automatic feeding apparatus was placed upon all the coining presses in the Philadelphia Mint, accomplishing a considerable reduction in the number of employees required to operate the 21 presses in that institution. These feeds have also been introduced at Denver and San Francisco. Similar apparatus had previously been attached to the upsetting machines.

REDUCTION IN COINAGE OPERATIONS.

An important reduction in the amount of work for the mints to do has occurred in recent years by reason of the cessation in the coinage of silver dollars and the practical completion of the Philippine stock. The silver bullion purchased under the act of July 14, 1890, was exhausted in 1905, and the coinage of dollar pieces, which had been at the rate of 1,500,000 per month, ended with it. The record coinage for the mints is that of the fiscal year 1902, which amounted in value to $228,202,151.55, not including 12,552,629 pesos in silver and a considerable minor coinage for the Philippines, and 2,730,000 pieces for foreign countries.

There were in operation in this record year only three mints, to wit, those at Philadelphia, New Orleans, and San Francisco. The opening of the new mint at Denver in 1905 came, therefore, almost simultaneously with an important reduction in the amount of coinage to be done and at a time, moreover, when new labor-saving machines and devices were about to seriously diminish the number of employees required.

NEW ORLEANS MINT IDLE.

The result of all these influences has been to force a scaling down of operations in all of the mints and a suspension of coinage in the New Orleans Mint. The amount of gold which is available for coinage at New Orleans is small, and the total coinage of the country can be done materially cheaper at three mints and with three organizations than at four mints and with four complete complements of officers and employees. The amount of coinage which could be given to the New Orleans Mint under these conditions did not warrant the continuance of operations there, and they were suspended April 1, 1909, and a large reduction of the force made at that time. At various dates in 1910 further reductions were made, and there appearing to be no likelihood that the mint could advantageously resume operations in the near future, the estimates for 1911 have been made for the conduct of the institution as an assay office only. The appropriations asked total $17,940, which compares with $107,300 appropriated for the fiscal year 1911.

THE MINOR ASSAY OFFICES.

In the estimates submitted for 1912 the assay offices at Charlotte and St. Louis are dropped, for the reason that the volume of business handled is unimportant and that the few producers making use of them could without much inconvenience send their bullion direct to

the mints, thus saving the Treasury not only the cost of maintaining the offices, but the cost of transporting the bullion to a mint. The larger part of the deposits at the St. Louis office come from Chicago and Cincinnati and the depositors could as well send them direct to the Philadelphia Mint as to St. Louis.

When the policy of maintaining assay offices in the producing districts was entered upon, the gold production of the country was chiefly from placers and by the labor of individual miners working claims on their own account. The Government assay offices were designed to serve these mining communities by giving reliable assays and by melting the placer dust and nuggets into bars, which were returned to the depositor with the weight and fineness stamped upon them; that is to say, they performed in a simpler manner the function of a mint. Later, the further step was taken, by way of increasing the service of these offices to the public, of buying the bullion at its coinage value, thus saving the miners from the exactions of the bullion buyer. This was done in 1878, and still later Congress inaugurated the policy of shipping the bullion to the mint at the expense of the Treasury instead of collecting the transportation charge from the depositor. This policy is still maintained.

It is apparent that the conditions surrounding the production of gold and which prompted the establishment of these assay offices have radically changed. At the time the offices at Denver, Helena, and Boise were established, not only was the production chiefly at the hands of individual miners who were obliged to dispose of their gold on the spot, but these localities were distant from a railway and the risks and cost of transportation were a serious handicap to the producers. When these offices were established, the country was using inconvertible paper as currency, and it was deemed a wise public policy to encourage the production of the precious metals and the exploration and development of the districts an which these metals were known to exist. At the present time, however, our gold production is mainly by well-organized companies and from ores, which are commonly shipped to smelters or reduction works, and the product eventually reaches the offices of the mint service at some distance from the place of production. A large share of the receipts of these assay offices come to them by express, in many instances costing the shippers practically as much as would shipment direct to a mint. For example, a producer in Nevada, who ships bullion to the assay office at Salt Lake City, as a number of them do, might as well ship it direct to the San Francisco Mint, thus saving the Government the expense of transporting it from the assay office to a mint.

In view of these conditions Congress may well consider whether the service now rendered by these offices warrants the expenditure for their maintenance.

GOLD CERTIFICATES AGAINST BULLION.

In the report of this bureau for the fiscal year 1902, the director called attention to the uselessness of coining all the gold bullion and foreign coin received at the mints, and again in the report for 1904 the embarrassment occasioned by the statutory requirement that so

much of the reserve fund must be kept in coin was pointed out. The paragraph in the 1902 report is as follows:

It is opportune here to call attention to the fact that the gold coinage of the country is now entering almost entirely into storage and that the cost of coinage is an unnecessary expense. The Treasury holds now about $500,000,000 of coined gold, which is doubtless more than will be called for in a generation to come. Practically all of the current coinage is being deposited in the Treasury for certificates. When gold is required for export it is wanted in bars, while for domestic circulation the public prefers the Treasury certificates, which, with some modifications of the statutes, might as well be issued against bars.

The case is stronger now than then, for the amount of coined gold in the Treasury is more than double the sum held at that time.

In the report for 1904 I said:

There has never been any continued demand upon the Treasury for gold except for export, and a demand for export is always a demand for bars. The exporters prefer bars because the latter are always of full weight, while all coin that has been in circulation is to some extent abraded. During the six months from January 1, 1904, to July 1, 1904, the total presentations of United States legal-tender notes for redemption in gold amounted to only $6,591,240, while in the same time the Treasury gave $60,790,511 in gold bars in direct exchange for gold certificates. At times in the last year it has been difficult to meet the demand for bars as fast as it came, and some coin has doubtless been exported which would not have gone if bars had been available. It is clear that nothing is gained by compelling the mints to work bars up into coin while it is being taken for export because bars can not be had. And it is equally plain that the Treasury would not be weakened by carrying a larger proportion of its reserve in bars.

Practically the entire gold production of this continent is going into the vaults of the Treasury. This gold will never be wanted in the form of coin. It will be held as the basis of our monetary system, but the habits of our people are fixed, and it is certain that they will always prefer paper money for actual use. The only important demands upon the Treasury for gold have always been for bullion for export. With $1,000,000,000 of coined gold in the Treasury it is perfectly safe to permit the issuance of gold certificates against bullion, allowing the Secretary of the Treasury to determine in his discretion when and how much shall be converted into coin. Such action will result in important economies in the mint service.

DEPOSITS OF GOLD BULLION.

The value of gold bullion contained in original deposits at the mints and assay offices during the fiscal year 1910 was $126,767,967. The redeposits during the year, consisting of bullion transferred from one office to another and bars bearing the stamp of one of the mints or assay offices, amounted to $35,519,671. The value of the gold bullion and uncurrent domestic and foreign coin received, including redeposits, amounted to $165,890,779, which was the total of gold receipts.

REDEPOSITS OF GOLD BULLION.

The redeposits contained 1,909,182 standard ounces of gold of the value of $35,519,671, fine bars representing 13,050 standard ounces ($242,781), and unparted bars representing 1,884,257 standard ounces ($35,055,942), as follows:

Bars manufactured at—	Unparted bars deposited at—			Fine bars deposited at—		
	Philadelphia.	San Francisco.	Denver.	Philadelphia.	New York.	San Francisco.
	Stand. ozs.	*Stand. ozs.*	*Stand. ozs.*	*Stand. ozs.*	*Stand. ozs.*	*Stand. ozs.*
Philadelphia				51		
New Orleans	746					
New York	886,201				545	47
Boise	36,417		6,124			
Helena	92,028		13,736			
Charlotte	4,751

Seattle		342,392	331,800			
Salt Lake City			48,432			
Total	1,067,604	411,676	404,947	12,457	545	47

There were redeposited at the Philadelphia Mint 11,876 standard ounces of gold "mint" bars, made at the assay office at St. Louis, resulting from deposits of uncurrent domestic coin. In addition to the above, there were 9 ounces of gold contained in unparted bars from the Charlotte office deposited at New York, and 20 ounces in unparted bars from the Helena office deposited at the Helena office.

DEPOSITS OF FOREIGN GOLD BULLION AND COIN.

Foreign gold bullion containing 847,200 standard ounces, of the value of $15,761,852, and foreign gold coin containing 21,781 standard ounces, of the value of $405,226, were deposited, and consisted of bullion and coin produced in the following-named countries:

Source.	Crude bullion.		Refined bullion.		Coin.	
	Standard ounces.	Value.	Standard ounces.	Value.	Standard ounces.	Value.
British Columbia	57,207	$1,064,313	7,241	$134,717

DEPOSITS AND PURCHASES OF SILVER.

The deposits of silver received at the mints and assay offices during the fiscal year ended June 30, 1910, for return to depositors in fine or unparted bars, with the weight and fineness stamped thereon, aggregated 2,551,151.24 standard ounces. The United States assay office at New York received the greater part of these deposits.

The government of the Philippine Islands deposited at the United States mint, San Francisco, silver coin issued under the act of March 3, 1903, containing 1,546,284.86 standard ounces, for recoinage into coins of reduced weight and fineness, as authorized by the act of June 23, 1906.

The purchases and deposits of silver bullion at the mints and assay offices of the United States during the fiscal year 1910 were as follows:

Items.	Standard ounces.
Silver purchased	282,485.34
Silver parted from gold deposits and purchased	2,313,355.55
Uncurrent domestic coin for recoinage	607,354.47
For return in fine bars	2,551,151.24
For Philippine coinage transferred for recoinage	1,546,284.86
Total	7,300,631.46

REDEPOSITS OF SILVER BULLION.

The redeposits contained 2,238,505 standard ounces of silver; fine bars representing 103,806 standard ounces; unparted bars representing 1,761,113 standard ounces; mint bars representing 373,586 standard ounces as follows:

Made at—	Unparted bars deposited at—			Fine bars deposited at New York.	Mint bars deposited at Philadelphia.

COINAGE OF THE UNITED STATES FOR THE FISCAL YEAR 1910.

The domestic coinage was as follows:

Description.	Pieces.	Value.
Gold	5,069,146	$47,578,875.00
Silver, subsidiary	17,272,355	4,297,567.25
Nickel 5-cent pieces	17,055,638	852,781.90
Bronze 1-cent pieces	148,609,529	1,486,095.29
Total	188,006,668	54,215,319.44

Of the subsidiary coinage made during the year $76,836.50 were from uncurrent domestic coin received for recoinage and $4,220,730.75 from silver purchased under the provisions of section 3526, Revised Statutes.

STANDARD SILVER DOLLARS USED IN SUBSIDIARY SILVER COINAGE.

There were purchased as bullion and melted at the mints and assay offices 961 mutilated silver dollars during the fiscal year 1910, which were used in the manufacture of subsidiary silver coin.

The following have been used since 1883:

Fiscal years.	Amount.	Fiscal years.	Amount.	Fiscal years.	Amount.	Fiscal years.	Amount.
1883	$621	1891	$10,800	1899	$1,734	1907	$1,548
1884	.....	1892	42,881	1900	1,341	1908	1,170
1885	1,850	1893	10,500	1901	1,786	1909	1,293
1886	.....	1894	15,055	1902	1,893	1910	961
1887	8,292	1895	18,580	1903	1,777		
1888	14,055	1896	2,034	1904	1,304	Total	188,964
1889	31,042	1897	1,898	1905	2,298		
1890	11,977	1898	1,365	1906	909		

RECOINAGE OF UNCURRENT UNITED STATES COIN.

The table following shows the face value of abraded subsidiary coin transferred and purchased for recoinage, the amount of new coin made therefrom, and the loss since 1891:

Fiscal years.	Face value.	Value of new coin produced.	Loss.
1891	$910,046.69	$861,680.41	$48,366.28
1892	7,118,602.78	6,937,886.02	180,716.76

Total	114,888,918	2,366,117,697.00	624,981,878	607,259,120	213,925,769.09

PHILIPPINE COINAGE.

The following coinage was executed during the fiscal year 1910 at the United States mint, San Francisco, for the Philippine government:

Denominations.	Pieces.	Fine ounces.
Silver:		
Pesos	5,276,559	2,714,261.95
50 centavo	36,000	8,680.50
20 centavo	450,000	43,402.50
10 centavo	312,199	15,055.79
Bronze:		
1 centavo	1,500,000	.....
Total	7,574,758	2,781,400.74

The total silver coinage to June 30, 1910, from coins received from the Philippine Islands for recoinage and from bullion purchased for such coinage was as follows:

Denomination.	Coined from new bullion, acts of Mar. 2, 1903, and June 23, 1906.		Coined from Philippine coins received for recoinage, act of June 23, 1906.		Total.	
	Pieces.	Fine ounces.	Pieces.	Fine ounces.	Pieces.	Fine ounces.
Pesos	93,445	48,068.11	41,402,559	21,297,476.35	41,496,004	21,345,544.46
50 centavo	3,342,126	805,870.13	2,100,000	506,362.50	5,442,126	1,312,232.63
20 centavo	3,666,152	353,600.36	2,735,000	263,790.75	6,401,152	617,391.11
10 centavo	6,077,392	293,082.21	4,030,000	194,346.75	10,107,392	487,428.96
Total	13,179,115	1,500,620.81	50,267,559	[1] 22,261,976.35	63,446,674	23,762,597.16

[1] Included in this amount is 11,237.93 fine ounces of coins reserved for assay.

(The balance of silver now on hand to the credit of the Philippine government is 0.27 of an ounce, fine.)

Under the act of Congress approved June 23, 1906, and the act of the Philippine Commission dated December 6, 1906, providing for the recoinage of Philippine silver coins issued under the act of March 2, 1903, into coins of a reduced weight and fineness, there were received at the mint, San Francisco, and melted for recoinage up to June 30, 1910, the following:

Denomination.	Pieces.	Fine ounces.
Pesos	24,093,573	18,787,537.62
50 centavo	5,331,400	2,076,145.12
20 centavo	5,440,500	844,564.23
10 centavo	6,890,000	534,328.47
Mixed Philippine coins	425	149.85
Mixed foreign coins	.....	8,013.40
Assay coins and transfers	.....	11,237.93
Total	41,755,898	22,261,976.62

Of the coins manufactured for the Philippine government under the act of March 2, 1903, there were remaining in the Philippine Islands, June 30, 1910, the following coins:

Denomination.	Pieces.	Value in pesos.
Pesos	2,930,785	2,930,785.00
50 centavo	797,118	398,559.00
20 centavo	2,557,268	511,453.60
10 centavo	4,467,557	446,755.70
Total	10,752,728	4,287,553.30

The total coinage, including recoinage, made for the Philippine government under authority of the acts of March 2, 1903, and June 23, 1906, was as follows:

Denomination.	Made at United States mint, Philadelphia.	Made at United States mint, San Francisco.	Total.
Silver:	*Pieces.*	*Pieces.*	*Pieces.*
Pesos	2,806,859	65,713,503	68,520,362
50 centavo	4,317,644	7,253,000	11,570,644
20 centavo	6,618,840	7,780,080	14,398,920
10 centavo	6,618,839	14,846,110	21,464,949
Nickel:			
5 centavo	10,000,384		10,000,384
Bronze:			
1 centavo	37,845,784	[1] 5,424,612	43,270,396
½ centavo	17,753,384		17,753,384
Total	85,961,734	101,017,305	186,979,039

[1] 3,924,612, recoinage of ½-centavo pieces.

WORK OF THE GOVERNMENT REFINERIES.

Bullion was operated upon by the refineries connected with the coinage mints during the fiscal year 1910, as shown by the following table:

Mints.	Bullion upon which charges for parting were collected.		Bullion owned by the Government retained by the refinery for parting purposes on which no charges for parting were imposed.		Total.	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.

Total value	$62,855,369.82	$5,568,317.25	$27,691,540.87	$2,455,385.54	$90,546,910.69	$8,023,702.79

PURCHASE OF SILVER.

The table following shows the amount and cost of silver bullion purchased for subsidiary silver coinage during the fiscal year 1910:

Stock of silver bullion.	Standard ounces.	Cost.
Purchased under section 3526, Revised Statutes, at mint	282,485.34	$129,556.57
Partings, charges, and fractions purchased	2,302,409.79	1,134,625.02
Melted assay coins purchased	2,486.63	1,438.11
Mutilated coins purchased	2,112.75	974.55
Surplus bullion purchased	6,346.38	3,054.55
Total	2,595,840.89	1,269,649.10

BALANCES OF SILVER BULLION.

The balances of silver bullion on hand June 30, 1910, at the mints and assay offices of the United States for the coinage of subsidiary silver coins, and also for the coinage for the Philippine government, were as follows:

Items.	Standard ounces.	Cost.
For subsidiary silver coinage	5,725,679.35	$3,642,047.98
Silver bullion for Philippine government	.30	.27
Total	5,725,679.65	3,642,048.25

COURSE OF SILVER.

During the 12 months ended June 30, 1910, the fluctuations in the price of silver in the London market were greater than for the fiscal year ended June 30, 1909. The price ranged from 23 1/16 pence to 24 15/16 pence per ounce for silver 0.925 fine (British standard), equivalent in money of the United States at the former rate to $0.50555 and at the last-named rate to $0.54665 per ounce 1,000 fine; a variation of $0.04110 per ounce. The average London price for the year was 23 15/16 pence, equivalent to $0.52481 per ounce fine. The commercial ratio of silver to gold at the average price for the year was 1 to 39.39. The bullion value of the standard silver dollar was $0.40590. The monthly fluctuations in the price of silver for the 12 months ended June 30, 1910, are shown in the following table:

HIGHEST, LOWEST, AND AVERAGE PRICE OF SILVER BULLION AND VALUE OF A FINE OUNCE EACH MONTH DURING THE FISCAL YEAR 1910.

Months.	Highest.	Lowest.	Average price per ounce, British standard, 0.925 fine.	Equivalent value of a fine ounce with exchange at par, $4.8665.	Average monthly price at New York of exchange on London.	Equivalent value of a fine ounce based on average monthly price and average rate of exchange.	Average monthly New York price of fine bar silver.

EARNINGS AND EXPENDITURES, MINTS AND ASSAY OFFICES.

The earnings and gains and expenditures and loss for the fiscal year 1910 were as follows:

Earnings and gains:	
Charges for parting and refining	$242,249.91
Charges for alloy	14,812.62
Charges for assaying and stamping	23,135.89
Seigniorage on minor coinage	1,914,747.88
Seigniorage on subsidiary coinage	2,468,685.09
Seigniorage on recoinage of minor coins	2,498.35
Profits on medals and proof coins	3,069.99
Charges received for mounting, etc., medal fund account	249.63
Charges for the manufacture of medals, etc	1,979.79
Deposit melting-room grains and sweepings	26,006.88
Surplus bullion recovered by operative officers	40,797.53
Gain on bullion shipped to mint for coinage	4,584.98
Proceeds of sale of old material	3,112.49
Receipts from special assays of bullion and ore	3,434.22
Receipts for manufacturing appliances for Government and other institutions	14,142.48
Charges received for coinage for Philippine government	60,836.81
Gain on light-weight United States gold coin for recoinage	220.26
Bullion recovered from cleaning refinery pipes	1,088.45
Charges for treatment of deposit melting-room sweeps	807.88
Receipts from sale of by-products	41,836.82
Charges for manufacture of proof gold and silver	98.00
Amount received in excess of assay value of melting and refining sweeps sold	457.82
Amount recovered on account of embezzlement	818.77
Total earnings and gains	4,869,672.54
Expenditures and loss:	
Salaries of officers and clerks	225,827.67
Wages of workmen and other clerks and employees	788,886.19
Contingent expenses, less amount paid to reimburse wastage and loss on sweeps sold	161,031.44
Parting and refining expenses, less amount paid to reimburse wastage and loss on sweeps sold	240,936.08
Wastage of operative departments	7,273.57
Loss on sweeps sold during the year	4,912.75
Expenses of distributing minor coin	20,249.43
Expenses of medal fund (charges paid, mounting, etc.)	249.63
Loss on recoinage of minor coins	14,028.54
Loss on bullion shipped to mint for coinage	76.09
Total expenditures and loss	1,463,471.39

APPROPRIATIONS.

The total appropriations for salaries, wages, and contingent expenses for the entire mint service, including $100,000 for freight on bullion and coin between mints and assay offices, and $36,770 for salaries and contingent expenses, Office of the Director of the Mint, for the fiscal year 1910 amounted to $1,497,370. There is also a balance in the Treasury to the credit of the appropriation for "New machinery and appliances, mint at Philadelphia," of $2,316.94, and to the credit of the appropriation for "New machinery and appliances, mint at Denver," of $343.01.

The total expenditures during the year from these appropriations amounted to $1,268,955.67, leaving a balance of $231,074.28.

APPROPRIATIONS AND EXPENDITURES, FISCAL YEAR 1910.

APPROPRIATIONS AND REIMBURSEMENTS.[1]

Institutions.	Salaries.	Wages of workmen.	Contingent expenses.	Total.
Philadelphia	$43,550.00	$400,000.00	$85,000.00	$528,550.00

[1] The reimbursements consist of payments made for coinage for other countries or for services rendered to other branches of the Government service.

EARNINGS AND EXPENDITURES OF THE REFINERIES OF THE COINAGE MINTS AND ASSAY OFFICE AT NEW YORK, FISCAL YEAR 1910.

The earnings on account of parting and refining bullion during the fiscal year ended June 30, 1910, all of which were deposited in the Treasury, amounted to $323,590.57; the expenditures on the same account aggregated $245,853.97; and the net earnings over expenditures $77,736.60.

The earnings and expenditures of the several mints and the assay office at New York were as follows:

Institutions.	Charges collected.	Surplus bullion.	Receipts sale by-products.	Total receipts.	Expenditures.
Philadelphia	$83,233.18	$24,658.85	$41,836.82	$149,728.85	$70,440.31
San Francisco	67,654.12	1,300.30		68,954.42	79,295.16
New Orleans	3,760.18	4,278.93		8,039.11	2,628.72
Denver	58,175.16	6,186.15		64,361.31	30,101.49
New York	29,427.27	3,079.61		32,506.88	63,388.29
Total	242,249.91	39,503.84	41,836.82	323,590.57	245,853.97

Appropriations and Expenditures, Office of Director of the Mint, including Freight on Bullion and Coin between Mints and Assay Offices.

Appropriations.	Amount.	Expenditures.	Unexpended balance.
Salaries	$30,120	$27,852.50	$2,267.50
Contingent expenses	6,650	3,290.79	3,359.21
Freight on bullion and coin	100,000.00	46,385.68	53,614.32
Total	136,770.00	77,528.97	59,241.03

Consolidated Statement of Expenditures for Salaries, Wages, and Supplies of the Mints and Assay Offices during the Fiscal Year 1910.

Items of expenditure.	Ordinary expenses.	Refinery expenses.	Total.

LABORATORY OF THE BUREAU OF THE MINT.

From the coinage of the calendar year 1909 the assayer of this bureau tested 359 gold and 466 silver coins, all of which, with one exception, were found within the legal requirements as to weight and fineness.

In the gold coins the greatest deviation above standard (the legal limit being 0.001 above or below) was 0.0003, while the greatest deviation below was 0.0011.

The greatest deviation of silver coins above standard (the limit being 0.003 above or below) was 0.0013, while the greatest deviation below was 0.0018.

The following table summarizes these assays:

Fineness.	Philadelphia.		San Francisco.		New Orleans.		Denver.		Total.	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
898.2		1								1
898.4				1						1
898.5		3								3
898.7		6								6
898.9		19	1						1	19
899.0			1						1	
899.1		23	4	1		2			4	26
899.2			10						10	
899.3	1	48	8	6		1	1	3	10	58
899.4			12						12	
899.5			16				2		18	
899.6	5	41	22	5		4	12		39	50
899.7	13		26				12		51	
899.8	15	21	26	10	1	8	15	3	57	42
899.9	36		10		1		16		63	
900.0	31	12	12	9	3	5	12	7	58	33
900.1	15		3		1		6		25	
900.2	3	7		17		2	2	3	5	29
900.3	3						2		5	
900.4		4		7		1		6		18
900.7				7		2		2		11
900.9				1						1
901.1				1						1
901.3				1						1
Total	122	185	151	66	6	25	80	24	359	300
Average fineness	899.917	899.423	899.623	900.056	899.966	899.900	899.837	900.070	899.777	899.668

In addition to the above there were examined 146 Philippine silver coins and 6 Costa Rican silver coins, all of which were within the legal requirements as to weight and fineness. Also 96 assays of miscellaneous gold were made in settlement of differences between the mints and the assay offices.

An extensive investigation was made into the question of the possibility of standard gold made from electrolytic gold segregating during the coinage operations, and investigations into the manufacture of cupels in the service and the determination of minute amounts of gold in refinery silver and coins were inaugurated.

PROCEEDINGS OF THE ASSAY COMMISSION, 1910.

The following-named gentlemen were designated as commissioners to test and examine the weight and fineness of the coins reserved at the several mints during the calendar year 1909, pursuant to the provisions of section 3547 of the Revised Statutes:

Hon. Julius C. Burrows, United States Senate; Hon. Carroll S. Page, United States Senate; Hon. William B. McKinley, House of

Representatives; Hon. William A. Ashbrook, House of Representatives; Dr. Edgar F. Smith, Philadelphia, Pa.; Dr. Edward H. Keiser, St. Louis, Mo.; Dr. Charles R. Sanger, Cambridge, Mass.; Hon. David Cunningham, Cadiz, Ohio; Mr. Archer M. Huntington, New York, N. Y.; Mr. Edgar T. Leche, New Orleans, La.; Mr. Fred More, Charleston, Ill.; Mr. Luther Drake, Omaha, Nebr.; Hon. D. A. McPherson, Deadwood, S. Dak.; Mr. James H. Manning, Albany, N. Y.; Dr. Edward D. Peters, Cambridge, Mass.; Dr. O. L. Shinn, Philadelphia, Pa.; Hon. Lawrence O. Murray, Washington, D. C.; Hon. John B. McPherson, Philadelphia, Pa.; Mr. H. G. Torrey, New York, N. Y.

The commission met at the mint at Philadelphia on February 9, 1910, and Hon. Carroll S. Page was elected chairman.

The following committees were appointed by the chairman with the approval of the commission:

Committee on counting.—Mr. Drake, chairman; Messrs. More and Cunningham.

Committee on weighing.—Mr. Ashbrook, chairman; Messrs. Torrey, Manning, and McPherson.

Committee on assaying.—Mr. McKinley, chairman; Messrs. Peters, Keiser, Shinn, and Leche.

The committee on counting reported that the packages containing the pieces reserved by the several mints for the trial of coins were delivered to them, and that they were compared with the transcripts kept by the Director of the Mint and found to be correct. After verification the coins were delivered to the committees on weighing and assaying.

The coins reserved by the mints for the purposes of the assay commission were as follows:

Gold coins from the mint at Philadelphia, 1,437, of the value of $9,545.

Silver coins from the mint at Philadelphia, 10,950, of the value of $2,265.90.

Gold coins from the mint at San Francisco, 3,368, of the value of $59,940.

Silver coins from the mint at San Francisco, 2,056, of the value of $659.50.

Gold coins from the mint at New Orleans, 35, of the value of $175.

Silver coins from the mint at New Orleans, 1,964, of the value of $435.

Gold coins from the mint at Denver, 3,600, of the value of $19,410.

Silver coins from the mint at Denver, 3,034, of the value of $686.95.

The coins reserved on account of coinage executed for the Philippine Islands were as follows:

Mint at San Francisco:	
Pesos	3,789
50 centavo	264
20 centavo	225
10 centavo	157

The committee on assaying reported receiving and making assays of coins reserved from the mints at Philadelphia, San Francisco, New Orleans, and Denver, representing the deliveries made by the coiners to the superintendents during the calendar year 1909.

The highest assay value of the gold coinage (the limit of tolerance being one one-thousandth) was at—

Philadelphia	900.3
San Francisco	900.3
Denver	900.1
New Orleans	899.9

The lowest assay value of the gold coinage (the limit of tolerance being one one-thousandth) was at—

Philadelphia	899.8
San Francisco	899.8
Denver	899.8
New Orleans	899.9

The highest assay value of the silver coinage (the limit of tolerance being three one-thousandths) was at—

Philadelphia	900.7
San Francisco	900.7
Denver	901.3
New Orleans	901.1

The lowest assay value of the silver coinage (the limit of tolerance being three one-thousandths) was at—

Philadelphia	898.4
San Francisco	899.5
Denver	900.2
New Orleans	898.9

The highest assay value [1] of the Philippine silver coinage was at—

San Francisco (pesos)	801.6
San Francisco (subsidiary)	749.4

The lowest assay value of the Philippine silver coinage was at—

San Francisco (pesos)	799.4
San Francisco (subsidiary)	749.4

The committee also tested the quartation silver and found it free from gold, and the lead used in the assay of the gold bullion and found it free from gold and silver. The acid used in the humid assay of silver was found to be free from silver and also from chlorine.

The balances used were tested and found to be correct.

MINT OF THE UNITED STATES AT PHILADELPHIA.

The following table shows by weight and value the gold and silver deposited during the fiscal year 1910:

Metals.	Deposits.	Redeposits.	Standard ounces.	Coinage values.
Gold	3,203	1,894	1,295,106.556	$24,095,005.64
Silver	694	82	2,715,651.23	3,160,030.52
Total	3,897	1,976		27,255,036.16

[1] By the act of June 23, 1906, the standard fineness of the Philippine peso was reduced to 800 and the subsidiary coins to 750 fine.

Of the above amount of gold bullion, 1,325.413 ounces standard are the surplus bullion recovered by the melter and refiner in his operations during the fiscal year 1910, and 66.876 ounces standard are the surplus bullion recovered by the coiner during the fiscal year 1910.

The following table shows the number of proof coins and medals and their nominal value manufactured during the fiscal year:

Articles.	Pieces.	Nominal value.
Gold medals	149	$5,512.57
Silver medals	491	922.91
Bronze medals	18,848	3,734.56
Gold-proof coins	665	5,336.25
Silver-proof coins	1,866	528.70
Minor-proof coins	8,550	256.50
Total	30,569	16,291.49

Minor Coinage.

The coinage of minor coin during the fiscal year 1910 at the Philadelphia mint is shown in the following table:

Denominations.	Value.
1-cent bronze	$1,442,415.29
5-cent nickel	852,781.90

No blanks for minor coinage were purchased during the year.

The amount of metal purchased for the manufacture of minor coinage was 988,121 avoirdupois pounds, at a cost of $145,299.46.

The amount of uncurrent copper, nickel, and bronze coins transferred from the Treasury during the year for conversion into current coins, cost, and seigniorage are shown by the following table:

Old copper cents		$110.86
Nickel 1-cent coins		533.16
Bronze 1-cent coins		33,998.57
Bronze 2-cent coins		166.40
Nickel 3-cent coins		433.41
Nickel 5-cent coins		189,810.60
Total		225,053.00
Balance from last year		29,885.00
Cost of nickel added to 1-cent metal to convert into 5-cent alloy for recoinage into nickel 5-cent coin		14.36
Cost of tin and zinc added to old copper-cent metal to convert into bronze 1-cent alloy for recoinage into bronze 1-cent coin		1.93
Cost of metal of same alloy added to nickel 3-cent metal for recoinage into nickel 5-cent coin		5.21
Seigniorage (gain by recoinage)		2,498.35
Total		257,457.85
Coinage executed, nominal value:		
Bronze 1-cent coin	$33,236.81	
Nickel 5-cent coin	210,192.50	
		243,429.31
Loss by recoinage		14,028.54
Total		257,457.85

The seigniorage or gain on recoinage of minor coin was $2,498.35, as against a loss of $14,028.54, showing a net loss of $11,530.19.

The seigniorage on the coinage of nickel and bronze coins coined from purchased metal was $1,875,505.38, which, less a net loss of $11,530.19 on the recoinage of minor coin and a wastage of the operative officers in the minor coinage operations of $1,597.48, gives a net seigniorage on minor coin of $1,862,377.71.

The total amount of the several types of minor coin manufactured at this mint from 1793, when the first coinage of copper cents was made, until June 30, 1910, aggregated $56,114,471.71. There have been melted for recoinage $5,228,912.44, leaving oustanding June 30, 1910, $50,885,559.27, the product of this mint.

The several types and denominations of minor coin issued, manufactured by the mint at Philadelphia since its establishment, the amount remelted, and the amount outstanding June 30, 1910, are set forth in the following table:

MINOR COINS ISSUED, REMELTED, AND OUTSTANDING.

Denominations.	Coined.	Remelted.	Outstanding June 30, 1910.
Copper cents	$1,562,887.44	$380,653.31	$1,182,234.13
Copper half cents	39,926.11		39,926.11
Copper-nickel cents	2,007,720.00	803,368.71	1,204,351.29
Bronze cents	18 537,065.29	382,456.73	18,154,638.56
Bronze 2-cent pieces	912,020.00	339,834.22	572,185.78
Nickel 3-cent pieces	905,768.52	283,102.27	622,666.25
Nickel 5-cent pieces	32,149,054.35	3,039,497.20	29,109,557.15
Total	56,114 471.71	5,228,912.44	50,885,559.27

Minor coins to the amount of $2,758,799.03 have been distributed throughout the States and Territories of the United States during the fiscal year 1910—$1,215,830.45 in nickel 5-cent pieces and $1,542,968.58 in bronze 1-cent pieces.

The expenditure for the distribution of minor coin for the same period was $20,189.92.

ALL SEIGNIORAGE.

The seigniorage on the coinage of purchased metal for the fiscal year was $3,575,885.92, as shown by the following table:

Items.	Coined.	Seigniorage.
Subsidiary silver coins	$2,911,667.25	$1,700,380.54
Minor coins	2,051,767.88	1,875,505.38
Total	4,963,435.13	3,575,885.92

VISITORS.

A large number of visitors from all States of the Union and from foreign countries visited the mint during the year, 86,177 having been shown through the building by the several guides.

Number of Employees.

The total number of employees in this mint at the close of the fiscal year was 360, distributed in the several departments as follows:

Department:	
General	183
Assayer's	13
Melter's and refiner's	61
Coiner's	94
Engraver's	9
Total	360

Melter and Refiner's Department.

During the fiscal year the melter and refiner received from the superintendent gold bullion containing by assay 1,839,490.674 standard ounces, of the value of $34,223,082.31, his legal allowance for wastage being 1,839.491 standard ounces, of the value of $34,223.09.

He also received silver bullion containing by assay 6,825,648.72 standard ounces, of the value of $7,942,573.06, his legal allowance for wastage being 10,238.47 standard ounces, of the value of $11,913.85. He returned to the superintendent 1,840,816.087 standard ounces of gold and 6,822,418.53 standard ounces of silver.

He operated upon bullion as follows:

Items.	Gold.	Silver.
	Standard ozs.	*Standard ozs.*
Ingots	156,328.090	3,840,018.82
Refinery	1,373,409.594	3,311,484.06
Total	1,529,737.684	7,151,502.88

The excess of silver operated upon over the amount charged during the year is due to duplicate operations.

Upon the settlement of the melter and refiner's accounts June 30, 1910, there was found an apparent gain upon the gold bullion during the fiscal year of 1,325.413 standard ounces, and in the operations upon the silver bullion an apparent loss of 3,230.19 standard ounces.

The melts made aggregate as follows:

Melts.	Bars.	Ingots.	Anodes.	Deposits.	Special.	Total.
Gold	238	26	995	3,240	254	4,753
Silver	1,023	966		579		2,568
Total	1,261	992	995	3,819	254	7,321

During the fiscal year one silver melt was condemned.

Number, Weight, and Value of Gold and Silver Bars for Industrial Use.

Metal.	Bars.	Standard ounces.	Coinage value.
Gold	5,115	466,761.327	$8,683,931.70
Silver	8,501	1,819,513.87	2,117,252.50
Total	13,616	2,286,275.197	10,801,184.20

During the year 145 barrels of sweeps were gathered, containing by assay 865.449 standard ounces of gold and 4,110.74 standard ounces of silver. There were 15 barrels of old sweeps reworked, containing by assay 147.228 standard ounces of gold and 641.39 standard ounces of silver.

The operations of the refinery were as follows:

Bullion.	Gold.	Silver.
	Standard ozs.	*Standard ozs.*
Sent to refinery 4,742,461.56 gross ounces, containing by assay	1,372,113.076	3,311,484.06
Bullion received from refinery	1,372,458.612	3,305,016.26
Sweeps	950.982	4,481.24
	[1] 1,296.518	[2] 1,986.56

[1] Apparent gain. [2] Apparent loss.

Silver bullion sent to the refinery upon which refining charges were collected contained by assay 2,647,553.49 standard ounces, and silver owned by the Government and returned to the refinery for parting purposes upon which no parting charges were collected contained by assay 663,930.57 standard ounces.

	Troy ounces.		
During the year the melter and refiner received from the superintendent minor coinage metal			31,543,551.07
Delivered prior to settlement:	Troy ounces.		
Bronze ingots	23,635,109.40		
Nickel ingots	5,191,652.40		
		28,826,761.80	
Delivered in settlement:			
Ingot copper	1,734,900.17		
Nickel shot	647,455.83		
Bronze ingots	70,036.80		
Zinc	96,207.00		
Tin	70,778.00		
Nickel clippings	256.00		
Nickel residue	974.00		
Bronze residue	3,527.00		
Old copper coin	4,685.00		
Bronze sample ingots	1,970.00		
Wastage	85,999.47		
		2,716,789.27	
			31,543,551.07

COINER'S DEPARTMENT.

The coiner received gold, silver, nickel, and bronze from the superintendent during the year, as follows:

Metal.	GOLD.		SILVER.	
	Amount.	Total.	Amount.	Total.
Received from superintendent July 1, 1909, to June 30, 1910	*Stand. oz.*	*Stand. oz.* 307,521.140	*Stand. oz.*	*Stand. oz.* 4,174,142.49
Returned prior to settlement June 30, 1910	31,096.564		3,951,609.53	
Returned in settlement June 30, 1910	276,491.452		222,219.11	
		307,588.016		4,173,828.64
Wastage		[1] 66.876		313.85

Metal.	NICKEL.		COPPER-BRONZE.	
	Amount.	Total.	Amount.	Total.
Received from superintendent July 1, 1909, to June 30, 1910	*Stand. oz.*	*Stand. oz.* 5,552,420.20	*Stand. oz.*	*Stand. oz.* 27,049,502.90
Returned prior to settlement June 30, 1910	5,231,555.38		26,614,500.20	
Returned in settlement June 30, 1910	314,893.45		380,012.80	
		5,546,448.83		26,994,513.00
Wastage		5,971.37		54,989.90

[1] Gold surplus.

During the fiscal year 1910 this department received from the superintendent 307,521.140 standard ounces of gold, of which 31,048.300 standard ounces were operated upon, from which there were produced 23,713.157 standard ounces of coin of the value of $441,175, and delivered to the superintendent during the fiscal year prior to settlement.

There were also delivered to the superintendent prior to settlement 7,383.407 standard ounces of gold clippings and bars, and there were delivered at settlement 276,491.452 standard ounces of gold ingots, partly finished coin, sweeps, and bars. The entire operation showed a gain or surplus of 66.876 standard ounces, of the value of $1,244.20.

The very small actual operation on gold involved practically no wastage, and a thorough cleaning up and the recovery of former wastage contributed this surplus.

The percentage of coin produced to the amount of metal operated upon was 76.37. This high percentage was due to the fact that the operation was almost entirely upon "unfinished coin and good blanks," received in the redelivery from the superientendent after the settlement of June 30, 1909.

During the same period the coiner also received from the superintendent 4,174,142.49 standard ounces of silver, of which 3,936,902.10 standard ounces were operated upon, from which there were produced 2,340,252.55 standard ounces of coin of the value of $2,911,667.25 in subsidiary silver coin and delivered to the superintendent during the fiscal year prior to settlement.

There were also delivered to the superintendent during the fiscal year prior to settlement 1,611,356.98 standard ounces of silver clippings and bars, and there were delivered at settlement 147,646.62

standard ounces of silver coin, and 74,572.49 standard ounces of ingots, unfinished coin, and sweeps. Upon the entire operation there was a wastage of 313.85 ounces of the value of $161.60, being 7.52 per cent of the legal allowance.

The percentage of coin produced to the amount of metal operated upon was 63.19 per cent.

There were also delivered to the coiner during the same period 5,552,420.20 ounces of nickel ingots, from which were produced 2,742,310.08 ounces of 5-cent pieces of the face value of $852,781.90, upon which there was a wastage of 5,971.37 ounces.

The percentage of coin produced to the amount operated upon was 49.39 per cent.

There were also delivered to the coiner during the same period 27,049,502.90 ounces of copper-bronze ingots, from which there were produced 14,425,498.70 ounces of 1-cent coin of the face value of $1,442,415.29, upon which there was a wastage of 54,989.90 ounces. The percentage of coin produced was 53.33.

The coinage executed during the year was:

Denominations.	Pieces.	Value.
Gold:		
Double eagles	143	$2,860.00
Eagles	172	1,720.00
Half eagles	26,182	130,910.00
Quarter eagles	122,274	305,685.00
Total gold	148,771	441,175.00
Silver:		
Half dollars	1,808,785	904,392.50
Quarter dollars	5,232,785	1,308,196.25
Dimes	6,990,785	699,078.50
Total silver	14,032,355	2,911,667.25
Minor:		
5-cent nickel pieces	17,055,638	852,781.90
1-cent bronze pieces	144,241,529	1,442,415.29
Total minor	161,297,167	2,295,197.19
Grand total	175,478,293	5,648,039.44

Engraver's Department.

All the dies used in the coinage operations of all the mints of the United States are made in the engraving department at Philadelphia.

The number of dies prepared for United States coinage last year was 2,626. In addition 65 dies were made for Philippine coinage, 24 for the Post Office Department, 20 for medals, and 84 master dies, hubs, and pattern dies.

DIES FURNISHED THE SEVERAL MINTS DURING THE FISCAL YEAR ENDED JUNE 30, 1910.

ASSAYER'S DEPARTMENT.

The number of assays made in this department were:

Deposits and purchases	35,812
Ingots (gold and silver)	2,337
Refinery	10,034
Special assays	3,046
Sweeps assays	217
Total	51,446

In addition to this, 560 ounces of proof gold and 820 ounces of proof silver were made.

Of the 26 melts of gold ingots made by the melter and refiner, all were passed. No melts were condemned. There were 966 melts of silver ingots made, of which 961 were passed, 4 returned for remelting, and 1 condemned.

The fineness of gold melts passed was:

2 melts at	900.2
1 melt at	900.1
12 melts at	900.0
8 melts at	899.9
3 melts at	899.8
26	

The fineness of silver melts passed was:

29 melts at	898
87 melts at	898¼
237 melts at	898½
170 melts at	898¾
293 melts at	899
85 melts at	899¼
42 melts at	899½
12 melts at	899¾
6 melts at	900
961	

Seventy-six thousands cupels were made and 80,000 leads cut, rolled, and weighed.

MINT OF THE UNITED STATES AT SAN FRANCISCO.

The following table shows by weight and value the gold and silver deposited during the fiscal year 1910:

Metals.	Deposits.	Redeposits.	Standard ounces.	Coining value.
Gold	7,117	502	2,279,646.826	$42,412,034.02
Silver	991	.....	1,851,448.74	2,154,413.07
Total	8,108	502	.....	44,566,447.09

Of the above amount of gold bullion 2.660 standard ounces were surplus bullion recovered by the coiner and 2,547.05 standard ounces recovered by the melter and refiner, during the fiscal year 1910.

Of the above amount of silver bullion 1,543,938.45 standard ounces of Philippine coin were received for recoinage for the government of the Philippine Islands.

During the year minor coinage metal was received for the coinage of United States bronze coin and the recoinage of minor coin into bronze coin for the Philippine Islands as follows:

Countries.	Recoinage.	Purchased.	Total.	Cost value.
	Troy ozs.	*Troy oz.*	*Troy oz.*	
Philippine Islands	311,724.50	15,225.00	326,949.50	$9,496.24
United States	.....	336,539.57	336,539.57	3,350.96
Total	311,724.50	351,764.57	663,489.07	12,847.20

ASSAYER'S DEPARTMENT.

The appended tables show the operations of the department for the fiscal year 1910:

Gold assays	49,075
Silver assays	12,852
Sweep assays	372
Total	62,299
Parting silver manufactured ..... ounces..	3,000
Cupels made	100,000
Leads cut, rolled and weighed	100,000

Ingot melts were passed as follows:

Fineness.	Melts.	Fineness.	Melts.
GOLD INGOTS.		SILVER INGOTS.	
899.6	10	898.5	106
899.7	96	898.6	197
899.8	259	898.7	1
899.9	301	898.8	112
900.0	77	899.1	172
900.1	19	899.3	82
Condemned	0	899.5	59
		899.8	16
Total	762	900.0	6
		900.2	6
		900.4	2
		Condemned	1
		Total made	760

Of the above ingots, 237 were double eagles, 305 were eagles, 220 were half eagles, 670 were half dollars, and 90 were quarter dollars.

REFINERY.

GOLD BULLION.

	Standard ounces.	
Sent to refinery:		
Bullion (no charges)	969,366.810	
Crude bullion (with charges)	1,080,641.467	2,050,008.277
Returned from refinery:		
Fine gold bars	2,002,825.752	
Settlement metal	47,079.973	2,049,905.725
Wastage		102.552

SILVER BULLION.

Sent to refinery:		
Bullion (no charges)	329,750.49	
Crude bullion (with charges)	1,708,541.47	2,038,291.96
Returned from refinery:		
Fine silver bars	1,993,221.34	
Settlement metal	44,135.36	2,037,356.70
Wastage		935.26

The refinery also produced 8,889 pounds of electrolytic copper.

SWEEP CELLAR.

Items.	Gold.	Silver.
	Std. oz.	Std. oz.
1,328 sacks, 51 barrels	1,176.519	4,194.43
Bars	2,280.262	3,881.72
Account Carson Mint:		
177 sacks	25.501	89.37
Bars	153.524	121.51
Total	3,635.806	8,287.03

Coiner's Department.

The coiner received gold, silver, and bronze from the superintendent during the fiscal year 1910 as follows:

GOLD.

		Standard ounces.
Received from superintendent		2,469,078.498
Returned prior to settlement June 30, 1910	2,266,860.206	
Returned in settlement June 30, 1910	202,220.952	
		2,469,081.158
Excess in gold		2.660

SILVER.

Received from superintendent		7,403,812.30
Returned prior to settlement June 30, 1910	7,043,810.99	
Returned in settlement June 30, 1910	357,110.87	
		7,400,921.86
Wastage in silver		2,890.44

COPPER-BRONZE.

		Troy ounces.
Received from superintendent		1,306,360.98
Returned prior to settlement June 30, 1910	1,092,248.32	
Returned in settlement June 30, 1910	208,938.74	
		1,301,187.06
Copper-bronze wastage		5,173.92

During the same period the coiner operated on gold, silver, and bronze and made delivery to the superintendent as follows:

GOLD.

	Standard ounces.
Amount operated on	2,266,857.546
Coin delivered to superintendent	1,280,674.375
Percentage of gold coin to amount operated on	56.49

SILVER.

Amount operated on	7,046,701.43
Coin delivered to superintendent	4,171,489.02
Percentage of silver coin to amount operated on	59.18

COPPER BRONZE.

	Troy ounces.
Amount operated on	1,197,422.24
Coin delivered to superintendent	681,606.99
Percentage of copper-bronze coin to amount operated on	56.76

The following table shows the coinage executed during the fiscal year:

Denomination.	Pieces.	Value.
DOMESTIC COINAGE.		
Gold	2,492,425	$23,826,500.00
Silver	3,074,000	1,345,000.00

20 centavo	450,000	90,000.00
10 centavo	312,199	31,219.90
Total silver coinage	6,074,758	5,415,778.90
Minor 1 centavo	1,500,000	15,000.00
Total Philippine Islands coinage	7,574,758	5,430,778.90

During the fiscal year 1910 a power plant was installed for the purpose of generating the electric current needed for operating motor-driven machinery and electric lighting.

The power plant consists of three turbo-generating units, switchboard, air compressor, cooling tower, jet condenser with accessories, superheaters, feed water heater, electric-driven fire pump, house pump, and boiler feed pump; new conduit system for electric wiring, hot and cold water tanks; water and air piping, covering, etc

The generating sets consist of one 150 kilowatts generator direct connected to a four stage steam turbine, and two 100 kilowatts generators direct connected to two stage steam turbines, each having a capacity of 25 per cent above their rating.

The switchboard is complete in every detail, having indicating and recording instruments connected with each department throughout the building.

The air compressor is used in connection with the water supply for the building and has a capacity of 68 cubic feet of free air per minute.

The condenser is of the jet type, having a capacity to condense 4,200 pounds of steam per hour continuously.

The superheaters installed in each battery of boilers have a capacity to superheat 4,200 pounds of steam at 150 pounds gauge 100 degrees F.

The feed water heater is of the open type, designed to purify all the water supplied to the boilers and to heat the same to the proper temperature.

The fire pump is of the two-stage type, direct connected to an electric motor, and has a capacity to deliver 300 gallons of water per minute against a head of 175 feet.

The house pump is of the triplex type, being driven by an electric motor. This pump has a capacity to deliver 75 gallons of water against a head of 150 feet.

The boiler feed pump is of the triplex type, having 24 speeds, and is designed to deliver 12.5 gallons of water per minute.

VISITORS.

During the year 52,635 visitors were shown through the mint.

MINT OF THE UNITED STATES AT DENVER, COLO.

The standard weight and value of bullion received during the fiscal year was as follows:

Metals.	Deposits and purchases.	Redeposits United States assay offices.	Standard ounces.	Coinage value.
Gold	3,546	551	1,195,622.426	$22,244,138.15
Silver	595		434,764.54	505,907.82
Total	4,141	551	1,630,386.966	22,750,045.97

Shipments from refineries, cyanide and chlorination mills aggregating 483,561.481 standard ounces gold, of a coinage value of $8,996,492.65, and 22,403.94 standard ounces silver, of a coinage value of $26,070.06.

Domestic bullion, unrefined, totaled 302,795.065 standard ounces gold, of a coinage value of $5,633,396.56, and 327,607.80 standard ounces silver, of a coinage value of $381,216.35.

Redeposits of United States assay offices carried 404,947.336 standard ounces gold, of a coinage value of $7,533,903.93, and 80,061.90 standard ounces silver, of a coinage value of $93,162.92.

During the year there were purchased gold and silver coins of a face value, respectively, of $477.50 and $34.50, and of a coinage value of $442.79 in gold, and $34.58 in subsidiary silver.

There was but one change in the staff of operative officers during the year, Mr. Jabin B. Baldwin succeeding Mr. Harry Tarbell as coiner March 1, 1910.

Visitors to the number of 55,740 were looked after during the six months of coining operations.

The number of officers and employees in the mint at the close of the fiscal year was as follows:

Department:	
General	57
Assayer's	8
Melter's and refiner's	23
Coiner's	31
Total	119

Assayer's Department.

The operations of this department during the fiscal year 1910 were as follows:

Items.	Samples operated on.		
	Gold.	Silver.	Total.
Deposits	3,558	595	4,153
Redeposits	514	37	551
Exchange bars	40	15	55
Return bars	4		4
Anode melts	47	464	511
Mint fine melts	171	101	272
Ingot melts	293		293
Consolidated melts	3		3
Experimental samples	139	106	245
Bullion assay samples	9		9
Copper melts	2		2
Superintendent's grain bars	4		4
Melter's and refiner's grain bars	8	14	22
Coiner's grain bars	4		4
Assayer's grain bars	21	1	22
Sweep samples	32	32	64
Special assay samples	192	135	327
Forest Service samples	208	203	411
Total	5,249	1,703	6,952

In addition there were assayed for the Forest Service 32 samples for copper, 5 samples for lead, 7 samples for zinc, and 1 sample for platinum.

Number of Actual Assays Made.

Gold	26,331
Silver	14,611
Sweeps	383
Forest Service	743
Cupels made	32,000
Lead, cut and rolled	32,000

Fine Gold Determinations.

The reported finenesses of the refined gold melts were as follows:

Fineness.	Melts.	Fineness.	Melts.
998.0	1	999.5	17
999.0	1	999.6	39
999.1	1	999.7	80
999.2	2	999.8	13
999.3	3		
999.4	14	Total	171

Fine Silver Determinations.

Fineness.	Melts.
998½	2
999.0	56
999¼	17
999½	26
Total	101

Ingot Fineness.

The reported finenesses of the gold ingot melts were as follows:

Fineness.	Melts.
899.8	8
899.9	118
900.0	158
900.1	7
900.2	1
	292
Remelted	1
Total	293

Melter and Refiner's Department.

The melter and refiner received from the superintendent during the fiscal year 1910:

Metal.	Gold account.		Silver account.	
	Amount.	Total.	Amount.	Total.
	Stand. oz.	*Stand. oz.*	*Stand. oz.*	*Stand. oz.*
In bullion		1,881,945.335		618,697.82
Returned prior to settlement	1,677,585.909		16,524.70	
Returned at settlement	204,665.805		603,197.27	
		1,882,251.774		619,721.97
Surplus		306.439		1,024.15

The surplus was recovered from unreported fractions of assays and from fractional gains in weights of deposits.

The ingot melting room was in operation six months only.

The sweeps cellar was operated for six months and treated 83,206 pounds of sweeps, and extracted therefrom 1,047.455 standard

ounces of gold and 1,799.37 standard ounces of silver, and the resulting mill tails contained 296.654 standard ounces of gold and 1,871.51 standard ounces of silver.

Refinery operations covering a period of eight months were as follows:

Metal.	Gold account.		Silver account.	
	Amount.	Total.	Amount.	Total.
	Stand. oz.	*Stand. oz.*	*Stand. oz.*	*Stand. oz.*
Delivered to the refinery		1,411,433.731		1,471,908.34
Returned prior to settlement	1,378,938.811		1,417,073.87	
Returned at settlement in bars	32,965.222		54,854.25	
Returned at settlement in sweeps	71.556		436.44	
		1,411,975.589		1,472,364.56
Surplus		541.858		456.22

The refinery earnings were as follows:

Charges collected on bullion treated in refinery	$60,565.82
Surplus bullion recovered	6,173.55
By-products	999.42
Total	67,738.79

The following melts were made:

Character of melts.	Gold.	Silver.	Gold and silver.	Total.
Deposits	3,738	613	.....	4,351
Anodes	47	464	.....	511
Cathodes	60	50	.....	110
Ingots	293	3	.....	296
Mint bars	171	101	.....	272
Slimes	42	57	.....	99
Settlement	8	14	.....	22
Sweats	.....	.....	314	314
Miscellaneous	166	.....	264	430
Total	4,525	1,302	578	6,405

Ingot melts condemned: None. Remelts: Gold, 1; silver, none.

Coiner's Department.

There was no coinage executed at this mint during the first six months of the fiscal year 1910.

From January 1, 1910, the coiner received and operated upon 1,758,337.70 standard ounces of gold. He delivered to the superintendent 1,252,977 standard ounces of gold coin, valued at $23,311,200. The number of pieces coined aggregated 2,427,950. The percentage of coin produced from the amount operated upon was 71.26. The loss in the coinage operations was 42.99 standard ounces, being 4.89 per cent of the legal tolerance.

The only work in silver during the fiscal year was in delivering to the superintendent the coins that were left over from the previous fiscal year, amounting to 32,873.37 standard ounces, valued at $40,900, and aggregating 166,000 pieces.

In the process of cleaning up and reclaiming from sweeps, etc., there were recovered 27.32 standard ounces of silver. There being

no operations of any kind in silver, other than as stated above, this amount stands as a surplus during the fiscal year, but in reality it is a recovery from the previous year's operations.

The coinage was as follows:

Items.	Pieces.	Value.
Total gold	2,427,950	$23,311,200
Total silver	166,000	40,900
Total coinage	2,593,950	23,352,100

ASSAY OFFICE OF THE UNITED STATES AT NEW YORK.

The report of the business of this office for the fiscal year 1910, is as follows:

Bullion received.	Deposits.	Re-deposits.	Standard ounces.	Coinage value.
Gold	10,517	1	3,103,623.674	$57,741,835.87
Silver	1,786	33	2,557,913.85	2,976,481.57
Total	12,303	34		60,718,317.44

The gross weight of this bullion was 5,384,915.29 ounces, a decrease from last year of 2,213,069.70 ounces.

The value of the foreign gold bullion and coin deposited was $12,936,181.26, an increase over last year of $1,385,131.33.

The value of the domestic gold bullion and coin deposited was $44,805,754.61, a decrease from last year of $3,378,537.12.

The source of domestic gold bullion and coin received were as follows:

From new production in United States and Territories	$5,013,870.54
From private refineries	34,987,869.23
From jewelers' bars, plate, etc	3,934,982.79
From redeposited bullion	10,310.23
From United States gold coin of light weight	858,721.82
Total	44,805,754.61

This statement shows a decrease compared with last year in the amount of gold bullion received from private refineries of $2,427,935.08, and an increase from gold coin of light weight of $322,739.67.

There was received from the United States mint at Philadelphia, during the year, fine gold amounting to 55,419.062 standard ounces, and fine silver amounting to 1,654,883.95 standard ounces.

Redeposited gold bullion consisted of 545.102 standard ounces gold contained in fine gold bars made at this office and 9.073 standard ounces contained in unparted bars made at the United States assay office, Charlotte, N. C.

As parting operations have not been resumed, the unparted bullion received during the year has been transferred to the United States Mint at Philadelphia, for treatment. Those shipments amounted to 2,418,038.48 ounces gross, containing 886,204.640 standard ounces of gold and 1,481,161.21 standard ounces of silver.

The amount of bullion delivered to the melter and refiner and by him returned to the superintendent during the fiscal year 1910, was as follows:

Bullion.	Delivered to melter and refiner.	Returned by melter and refiner.
	Stand. oz.	*Stand. oz.*
Gold	3,205,474.192	2,949,692.248
Silver	2,651,519.47	2,529,612.19

The grains and fluxes from the deposit melting room yielded $5,802.97, and the sweeps (52 barrels) $5,110.27.

There was stamped during the year 56,099 gold bars and 14,016 silver bars. In the previous years there were stamped 47,434 gold bars and 13,379 silver bars. Gold bars issued to depositors of bullion for domestic use, $3,589,277.87. Gold bars exchanged for gold coin for domestic use, $23,332,333.28. Total gold bars issued for use in the arts, etc., $26,921,611.15, showing an increase of $4,391,810.85 compared with last year.

The value of gold bars exchanged for gold coin for export was $355,381.93, being a decrease compared with last year of $17,035,514.33.

The income from the exchange of gold bars for gold coin was $11,940.49, and from special assays $1,898.

The force employed in this office at the close of the year including the superintendent, assayer, and melter and refiner, numbered 75, distributed as follows:

General department	23
Assayer's department	15
Melter and refiner's department	37

No settlement was made at the close of the fiscal year, it being postponed one month and made coincident with the transfer from Mr. Kingsbery Foster, superintendent, up to the close of July, to Mr. Daniel P. Kingsford, who then succeeded him.

The surplus bullion turned over at that time, recovered by the melter and refiner during the 13 months ending July 31, 1910, contained 126.872 ounces of gold and 1,411.48 standard ounces of silver.

During the fiscal year the foundations for the new refinery have been completed and a large part of the framework erected.

For greater safety during this construction work $10,000,000 in fine gold bars were transferred to the subtreasury for storage under the seal of the superintendent.

All the operations of the office have been conducted under very difficult conditions during the year, every department being very much crowded and hampered by the changes and curtailment of space and light in the present building incident to the erection of the new refinery.

Assayer's Department.

The following is the report of the operations in the assay department during the fiscal year 1910:

There were assayed 10,517 melts of gold deposits, and 1,786 melts of silver deposits, a total of 12,303 melts, involving 61,505 assays. The fine gold and silver melts assayed were 375 and the fineness was

stamped upon 55,954 bars of gold and 6,475 bars of silver, a total of 62,429.

Special assays numbered 928, being largely articles of jewelry and manufacturer's samples.

Assays were made on 134 barrels of sweeps and on 155 consolidated melts for shipment to the mint, with the usual incidental ones for the melter and refiner, etc.

All cupels used were made in this department.

Melter and Refiner's Department.

The following is a statement of the business of this department during the fiscal year ended June 30, 1910:

Items.	Weight.	Gold.	Silver.
	Gross oz.	*Stand. oz.*	*Stand. oz.*
Settlement metal of June, 1909	199,156.66	101,406.808	92,757.55
Gold deposits	3,114,623.236	3,066,361.797	212,536.64
Silver deposits	2,270,292.05	37,261.877	2,345,377.21
Deposit melting-room grains and fluxes	5,612.52	443.710	848.07
Total	5,589,684.466	3,205,474.192	2,651,519.47

The melter and refiner returned during the year the following bullion:

Kind of bars.	Number of bars.		Gold.	Silver.
	Gold.	Silver.		
			Stand. oz.	*Stand. oz.*
Fine	55,780	6,419	2,011,113.772	674,317.94
Standard	174		51,904.776	
Mint		329		373,586.34
Unparted		14,157	886,204.640	1,481,161.21
In sweeps			469.060	546.70
Total			2,949,692.248	2,529,612.19
Balance due superintendent June 30, 1910, but not delivered			255,781.944	121,907.28
Total	55,954	20,905	3,205,474.192	2,651,519.47

There were delivered to the superintendent 98 barrels of melter and refiner's sweeps, containing 469.060 ounces standard gold and 546.70 ounces standard silver.

The operations of the melter and refiner's melting room were as follows:

Items.	Gold.	Silver.
	Stand. oz.	*Stand. oz.*
Sent to melters and refined by fluxes	2,251,149.211	355,505.44
Unparted bars melted	297,358.761	232,406.18
Mixed deposits of gold coin melted	52,171.451	
Total	2,600,679.423	587,911.62
Returned from melters: Tops, bars, etc., sweeps and other sources	58,764.409 2,542,003.046	7,051.22 581,987.50
Total	2,600,767.455	589,038.72
Apparent gains	88.032	1,127.10

One hundred and twenty-six and eight hundred and seventy-two one-thousandths ounces standard gold and 1,411.48 ounces standard silver were returned in settlement of July 31, 1910, in excess of amounts debited to melter and refiner.

The apparent sources of above amounts in excess are as follows:

Items.	Gold.		Silver.	
	Apparent gains.	Apparent losses.	Apparent gains.	Apparent losses.
	Stand. oz.	*Stand. oz.*	*Stand. oz.*	*Stand. oz.*
Unparted bars	232.371		590.02	
Gold bars		78.392		
Silver bars			647.32	
Assayer's account			288.44	
Shipments		27.107		114.30
	232.371	105.499	1,525.78	114.30
	105.499		114.30	
Net total apparent gains	126.872		1,411.48	

There was an allowance during 12 months of 162.323 ounces standard gold on small bars for which this department received no credit.

THE MINT AT NEW ORLEANS.

The following table shows by weight and value the gold and silver deposited during the fiscal year 1910:

Metals.	Deposits.	Standard ounces.	Coining value.
Gold	836	47,151.035	$877,228.56
Silver	45	94,332.21	109,768.39
Total	881		986,996.95

Included therein are 192.521 standard ounces of gold and 1,515.89 standard ounces of silver surplus recovered by the melter and refiner in his operations during the 11 months ended May 31, 1910.

The greater portion of deposits of gold were from Mexico, Central and South America, and contained 40,288.749 standard ounces, of the value of $749,558, while the deposits of domestic subsidiary coin transferred from the Treasury contained 61,412.90 standard ounces and those purchased over the counter contained 153.05 standard ounces, a total of 61,595.95 standard ounces of the value in new subsidiary coin of $76,598.37.

The following table shows the country from which the bullion was received:

Countries.	Gold.		Silver.	
	Standard ounces.	Value.	Standard ounces.	Value.
Mexico	17.447	$324.59	5.85	$6.81
Nicaragua	38,240.022	711,442.27	17,646.54	20,534.15
Guatemala	1,405.475	26,148.37	142.62	165.95
Honduras	588.853	10,955.40	189.38	220.37
Colombia	36.952	687.49	12.77	14.86
Total	40,288.749	749,558.12	17,997.16	20,942.14

Assayer's Department.

The work of the assayer's department of the mint consisted chiefly of assay determinations for the value of gold and silver deposits, being 881 in number. There were also made 151 assays of mass melts, fine and grain bars. The balance of the work was in assaying samples of bullion, sweeps, and special bullion, making in all 1,099 assays as follows:

NUMBER OF DEPOSITS AND PURCHASESAND BARS RECEIVED AND ASSAYED DURING THE FISCAL YEAR ENDED JUNE 30, 1910.

Classification.	Gold.	Silver.	Total.
Deposits	836	45	881
Mint fine bars issued	52	18	70
Melter and refiner's mass melts	25	.....	25
Superintendent's bars	12	.....	12
Melter and refiner's grain bars	5	3	8
Melter and refiner's fine melts	21	11	32
Assayer's bars	2	2	4
Mint bureau samples	46	12	58
Transfer orders	.....	3	3
Sweeps	2	.....	2
Special bullion assays	4	.....	4
Total	1,005	94	1,099

Melter and Refiner's Department.

The amount of gold and silver received and operated upon by the melter and refiner from July 1, 1909, to the settlement of his accounts May 31, 1910, was as follows:

Bullion.	Gold.	Silver.
	Standard oz.	*Standard oz.*
Bullion received	189,291.965	171,651.55
Bullion returned	189,484.486	173,167.44
Surplus recovered	192.521	1,515.89

The refinery operated upon 31,545.985 standard ounces of gold and 73,329.05 standard ounces of silver, of which there was an apparent gain of 42.995 standard ounces of gold and 100.03 standard ounces of silver.

Silver bullion upon which charges were collected contained 17,148.88 standard ounces; silver bullion owned by the Government, upon which there were no charges, contained 56,080.14 standard ounces.

There were 45.584 standard ounces of gold and 585.58 standard ounces of silver recovered from eight barrels of sweeps from the various workrooms of this department. There were also made 996 melts of bullion of all kinds.

Coiner's Department.

There were no operations in this department during the fiscal year.

OPERATIONS OF THE MINOR ASSAY OFFICES FOR THE FISCAL YEAR 1910.

Mint at Carson.—The deposits of bullion at this mint amounted to $1,344,718.37, a reduction in the value of deposits from 1909, due to the discontinuance of deposits by certain mines.

The earnings for 1910 amounted to $6,432.05, exceeding those of 1909 by reason of a clean-up of slag, etc., while the expenditures for 1910 were $14,950.35, or $1,817.26 more than for 1909. The necessary operations required to handle the above bullion show a total of 5,629 assays. In addition there were 44 assays of ores and 14 assays of bullion.

Assay office at Boise.—The value of deposits during 1910 at this office amounted to $821,347, being $261,268.98 less than for 1909. This decrease is claimed to be due to the extremely cold weather, which prevented to a great extent mining operations.

The earnings for 1910 were $3,110.55, being $1,542.21 less than for 1909, while the expenditures for 1910 amounted to $13,822.20 and exceeded those of last year by $511.96.

There were made, in addition to the regular assays required for the determination of the value of bullion for payment of deposits, 628 assays.

Assay office at Helena.—The value of the deposits received during 1910 amounted to $2,013,632.58 and exceeded those of 1909 by 107,621.07, which apparently is due to the increased output of Montana bullion deposited at this office. The earnings for 1910 amounted to $3,438.22, $888.08 less than for 1909, while the expenditures were $21,841.74, or $594.82 less than in 1909.

There were 3,625 assays made at this office, which required the manufacture of 9,000 cupels. There were 40 mass melts made from 574 bars weighing 17,118.85 ounces and valued at $272,560.95.

Assay office at Charlotte.—The deposits of bullion at this office amounted to $89,231.66, a reduction of $21,831.90 below the deposits of last year. The earnings for 1910 were $911.78, against $1,166.06 for 1909. The expenditures were $4,212.04, being $282.25 in excess of those for last year.

In addition to the regular assays for deposits 126 assays of ores were made.

Assay office at St. Louis.—The deposits of bullion at this office during 1910 amounted to $725,665.67 against $554,588.53, the value of deposits for 1909, the increase of $171,077.14 being due principally to the increased deposits made by private refineries at Chicago and Cincinnati. The earnings for 1910 were $799.17, an increase of $122.44 over the amount reported last year. The 1910 expenditures

were $3,742.32, exceeding those of 1909 by $35.67. In addition to the regular work of the office there were 25 assays of ores and 29 special assays of bullion.

Assay office at Deadwood.—The deposits received at this office were of the value of $734,934.53, compared with $1,329,965.43, reported for 1909. The reduction of $595,030.90 is assumed to be due to the destruction by fire of a large milling plant. The earnings for the year 1910 amounted to $2,385.17, a gain of $12.29 over those of last year, while the expenditures amounted to $7,629.17, or $99.07 less than in 1909.

There were 416 assays made during the year for the determination of platinum, gold, silver, copper, lead, tin, and iron. Of these, 113 were made for the Forest Service and 18 for the General Land Office. There were required for this work 2,500 cupels, which were made in this institution.

Assay office at Seattle.—The value of deposits at this office is reported as $12,196,785.81, against $19,314,127.29 for 1909, a reduction of $7,117,341.48, which is accounted for by diminished deposits of bullion from Alaska as well as foreign crude and refined bullion.

The earnings for 1910 were $19,394.66, being $6,108.42 less than for 1909. The expenditures were $42,498.51, against $44,669.29 for 1909.

There were 2,133 deposits, requiring 4,800 assays, using in the operations 12,000 cupels manufactured in this office.

There were 51 special assays of bullion and 112 assays of slag from the melting room. There were 64 assays for gold and silver and 29 assays for copper made for the Forestry Service.

The average fineness of the bullion deposited was 0.867½ gold and 0.119 silver. For convenience in shipment to the mints for coinage, 1,551 bars, each under 400 ounces in weight and aggregating 72,527.87 ounces Troy, were remelted into 67 large bars.

The source of the bullion deposited during the fiscal year was as follows:

Source.	Gold.	Silver.	Total coining value.

Assay office at Salt Lake.—The value of bullion deposited at this office amounted to $904,156.37. The earnings for 1910 were $1,508.91 and the expenditures $15,071.12.

There were 333 deposits requiring assay and 5,000 cupels used in the operations of this institution, which were made on the premises. To facilitate shipment of bullion to the mint there were 265 bars, all under 300 ounces, massed into 13 larger bars, the total weight of which was 8,294.45 ounces.

OPERATIONS OF THE MELTER AND REFINERS AND THE COINERS FISCAL YEAR 1910.

The quantity of precious metals operated upon in the different departments of the mints and assay office at New York during the fiscal year 1910 aggregated 15,036.212 standard ounces of gold and 26,393.567 standard ounces of silver. The figures in the table following are the actual figures as obtained at the settlement of the accounts.

[2] Operations on gold confined almost exclusively to unfinished coin.
[3] Operations suspended.

PERCENTAGE OF LOSS IN MELTING OF DEPOSITS, 1910.

In the statement of percentages of loss appended hereto there is shown a wide difference of loss in melting similar grades of bullion deposited at the several offices connected with the service. This is accounted for by the crude condition in which many of the bars are presented.

Mints and assay offices.	Number of deposits.	Kings and bars.	Dust.	Retorts.	Amalgam unretorted.	U. S. coin.	Miscellaneous.	Nuggets.	Jewelry.
Philadelphia	3,897	0.550	5.730	5.740	.....	.....	3.560	.....	.....
San Francisco	6,121	.075	3.256	4.757	53.414	.....	3.936	.....	.....
New Orleans	881	.717	4.438	.....	11.367	0.253	2.064	.....	.....
Denver	4,141	.208	3.091	1.674	.....	.....	1.643	.....	.....
New York	10,517	.102	4.636	5.848	.....	.067	1.645	.....	.....

The percentage of loss in melting bars exchanged for coin was 0.284 and on return bars 9.240, occurring at the Denver Mint.

WASTAGE AND LOSS ON SALE OF SWEEPS AND GAINS FROM OPERATIONS.

The value of the precious metals wasted in the metallurgical and mechanical departments was $5,676.09. A loss of $4,912.75 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same, as described in the following table:

WASTAGE AND LOSS ON SALE OF SWEEPS.

Items.	Mint at—				Assay office at New York.	Total.
	Philadelphia.	San Francisco.	New Orleans.	Denver.		
Melter and refiner's gold wastage		$1,575.90				$1,575.90
Melter and refiner's silver wastage	$1,663.17					1,663.17
Coiner's gold wastage				$799.81		799.81
Coiner's silver wastage	161.60	1,475.61				1,637.21
Loss on sale of sweeps	832.24	1,966.68	$766.07	337.56	$1,010.20	4,912.75
Total	2,657.01	5,018.19	766.07	1,137.37	1,010.20	10,588.84
Paid as follows:						
From contingent appropriation	1,065.83	2,983.19	766.07	855.86		5,670.95
From parting and refining appropriation	1,591.18	2,035.00		281.51	1,010.20	4,917.89
Total	2,657.01	5,018.19	766.07	1,137.37	1,010.20	10,588.84

The wastage and loss on sale of sweeps amounted to $10,588.84. Against these losses there were gains arising from the operations in bullion during the year aggregating $116,543.30, as follows:

Character of gains.	Fiscal year 1910.
Surplus bullion returned by operative officers	$40,797.53
Precious metals recovered in grains and sweeps	26,006.88
Net gains on bullion shipped from assay offices to the mints for coinage	4,508.89
Received in excess of assay values of melter and refiner's sweeps sold	457.82
Charges for treatment of deposit melting room sweeps	807.88
Gain on light-weight United States gold coin for recoinage	220.26
Value of bullion recovered from cleaning refinery pipes after settlement	1,088.45
Receipts from the sale of by-products	41,836.82
Amount recovered on account of embezzlement	818.77
Total	116,543.30

Deducting the incidental gains on bullion operated on from the value of the total wastages and losses on sale of sweeps, there has been a net gain in the operations of the mints during the fiscal year of $105,954.46.

RECEIPTS AND DISPOSITION OF GOLD BULLION, FISCAL YEAR 1910.

The receipts of gold bullion at the mints and assay offices aggregated $166,904,784.96, as shown by the following table:

Institutions.	Deposited.		Surplus bullion recovered.	Redeposited—Receipts from assay offices.	Total.
	Deposits.	Uncurrent United States coin transferred for recoinage.			
Philadelphia	$1,535,289.56	$2,213,740.31	[1] $14,771.90	$20,314,147.54	$24,077,949.31
San Francisco	34,750,377.94	1,292.65	1,266.24	7,659,097.19	42,412,034.02
New Orleans	873,228.57		[2] 4,010.40		877,238.97
Denver	14,704,274.40		[3] 11,661.06	7,533,903.93	22,249,839.39
New York	57,741,835.87		5,490.80	[3] 1,031,052.31	58,778,378.98
Carson	1,302,626.74		3,144.87		1,305,771.61
Helena	1,938,916.67		335.22		1,939,251.89
Boise	797,997.72		420.25		798,417.97
Charlotte	88,387.51		190.74		88,578.25

Deadwood	676,095.98		369.62		676,465.60
Seattle	12,090,312.16		2,527.10		12,092,839.26
Salt Lake City	883,894.54		148.29		884,042.83
Total	128,107,167.58	2,215,032.96	44,383.45	36,538,200.97	166,904,784.96

[1] Of this amount $217.07 was gained on United States light-weight coin melted.
[2] Of this amount $10.21 was gained on shipments to Philadelphia Mint.
[3] Fine bars received from Philadelphia Mint.

The disposition of gold bullion contained in the above table is as follows:

Institutions.	Bars paid depositors.	Shipped to the mint for coinage.	Sold in sweeps.	Bars exchanged for coin.	Coinage.	Wastage.	Total.
Philadelphia	$279,195.85	[1] $1,031,052.31	$14,633.81	$7,373,683.54	$441,175.00	$1,119.85	$9,140,860.36

UNITED STATES GOLD COIN IN CANADA.

The holdings of United States gold coin in the treasury of the Dominion of Canada on December 31, 1909, was $62,988,474.

The holdings of the charter banks (29 in number), on the same date aggregated $17,364,362, or 63.24 per cent of their specie holdings. The total amount of United States gold coin in Canadian reserves on the foregoing date was therefore $80,352,836.

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1909.

Among the purveyors of gold and silver bars for use in the industrial arts the United States Mint at Philadelphia and the United States assay office at New York hold the foremost places; consequently, the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1909, with the class of material from which they were made:

GOLD AND SILVER BARS ISSUED BY THE GOVERNMENT INSTITUTIONS AND MANUFACTURED BY PRIVATE REFINERIES FOR USE IN THE INDUSTRIAL ARTS DURING THE CALENDAR YEAR 1909.

Materials used.	Value of gold issued by—			Weight of silver issued by—		
	Government institutions.	Private refineries.	Total.	Government institutions.	Private refineries.	Total.
				Fine ounces.	*Fine ounces.*	*Fine ounces.*
Domestic bullion	$18,455,948	$224,255	$18,680,203	594,763	15,634,015	16,228,778
Foreign material	10,561,660	207	10,561,867	1,605,856	3,209,021	4,814,877
United States coin	98	364,458	364,556	.....	1,500	1,500
Old jewelry, etc.	2,870,870	2,015,829	4,886,699	354,629	6,425,498	6,780,127
Total	31,888,576	2,604,749	34,493,325	2,555,248	25,270,034	27,825,282

Estimating that the total amount of gold coin used in the arts during the calendar year 1909 has been $3,500,000, and silver coin $100,000, equivalent to 77,344 fine ounces, the total industrial consumption would be as follows:

Materials used.	Gold.	Silver.
	Value.	*Fine ounces.*
Domestic bullion	$18,680,203	16,228,778
Foreign material	10,561,867	4,814,877
United States coin	3,500,000	77,344
Old material	4,886,699	6,780,127
Total	37,628,769	27,901,126

In order to arrive at the net consumption in the industrial arts, there should be deducted from the foregoing totals the amount of old jewelry, plate, etc., included, and also the amount of the same class of material returned to coinage use. In the year 1909 these amounts aggregated $7,380,560 in gold, and 6,941,962 fine ounces of silver, which leaves $30,248,209 of gold and 20,959,164 fine ounces of silver as the net amount of new bullion devoted to industrial use.

The following table gives the amounts and the classification of gold and silver used in the industrial arts in the United States since 1880:

GOLD AND SILVER BARS FURNISHED FOR USE IN MANUFACTURES AND THE ARTS, AND CLASSIFICATION OF THE MATERIAL USED, BY CALENDAR YEARS, SINCE 1880.

GOLD.

Calendar years.	New material.				Old material.	Grand total.

THE WORLD'S INDUSTRIAL CONSUMPTION OF THE PRECIOUS METALS IN 1909.

This bureau estimates the world's consumption of the precious metals in the arts during the calendar year 1909 as follows: Gold, of the value of $142,506,100, equivalent to 6,893,733 ounces, fine; and silver, 104,838,200 ounces, fine, of the commercial value of $54,515,864. In these estimates only new material is taken into account.

PRODUCT OF GOLD AND SILVER IN THE UNITED STATES IN 1909.

The detailed statistics of the product of gold and silver in the United States for the calendar year 1909 are presented in a special report to the Secretary of the Treasury.

The distribution of the product among producing States and Territories was as follows:

APPROXIMATE DISTRIBUTION, BY PRODUCING STATES AND TERRITORIES, OF THE PRODUCT OF GOLD AND SILVER IN THE UNITED STATES FOR THE CALENDAR YEAR 1909.

[As estimated by the Director of the Mint.]

State or Territory.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
Alabama	1,413	$29,200	200	$100
Alaska	983,928	20,339,600	198,600	103,300
Arizona	127,071	2,626,800	2,523,600	1,312,300

WORLD'S COINAGE.

In the appendix will be found a table, revised from the latest information received, exhibiting the coinages of the various countries of the world during the calendar years 1907, 1908, and 1909.

The figures in the following table represent, as nearly as this bureau has been able to ascertain, the total value of, and the fine ounces consumed in, the gold and silver coinages executed in the world since 1873.

It must be borne in mind, however, that the total of these coinages does not correctly represent the amount of new gold and new silver made into coins during the year, for the reason that the coinages as reported include the value of domestic and foreign coins melted for recoinage, as well as old material, plate, etc., used in coinage.

In the circular letter of inquiry prepared at this bureau and sent to foreign Governments through the Department of State, asking for information on these subjects, it was especially requested that each country report the amount of such recoinages. This has been done in many instances, but not in all.

COINAGE OF GOLD AND SILVER OF THE MINTS OF THE WORLD BY CALENDAR YEARS SINCE 1873.

Calendar years.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Coining value.
1873	12,462,890	$257,630,802	101,741,421	$131,544,464
1874	6,568,279	135,778,387	79,610,875	102,931,232
1875	9,480,892	195,987,428	92,747,118	119,915,467

Portugal						
Russia	9		150		16,981	
Siam		302,826				
Turkey	9,219,795	168,957	4,770,012	20,469	8,076,902	
Total	31,477,363	3,949,768	11,836,823	438,845	8,519,193	343,811

UNITED STATES GOLD COIN IMPORTED AND MELTED BY VARIOUS COUNTRIES DURING THE CALENDAR YEAR 1909.

The following table shows the amount of United States gold coin imported by various countries and the value of the United States gold coin melted at their mints:

Countries.	Import of United States gold coin.	Total import of gold from United States.	United States gold coin melted.
Austria-Hungary			$11,345
Canada	$5,427,453		
Russia	16,981		16,981
Guatemala	240,000		
Guiana (Dutch)	30,000		
Haiti	400,000		
Venezuela	611,742		
Japan	4,710		4,992
Great Britain		[1] $14,384,328	
Total	6,730,886	14,384,328	33,318

[1] Of this amount, $188,658 was British coin; $11,282,828 foreign coin; and the balance, $2,912,842, was in bullion

RECOINAGES OF THE WORLD.

The following table, compiled from official sources, exhibits approximately the gold and silver recoinages in the principal countries of the world for the calendar years 1907, 1908, and 1909, so far as has been reported to this bureau:

Countries.	1907		1908		1909	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
United States	$3,072,960	$1,233,298	$5,321,467	$977,211	$2,704,802	$759,677

MONETARY LEGISLATION.

CHAP. 25.—An Act Prescribing certain provisions and conditions under which bonds and certificates of indebtedness of the United States may be issued, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any bonds and certificates of indebtedness of the United States hereafter issued shall be payable, principal and interest, in United States gold coin of the present standard of value; and that such bonds may be issued in such denominations as may be prescribed by the Secretary of the Treasury.

SEC. 2. That any certificates of indebtedness hereafter issued shall be exempt from all taxes or duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority; and that a sum not exceeding one-tenth of one per centum of the amount of any certificates of indebtedness issued is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to pay the expenses of preparing, advertising, and issuing the same.

SEC. 3. That all acts or parts of acts inconsistent with the provisions of this act are hereby repealed.

Approved, February 4, 1910.

CHAP. 240.—An Act To establish in the Department of the Interior a Bureau of Mines.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby established in the Department of the Interior a bureau, to be called the Bureau of Mines, and a director of said bureau, who shall be thoroughly equipped for the duties of said office by technical education and experience and who shall be appointed by the President, by and with the advice and consent of the Senate, and who shall receive a salary of six thousand dollars per annum; and there shall also be in the said bureau such experts and other employees as may from time to time be authorized by Congress.

SEC. 2. That it shall be the province and duty of said bureau and its director, under the direction of the Secretary of the Interior, to make diligent investigation of the methods of mining, especially in relation to the safety of miners, and the appliances best adapted to prevent accidents, the possible improvement of conditions under which mining operations are carried on, the treatment of ores and other mineral substances, the use of explosives and electricity, the prevention of accidents, and other inquiries and technologic investigations pertinent to said industries, and from time to time make such public reports of the work, investigations, and information obtained as the Secretary of said department may direct, with the recommendations of such bureau.

SEC. 3. That the Secretary of the Interior shall provide the said bureau with furnished offices in the city of Washington, with such books, records, stationery, and appliances, and such assistants, clerks, stenographers, typewriters, and other employees as may be necessary for the proper discharge of the duties imposed by this act upon such bureau, fixing the compensation of such clerks and employees within appropriations made for that purpose.

SEC. 4. That the Secretary of the Interior is hereby authorized to transfer to the Bureau of Mines from the United States Geological Survey the supervision of the investigations of structural materials and the analyzing and testing of coals, lignites, and other mineral fuel substances and the investigation as to the causes of mine explosions; and the appropriations made for such investigations may be expended under the supervision of the Director of the Bureau of Mines in manner as if the same were so directed in the appropriation acts; and such investigations shall hereafter be within the province of the Bureau of Mines, and shall cease and determine under the organization of the United States Geological Survey; and such experts, employees, property, and equipment as are now employed or used by the Geological Survey in connection with the subjects herewith transferred to the Bureau of Mines are directed to be transferred to said bureau.

SEC. 5. That nothing in this act shall be construed as in any way granting to any officer or employee of the Bureau of Mines any right or authority in connection with the inspection or supervision of mines or metallurgical plants in any State.

SEC. 6. This act shall take effect and be in force on and after the first day of July, nineteen hundred and ten.

Approved, May 16, 1910.

MONETARY STATISTICS OF FOREIGN COUNTRIES.

The statistics of the production and coinage of the precious metals, imports and exports of gold and silver, amount of bank and Government notes both covered and uncovered of the different foreign countries published annually in the reports of this bureau are obtained directly from the Governments of such countries by the representatives of the United States accredited to them.

A copy of the interrogatories covering the points on which information is sought from the Governments of foreign countries is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies, in the form of reports, are forwarded directly to the Bureau of the Mint. The interrogatories sent are as follows:

1. What was the amount of gold and silver coinage by denominations and number of pieces during the calendar year 1909 (new coinage and domestic and foreign recoinage.

2 (*a*). Was any coinage executed at your mint for other Governments during the year 1909? If so, state character and amount of same.

2 (*b*). Was any coinage executed at foreign mints for your Government? If so, state character and amount of same.

3. What was the estimated weight of fine gold and silver used in the industrial arts during the calendar year 1909?

4. What was the total import of United States gold coin and what amount was deposited and melted at the mints during the year 1909?

5. What was the weight, expressed in kilograms, fine and the value of the gold and silver produced from the mines of the country during the calendar year 1909? Give the product of the colonies of the country, naming them separately.

6. What, approximately, was the stock of gold and silver coin and bullion in the country on December 31, 1909? Give stock in public treasuries and banks and in circulation, separately.

7. What was the amount of Government and bank notes outstanding at the end of the year 1909, and what amount was not covered by gold coin and bullion and legal-tender silver coin held for their redemption?

8. Is gold at premium as compared with the actual currency of the country? If so, what is the actual currency?

9. Were any laws passed during the year 1909 affecting the coinage, currency, or banking? If so, please forward copies of the same.

10. Is there a report published on the operations of the mint? If so, please forward a copy; also, a report of the Department of Mines.

11 (*a*). What was the import and export of gold during the calendar year 1909; the value of coin, bullion, and ore to be given separately and by countries?

11 (*b*). What was the import and export of silver during the calendar year 1909; the value of coin, bullion, and ore to be given separately and by countries?

12. Please examine the appended description of the coins of your country, bringing it down to date with corrections?

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1910, is respectfully submitted.

GEO. E. ROBERTS,
Director of the Mint.

Hon. FRANKLIN MACVEAGH,
Secretary of the Treasury.

No. 21.—Product of Gold and Silver in the World Since 1860.

[The annual production of 1860 to 1872 is obtained from 5-year period estimates, compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint.]

Calendar years.	Gold.		Silver.

1888	536,024.15	1,232.49	
1889	794,068.05	646.83	
1890	812,963.60		
1891	841,717.50		
1892	584,982.10		
1893	608,509.75		
1894	270,656.60		
1895	498,994.20		
1896	442,146.00		
1897	1,021,436.75		
1898	626,604.35		
1899	1,301,451.55		
1900	1,362,799.75		
1901	1,324,010.65		
1902	1,574,028.95		
1903	1,400,336.25		
1904	1,070,249.20		
1905	1,491,363.80		
1906	1,930,686.25		
1907	1,960,740.00		
1908	1,134,308.85		
1909	579,526.30		
Total	31,272,413.35	941,349.48	912,020.00

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Gold coin in the hands of receiver general and assistants:	
United States coins	$62,988,474
British gold coins	6,537,227
Total	69,525,701
Gold coin in banks	27,456,690

There is no official estimate of the amount in circulation.

The amount of silver coin held by the receiver general on December 31, 1909, was $293,648.

7. Amount of Government and bank notes outstanding at the end of the year 1909:

Government notes outstanding	[1] $86,984,843
Notes of banks of issue	81,325,732
Gold holdings:	
Specie and gold deposits	7,500,000
Specie	36,984,843

8. Gold is not at a premium, as compared with the actual currency of the country. (The Dominion of Canada comprises the Provinces of Alberta, British Columbia, Manitoba, New Brunswick, Nova Scotia, Ontario, Prince Edward Island, Quebec, and Saskatchewan, and the Yukon and Northwest Territory. The money of the Dominion consists of British and United States gold coin; Dominion and bank notes, and a Dominion issue of subsidiary coin):

The weights, fineness, etc., of the subsidiary coins of Canada are as follows:

Denominations.	Weight.	Fineness.	Pure silver contained.	Value in United States currency.	Limit of legal tender.
Silver:	*Grains.*	*Thousandths.*	*Grains.*		
50 cents	179.3336	925	165.8836	$0.50	$10.00
25 cents	89.6668	925	82.9418	.25	
10 cents	35.8667	925	33.1767	.10	
5 cents	17.9334	925	16.5883	.05	
Bronze: 1 cent	87.5	(2)		.01	.25

[2] 95 per cent copper, 4 per cent tin, 1 per cent zinc.

9. Laws passed in 1909 affecting the currency: None.

10. The report on the operations of this mint is included in the general annual report of the London mint.

11 (*a*). Import and export of gold during the calendar year 1909:

Classification and countries.	Imports.	Exports.
Coin and bullion not separated:		
From United States	$5,427,453	
To United States		$2,219,788
From other countries	17,442	

11 (*b*). Import and export of silver during 1909: None.

[1] Chapter 27 of Revised Statutes of 1906: Twenty-five per cent of first $30,000,000 of Dominion notes required to be held in specie and guaranteed debentures, dollar for dollar, in excess of $30,000,000.

The Note Issues of Canada with Their Bearing on the Proposed Issue of Commonwealth Notes.

By Thomas Church.

[From The Australasian Insurance and Banking Record, Melbourne and Sydney, March 21, 1910.]

[Author's note.—The following notes on Canadian note issues are offered as a recital of facts, collected on a tour through Canada, by reference to Canadian statutes, and authorities, bankers and economists, and my own observations.]

* * * * * * *

The question of currency is one that has special interest to Australian bankers at the present time, in view of the attempt by the Federal Government to introduce a bill for the abolition or curtailment of bank issues of notes and to substitute in lieu thereof Commonwealth notes to a practically unlimited amount. Much is heard through the press and from the man in the street of the blessings of paper money. Sections of our people—and large sections, too—prescribe it as panacea for bad times. They point out that it has only to be adopted and it will make cheap money, and, with a Government, give an elastic and easy means of borrowing money that will cause prosperity; that paper with the King's arms impressed upon it is always good, and when made a legal tender by act of Parliament all doubts about its virtue are dispelled. Canada and the United States are held up as examples of prosperous countries that have enjoyed the blessings of good times and great expansion in some measure by the issue of paper money. Why the American States are cited it is difficult to understand. There is no problem at the present time in the United States of America that presents greater difficulties to its ministers than its maze and tangle of currency and banking methods, and much of this is the outcome of its experiments with paper money. It is equally difficult to understand why Canada's prosperity should be cited so often as in part due to currency. The Canadians certainly do not make any such claim.

In order to get at the truth regarding paper money, it is well to consider what is meant by "paper money." One idea—the idea of the casual citizen—is that the Government should print notes of different denominations and issue them to any extent, make them a legal tender by law, and use the proceeds of the issue in Government undertakings. It would be quite safe—they say—the Government would get the money and use it for State purposes, and as the notes could not be refused in commercial transactions, there would be no danger. By these means the large sums of gold lying in the banks would not be allowed to be idle (for the reason that they would have to hand it over, or much of it, to the Treasury in exchange for notes), but would be used in building railways and developing the country. Little is said about gold reserves for the notes, or how they are to be redeemed when they are presented and gold demanded for them. This misconception about paper money arises largely from ignorance of the functions of government. There are natural and exact laws governing States and nations, just as there are laws governing the exercise of our own mental and physical powers. And these laws carry "penalty clauses" for the misuse of them, just the same as do nature's laws applied to ourselves. To issue paper money without basing it on anything more tangible than the undertaking of a Government to pay, and not providing the means of payment when need arises, is creating something out of nothing—and this is even beyond the powers of Governments.

Currency is defined as "circulation—paper passing for money," and that definition is misleading. It means in truth paper based on money, and money is the medium of exchange, with its bedrock gold, "the universal standard of value"—"the touchstone of measurement." A bank note issue, quotes Mr. Inglis Palgrave, has two requisites directly essential: (1) That it should be completely secured; (2) that it should be readily convertible into metallic money. These requisites are essential to any system of paper credit, State or public or personal. To issue paper money without having something for it of equivalent real value is "kite-flying," and the merits or virtues of such business need not be discussed.

Before we accept Canada's sytem of paper as a precedent let us see if our conditions approximate in any way to theirs. A system that is good in one country may be bad in another. As Mr. Walker puts it: "The most cherished dogma of one country is rank heresy in another." Canada has always had paper; its banking system is based largely on its issue of notes. They know no note tax of 2 per cent per annum, as we do, and their act authorizes the issue of bank notes to the extent of their paid-up capital, and in some cases beyond it. Gold is seldom or never seen. Paper money is the rule.

Gold has always been the rule in Australia. Our people are not educated to notes, and our bank issues compared to Canada's are small, but they are all the public want. The paper money market will not absorb more than it needs. But for the present it will suffice to consider the economic side of the Federal Parliament proposals, without regard to their application to our banking system.

First, the proposals of members of the Federal Parliament are put forward, not because of their desire to improve our monetary system of currency, but in order to borrow money free of interest that would become a permanent loan to them from the people. That is the only aspect from which they survey currency. Our Federal Government, owing to our large States' indebtedness, finds it difficult to borrow in the ordinary manner, because of State agitation against it. They have accordingly turned their attention to the large balances of public gold and desire to use some of it through the proposed introduction of their own currency in the form of Federal notes. In this they are only following the necessitous law that Canada followed in 1866. The question as to the State prerogative to borrow money by means of currency or their right to issue notes at all is dealt with in Breckenridge's "Canadian Banking System," page 196, and he deals with it in company with high authorities. He quotes:

"To deduce from the mint prerogative the exclusive right of the State to issue a convertible fiduciary currency is a process, specious perhaps, but illogical, unhistorical, and dangerous. The true explanation of State interference with matters of banking and the issue of bank notes is to be found in the general powers of supervision and regulation * * * in the supposed interest of the public and in the conditions which Government has been able to exact in return to the concessions sought by the banks."

From an economic point of view a Government has no more right to use currency for loan purposes than it has the funds of savings banks for the same purposes. As regards the latter it may have the practical right, provided it invests the money in real live securities which are ear-marked as belonging to those funds, but it has no right to pass in treasury stock only for them.

The State has its methods for borrowing money laid down for it. Fixed loans by issue of stock and treasury bills in anticipation of a fixed loan are prescribed. When it goes outside the currency or the public business to raise money, it is the beginning of public trouble. The early history of Canadian issues shows how hazardous a venture it becomes. To again quote from Breckenridge:

"If a necessitous government is constrained to derive greater revenue from the note issue than is possible by leaving it in private hands, it may by the exercise of sovereign power exclude all but itself from this department of economic activity."

This practically is what many European States have done. But those who guide a nation's policy may well weigh carefully the commercial disadvantages attending such a usurpation and the tendencies toward forced circulation, fiat money, depreciation, and repudiation which it is likely to release. Governments, the same as individuals, however, do not or can not act up to ideals, and so they do borrow money by currency and savings banks, and we then have to deal with things as they are, and not with things as they ought to be.

The Commonwealth is going sooner or later to give us a currency, so that it can secure a floating but permanent loan, and we have stated that paper must comply with the main essential that it must be readily convertible into metallic money.

Let us now consider Canada's paper issues and see to what extent it has assisted them. Canada's system of currency comprises gold, silver, copper, and paper. Gold is rarely seen in circulation; silver at present is only used for small change money; the 5, 10, 25, and 50 cent pieces are not in common use. The circulation is chiefly, almost wholly, by means of notes—bank and Dominion. American and British money—paper and metallic—pass in circulation, the American at face value and British at slightly above. The British sovereign is equal to and passes current for 486⅔ cents and the half sovereign at half that. Under the Dominion notes act "notes may be issued and outstanding at any time to any amount, and such notes shall be a legal tender in every part of Canada, but the minister of finance shall always hold as security for the redemption of Dominion notes up to and including $30,000,000, an amount equal to 25 per cent of such amount in gold, or 15 per cent in gold and 10 per cent in Canadian securities guaranteed by the United Kingdom. As security for the redemption of Dominion notes issued in excess of $30,000,000 the minister shall hold an amount in gold equal to such excess."

It is seen at once that Canada's system of paper money is based on gold almost wholly. If we take the figures of their circulation and gold held, we find that the amount that the Government gets by way of loan from the public is very small compared with the total issue, but still a large sum to employ for nothing.

Dominion notes are issued in the following denominations: 25 cents, 1 dollar, 2 dollars, 4 dollars, 50 dollars, 100 dollars, 500 dollars, 1,000 dollars, 5,000 dollars. The

average total amount of notes in circulation usually fluctuates from 60,000,000 to 63,000,000 dollars. This amount is made up by the following totals of the respective notes taken from the returns for June last:

Fractional notes, 25 cents	$487,522
$1 and $2	14,587,073
$4	195,000
$50 and $100	105,000
$500 and $1,000	6,801,000
$5,000	40,875,000

Of these the first two items, fractionals and 1 and 2 dollar notes, are "change" notes and are not likely to be ever presented for exchange into gold. The larger notes are usually in the hands of banks, while the $5,000 notes are issued to banks only for use in the clearing-house system as exchange vouchers. Against this amount of $63,000,000 (round figures) the Government holds gold to the value of $45,259,000 and guaranteed sterling debentures of $1,946,000, or a total of $47,200,000, leaving a shortage of $15,800,000, or, roughly, 3,000,000 sterling, which they employ from the total operations of their note currency as a free loan from the public.

These figures require some explanation. Their statute authorizes the use of $22,500,000 without any reserve in gold being held. They employ only $15,800,000, as shown by the foregoing statement. Their total circulation is $63,000,000, but of this nearly $41,000,000 is in clearing-house certificates, which can not, strictly speaking, be termed circulation, as explained later, so that the balance, $22,000,000, is true currency and liable to the 25 per cent reserve in gold, which, when deducted, leaves Canada with an authorized issue free of the total figures, roughly, $17,250,000. Of this authorization they employ the amount stated, viz, $15,800,000, so that they have a balance yet to employ of $1,450,000 when the public need it.

The cost of managing and operating this note system is not ascertainable, for the reason that services in connection with it are bound up with the treasury charges generally, and they have never been separated.

It is unlikely that any embarrassment could be caused the Government by sudden demand for redemption of the notes in gold, for the reason that the total shortage is only as stated, about 3,000,000 sterling, and the "change notes" which equal the shortage, would never be presented, being too small in amount and too widely distributed.

From the foregoing it will be seen that Canada's system is in reality a gold system, as any sound system of currency must be; the only difference as between the Government and the banks and our Australian system is that in one case the Treasury holds the gold, and the Dominion notes are circulated as counters for it, and the banks hold gold and Dominion notes as reserves, while in Australia practically gold only is held by the banks for circulation and reserves.

We have seen that the use of currency by means of State notes has furnished Canada with a free loan of, roughly, 3,000,000 sterling, and this after their system has been in force for over 40 years. It is interesting now to turn to the early history of their experiments in raising money by issue of paper. First, it must be borne in mind that Canada, from its earliest times, never knew anything of gold circulation; it has always had paper. Its system of banking gave them that, and their early systems of government always employed it in a manner not to their credit but from necessity. In 1866 Canada, in order to raise, roughly, a million sterling to discharge floating debts, assumed the right to issue approximately one and a half million sterling in notes, and passed a bill accordingly. But having now assumed the right, the important work of getting the notes into circulation had to be faced. This was done primarily through the agency of the Bank of Montreal, to whom the Government owed large sums which the bank could not recover and by means of these notes the debt to the bank was liquidated, for the bank credited them to their debt against the Government and put them into circulation. But considerations had to be paid before the banks would accept the notes and withdraw their own, and varying sums were paid, up to 5 per cent on the amount outstanding on a given date, and brokerage and commission for issue and redemption. By these means the notes were got into circulation, but for some years the issue was profitless to the Government. It disarranged banking and commerce, and is credited with causing bank failures. But the history of the effects of the forced issue of notes upon the country need not be detailed here. It is fully dealt with by Breckenridge in his valuable work on "Canadian Banking," page 180, etc. It will suffice to say that it was profitless for some years, dislocated trade and banking, and has the charge laid against it of causing certain banks to suspend payment.

The experience of Canada's experiment with notes, its gains and its losses, having been referred to, it now remains to consider how a Federal issue of notes would affect Australian trade and banking, and how much the Government might obtain as a loan

from it. We have two important differences to bear in mind in regard to any comparison with Canadian experiences:

1. We have a circulation almost wholly gold, while Canada has always had paper.
2. We have never known notes for value less than 20 shillings, while Canada has them from 25 cents up.

In order to get a circulation the Government would need to use banking channels. If their notes are to replace the bank issues, then the banks would need to call theirs in. This would mean that the loan they employ from the public through their note issues would have to be repaid by them in gold. Banks, in order to do this would have to call in their advances to an equivalent amount and suspend all fresh advances for an indefinite period. In order to arrive at some estimate of the amount of paper the public would absorb, it would be necessary to ascertain as nearly as possible the total amount of bank notes and metallic currency in circulation, for any issue of Government notes means that gold would be withdrawn and handed over to the Treasury in exchange for their notes.

It is impossible to say what the exact effects of so radical an economic change would be, but it is certain that there must be dislocation of trade and public method, for the reason that our people would need education to the general use of paper, and as no Government can cancel any citizen's right of redemption in gold, any change must be gradual. To attempt to force notes into circulation would cause want of confidence in currency method, and want of confidence is the forerunner of panic. Assuming a system somewhat on the Canadian lines were adopted, viz, the Government to have the right to issue, roughly, 4,750,000 free, and any balance beyond that to be secured by pound for pound in gold, how long would it take our circulation to absorb that sum? Probably years. Canada has taken 40 years to get three millions from the people, and can not get more, and the problem of increasing it is one that her statesmen are considering but can not solve unless by compelling banks to call in advances in order to absorb more notes. From the figures quoted of Canada's circulation it must be kept in mind that of the sixty-odd millions, forty represent gold clearing-house certificates for the bank clearing house, and this is obviously kept intact in gold; the balance is the circulation, and it does not produce enough to give Canada her limit of 4,750,000 she is empowered to employ free through her act.

To sum up the position as regards the proposals of Australian advocates of a Government currency, they require a free loan, and they propose to disguise it under cover of currency legislation. To gain their end by means of currency they would have to start gradually in proper season when money is easy, and patiently educate people to the use of paper, cooperate with the banks to encourage its use and allow time to work a gradual achievement. To suddenly prohibit future bank issues or call in present ones and let loose their own Federal notes would be equivalent to a sudden demand for an urgent forced loan, a consequent stoppage of bank advances, a calling in of existing ones to make room for the new demand, and general dislocation of business.

A fact that is real and plain is that no community will absorb more currency than it needs, and any attempt to ignore that in practice must end in disaster.

A strong feature in Canadian currency and banking legislation is that its financiers cooperate with their banking leaders in conference and discussion in settling their acts with mutual benefit. There is abundant reason why the Commonwealth should do the same.

MEXICO.

Answers to interrogatories, 1909.

1. Amount of gold and silver coinage during the calendar year 1909:

SILVER.

Denominations.	Number of pieces.	Value.
Pesos	2,924,000	[1] $2,111,571.80
Decimos	2,620,000	[2] 1,074,428.20
Total		3,186,000.00

[1] New coinage. [2] Recoinage.

2 (*a*). No coinage was executed at the mint of Mexico for other Governments during 1909.

2 (*b*). Coinage executed at the mint of Birmingham for Mexican Government during 1909: Nickel coins of 5 cents, 2,051,600 pieces; value, $102,580.

3. Fine gold and silver used in the industrial arts during 1909: There is no data.

4. United States gold coin imported, and deposited at mint and melted during 1909: The customs list of duties for importation, from which we compiled the statistical information, comprises together in only one part the "foreign gold and silver coins," consequently it is impossible to estimate the value of the coins of either metal, or the countries to which they belong. The mint of Mexico did not melt any United States gold coins during 1909.

5. Gold and silver produced from mines of the country during the calendar year 1909:

Classifications.	Kilograms.	Value.
Gold from deep mines and placer mining	35,875.599	$47,894,012.03
Silver from dry or siliceous ores, lead and copper ores	2,399,920.133	76,815,938.80

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In public treasuries.	In banks.
Gold coin	$11,815,735.00	$63,671,450.00
Silver coin	226,606.70	32,428,306.86
Total	12,042,341.70	96,099,756.86

7. Bank notes outstanding at the end of the year 1909: Notes of banks of issue, $101,460,121.

8. There is no premium on gold.

9. Laws passed during 1909 affecting the coinage, currency, or banking: A copy of the order of December 27, 1909, for changing the design of the silver coins of $1 inclosed herewith.

10. The mint report for the fiscal year 1908–9 will be sent to you as soon as it is printed.

11 (*a*). Import and export of gold, (*b*) import and export of silver during the calendar year 1909:

GOLD.

OFFICE OF THE SECRETARY OF STATE, TREASURY, AND PUBLIC CREDIT,
DEPARTMENT OF CREDIT AND COMMERCE.

In compliance with the order in article 8 of the law of March 25, 1905, which established the monetary system of the United States of Mexico, and using the authorization conceded to him by article 2 of the law of November 6 of the same year, the President of the Republic has thought it well to decide that, without any modification in the weight, fineness, or diameter, to change the design of the silver coins of 1 peso, to the end that in circulating these new pieces they will constitute one of the commemorations of the centennial of the national independence.

The peso will have the following legends, devices, and requisites:

On the obverse, the coat of arms of the country; in the upper part surrounding the eagle will be read: "Estados Unidos Mexicanos" (United States of Mexico); the lower part, in a horizontal line, the value of the coin will be stamped.

On the left of the small island which supports the cactus plant the word "un" (one), and on the right the word "peso" (dollar) will be placed. The border will represent a chain composed of 37 oblong links with a few other clasps.

On the reverse, the principal figure will be that of Liberty, a cavalier mounted on a spirited charger, wearing a Phrygian cap, with floating hair and loose garb, carrying in his left hand a torch, and in his right a branch of oak; the bridle rein is raised high, and the left front leg and the right hind leg of the horse are treading upon a narrow strip of earth, back of which is the sun, whose rays, numbering 14, approach more or less to the circumference of the coin. In the lower part is placed the date of the year of coinage. The border is like the obverse, with but 35 links, as the torch of the figure of Liberty obstructs the chain. The border will have in bas-relief the inscription "Independencia y libertad" (Independence and liberty).

Mexico, December 27, 1909.

LIMANTOUR.

Copied from the original. Mexico, June 11, 1910.

WALKENDZABAL, *The Director.*

A NEW MEXICAN DOLLAR.

[From the Bankers' Magazine. New York, May, 1910.]

The centennial of Mexican independence, which occurs this year, will be commemorated by the issue of a new form of the silver peso, which will probably supersede the old design, which has had such a wide circulation in the Orient. The new design was prepared abroad, and is very artistic in character. On one side will appear the national coat of arms. On the other side will appear a figure of Liberty mounted on a fiery charger, crowned with the Phrygian bonnet, with light, floating drapery,

holding a torch in her right hand. Her left hand will hold a branch of laurel. The left foot of the charger will be raised, and also the right rear foot. He will stand upon a narrow strip of land, behind which will appear a rising sun. Around the edges will appear the inscription, "Independencia y libertad."

[Translation.]

Demonetization of Mexican Coins.

[From L'Économiste Européen, Paris, July 8, 1910.]

The following decree, dated May 4, 1910, published in the Diario Oficial, has decided the demonetization of various Mexican silver and copper coins:

"Article 1. The copper centavos of a date prior to March 25, 1905, known by the name of "centavo grande" (large centavo), and the silver coin of 5 centavos, prior to the same date, are demonetized.

"Art. 2. All these coins now in circulation will have lawful currency only up to December 31 next.

"Art. 3. These coins will be exchanged at parity and in amounts to be determined by interested parties being in charge of the following offices: The commission of exchanges and coins; the chiefs of the finances; the marine and frontier customs; and the principal administrative and subordinate offices of the stamp office.

"The public administrations of the confederation will positively refrain immediately from putting in circulation the coins named in this decree."

COSTA RICA.

Answers to interrogatories, 1909.

1. Gold and silver coined or recoined during calendar year 1909: None.

2. (*a*) Coinage executed for other Governments during the year 1909: None. (*b*) Coinage executed at foreign mints for Costa Rica during the year 1909: None.

3. Fine gold and fine silver used in industrial arts during the year 1909: No data obtainable, but quantity is so small that it may be disregarded.

4. United States gold coin imported or deposited at mint and melted during the year 1909: None, as far as known.

5. Gold and silver produced from mines of the country and colonies of the country during the year 1909:

	Colones.
Gold from deep mines (domestic production)	1,213,306
Silver from dry or siliceous ores (domestic production)	491,742

(The mining companies in Costa Rica do not separate gold from silver bullion in their output. When the quantity of silver exceeds 50 per cent in the bullion it is exported as silver product. The output of the mines is steadily increasing and properties are being extensively developed. The ores are worked by the cyanide process. The capital in the mines is mostly American.)

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: Stock in public treasuries not known, but inconsiderable.

	Colones.
Stock in banks, Costa Rica gold coin	1,309,860.00
Stock in banks, foreign gold coin	897,867.36
Stock in banks, silver coin	723,000.00
Total	2,930,727.36

Stock in circulation uncertain, owing to export during the year.

7. Amount of Government and bank notes outstanding at the end of the year 1909: Government legal-tender silver holdings, 723,000 colones (same amount—723,000 cents—Costa Rica silver was on deposit in Bank of Costa Rica as security for silver circulation).

Banks of issue:	Colones.
Notes outstanding	2,563,080.00
Gold holdings	2,930,727.36

8. Premium on gold: Gold and the local currency have the same value, fixed by law at 46.5 gold for 1 colon=215 par of exchange, except for small fluctuations depending upon demand for foreign exchange.

Premium during 1909: Highest, 216½; lowest, 213¼; average, 215¼.

When the coffee crop is going out, exchange drops to minimum stated; otherwise, foreign exchange approximates 215 closely.

9. Laws passed during the year 1909, affecting currency or banking: Decreasing metallic reserve to 40 per cent of circulation: A recent law makes the obligatory metallic bank reserve against notes in circulation 40 per cent; it was formerly 50 per cent; but the three banks of issue have not availed thereof to date.

10. Costa Rica has at present no mint and no report is made by a department of mines, which does not exist.

* * * * * * *

FINANCE.

[From Bulletin of the International Bureau of the American Republics, July, 1910.]

* * * * * * *

Money in circulation for the year was estimated by the President at 6,275,000 colones, of values as follows:

	Colones.[1]
Foreign gold	1,800,000
National gold	2,000,000
Silver and silver certificates	875,000
Bank notes	4,000,000
Total	8,675,000
Less gold reserve held by banks as guaranteed by notes	2,400,000
Net circulation	6,275,000

[1]The colon has a value of 46½ cents United States gold.

COMMERCE.

Gold and silver bullion was exported during the year 1909 to the amount of $792,847.

GUATEMALA.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined and recoined, and coinage executed for, or by other Governments, during the calendar year 1909: None.

3. Weight of fine gold and fine silver used in the industrial arts during 1909: None.

4. Total import of United States gold coin and amount deposited and melted at the mints during the year 1909: United Fruit Co., and Northern Railroad, $240,000, for wages of laborers; bulk reexported to West Indies. Further statistics unobtainable.

5. Weight and value of gold and silver produced from mines of the country during the year 1909: There is gold produced, but it is impossible to obtain correct information as to output.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock: Gold coin, gold bullion, silver coin, silver bullion.

In public treasuries: Unknown; statistics unobtainable.

In banks: Bankers' estimates vary from $16,000 to $50,000, gold coin and bullion; $267,000 to $500,000, silver coin and bullion.

In circulation: Impossible to say; on Atlantic coast natives prefer coin; in interior only Guatemala paper bills are current.

7. Amount of Government and bank notes outstanding at the end of the year 1909:

Issued by—	Notes outstanding about—	Gold holdings.	Legal-tender silver holdings.
	Pesos.		
Government	6,000,000	None.	None.
Banks of issue	60,000,000		
Total	66,000,000		

8. Premium on gold during the year 1909: Highest premium, pesos, 18.50 for $1 gold (United States currency); lowest premium, pesos, 16 for $1 gold (United States currency); average premium, pesos, 17.25 for $1 gold (United States currency). Actual currency of the country, paper money.

9. Laws passed during the year 1909 affecting the coinage, currency, of banking: None.

10. Report published on operations of the mint during the year 1909: None.

* * * * * * *

HONDURAS.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909: None.

2. No coinage was executed for other Governments, or by other Governments for Honduras during 1909.

3. Estimated weight of gold and silver used in the industrial arts during 1909: Gold, 4,000 ounces; silver, 36,000 ounces (estimated).

4. Total import of United States gold coin during 1909: No data. Amount of United States gold coin melted at mints: None.

5. Gold and silver produced from mines of the country during 1909: No data.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

	Pesos.
Silver coin in banks	138,214.51
Silver coin in circulation	2,000,000.00

7. Amount of bank notes outstanding at the end of the year 1909: Issued by banks of issue, 428,450 pesos.

8. Premium on gold during 1909: Highest, 175 per cent; lowest, 165 per cent; average, 169 per cent. Actual currency of the country is silver.

9. No laws were passed during 1909 affecting the currency.

10. There is no report published on the operations of the mint or of the Department of Mines.

11. (*a*) Import and export of gold during 1909: Export—Gold bullion to Germany valued at 4,146.25 pesos.

11. (*b*) Import and export of silver during 1909:

Coining Money in Honduras.

By Consul Arminius T. Haeberle, Tegucigalpa.

[Taken from Daily Consular and Trade Reports, October 8, 1910.]

On February 16, 1910, the mint of Honduras was opened after having been closed two years, owing to the fact that most of the silver in bars is exported to other countries.

At present (August, 1910) the Government is coining some silver, but chiefly copper coins, to replace the amount which disappeared from circulation. According to information received, copper was formerly bought at 1.50 pesos per pound (about 55 cents gold), while 1½ pesos worth of copper coins weighed 1 pound 6 ounces. In other words, if one bought coins to equal the value of 1 pound of copper, there was a gain of 6 ounces in actual weight. As a result copper coins begin to disappear from circulation. The Government has now gathered about 84,000 copper coins and expects to coin new ones to the amount of 1,000,000. By decree No. 68 in the official publication, Le Gaceta of March 4, 1910, 2-cent pieces were to be coined in addition to the 1-cent piece. These were to weigh 4.25 grams, tolerance being 5 centigrams, the diameter 19.5 millimeters, and 235 coins to each kilo, or 2.2 pounds. The 1-cent pieces were to weigh 2.12½ grams, or one-half of their former weight, tolerance being 5 centigrams, diameter 15 millimeters, and 470 coins to each kilo. This was later changed, so that the actual weight of the 2-cent piece is 3.5 grams and of the 1-cent piece 1.9 grams.

The machinery at the mint dates to the time of President Marco Soto, 1877–1883, and consists of 3 presses, 3 rollers, 2 machines for cutting of coin, 1 for milling, and 1 for drying coin. With the present equipment about 20,000 can be turned out daily, although at an average only about 400 pesos worth are made in one week, the making of which costs about 200 pesos.

The mint is equipped with a cupola furnace for melting large quantities of silver, about 100 pounds at a time, one melting furnace which provides for crucibles of about 150 pounds capacity, apparatus for parting gold and silver, and a charcoal assaying furnace. Of the various coins 4,901 pesos worth were coined during March to June, inclusive.

Monetary System of Honduras.

[From Weekly Consular and Trade Reports, March 5, 1910.]

COMMISSION RECOMMENDS ADOPTION OF GOLD STANDARD.

Consul Samuel MacClintock, of Puerto Cortes, explains the conditions which obtain in connection with the circulating medium of Honduras:

Honduras and Salvador are on a silver basis, while Nicaragua and Guatemala have a mixed silver-paper system. As their paper is not convertible it results that they have in circulation only fractional silver coins. Costa Rica is solidly on a gold basis and experience none of the disadvantages of fluctuations in the price of silver and exchange.

Previous to 1879 a mint had been established at Tegucigalpa, the capital, which coined some silver and copper, but apparently without any systematic plan or relation to the demands of business. In order to supply the demand for small silver the current pieces were cut in half, as far back as 1649, and these media constituted the circulation until 1774, when a mint was established in Guatemala. Even after that "cut money" seems to have continued in circulation as long as the Spaniards were in control of the country, and is even occasionally met with to-day in remote parts of the country. From 1859 to 1878 the mint was closed. In 1869 the Government decreed the coinage of nickel and sent to France for the work. At first these coins circulated at their par value, then gradually depreciated until the people refused to take them at any valuation. With the disappearance of nickel, the silver of other countries, chiefly, Peru and Chile, came into the country. In one part of the country only the round silver money was in circulation, in another the "cut money," and in others the mixture of silver and copper.

ESTABLISHMENT OF THE PRESENT SYSTEM.

The first actual monetary system established in Honduras dates from 1879 and was confirmed by executive decree of September, 1896. It made the decimal silver, peso, or dollar of 100 centavos, 25 grams in weight and 0.900 fine, and therefore containing 347.265 grains of pure silver, the unit of value. Its present value is $0.365. Fractional coins of 50, 25, 20, 10, and 5 centavo denominations, and copper of 1 and one-half centavo denominations were also decreed. The silver 25-centavo piece of 0.835 fine, and the fractional coins of Nicaragua and all the moneys of Salvador

are also accepted. Gold coins were also made legal tender in the system of 1879, and 20, 10, and 1 peso denominations have been minted.

Not much money has ever been coined in Honduras, owing to the fact that it was more profitable to export silver and receive value in gold, and also to the additional fact that there has been lacking the knowledge and appliances to separate scientifically the silver and gold.

Between 1879 and 1902 silver to the value of 948,690 pesos was coined; gold to the value of 1,421 pesos, and copper to the value of 82,404 pesos.

It is difficult to estimate the amount of money in actual circulation at present in Honduras and Salvador. Of gold there is practically none. Gold, as a metal, forms a considerable export. Of the national silver there is little in circulation and none being coined. It has practically all been driven out by the cheaper money from other countries, for the Honduranean peso contains a slight admixture of gold, which makes it profitable to export. Copper coins are also very scarce, so much so that on the north coast some commercial houses issue brass checks, which are generally accepted under their guaranty of redemption. The scarcity of small money greatly embarrasses transactions of minor value, and in remote places various small articles, such as candles, tobacco, matches, and even safety pins are used to facilitate exchange.

HONDURANEAN MONEY IN ADJOINING COUNTRIES.

The national money, being 0.900 fine, is readily accepted in the neighboring Republics at a premium of at least 5 to 1 as compared with the paper money of Guatemala, and 3 to 1 compared with that of Nicaragua, and it exchanges with the colon of Costa Rica according to its bullion value in the New York market.

The silver of Guatemala and Salvador, in the denominations of 1 peso, and 50 and 25 centavos, circulates in greater quantities than the national money and is accepted at its face value. The Guatemalan 12½ and 6¼ silver pieces, 0.835 fine, also circulate, but are not accepted by the bank or by the people generally. The Nicaraguan 20, 10, and 5 centavo silver pieces are found all over the Republic, displacing the national money of the same denominations. In the southern part of the Republic this fractional silver of Nicaragua excludes that of the other Central American States. In the interior this Nicaraguan money is often subject to a discount and on the north coast is not received at all.

The Government of Honduras issues no paper money and the bills of the Bank of Honduras do not circulate very freely. The people at a distance from the bank avoid their use. Thus the bills of the bank in Tegucigalpa are subject to a discount on the north coast unless they are especially stamped, and for thus stamping its own bills the bank charges the customer.

GOLD STANDARD FOR ALL CENTRAL AMERICA.

A commission appointed to report upon the monetary system of Honduras to the First Central American Conference made the following recommendations:

"1. That the gold standard be adopted as soon as possible, as it will facilitate commerce, both domestic and foreign, and make less noticeable the fluctuations in the rate of exchange.

"2. In case it should be impossible to get the five Republics to agree to establish the gold standard, there should be established as one of the means to secure that desirable end, a unity in the coinage of the silver dollars of all of the Central American Republics, with the stamp of the old Republic of Central America, using the Mexican dollar as a model with regard to weight, fineness, and other conditions, and neither coining nor receiving silver dollars of any other class.

"3. That each of the States be at liberty to coin fractional money, at least the 25-centavo piece, which its internal trade demands, with the weight, fineness, and other requirements which it deems convenient, the other States being exempt from the necessity of receiving it.

"4. That it be agreed, as a fixed point in the monetary system of Central America, never to introduce paper money, which the Honduranean people have never been disposed to accept in any case.

"5. That a monetary convention be entered into between the Republics of Central America and the other Latin-American States to fix the value of silver of each with reference to gold."

UNIFORM SYSTEM PROPOSED.

The First Central American Conference met in Tegucigalpa, Honduras, January, 1909, and passed the following resolutions with regard to the monetary system:

"1. The basis of the future monetary system in Central America shall be the gold and silver dollar at parity.

"2. The Central American Conference of 1910 shall fix the date when the respective Governments shall proceed to change their respective monetary systems.

"3. No foreign silver money shall be legal tender in Central America after the date fixed by each of the Governments and after there shall exist a national money.

"4. Each Government shall prescribe the conditions for the recoinage or exportation of the silver money not national, shall fix the limit of coinage, and shall arrange for the settlement of the obligations contracted before the conversion of the system.

"5. The money of Central America, created by this conference, shall be composed of the following denominations: Gold pieces of 20, 10, 5, and 1; silver of 1.00, 0.50, 0.25, 0.10; nickel of 0.05, 0.01. In fineness, weight, and size these moneys shall be like those of the United States. They shall bear on the face Republica de ——; on the reverse, the shield of the Federation of Central America, with the legend '15 de septiembre de 1821' and below this the denomination."

NICARAGUA.

NEW ISSUE OF PAPER CURRENCY.

[From Bulletin of the International Bureau of the American Republics, March, 1910.]

The vice consul of the United States at Managua states that, according to a recent executive decree, paper currency is to be issued in Nicaragua to the amount of $2,000,000. The issue is to be in bills of $50 denomination.

SAN SALVADOR.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909: None.

2. Coinage executed for other Governments, or by foreign Governments for Salvador during 1909: None.

"For many years they have suspended the coining of money in Salvador, but since 1896 the works of our mint, which had scarcely four years' existence, have remained idle.

"Subsequently, they have authorized different banking enterprises and honorable persons and powers to coin money in foreign countries for account of Salvador.

"On November 29, 1904, the Salvadorian Bank received 113 cases containing 450,000, and on December of the same year the Agricultural Bank received 75 cases containing 269,000 pesos.

"According to the Report of the Treasury and Public Credit for the year 1908, the Government granted authorization to the Salvadorian Bank, the Occidental Bank, and to Messrs. Miardi & Co. and Messrs. Dreyfus Bros. to coin 700,000, 500,000, 200,000, and 500,000 pesos, respectively, of which lots there had come in when the said report was first published only 700,000 pesos."

3. Statistics concerning the employment of gold and silver in the industrial arts have not yet been collected, because, owing to their meagerness, they represent no value under this head.

4. United States gold coin imported, or deposited at mint and melted, during 1909: (No reply.)

5. Gold and silver produced from mines of the country during 1909: Data under this head have not yet been obtained.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In public treasuries.	In banks.
Gold coin		$13,632.06
Silver coin	$322,981.56	4,959,589.17

There is no data concerning the circulation.

7. Bank notes outstanding at the end of the year 1909: Issued by banks of issue—

Notes outstanding	$4,379,722.00
Legal-tender silver holdings	4,959,589.17

8. Premium on gold during 1909: Highest, 208 per cent; lowest, 157 per cent; average, 170 per cent.

9. Laws passed during the year 1909 affecting the coinage, currency, or banking: None.

10. Report published on operations of mint: None.

11. (*a*) Import and export of gold, (*b*) import and export of silver during the calendar year 1909:

GOLD.

Classifications and countries.	Imports.	Exports.[1]
Gold bullion, United States		$1,836,025.45

SILVER.

Silver bullion, United States		$801,987.60
Auriferous silver, Great Britain		297,557.70
Gold and silver tailings, 41,158.86 colones (country not specified)		

[1] In Salvadorian colones.

Commerce, First Half of 1909.

[From Bulletin of the International Bureau of the American Republics, March, 1910.]

* * * * * * *

Gold and silver bullion exported amounted to $490,429.

* * * * * * *

CUBA.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined, and coinage executed for other Governments, or by other mints for Cuba during the year 1909: None.

3. Estimated weight of fine gold and fine silver used in the industrial arts during the calendar year 1909: (No reply.)

4. The amounts of United States currency (gold coin) imported or exported can not be determined, for the simple reason that the customs statistics classify coins by the metals only, or according to the countries of origin, but never according to the particular coinage.

5. Gold and silver produced from the mines of the country during the year 1909: In Cuba there are several gold mines denounced and patented in the Provinces of Pinar del Rio, Santa Clara, Camaguey, and Oriente. It is not thought that any regular operations have yet been carried on in those properties, except at one quartz mine belonging to an American company, located at Helguin, in the Province of Santiago de Cuba. There are, however, no available data in respect to the production of that mine.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: The only official monetary data available in statistical form are those compiled by order of the secretary of finance, Gen. Juan Rius Rivera, toward the end of 1905 and published a few months later, in 1906. These statistics show the following stock in the Republic as on January 1, 1906:

Classifications.	Number of units.	Value.	Per capita.
United States paper currency:			
Denominations of $10 and more		$6,853,935	$4.36
Denominations of $1, $2, and $5		1,531,875	1.00
Total paper	790,435	8,385,810	5.36
United States gold coins:			
Denominations of $10, $20, and $50		15,820,010	10.08
Denominations of $5, $2½, and $1		5,595,944	3.63
Total United States gold	2,181,763	21,415,954	13.71
United States silver coins:			
Denomination, $1	217,121	217,121	.14
Denominations, 50 cents, 25 cents, and 10 cents	372,415	94,674	.06
Total United States silver	589,536	311,795	.20
United States nickel and copper coins	447,491	14,889	.01
Total United States currency		30,128,448	19.28
Spanish and French gold coins	3,607,540	16,818,762	10.70
Spanish silver coins:			
Denomination, $1	1,623,283	1,623,283	1.03
Denominations, 50 cents, 40 cents, and 10 cents	1,474,971	375,954	.24
Spanish copper coins	1,621,641	26,618	.02
Total Spanish and French coins		18,844,617	11.99
Recapitulation:			
United States currency		30,128,448	19.29
Spanish and French money		18,844,617	11.99
Grand total		48,973,065	31.28

With the foregoing table and adding thereto differences resulting from imports and exports through customhouses of the Republic since the beginning of the calendar year 1906, we have, if not an exact figure, at least a sufficiently approximate figure of the visible or known stock of money in the country. With respect to bank notes, there is no way of determining imports and exports by the mails, by express, and similar means over which the customs exercise no control.

Reducing Spanish and French gold (see table) to its value in United States currency, we have the following figures of gold stock as on January 1, 1906:

United States gold as per the foregoing table		$21,415,954
Spanish and French gold	$16,818,762	
Reducing 10 per cent difference in value	1,681,876	15,136,886
Total gold		36,552,840

The silver in circulation on the same date, reduced to United States gold, is as follows:

United States silver		311,795
Spanish silver	$1,999,237	
Less 12 per cent difference in value	239,908	1,759,329
Total silver (United States value)		2,071,124

Due to the progressive improvement in Spanish finances, the rate of discount as between Spanish silver and pounds sterling is very small, and in Cuba Spanish silver has reached almost a parity with Spanish and French gold, the difference being but 2 per cent, which, added to the 10 per cent difference between United States and Spanish gold, makes the discount on Spanish silver as to United States currency 12 per cent.

United States nickel and copper coins in circulation amounted to		$14,889
And Spanish copper to	$26,618	
Deduct 12 per cent for difference in value	3,194	23,424
Total		38,313

The scarcity of copper coins has placed copper on a parity with silver, and frequently factories and other establishments employing day labor are compelled to pay a premium up to 5 per cent for copper and for silver coins of small denomination.

The imports and exports of specie (gold and silver) during the calendar years 1906–1909 (according to statistics of the Treasury Department for 1906 and 1907 and data supplied by the Bureau of Statistics for 1908 and by the customhouse of Habana for 1909, figures of the movement through other ports for that year, which is in any event insignificant, being unavailable) are shown in the following table:

GOLD.

Year.	Imports.	Exports.	Increase of circulation.	Decrease of circulation.
1906	$1,264,232	$4,472,098		$3,208,466
1907	687,166	12,261,799		11,574,633
1908	943,700	3,697,700		2,754,000
1909	3,719,228	34,000	$3,685,228	
Total	6,614,326	20,466,197	3,685,228	17,537,099
Net				13,851,871

SILVER.

1906	$256,330	$522,433		$266,103
1907	69,387	157,882		88,495
1908	118,000	548,000		430,000
1909	138,375	200	$138,175	
Total	582,092	1,228,515	138,175	784,598
Net				646,423

COPPER.

1906	$500		$500	
1907	720		720	
1908	88,726		88,726	
Total	89,946		89,946	

From the foregoing tables it will be seen that the visible stock in 1909 was made up as follows:

Description.	Stock in 1906.	Stock in 1909.	Increase or decrease, 1906–1909.
Gold	$36,552,000	$24,300,969	−$12,251,031
Silver	2,071,124	1,424,702	− 646,422
Copper	38,313	128,059	+ 89,746
Total	38,661,437	25,853,730	− 12,807,707

Of course, these figures are no more than approximate, for, as a matter of fact, no real monetary census has ever been taken in Cuba; nor does the prevailing fiscal system permit of an exact calculation of the movement of coined metals and fine metals destined to industrial uses.

7. Government and bank notes outstanding at the end of the year 1909: In respect to this question I have to say that the Government does not issue nor have in circulation any bank notes or treasury certificates of any kind, and, although the law authorizes banks to issue notes, no bank has taken advantage of such authorization after the concession held by the Spanish Bank of the Island of Cuba expired.

8. Premium on gold: As the official currency of the country is United States currency, this question needs no further reply.

9. Laws passed during 1909 affecting the coinage, currency, or banking: None.
10. Report published on operations of mint: None.
11. (*a*) Import and export of gold, (*b*) import and export of silver, during the calendar year 1909:

GOLD.

Classification and country.	Imports.	Exports.
Gold coin:		
France (United States currency)	$3,684,988	
Spain (United States currency)	34,240	
United States		$34,000
Total	3,719,228	34,000

SILVER.

Silver coin:		
Spain (United States currency)	$138,375	
United States		$235
Total	138,375	235

It will be seen that the balance of trade (with reference to specie) in 1909 was favorable to Cuba, the net difference amounting to $3,689,000, principally in French gold. This had not happened in Cuba for many years.

Financial Statement at the Close of 1909.

[From Bulletin of the International Bureau of the American Republics, March, 1910.]

On December 31, 1909, the Republic of Cuba had on hand assets to the value of $6,399,447.50, consisting of cash on hand deposited in the banks of the island $939,028.79, and cash in the treasury and in the hands of collectors $5,460,418.81. The liabilities at that time exactly covered the amount mentioned.

DOMINICAN REPUBLIC.

Commerce.

[From Bulletin of the International Bureau of the American Republics, July, 1910.]

* * * * * * *

During the year 1909 there was imported from the United States gold and silver currency to the value of $219,465.

* * * * * * *

During the year 1909 there was exported to the United States gold and silver currency to the value of $55,640, and to Germany to the value of $8,000.

Department of Foreign Relations,
Santo Domingo, April 26, 1910.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined during the calendar year 1909: No money has been coined in this country nor is there any coinage law in force.

* * * * * * *

4. United States gold coin imported during the year 1909: In 1909 there was a declared importation of $202,565, but there is no exact data relative to the proportion of coin in this amount, which, to a great extent, was formed of American bank notes; nor was this the total amount of money brought into the Republic in said year, for the greater part was introduced by mail without being declared.

* * * * * * *

8. Premium on gold: The monetary unit of the country is the gold dollar of the United States of America. The circulating money is the national currency at a fixed official rate of $5 to $1 gold, and this latter at its nominal value. In 1909 drafts upon North America were sold at a premium of one-half to 1 per cent.

9. On the 15th of November, 1909, a banking law was passed, which was published in the Gaceta Oficial, No. 2041, of the 20th of the month and year mentioned.

HAITI.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined, and coinage executed for other Governments during the calendar year 1909: None. No mint in Haiti.

3. Amount of fine gold and fine silver used in industrial arts during 1909: Very little used and impossible to estimate amount.

4. Amount of United States gold coin imported during the year 1909: $400,000.

5. Gold and silver produced from mines of the country during the year 1909: None.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Gold coin:
- In public treasuries, practically none.
- In banks, impossible to estimate.
- In circulation, $1,000,000 (estimated).

Gold bullion, none.

Silver coin:
- In public treasuries, practically none.
- In banks, impossible to estimate.
- In circulation, $10,000 (estimated).

Silver bullion, none.

7. Amount of Government and bank notes outstanding at the end of the year 1909: Issued by the Government, gold, 14,593,115 gourdes. This is in fluctuating currency of gourdes, value of which is given under No. 12. It consists of the following:

	Gourdes.
1 and 2 gourde bills	7,094,750.00
5-gourde bills	1,273,365.00
5, 10, 20, and 50 centimes, nickel	6,000,000.00
1 centime, copper	225,000.00
Total	14,593,115.00
Less estimated loss through fires, etc	145,931.15
Total estimated circulation	14,447,183.85

8. Premium on gold during 1909: Highest, 610; lowest, 375; average, 525. Actual currency of the country, paper gourdes, and fractions of gourdes in nickel and copper.

9. Laws passed during 1909 affecting the currency were as follows:

Law.

François Antoine Simon, President of the Republic, using the power that article 69 of the constitution grants him.

Considering that the depreciation of the paper money causes serious losses to the public treasury, paralyzes commercial transactions, and impedes the progress of the national industry;

Considering that there is necessity to put an end to this deplorable state of affairs and to consider, in consequence, the gradual withdrawal of the paper money;

On the report of the secretary of state for finance and commerce and the advice of the council of the secretaries of state, has proposed, and the legislative corps has voted, the following law:

ARTICLE 1. Immediately after the promulgation of the present law the resources created by the laws of August 11, 1903, and July 26, 1907, consisting of the stamp tax, transmission tax, tax on the income from personal property, and the passport tax, shall be exclusively appropriated to the withdrawal of the 1 and 2 gourde bills at present in circulation.

ART. 2. The above-enumerated taxes shall be the subject of a special account in the treasury books and the funds resulting therefrom shall constitute a sacred deposit

in the safes of the treasury, of which it is forbidden to put to any other use than that indicated by the preceding article.

ART. 3. All appropriations that shall be made from this fund for purposes other than that for which it was created shall be deemed a crime against the state and the author and accomplice shall be punished with hard labor for life.

ART. 4. The taxes stipulated to be paid in American gold by the laws of August 11, 1903, and July 26, 1907, may be paid in 1 and 2 gourde bills at the rate of exchange of the day of the payment.

ART. 5. The operation of the withdrawal shall be carried on under the supervision and care of the legislative commission foreseen by the law of August 11, 1903, and under the conditions provided by that law.

ART. 6. A commission of 2 per cent of the amount withdrawn from circulation is allowed to the legislative commission to cover the expenses of the withdrawal and to reecompense it for its services.

ART. 7. The present law abrogates all laws and provisions of laws that are contrary thereto and shall be executed under the supervision of the secretary of state for finance and commerce.

Signed by the representatives July 9, 1909.
Signed by the Senate August 3, 1909.
Signed by the President August 12, 1909.

LAW.

[Translation.]

François Antoine Simon, President of the Republic, in view of article 69 of the constitution.

Considering that to modify the economic situation of the country and ameliorate the general conditions of existence, there is a necessity to consider the immediate withdrawal of a certain quantity of the 50-cent nickel pieces at present in circulation;

Considering that it is just and equitable to pay to the victims of the Port au Prince fire a second installment of the assistance granted to them amounting to 166,666.66 gourdes;

Considering that this result can not be attained with the ordinary budgetary resources, there is therefore occasion to provide for this by means of extraordinary resources;

Considering that there is a necessity to make an appeal to the public credit to cover the insufficiencies of the receipts and assure the current expenses of the service;

On the report of the secretary of state for finance and commerce and the advice of the council of the secretaries of state, has proposed, and the legislative corps has shown the urgency of the following law:

ARTICLE 1. The Government is authorized to contract a loan, to the best interest of the country, of 1,000,000 gourdes in 50-cent nickel pieces to be withdrawn from circulation, and 1,500,000 gourdes in bills for the current expenses.

ART. 2. The 50-cent nickel pieces, the proceeds of this loan, shall be melted up in the presence of the legislative commission that will be formed for the withdrawal of the 1 and 2 gourde bills.

ART. 3. The bills which are the proceeds of this loan shall be paid into the treasury to be used for the current expenses, deduction being made of the 166,666.66 gourdes for the benefit of the victims of the fires of the 5th, 6th, and 10th of July.

ART. 4. A new surtax of 15 per cent on the total amount of the import duties is created for the reimbursement of this loan. This new surtax shall be enforced three days after the promulgation of the present law.

ART. 5. When the reimbursement of the loan shall be completed the new surtax of 15 per cent shall be reduced to 10 per cent and this surtax of 10 per cent shall be used to withdraw the nickel pieces at present in circulation, continuing still with the 50-cent pieces under the supervision of the legislative commission that is to be formed by virtue of the law of August 11, 1903.

ART. 6. The present law repeals all laws or provisions of laws that are contrary thereto and shall be executed under the supervision of the secretary of state for finance and commerce.

Signed at the House of Representatives August 20, 1909.
Signed at the Senate August 20, 1909.
Signed by the President August 21, 1909.

11 (*a*). Import and export of gold during the calendar year 1909:

Classification and country.	Imports.	Exports.
Gold coin, United States	$400,000	[1] $250,000

[1] Estimated.

11 (*b*). Import and export of silver during the calendar year 1909: None, or so little as not to be noted.

12. Description of the coins in use in the country in 1909:

The money in circulation in Haiti is the gourde of 100 cents, multiples and fractions of gourdes.

The law of September 24, 1880, provided for the minting of a national gold coin, called gourde, weighing 1.6129 grams, of the fineness of 0.900, and a silver gourde, weighing 25 grams, of the same fineness. The law also provided for fractional silver coins, 0.835 fine. The gold coins were never minted. The silver gourde and fractional silver coins, with the exception of the 5-cent piece, were minted and placed in circulation, but have now disappeared entirely from circulation, owing to the fact that when the paper currency became so depreciated they were exported and sold as bullion. There remain only a few silver coins, kept as curios.

The actual currency of Haiti is irredeemable paper, in 5, 2, and 1 gourde bills; nickel, in 50, 20, 10, and 5 cent pieces; bronze, in 2 and 1 cent pieces.

United States gold is current in Haiti. Large quantities are met with, owing to the fact that all the export duties, and on imports a surtax of 25 per cent and an additional 15 per cent, are payable in that coin. Some salaries are paid in United States gold, and quite a number of items of the budget are in United States gold.

SOUTH AMERICA.

ARGENTINA.

Answers to interrogatories, 1908.

1 and 2. No gold has been coined since July 22, 1896. No silver has been coined since February 7, 1884, but $456,455.65 in nickel coins were struck during 1908, as follows:

	Pieces.
5 centavo	1,692,977
10 centavo	2,279,812
20 centavo	719,128
Total	4,691,917

3. Coinage executed for other Governments: For the Republic of Paraguay, through the mediation of the French Bank of Rio de la Plata, $300,001.75 in Paraguayan nickel coins were struck during 1908, as follows:

	Pieces.
5 centavo	400,005
10 centavo	800,005
20 centavo	1,000,005
Total	2,200,015

4 and 5. No reply.

6, 7, and 8. Importation and exportation of gold and silver during 1908:

Country of origin and destination.	Importation.		Exportation.	
	Gold.	Silver.	Gold.	Silver.
Germany	$1,083,000			$1,378
Bolivia	2,611	$34,136	$14,845	
Brazil			1,500	
United States	500,000		800	200
France	1,410,687			
Paraguay	367,520		5,773	
United Kingdom	22,496,525		21,899	
Uruguay	2,790,872			
Total	28,651,215	34,136	44,817	1,578

9. No reply.

10, 11, 12, and 13. The quantity of gold produced during the year 1908 of which we have any knowledge was 80 kilograms; but it is to be observed that it is impossible to ascertain the production of the gold from washings, inasmuch as it treats of a substance of common profit. It is quite possible that the gold extracted by washing would amount to double the figures noted above.

The production of argentiferous galena during the same year was 16,929 kilograms, but the fineness of the silver is not known; we can only give an opinion that it oscillates around 2 kilograms of silver to the ton.

14 and 15. Approximate stock of money in the country on December 31, 1908:

Denomination.	Number.	Value.
NOTES.		
$0.50	2,065,428	$1,032,714.00
1.00	20,458,736	20,458,736.00
2.00	406,479	812,958.00
5.00	11,698,720	58,493,600.00
10.00	11,508,536	115,085,360.00
20.00	26,757	535,140.00
50.00	1,817,860	90,893,000.00
100.00	1,370,215	137,021,500.00
200.00	31,436	6,287,200.00
500.00	97,433	48,716,500.00
1,000.00	91,593	91,593,000.00
Old issue of the National Bank, whose denominations are unknown		306,038.00
Total		571,235,746.00
NICKEL COINS.		
5 centavo	26,365,290	1,318,264.50
10 centavo	38,104,475	3,810,447.50
20 centavo	21,207,475	4,241,473.00
Total		9,370,185.00
COPPER COINS.		
1 centavo	12,907,518	129,075.18
2 centavo	26,680,576	533,611.52
Nickel and copper coins for revision		3,550.00
Total		666,236.70
Grand total		581,272,167.70

The issues of notes indicated above are classified as follows:

Issue guaranteed with $126,721,723.948 in gold coin, in accordance with the law No. 3871	$288,003,909.26
Issue of the British Bank of South America, guaranteed with $250,000 in public funds for gold of 4½ per cent, according to law No. 2216	250,000.00
Issue charged to the National Government for the conversion of which there exists in the bank of the Argentine nation a fund of 25,000,000 in gold dollars	293,018,258.44
Total	581,272,167.70

On December 31, 1908, the fund for conversion amounted to $28,000,000 in gold dollars.

16, 17, 18, and 19. Notes were printed in 1908 as follows:

Denomination.	Number.	Value.
$1	12,836,000	
5	1,906,000	
10	4,902,000	
50	807,500	
100	783,000	
1,000	198,300	
Total notes and value	21,432,800	$388,361,000

20. Actual currency of the country: "It is not possible to determine the amount of gold and silver money in circulation, because the public of this country are accustomed to the almost exclusive circulation of paper notes, so that the gold that comes into the country is generally exchanged at the conversion office or at the banks for paper, with which all transactions are made." (From report for 1907.)

21. Premium on gold: Law No. 3871, called the conversion law of November 4, 1899, provides that the nation shall convert all its present medium at the rate of 44 cents gold for each paper peso, or, approximately, at the rate of 227.27 per cent, and authorizes the cash conversion office to receive and pay out whenever requested notes of legal currency in exchange for gold at the rate indicated. Since October, 1902, up to the present the rate has been almost invariable, and is that which has prevailed in all official and commercial transactions generally.

22. No laws were passed in 1908 affecting the currency.

23. No report of the mint has been published in 1908.

Argentina Monetary Reform.

[Translation.]

[From L'Économiste Européen, Paris, Sept. 23, 1910.]

We give here below information relative to the Argentina monetary reform:

The project of law deposited with Congress by M. Iriondo, minister of finances, ordered the stamping of gold, nickel, and copper coins upon the basis of the standard value of the present paper peso, which is 44 per cent of the national gold peso of the value of 5 francs, according to the law of 1881.

The weight of the new standard gold peso is fixed at 0.709696 grams, corresponding to 2.20 francs.

The coinage of gold will be free and unlimited. The coinage will comprise 10-peso pieces, valuing 22 francs. The nickel pieces will be of 20, 10, and 5 centavos, or hundredths of a peso. The copper pieces will be of 2 and 1 centavos as at present.

The old gold argentinos of 5 pesos will be exchanged against the new pieces of 10 pesos at the rate of 44 centavos in gold for 1 paper peso.

The new monetary system will be maintained up to the amount of the funds of conversion of issues prior to the law, No. 3871, of 1899, which reached the amount of 300,000,000 francs and which at present amounts to 150,000,000 francs.

The funds will be principally constituted from the net product of the liquidation of the old Banco Nacional (National Bank), estimated at 60,000,000 francs, by the 150,000,000 of the conversion funds formed by the Government and by 13,000,000 provided from other resources which will be realized outside of the annual entries to the budget.

In exchange for the present notes there will be others delivered bearing the inscription, "Payable in gold pesos." The foreign coins will be received according to the value represented by the fine gold which they contain.

A new issue department is going to be instituted at the Banco de la Nacion Argentino (the National Bank of Argentina), with a personnel, a treasury, and offices, all to be made independent of the operations of the bank with the public and the Government.

This department will take charge of all operations at present connected with the cash-conversion office.

The present reserve and the gold which will be received in exchange for notes must not, in any case or under any orders whatsoever, be devoted to any other object than that of the conversion of notes under the personal responsibility of the administrators of the National Bank of Argentina and the directors and employees of that establishment.

The National Bank of Argentina will continue to use the funds of conversion deposited by the Government in foreign trading, as they have been doing up to the present time. Even when the funds of conversion have reached the amount of 300,000,000 francs, the Government will always continue to increase them.

The Argentine Republic in 1909.

[From Bulletin of the International Bureau of the American Republics, July, 1910.]

* * * * * * *

The financial condition of the country in 1909 was most satisfactory, the conversion fund of the nation having increased during that period to the extent of $30,000,000 gold. Shipments of gold exceeding $70,000,000 flowed into the country during the year, the greater part of which went into the conversion fund of the Government, swelling the amount at the close of the year to $173,000,000, the largest conversion fund ever accumulated in the history of the Republic. As compared with 1908, the rate of interest fell, money was plentiful, and the commercial and industrial development of the country was greatly stimulated.

* * * * * * *

For a number of years prior to 1902 Argentina's credit and commerce suffered on

account of the inconvertible paper currency. At times the gold premium advanced to an alarming figure. The conversion act established the conversion office through which the Government undertook to maintain the gold premium at 127 per cent—that is, at an exchange ratio of 2.27—thus fixing the value of the paper peso at approximately 44 cents. To do this it was, of course, necessary to maintain a large gold reserve in the conversion office. This reserve began with the deposit of $2,843 in gold in 1902, which, with a gold bank credit of $142,464 made in all $145,307. At this time the paper circulation was 296,055,093 pesos. The reserve therefore represented only $\frac{1}{100}$ of 1 per cent of guaranteed value of circulation. In 1909 the circulation was 685,150,000 pesos and the gold reserve $201,000,000, which represents 66⅔ per cent of the guaranteed value of the circulation.

* * * * * * *

The following table shows the cash on hand in the banks for the last four years:

Year.	Paper.	Gold (cash on hand).
	Pesos.	
1906	199,400,000	$26,210,000
1907	220,770,000	40,027,000
1908	330,161,400	47,520,137
1909 (November 30)	318,354,944	64,264,356

BOLIVIA.

Report on the National Mint.

[Translation.]

Since the 1st of January, 1909, the National Mint has suspended the coinage of silver coins, as much for the lack of dies corresponding to the new types of coins as for the lack of silver bullion.

By law of December 31, 1908, the Government was authorized to coin 4,000,000 bolivianos in silver coins of 50 and 20 cent values, with the weight of 10 and 4 grams, respectively, and the standard of 0.833⅓ fine.

In view of the most favorable conditions that could be obtained among the establishments of England, France, Belgium, Germany, and North America, the coinage was contracted for in Birmingham for 1,000,000 bolivianos in the following form:

	Bolivianos.
In 50-cent pieces	700,000
In 20-cent pieces	300,000
Total	1,000,000

from 20,000.64360 kilograms containing 579,292.44 troy ounces, fine.

The issue of nickel reached 1,000,000 bolivianos in coins of 10 and 5 cents.

On account of the difference in weight and fineness, the Government had to contract for the manufacture of new dies with the design provided for in the law of December 31, for future coinages.

As the new silver coin is merely for convenience in business, since the adoption of the gold standard, it need not be accepted in larger sums than 12.50 bolivianos, the value of the pound sterling, on which account the Government has not yet been obliged to coin the 4,000,000 which it authorized, because the sum ordered has been sufficient for small transactions.

Owing to the system of lixiviation employed in the treatment of the argentiferous metals, which does not produce bullion as was the case with the systems of amalgamation, which are those wanted by the National Mint, but simple precipitates or sulphurets, which need special treatment to concentrate the importation of bullion is each day more insignificant and is not enough for the coining necessities of the country.

With the view of resolving the problem of the treatment of sulphurets, the former director of the mint ordered from Europe special furnaces for this purpose, which as yet have not been installed on account of there having arisen inconveniences of a technical character. On the other hand, the secondary rôle that has been given the silver coin by the cited law of December 31, 1908, makes less urgent the necessity of increasing the production of bullion, as was the case when the country was under the régime of the silver standard.

Since the year 1908 the production of bullion has touched its minimum point, the annual importation into the country not having passed 719,171 kilograms with a value of 24,881.50 bolivianos, it being noticeable that in previous years it never fell below 2,000,000 kilograms, on which account, if it were actually desired to strike coins, the coinage would not be over 30,000 to 40,000 bolivianos.

With the new dies ordered and the establishment of the section of furnaces for the treatment of silver sulphurets, the establishment can be started anew, and for which betterment there has been set aside a sum from the Morgan loan.

The production of silver bars reached its minimum output during the years 1907 and 1908, as shown by the following data relating to the last five years:

Years.	Kilograms, fine.	Coining value.
		Bolivianos.
1904	16,905.421	816,937.00
1905	12,238.925	584,679.00
1906	6,687.974	308,115.16
1907	715.530	33,381.00
1908	719.171	24,881.50

In return the production of silver sulphurets was in an increased amount, according to figures of the customhouse statistics, as follows:

PRODUCTION AND EXPORTATION OF SILVER SULPHURETS.

Years.	Kilograms, fine.	Commercial value.
		Bolivianos.
1904	88,592.30	3,857,949
1905	88,607.33	3,858,020
1906	110,114.23	4,796,732
1907	194,121.96	6,483,463
1908	156,482.34	8,058,092

SILVER ORES.

The production and exportation of argentiferous ores has declined considerably. Even the law of December 13, 1902, suppressing the former heavy duties, and which is yet in force, had not power to reanimate and stimulate the development of the silver mines of this district, whose owners all apply themselves with preference to the working of tin mines, which yield to them better utility and profit.

In the value of the small exportations made from this customhouse in 1908 and the first six months of 1909, the following countries have taken part:

Countries.	Commercial value.	Countries.	Commercial value.
1908.		1909.[1]	
	Bolivianos.		*Bolivianos.*
Germany	539,742.27	Chile (in transit)	123,366.00
England	450,942.35	England	121,502.49
Chile (in transit)	2,970.40	Germany	69,813.06
Italy	1,598.00	Italy	3,426.50

[1] First six months.

GOLD COIN.

During the course of the past six months (1909) there was taken out of the country, as proven at this customhouse, £898 in gold coin, of which £110 was exported previous to the supreme decree of March 3, last, free of all duty; and the remaining £788, after the said decree, which established the duty instituted by article 5 of the law of January 3, 1906, on the exportation of gold coin, or by paying the duty of 3 per cent on the equivalent value of 9,850 bolivianos, made 295.50 bolivianos for export duty.

Exportation of gold of national production in 1908: 35,496 kilograms, valued at 59,225 bolivianos; silver, 156,482.340 kilograms, valued at 8,050,092 bolivianos.

The exportation of silver and gold in 1909 was as follows: Silver, 156,507.309 kilograms, valued at 8,060,461.33 bolivianos; gold, 39.900 kilograms, valued at 65,244.66 bolivianos.

The metallic stock of gold in the institutions of issue on December 31, last, amounted to £507,845. On June 30, last, that total had been reduced to £482,792, which includes the £30,000 that the Government imported and the amount existing in the bank coffers as sight deposits, on which they derived an annual interest of 4 per cent.

For the reason that the diminution of the metallic reserves of the banks has not passed £25,153, as may be seen, it does not indicate a large demonetization. A good portion of the difference is in the hands of the public.

They have recently acquired £50,000, which also belongs to the Government. With this new quota, the amount of gold coin existing is above the amount contained in the data collected December 31, 1908, the date on which the new monetary system went into force.

[Translation.]

Reestablishing the Duty Instituted by Article 5 of the Law of January 3, 1906, on the Exportation of Gold Coin.

Ismael Montes, President of the Republic, considering:

That it is necessary to provide for the preservation of gold coin in the Republic, with the view of consolidating the monetary reform of December 31, last;

By employment of the power conferred on me by the law of December 15, decree:

Article 1. The duty created by article 5, of the law of January 3, 1906, on the exportation of gold coin is reestablished.

Art. 2. Conforming to the General Regulation for Customs, all exportation which is not made within the lawful requirements, are to be confiscated.

The honorable minister of the treasury and industry is charged with the execution and fulfilling of this decree.

Given at the palace of the governor of La Paz, March 3, 1909.

Ismael Montes,
Tenth Guardian of the City.

To contribute to the consolidation of the reform, the governor considers that the following measures are necessary:

First. To concur with the resolutions and their supplements in the maintenance of a rate of exchange on London which will not permit the exportation of coin and to procure the advance of that rate up to where it will give place to the importation of said coin.

Second. To retain in the country the greatest possible amount of gold coin and to encourage the banks so that, on their part, they will fulfill that duty.

Third. To retire the old silver coin existing in the reserves of institutions of credit and in the hands of the public, and to substitute for them those coined under the conditions specified in the new law.

Fourth. To carefully observe the fluctuations of our economic balance with a view to knowing the movement of exportations and importations, which interfere as principal factors, solely, in the fluctuations of exchange.

Bank Statement, June 30, 1909.

[From Bulletin of the International Bureau of the American Republics, January, 1910.]

Mr. José Gutiérrez Guerra has prepared some interesting data concerning the operations of the banks of Bolivia during the first half of 1909. On December 31, 1908, the coined gold on hand in the five banks of issue of the Republic amounted to 5,631,193.75 bolivianos, as compared with 5,780,156.25 bolivianos on June 30, 1909, an increase of 148,962.50 bolivianos, or £11,917. On the other hand, a decrease of 256,598.53 bolivianos and 20,356.20 bolivianos, respectively, is noted in silver and nickel coins on June 30, 1909, as compared with December 31, 1908. The decrease in silver coin was due to the exportation by the Industrial Bank, in accordance with an order of the Government, of 227,000 bolivianos.

The foregoing figures do not include the transactions of the Bank of Bolivia and London, an institution recently established in the Republic, and whose figures are not available, no statement of that bank having yet been published, but comprises the operations of the National, Francisco Argandona, Industrial, Agricultural, and Mercantile Banks.

BRAZIL.

Answers to interrogatories, 1909.

1. The coinage of gold and silver by the Brazilian mint during the year 1909 was as follows:

Denominations.	Number of pieces.	Value.	Value in United States currency.
		Milreis.	
Gold:			
10 milreis	1,009	10,090	$5,787
20 milreis	4,427	88,540	48,342
Total	5,496	90,230	54,129
Silver: 1 milreis	816,200	816,200	247,308

2. No coinage was executed at the Brazilian mint for other Governments, and no coinage was executed for Brazil in foreign mints.

3. There are no statistics to be had as to the amount of gold and silver used in the industrial arts.

4. The amount of American gold deposited in the caixa de conversao on December 31, 1909, was $13,266,840, which represents the total amount of American gold held by the Brazilian Government. Of this amount none was deposited or melted at the mint.

5. The production of gold would be represented more or less by the export of bullion (see No. 11). The production of silver is practically nil.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: There are no figures obtainable as to the deposits in the banks. The gold deposit in the caixa de conversao (which corresponds to the public treasury) was, on December 31, 1909, 225,283,744 milreis, equivalent to $68,336,069. No statistics as to the deposits of silver.

7. There are no bank notes in Brazil. Of Government notes, the amount of convertible notes was 271,320,420 milreis, equivalent to $72,300,637. The amount of inconvertible paper notes was 628,452,722 milreis, equivalent to $190,630,663. (The value of the paper milreis throughout the year was 15d., or about 30.4 cents.

8. There is a premium on gold: The gold milreis is equivalent to 1.8 paper milreis, corresponding to their respective values of 27d. and 15d. The actual currency is paper of the convertible and inconvertible character, as above referred to.

During 1909 the highest rate of exchange was 15$\frac{1}{2}$d., and the lowest rate 15$\frac{1}{32}$d, which would give the value of the gold milreis as 1.788 paper milreis. The average premium on gold for the year 1909 was 78$\frac{6}{10}$ per cent.

9. There were no laws passed during the year 1909 affecting coinage, currency, or banking.

10. No department of mines and no report of the operations of the mint, separately published. The information will be embodied in the Annual Report of the Minister of Finance, not yet issued.

11 (*a*). Import and export of gold during the year 1909: No imports of gold.

Exports of gold:

Countries.	Kilograms, fine.	Value.
Germany		$2,102
France		19,980
England		2,230,814
Total	4,320	2,252,896

These figures are based upon the amount of gold on which duty has been paid, so it must be borne in mind that there is doubtless a considerable amount of gold bullion taken out of the country clandestinely.

11. (*b*). The import of silver during 1909 is not ascertainable.

12. Description of the coins of Brazil: The description of the coins of Brazil submitted

by the mint is, for the most part, substantially correct. The legal valuation of the gold milreis, namely, 27d. corresponds to a valuation of the English sovereign of 8.889 instead of 8.910.

The circulation during 1909 was paper, but not exclusively inconvertible paper. It consisted of 628,452,722 milreis of inconvertible paper and 271,320,420 milreis of convertible paper money. Nor during 1909 was it still true that the money in circulation was fluctuating in value, except as stated in answer to No. 8, between the narrow limits of 15 $\frac{5}{32}$ and 15$\frac{3}{4}$ pence.

The stability of exchange in Brazil at a shade above 15d. is one of the results of the operation of the conversion law, passed in December, 1906.

The Brazilian nickel coins at present in use are of the denomination of 400 reis, 200 reis, and 100 reis. All of the 50 reis pieces and the old, large, 200 and 100 reis coins are being called in. The 10 reis coins have long since disappeared. (1,000 milreis is called a "conto" and 1,000 contos a "conto de contos").

THE BRAZILIAN COINAGE.

[From the Brazilian Yearbook of 1909.]

During the colonial period and even after independence, until 1883, the monetary system of Brazil was regulated by the Portuguese law of August 4, 1686, that determined the types and values of the different gold and silver coins in use.

The value of the oitava of gold, or one-eighth part of a Portuguese ounce (28.691 grams or 445.7681 grains troy), of 22-carat fineness, was declared to be 1,600 reis; and that of an oitava of silver, of the fineness of 11d. to be 100 reis, the ratio thus established between gold and silver being 1 to 16.

By the same law it was determined that in the Portuguese colonies in Asia and Africa, the value of the oitava of gold should be 1,720 reis or 7.5 per cent higher, and the oitava of silver, 120 reis, or 20 per cent higher.

By the law of October 12, 1702, the coinage was again revised, when the value of a mark of 64 oitavas of gold of 22 carats was determined to be 112,640 reis, and that of silver of 11d. fineness to be 7,600 reis, thus raising the value of the oitava of gold to 1,760 reis, and of silver to 118.75 reis, the relation of silver to gold being thus raised to 1 to 14.816.

In spite of this law gold coins of 4 oitavas and value of 6,400 reis, in accordance with the old law of 1688, continued to be issued at Lisbon, whilst in the colonial mints of Brazil and other colonies, gold coins of 2 oitavas and 20 grains (2.227 oitavas), of the legal-tender value of 4,300 reis were issued at a premium of 18.75 per cent compared with the coins simultaneously issued at Lisbon and likewise legal tender in Brazil.

On October 8, 1833, the first law under the Brazilian Empire was promulgated regulating the currency, by which the value of the oitava of gold of 22 carats was declared to be 2,500 reis. But only by a subsequent decree, dated October 18 of the same year, was the relation of silver and gold declared to be 1 to 15.623.

In 1846 there was a further alteration, when the law of September 11 declared an oitava of gold of 22 carats to be worth, 4,000 reis. In 1849, by executive decree of July 28, the relation of gold and silver was declared to be 1 to 14.222.

This law, by which the value in sterling of the milreis (1,000 reis) was determined to be 27d., is still in force, as regards gold.

As regards silver, there have been several alterations of the fineness of the coins, the last coined in 1906 being of 0.800 fineness, with the weight of 20, 10, and 5 grams, and legal value of 2,000, 1,000, and 500 reis, respectively.

Taking the oitava, gold, for basis, the depreciation of Brazilian currency since 1688 is as follows:

Year.	Character of coin.	Currency.	Depreciation.
1688	1 oitava, 22 carats	1,600 reis in gold coin	Starting point.
1702	.....do	1,760 reis in gold coin	9.09 per cent.
	.....do	1,720 reis in gold coin	6.97 per cent.
	Colonies.		
	2.227 oitavas, 22 carats	4,300 reis in gold coin	15.25 per cent.
	1 oitava, 22 carats	1,888 reis in gold coin	15.25 per cent.
1833	.....do	2,500 reis in gold coin	36 per cent.
1846	.....do	4,800 reis of 27d. paper money[1]	60 per cent.
1906	.....do	7,200 reis of 27d. paper	77.77 per cent.

[1] The rate of conversion of new issues.

Value of Current Brazilian Coin and Currency.

Gold pieces.	Weight.		Fineness.	Mint value.
	Oitavas.	Grams.		£. s. d.
20,000 reis	5	17.929	916.67	2 4 10.698
10,000 reis	2.5	8.965	916.67	1 2 5.348
5,000 reis	1.25	4.482	916.67	0 11 2.674

The mint par of the unit 1,000 reis, gold, is therefore 26.934d. In commercial practice 27d. is adopted as the par value.

Finance.

[From Bulletin of the International Bureau of the American Republics, July, 1910.]

* * * * * * *

On December 31, 1908, there was in circulation paper money to the amount of $634,682,852. On the same date in 1909 the amount was 628,452,732 milreis. This circulation has been further reduced in the year 1910, so that at the end of March it stood at 627,075,261.500 milreis.

Commerce.

[Translation.]

The Coining of Money in Brazil.

[From L'Économiste Européen, Paris, Nov. 12, 1909.]

According to information published in the Brazilian Review, the mint of Brazil has recently acquired the delivery of 91 silver bars of a total weight of about 4,550 kilograms.

The first pieces that will be coined are those of 1 milreis, their stock at the mint being completely exhausted.

The Government has authorization for coining silver pieces up to the amount of 42,000,000 milreis, and the number struck up to the present do not amount to more than 15,000,000 milreis. Silver coins are now very common in Rio Janeiro, and the old notes of 1 and 2 milreis, often badly soiled and worn, are rapidly disappearing.

On the other hand, they give notice that the minister of finances intends to retire from circulation the silver coins issued previous to those coined in the last two years.

With regard to nickel coins, the necessity appears to be less urgent. The mint possesses in reserve at present a total amount of 20,000,000 milreis, in pieces of 400, 200, and 100 reis.

The old notes are still difficult to retire from circulation in the interior of the country, because the paper money, which dates a good while before the proclamation of the Republic, is considered as being perfectly lawful, although they would, in reality, be without any value whatever if they were sent to Rio.

Concerning gold coins, the coinage has shown a considerable increase during the last years. In 1904 the value of the gold coins stamped reached 14,290 milreis; there were none coined in 1905; in 1906 the value coined was 7,920 milreis; in 1907 it amounted to 74,980 milreis; and in 1908 to 126,910 milreis. During the first nine months of 1908 77,050 milreis in gold coins have been stamped, and they expect that the coinage of gold coins will be considerably greater in 1909. The gold coins stamped during the last years have been of 20 and 10 milreis pieces, exclusively. They have not coined any 5-milreis pieces.

At present exchange a gold piece of 10 milreis is valued at 18 paper milreis, and a 20-milreis piece at 36 paper milreis. Any person who brings a bar of gold to the mint to be made into coin must pay 1½ per cent of the value of the gold, beside 3 milreis for the two assays to which the bar of gold is subjected.

The Brazilian Review adds that, if the rate of 1½ per cent for coinage would shortly be reduced to 1 per cent, in case exchange is maintained at its present low rate, it would then make the coining of gold in Brazil more profitable than its exportation.

CHILE.

Answers to interrogatories, 1908.

1. Amount of gold coined during 1908, $513,560 in gold coins of 10 pesos value each. No recoinage.

2. Amount of silver coined during 1908:

$0.40 (with weight of 15 grams to the peso)	$580,782.60
.20	1,173,789.60
.10	414,938.00
.05	182,123.05
Total	2,351,633.25

No recoinage; all from new bullion. No domestic nor foreign coins melted. No coinage at foreign mints.

3. Coinage executed for other governments: None.

4 and 5. Amount of gold and silver used in industrial arts during the year 1908: No reply.

6. Importation of gold during 1908: From Great Britain, $117,971 in coin (Chile gold at 18d.).

Exportation of gold during 1908:

Metal.	Quantity.	Value.
	Kilograms.	*Pesos.*
Copper and gold mineral to Great Britain	2,195.968	519,957
Copper, gold, and silver mineral to Great Britain	32.961	3,793
Gold mineral:		
To Great Britain	58.776	10,217
To United States	104.290	28,157
Total	163.066	38,374
Gold and silver mineral to Great Britain	1,162.913	2,529,735
Gold bullion:		
To Great Britain	.565	1,017
To Germany	17.775	31,239
To France	3.620	6,516
Total	21.960	38,772

7. Importation of silver during 1908: From Peru, $144,476 in coin (Chile currency at 18d.); from Bolivia, $51,053 in coin (Chile currency at 18d.).

Exportation of silver during 1908:

Metal.	Quantity.	Value.
	Kilograms.	*Pesos.*
Silver ore:		
To Great Britain	50.160	44,659
To Germany	77.662	32,252
To United States	21.900	2,114
Total	149,722	79,025
Silver and lead ore:		
To Great Britain	17.011	3,701
To Germany	1.524	419
Total	18.535	4,120
Copper and silver ore:		
To Great Britain	475.390	84,636
To Germany	21.000	8,817
Total	496.390	93,453
Silver bullion:		
To Great Britain	8,301.123	869,074
To France	61.153	2,213
Total	8,362.276	871,287

8 and 9. United States gold coin imported and amount deposited at mint and melted during 1908: None.

10, 11, 12, and 13. Gold and silver produced from mines of the country during 1908: Gold, 1,188,522 grams; value, [1] $1,070,354. Silver, 52,435,071 grams; value, [1] $1,515,241.

Output of gold and silver from refineries of the country during 1908: "Although no small portion of the gold produced in the country is sent abroad for treatment or for separating it from the silver, copper, and other metals, which are nearly always combined with it, it is of some interest to know the origin of the gold which is brought to the mint, in bars, dust, and crude bullion for either melting or sale."

DERIVATION AND CHARACTER OF GOLD MELTED AND ACQUIRED BY THE MINT IN 1908.

Description.	Bars.	Dust.	Crude bullion.
	Kilograms.	*Kilograms.*	*Kilograms.*
Domestic	124.8910	88.2295	7.4545
Foreign	.....	93.7145	.....

"Various foreign coins, 41.2825 kilograms." [2]

14 and 15. Approximate stock of gold and sliver coin and bullion in the country at the close of the calendar year 1908:

"Gold: Of the amount of 23,985,620 pesos coined in 1898, 1900, and 1901, for the fund of conversion, there were used 4,539,460.32 pesos for acquiring gold bullion from July 6, 1898, to December 31, 1905, and the remaining 19,446,159.68 pesos were delivered to the official treasury of Santiago as part of the 26,850,444 pesos in coined gold, and 2,057,069 in gold bullion, which that office sent to Europe in 1905.

"The coinage of 1,581,040 pesos during the years 1906, 1907, and 1908, was effected with the object of providing the mint with gold coin for paying for bullion brought there, and also for contributing to the increase of gold circulation, for which they depended upon the mint. The amount of those coinages remaining in the vault on December 31, 1908, was 312,971.33 pesos.

"Silver: In the 10 years running back from July 6, 1898 to December 31, 1908, they have coined silver coins with the fineness of five-tenths, in accordance with

[1] In dollars of 18d.

[2] From the Report of the Superintendency of the Mint, presented to the honorable minister of the treasury in 1909," Santiago, Chile.

law No. 1172, of January 19, 1899; of seven-tenths, in accordance with law No. 1509, of December 31, 1901, and of four-tenths, by virtue of law No. 2057, of December 8, 1907. The amount and types of silver coins in use at present are those coined within that period with authorization conferred by those three cited laws.

"On December 31,1908, the mint closed with a stock of 1,030,000 pesos in fractional silver coins, having delivered to the official treasury of Santiago, to banks and to the public, in the preceding nine years, 8,487,481.45 pesos.

"On the date of the promulgation of law No. 1992, of August 27, 1907, by which the Saltpetre-refiners' Cash Credit Office (Caja de Credito Salitrero) was established, and which authorized the issue of 30,000,000 pesos in notes of lawful currency and the contracting of a loan of 4,500,000 pounds sterling, the international exchange fluctuated around $12\frac{7}{8}$ pence. In the months of September, October, November, and December following a rapid decline in exchange took place, falling in the first 15 days of the last month to less than $8\frac{1}{4}$ pence. One of the immediate consequences of this violent fall was the retirement and holding back of the fractional silver coin, for exporting it at a profit, or selling it at a premium in the market. The scarcity in the circulation began to be more and more sensibly felt as it was up to the point where they could not obtain them without difficulty and even then at a sacrifice as they were indispensable in small transactions for daily subsistence. This situation could not be prolonged and for relief they had recourse to a new coinage of fractional coin, which was the quickest way of effecting it. That was the origin of law No. 2057, of December 9, 1907, which created the silver coin with a fineness of four-tenths. The intrinsic value of this coin with 15 grams per peso, at $26\frac{7}{8}$ pence, which was the price of silver in London at the end of November, 1907, the date on which the superintendent of this mint proposed their coinage, was $5\frac{6.0}{10.0}$ pence; and if the troy ounce should go up to 30 pence it would be $6\frac{1}{4}$ pence. But taking into account the tolerance in the fineness and weight the cost of remelting, transportation, insurance, commission, refining, etc., the intrinsic value legally exact is reduced at least 1 penny, so that with silver at $26\frac{7}{8}$ pence, it would value in reality no more than $4\frac{6.0}{10.0}$ pence, and with silver at 30 pence, no more than $5\frac{1}{4}$ pence.

"In carrying out the law of December 9, painstaking energy was applied by the mint in the coinage of the new coins and they were satisfactorily delivered to the circulation a very few days afterwards, thus contributing to put an end to the perplexing situation produced, and also to that which might have supervened in still more distressing conditions, as in June, when the decline of exchange should have been still greater, it went up to around $7\frac{3}{8}$ pence.

"From that time to the present the mint has covered all the exchanges and orders for delivery of fractional coin they were asked for and, as they have had occasion to demonstrate, had sufficient in their vaults to meet any extraordinary demand whatsoever.

"By article 2 of the recorded law of December 9, 1907, the President of the Republic was authorized to make coinage of nickel coins in 5 and 10 centavos, up to 1,000,000 pesos.

"The mint made a calculation, between their values, with the nickel necessary for effecting the coinage and to conveniently provide special blacklead crucibles for melting the metal, and stamping the designs for their issue, which had to be those that were approved by the supreme governor. Notwithstanding, the mint ceased to coin the nickel money or to launch them into circulation. The reasons they gave in a note addressed to the honorable minister of the treasury, were, in the first place, that they had fully supplied the necessity for which that coin was destined with the silver coin of four-tenths fineness, with the same designs as the 10 and 5 centavos; and forthwith, as a ground of greater importance, establishing the fear that the silver coins were to be expelled by the nickel coins of less effective value, and probably opening a field for possible falsification and clandestine importation of nickel coins with the object of hoarding the silver ones.

"Copper: In exercise of the authority granted to the President of the Republic by article 11, of law No. 1054, of July 31, 1898, they coined in that and the following year 70,477.44 pesos in copper coins of $2\frac{1}{2}$ and 2 centavos; and in 1904, 1906, 1907, and 1908, they coined in the same denominations 31,427.96 pesos, in conformity with the law No. 1652, of March 9, 1904. The demand for copper coin in that period of ten years had not required the coinage of more than a total of 101,905.40 pesos in the two preceding lots. For that reason they limited the mint to issue that coin in the proportion solicited up to the full amount of 200,000 pesos authorized by article 2, of the law of March 8, 1904.

"That law, as it is recorded, created a new copper coin with an alloyage of 95 per cent copper, 4 per cent tin, and 1 per cent zinc, which was very different from that employed up to that date for the same coin, and their dimensions and designs were

also very diverse. The quality of this new coin has had satisfactory results; in the use of it no exchange has resulted unpleasantly as with that of the preceding coin, and their size permits of carrying them without inconvenience, and they are not susceptible of being confounded with the gold and silver coins.

"In the exercise of the law they have put into circulation only two of the types of the new coins, those which were in greatest demand, of 2½ and 2 centavos. They are preparing the dies for the other two, of 1 and one-half centavos, and they will be issued in the course of the present year (1908). The amount of copper coin existing in the mint on December 31, 1908, was 410,000 pesos." (From the "Report of the Superintendent of the Mint, presented to the honorable minister of the treasury in 1909," Santiago, Chile.)

16 and 17. Government notes outstanding at the end of the year 1908:

Bills of—	Pesos.
1 peso	8,325,078
2 pesos	1,680,502
5 pesos	25,812,430
10 pesos	36,130,220
20 pesos	17,797,600
50 pesos	17,827,600
100 pesos	27,308,400
500 pesos	6,718,000
1,000 pesos	7,986,000
Total	149,345,880
Canceled notes	647,078
Canceled bank notes	7,042
Total emission	150,000,000

According to law the Government declares the entire emission convertible in gold.

18 and 19. Amount of bank notes outstanding at the end of the year 1908: $4,220,445. None not covered by legal tender gold or silver coin or bullion.

20. Actual currency of the country: Gold of 18d., silver 15 grams to the pesos, and government paper convertible according to law.

21. * * *

22. Laws passed during the year 1908 affecting the currency: None.

23. Report published on operations of the mint during 1908: "Memoria de la Casa de Moneda" sent herewith.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909:

SILVER.

Denomination.	Number of pieces.	Value.[1]
20 centavos	1,075,645	
10 centavos	2,963,770	
5 centavos	1,176,971	
Total	5,216,386	$571,154.55

[From Bulletin of the International Bureau of the American Republics, July, 1910.]

FINANCE.

* * * * * * *

The paper currency consists of 150,000,000 pesos, paper, of a par value of 18d. On January 5, 1909, the exchange value of the paper peso was at its highest, 13 3/16d., which is about 64 per cent of its par value. It reached its lowest point during May, when it went down to a fraction under 10d., or to about 54 per cent of its par value. At the close of the year the peso was worth about 11 1/16d., but is now a little higher. The average during the year 1909 was about 10 1/4d., or 21 cents United States gold.

The total deposits in the banks on December 31, 1909, were 394,614,515 pesos, gold.

ECUADOR.

Answers to interrogatories, 1909.

* * * * * * *

3. Estimated weight of fine gold and fine silver used in the industrial arts during the calendar year 1909: None.

* * * * * * *

6. Approximate stock of money in the country on December 31, 1909: The total amount of currency in the hands of the public (Dec. 31, 1909) is:

	Sucres.
Gold coin	4,222,596.95
Silver coin	2,406,858.77
Bank notes	8,236,649.00
Nickel coin	142,654.25
Total	15,008,758.97

The legal reserve of the banks is 50 per cent of the amount of notes in circulation:

	Sucres.
The notes in circulation amount to	8,369,226
The reserve should be	4,184,613
The banks held gold for	5,027,305
Surplus of gold	832,682

7. Bank notes outstanding at the end of the year 1909: The three banks of issue existing at present in Ecuador have in circulation (Dec. 31, 1909):

	Sucres.
Bank of Ecuador	3,980,653
Bank Comercial and Agricola	3,255,859
Bank of Pichincha	1,432,714
Total	8,669,226
It is considered that there have been destroyed and lost, about	300,000
In circulation	8,369,226
The banks held (securities)	132,577
In the hands of the public	8,236,649

* * * * * * *

9. Laws passed during 1909 affecting the currency: According to the amendment of the money law (act of 1908), two new gold coins were added to the law of 1898, viz: Gold piece of 2 sucres; weight, 1.6272 gram; 0.900 fine. Gold piece of 5 sucres; weight, 4.0680 grams; 0.900 fine.

The Government was authorized to coin nickel as follows: 100,000 sucres in pieces of 5 cents, weight 3 grams; 50,000 sucres in pieces of 2 cents, weight 3 grams; 30,000 sucres in pieces of 1 cent, weight 2 grams; 20,000 sucres in pieces of ½ cent weight 1 gram. Alloy, 75 per cent copper, 25 per cent nickel.

The law of 1898 ordered that silver was legal tender up to 10 sucres; the new law reduced it to 5 sucres. The law of 1898 ordered copper or nickel to be legal tender up to 5 cents; the new law increased it to 50 cents.

* * * * * * *

11 (*a*). Import and export of gold during 1909:

	Sucres.
Since the adoption of the gold standard (in 1900) there have been imported into the country in gold coins	16,415,065.95
Of these only 2,000,000 sucres were Ecuadorian coins (pieces of the value of 10 sucres, or £1) and the rest English and Australian sovereigns, French 20 francs, German 20 marks, and some $5 American pieces.	
There have been reexported up to December 31, 1909	7,165,164.00
Leaving in the country a stock of	9,249,901.95
Which is distributed as follows:	
(1) In the vaults of the banks as guaranties for their notes issued and in circulation:	
Bank of Ecuador	2,404,556.00
Bank Comercial and Agricola	1,805,570.00
Bank of Pichincha	817,179.00
Total	5,027,305.00

1908	18,078	176	259	49

11 (*b*). Import and export of silver during 1909:

	Sucres.
In 1885 Ecuador adopted the decimal system and since then the quantity of silver coin imported (and recoined abroad) has amounted to	4,995,395.00
For the purpose of conversion (1900) when the gold standard was adopted there were exported (and afterwards) for recoinage into small pieces	2,415,667.00
Leaving in the country a stock of	2,579,728.00
Which is distributed as follows:	
(1) In the vaults of the banks:	
Bank of Ecuador	47,024.92
Bank Comercial and Agricola	105,644.40
Bank of Pichincha	20,199.91
Total	172,869.23
(2) In the hands of the public	2,406,858.77
Total	2,579,728.00

11 (*c*). Nickel: According to the law of 1908, which authorized the Government to coin up to 200,000 sucres in nickel coins, there were imported in 1909, 168,000 sucres, of which only a part was put in circulation, and the stock on December 31 was distributed as follows:

	Sucres.
In the vaults of the Bank of Pichincha	25,345.75
In the treasury and hands of the public	142,654.25
Total	168,000.00

BRITISH GUIANA.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined, and coinage executed for other Governments during the calendar year 1909: None.

3. Fine gold and fine silver used in the industrial arts during the calendar year 1909: No record is kept.

4. United States gold coin imported and deposited at mint and melted during 1909: None.

5. Amount of gold and silver produced from mines of the country during 1909:

Gold produced in 1909.	Kilograms. (fine).	Value.
Domestic production:		
Deep mines	518	$291,395
Placer mining and hydraulicking	1,467	825,913
Dredging	134	75,407
Total	2,119	1,192,715

No silver produced.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: Stock in public treasuries, none; in banks, declined to state; in circulation, unknown.

7. Amount of Government and bank notes outstanding at the end of the year 1909: The Government does not issue notes. Banks of issue: Notes, $632,835; gold holdings and legal-tender silver holdings, declined to state.

8. Premium on gold during 1909: Highest, 2 per cent; lowest, 2 per cent; average, 2 per cent.

The actual currency of the country is English silver and notes issued by the local banks. To obtain gold from the banks a premium of 2 per cent is charged. Hardly any gold is in circulation. The buying power of an English sovereign is 20 shillings, but to get sovereigns, a premium of 2 per cent is charged.

9. No laws were passed during 1909 affecting the coinage, currency, or banking.

10. A copy of the report of the commissioner of lands and mines for the fiscal year ended March 31, 1909, is transmitted under separate cover.

11. (*a*) Import and export of gold, (*b*) import and export of silver, during the calendar year 1909:

GOLD.

5. Gold and silver produced from mines of the country during 1909: Gold, from placer mining, 3,786.694 kilograms; fine; valued at 1,107,986 francs. (No silver produced.)

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stocks.	In public treasuries.	In banks.	In circulation.
	Francs.	*Francs.*	*Francs.*
Gold coin	848,410	251,120.00	
Silver coin	198,069	313,705.90	About 100,000

7. Amount of Government and bank notes outstanding at the end of the year 1909: Impossible to obtain any information.

8. There is no premium on gold.

9. Laws passed during 1909 affecting the coinage, currency, or banking: None.

10. Report published on operations of mint: None.

11. Import and export of gold and silver during the year 1909: This information can not be obtained.

12. Coins of the colony: The same as in France.

URUGUAY.

[Translation.]

Monetary System of the Oriental Republic of Uruguay.

By Mr. Edmond Bruwaert, Minister for France to Montevideo.

[Taken from the Report of the Administration of Coins and Medals to the Minister of Finances, Paris, 1906.]

Uruguay has the gold standard with this peculiarity, that the Republic has never coined any national gold coins. The gold which circulates abundantly in the country comes from foreign countries, of which it carries the stamp. Besides these foreign gold pieces there is a national silver coin for payments in small amounts, coined for account and benefit of the State, in much reduced proportions. There also exists, for small change, a national nickel coin of equally limited issue. Save for retail account, however, this is not the metallic money of which they make the most use—in Montevideo, at least. Bank notes seem to be preferred. The check exists, and it may be that the print on them is troublesome, and it may be that distrust makes them unwelcome, but they are far from occupying the important rôle which they merit and which is accorded to them elsewhere, in England and in the United States, for example, to the great benefit of monetary stocks, which, becoming less necessary as articles of liquidation, they can be used as material for investment.

LEGISLATION.

Before the acknowledgment of the independence of the oriental Republic (Aug. 27, 1828), the country had been alternatively attached to Spain, to the Argentine Confederation, to Portugal, and to Brazil; thence the various monetary systems which have left their traces in the monetary circulation. Various laws have come to modify, little by little, this condition of things—those of June 14, 1839; December 13, 1843; June 23 and July 15 and 19, 1854; June 13 and July 2, 1857, which, to-day, are all repealed.

Gold.—The gold money is now regulated by the law of June 23, 1862, of which the principal provisions are as follows:

Article 1. On January 1, 1863, the national coins of the oriental Republic of Uruguay shall be the silver piaster and the gold doubloon.

* * * * * * *

Art. 3. The gold doubloon of the weight of 16.97 grams and the fineness of 0.917 shall have the value of 10 silver piasters.

* * * * * * *

Art. 8. So long as no national coins shall have been coined, the foreign gold and silver coins will continue to circulate for their current value according to the equivalence following the official rate (since modified) of 13 different kinds of coins.

* * * * * * *

Art. 13. All prior laws contrary to this law are repealed.

* * * * * * *

The double standard recognized by this text suffered a first injury at the time of the promulgation of the law for banks of issue of March 25, 1865. That law is expressed, in intent, in paragraph 1 of article 1, as follows: "Notes issued by the banks shall be drawn to bearer, at sight, and payable in gold coin, in dubloons, or, failing them, in coin of the same metal, according to the law of March 23, 1862."

The adoption of the single gold standard was affirmed 11 years later by the fiat law of June 7, 1876, expressed in these words:

"The law of March 23, 1865, having declared compulsory the reimbursement of bank notes in gold doubloons or in coin of the same metal, according to the law of June 23, 1862, by which the repeal of the double standard provisionally established by that law was involved, taking into account that the gold since then has been considered the sole monetary standard of the Republic and that, in consequence, the executive power has, by decree of October 12, 1870, limited to a fraction which does not amount to half of a gold doubloon, the silver coins admitted in payments of customs duties, and, on the other hand, judging it advisable to adopt a general regulation which will govern commercial transactions and at the same time decrease the inconveniences of fluctuations produced by the constant lowering of silver with relation to gold;

"The provisional government has willed and decreed:

"Article 1. To continue to permit the importation and circulation in the Republic of silver coins of lawful currency with the auxiliary character to the gold coin in proportions indicated by the following article:

"ART. 2. Accordingly, no one has to receive the auxiliary coins for more than 10 piasters in all settlements not exceeding 1 dubloon; for more than 10 piasters in settlements of from 11 to 1,000; for more than 20 piasters in settlements of more than 1,000. The fractional pieces of the unit are designed to transactions of less than 1 piaster."

Silver.—The law of June 23, 1862, instituted the silver piaster and gave it the weight of 25.480 grams, with the fineness of 0.917. That lawful piece was never coined. On March 9, 1877, the treasury passed a contract with MM. Paulier Bros. for coining 1,000,000 oriental piasters at the mint of Paris. These white pieces were of the denominations of 1 piaster, 50, 20, and 10 centesimos or soles, arranged according to the official book of charges, in conformity with the French decimal types of 25, 12.5, 5, and 2.5 grams; the fineness was fixed at $\frac{835}{1000}$, in despite of the oriental law. That abnormal condition, however, was regulated by a subsequent law of October 18, 1890, which ordered the coining, for account and profit of the State, of another 3,000,000 white pieces.

Article 2 of that law indicated the dimensions and weight of the pieces according to the French types. Article 3 decided the design. Article 4 reserved to the State the profits of the operation, the grantees of the coinage realizing only their expenses. From the point of view of the liberty power of this money article 7 expresses thus:

"In payments of less than 10 piasters they must remit up to 5 silver piasters; for payments of more they will observe the following scale: From 10 to 25 piasters, 30 per cent; for more than 25 piasters up to 100, 20 per cent; for more than 100 piasters up to 500, 10 per cent; for more than 500 up to 5,000, 5 per cent; for more than 5,000, 2 per cent.

"ART. 8. This coinage realized, on the whole or in part, the executive power interdicted, throughout all the territory of the Republic, the circulation of silver coin other than that of national coinage.

ART. 9. Account is to be rendered to Parliament of the profits realized, which will be disposed of as they agree to do."

Four million silver piasters of various designs have thus been coined and put in circulation in Uruguay with limited liberty power. Nevertheless the officials of the State, the workmen of the towns and fields, the daily supplies tradesmen, are nearly all paid in silver, the gold being at a premium. The premium there for 10 or 12 years has been 15 per cent; at present it is from 3 to 7 per cent. In selling 1,000 gold piasters to the bullion dealers they obtain 1,003 to 1,007 piasters, being a gain of from 3 to 7 piasters, which benefits all these: First, the State, who, when it has small sums to pay, can impose the white pieces on the receiving parties. On the contrary, the retail dealers who receive the white pieces from their patrons must sell them at a loss in paying the wholesale dealer, as with 1,007 piasters of white metal they obtain only 1,000 piasters of yellow metal in the amount which the negotiation yields; therefore they complain of the license the consumer takes with respect thereto.

Nickel.—For some time Uruguay had been overrun by copper coins, which caused frequent commercial crises. This species of coin has given place to the bronze pieces of the French decimal type. In turn, this system has gone out of place since the law of December 6, 1900, which instituted the billon nickel coin.

Article 1 of that law gave the National Bank of the Republic (which is an institution of the State) in charge of the coining. According to article 2 the metal shall be composed of 25 per cent nickel and 75 per cent copper. Article 3 fixed the lawful amount of the pieces to be issued at 500,000 piasters, in denominations of 5, 2, and 1 centesimos or soles.

"ART. 7. The public pay offices need not receive nor remit more than 25 piasters or soles in nickel in all payments. The same regulation applies to individuals."

According to the provisions for the retirement of demonetized bronze coins, the profits (they had a gain of 400,000 piasters on the coinage of 500,000) are, by article 10, appropriated to various national works.

VENEZUELA.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined; coinage executed for other Governments, or coinage executed at foreign mints for Venezuela during the calendar year 1909: None.

3. Fine gold and fine silver used in the industrial arts during 1909: (No reply.)

4. United States gold coin imported during 1909: 3,169,650 bolivars.

5. Amount of gold and silver produced from mines of the country during 1909: Gold from deep mines and from placer mining, 603.113 kilograms; value, 1,503,086.99 bolivars. (No silver.)

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: Gold coin in banks, 3,562,126 bolivars; silver coin in banks, 3,294,085 bolivars.

7. Amount of Government and bank notes outstanding at the end of the year 1909: None.

8. Premium on gold: There is none.

9. Laws passed during 1909 affecting the coinage, currency, or banking: (No reply.)

10. There was no report published during 1909 on the operations of the mint.

11. Import and export of gold and silver during 1909:

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909:

GOLD.

Denominations.	Number of pieces.	Value.
		Crowns.
New coinage:		
100 crowns	3,971	
20 crowns	330,158	
10 crowns	2,512,007	
Quadruple ducats [1]	91,979	
Ducats [1]	390,162	
Total	3,328,277	40,609,830.62
Total recoinage (domestic)		9,200.00
Total coinage		40,679,030.62

SILVER.

New coinage:		
5 crowns	3,484,587	
Levantine thalers [1]	6,054,100	
Total	9,538,687	[2] 17,419,880.00
Total recoinage (domestic)		3,055.00
Total coinage		17,422,935.00

[1] Trade coins.

[2] No value is given the Levantine dollars, since as trade coins they possess no constant value.

2. No coinage was executed at the mint in Vienna for other Governments during the calendar year 1909, and no coinage was executed for Austria by foreign Governments.

3. Estimated weight of fine gold and fine silver used in the industrial arts during 1909:

Material used.	Gold.	Silver.
	Fine ounces.	*Fine ounces.*
New bullion	2,166.742	64,600.886
Old plate, jewelry, etc	332.053	3,071.016
Domestic coin	1,751.124	1,985.736
Foreign coin	1,862.355	948.467
Total	6,112.274	70,705.146

4. United States gold coin deposited at mint and melted during 1909: 1,135.75 eagle pieces, which contained 18.9660 kilograms with alloy and 17.0689 kilograms of fine gold. No gold coins were imported from the United States in the year 1909.

5. Amount of gold and silver produced from mines of the country during the calendar year 1909:

Classification.	Weight.	Value.
GOLD.		
Domestic production from deep mines	*Kilograms.* 203.595	*Crowns.* 641,346
SILVER.		
Domestic production:		
From dry or siliceous ores	20,976.588	1,241,903
From lead ores	5,333.265	377,751
From copper ores	276.820	20,762
Total	26,586.673	1,640,416

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In imperial treasury.	In Austrian-Hungarian Bank.	In circulation.
	Crowns.	*Crowns.*	*Crowns.*
Gold coin	3,671,764.55	1,066,564,731.21	[1] 300,000,000
Gold bullion		287,462,541.99	
Silver coin	5,611,993.00	290,780,449.00	[1] 350,000,000
Total	9,283,757.55	1,644,807,722.20	[1] 650,000,000

[1] Nearly.

7. Bank notes outstanding at the end of the year 1909:

	Crowns.
Issued by banks of issue:	
Notes outstanding	2,188,040,520.00
Gold holdings	1,354,027,273.20
Legal-tender silver holdings	290,780,449.00

The stock of metals in the Austrian-Hungarian Bank on December 31, 1909, was as follows:

	Crowns.
Nickel and bronze coins	8,210,873.42
Gold coins and bars	60,000,000.00
Total	68,210,873.42
Total metallic stock on Dec. 31, 1909	1,713,018,595.62
Bills of exchange payable in gold	475,021,924.38

8. Premium on gold during the calendar year 1909: The exchange value of sight drafts on London, Berlin, and Paris at the Vienna Bourse in 1909 was as follows:

Items.	Average.	Maximum.		Minimum.		Parity.
		Date.	Value.	Date.	Value.	
	Crowns.		*Crowns.*		*Crowns.*	*Crowns.*
London (for £1 sterling)	240.032	Nov. 9	241.475	May 1	239.475	240.174
Berlin (for 100 marks)	117.321	Dec. 2–3	117.925	Jan. 29 / Feb. 3	116.875	117.563
Paris (for 100 francs)	95.3118	Dec. 3	95.80	Mar. 10	95.000	95.226

9. Laws passed during 1909 affecting the coinage, currency, or banking: Proclamation of October 27, 1909, from the finance ministry, regarding the issue of a national gold coin of 100 crowns.

Law of October 27, 1909, (Reichsgesetzblatt No. 201), relative to the coinage of a national gold coin of 100 crowns, for individual account.

Upon the basis of the law of August 11, 1907, the coinage of the 100-crown gold piece was to commence in 1909, or when found convenient to establish the practicability to make the coinage.

10. The reports upon the operations of the mint and mining for 1909 are still in course of completion, and when they are ready we will forward a copy as formerly to the Director of the Mint of the United States of North America.

11. (*a*) Imports and exports of gold, (*b*) imports and exports of silver during the calendar year 1909:

Answers to interrogatories, 1909.

1. During the calendar year 1909 gold was coined as follows:

Denomination.	Number of pieces.	Value.
		Crowns.
20-crown pieces	438,743	9,174,860
10-crown pieces	573,816	5,738,160
Total	1,032,559	14,913,020

Of the above amount, 14,905,530 crowns was new coinage and 7,490 crowns was recoinage.

2 (*a*). During the calendar year 1909 silver was coined as follows:

Denomination.	Number of pieces.	Value.
		Crowns.
5-crown pieces	1,058,362	5,291,810

Of the above amount, 5,290,535 crowns was new coinage and 1,275 crowns was recoinage.

In addition thereto there were withdrawn from circulation and recoined 3,156 one-crown pieces, valued at 3,156 crowns.

2 (*b*). The above coinage was executed at the royal imperial mint at Vienna without the assistance of any foreign mint. No coinage was executed for other governments during 1909.

3. With regard to gold and silver employed for industrial arts, no exact data are at hand. The following articles were delivered for stamping at the royal Hungarian bureau for the stamping of metals during the calendar year 1909:

	Kilograms.
A. Domestic goods:	
(1) Gold ware	2,857.839
(2) Silverware	15,562.711
(3) Gold-plated wire	604.650
(4) Silver wire	572.744
B. Foreign goods:	
(1) Various gold ware	397.135
(2) Diversified silverware	2,609.700
(3) Gold watches	219.400
(4) Silver watches	1,016.740
(5) Gold-plated wire	2.150

For the striking of medals in the royal Hungarian bureau for the stamping and melting of metals there were used during 1909, 2.07092 kilograms of gold and 24.4593 kilograms of silver.

4. No United States gold coin was imported or melted during 1909.

5. Product of Hungarian mines during 1909:

	Crowns.
2,726.20902 kilograms of gold, valued at	8,941,967.55
11,159.95161 kilograms of silver, valued at	1,004,356.45

From Hungarian refineries were produced during 1909:

	Crowns.
874.51162 kilograms of gold, valued at	2,868,398.11
11,284.879 kilograms of silver, valued at	101,563,911.00

The Hungarian refineries worked only upon material derived from Hungarian mines; in consequence, the gold and silver recovered was contained in the amount of ore produced, from which was recovered: From gold washings, 0.606929 kilogram, valued at 1,990.727 crowns.

In the estimation of values 1 kilogram of fine gold is reckoned at 3,280 crowns and 1 kilogram of fine silver at 90 crowns.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: In the state treasury at the end of the year 1909 there were 2,194,470.34 crowns in gold coins, and in circulation about 112,947,143 crowns.

The metallic stock in the treasury of the Austrian-Hungarian Bank at the end of 1909 was, gold, 1,354,000,000 crowns, and silver, 298,000,000 crowns. These coins serve as the deposit covering the bank notes in circulation.

In gold and silver bars there were 30,376.4818 kilograms in gold and 10,086.0196 in silver.

7. The complete withdrawal of Government notes was concluded in the course of the year 1907, so that in 1908 and 1909 no Government notes were in circulation.

Of bank notes issued by the Austrian-Hungarian Bank, there were in circulation at the end of the year 1909 2,188,000,000 crowns.

At the end of the year 1909 there were in the vaults of the Austrian-Hungarian Bank:

	Crowns.
Gold coin and bullion	1,354,000,000
Notes payable in gold	60,000,000
Silver coin and bullion	298,000,000
Total	1,712,000,000

After deducting this amount from the bank notes in circulation (2,188,000,000 crowns), there remains 476,000,000 crowns which are not covered by a deposit in coin, but which are covered by bank securities.

8. According to the average current rates of Berlin, London, and Paris, gold has a par value. During the first six months of 1909 there was no premium; at the middle of June the rate stood at par; it was below par at the lowest at the end of March, when it was 0.433 per cent below. During the second six months of 1909, to the end of September, it was below par, then it rose to par at the beginning of October; at the middle of October it was again below par and sinking; it then took an upward tendency and stood at the highest at the beginning of December, viz, 0.433 per cent premium; at the end of December it again sold at 2 per cent.

9. No laws were passed during 1909 affecting coinage, currency, or banking.

10. The reports upon the operations of the mint and mining for 1909 are not yet completed; when they are issued we will, as formerly, forward a copy direct to the Director of the Mint of the United States of North America.

11. Imports and exports of gold and silver during the calendar year 1909:

IMPORTS AND EXPORTS OF GOLD AND SILVER INTO AND FROM HUNGARY DURING THE YEAR 1909.

BELGIUM.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909: No gold coined. Silver coinage (national fractional coins).

Denomination.	Number of pieces.	Value.
		Francs.
Domestic recoinage:		
2 francs	2,175,000	4,350,000
1 franc	4,500,000	4,500,000
50 centimes	5,012,916	2,506,458
Total	11,687,916	[1] 11,356,458

[1] From metal obtained as follows:

	Francs.
Belgian coins of 5 francs	8,788,575
Belgian worn coins of 2 francs, 1 franc, and 50 centimes	976,458
Demonetized 5-franc pieces of the late independent State of the Kongo	553,065
Demonetized 2-franc, 1-franc, and 50-centime pieces of the late independent State of the Kongo	346,935
Total	10,665,033

2 (*a*). Coinage executed at the Belgian mint for foreign governments during the year 1909:

Country and classification.	Number of pieces.	Value.
		Francs.
Colombia, nickel coins	4,000,000	1,008,000
Persia, nickel coins (of 1 and 2 shahis)	12,000,000	900,000
Siam:		
Nickel coins (of 5 and 10 stangs)	16,000,000	3,300,000
Bronze coins (of 1 stang)	150,051	900,000

2 (*b*). No coinage was executed at foreign mints for Belgium during the year 1909.

3. Estimated amount of gold and silver used in the industrial arts during the calendar year 1909: Since the law of June 5, 1868, authorizing the free exercise of the gold and silver smith trades, it is impossible to ascertain the weight of gold and silver used in the industrial arts.

Three refineries situated in the provinces of Liege and of Limbourg (works of Bleyberg, Sclaigneaux, and Overpelt) treat argentiferous ores of foreign production. The production of those establishments in 1909 amounted to 80,747 kilograms. The works at Overpelt have also extracted from auriferous ores 43.479 kilograms of gold. For the 44 years (1866–1909) the production has amounted to more than 1,090,544 kilograms of fine silver.

A fourth refinery, started at Hoboken, near Anvers, treated lead ingots, imported principally from Spain; their production for 1909 amounted to 184,562 kilograms of silver and 985 kilograms of gold.

4. United States gold coin imported and deposited at mint and melted during the year 1909: Nil.

5. Gold and silver produced from mines of the country during the year 1909:

Source of product.	Kilograms (fine).	Value.
Domestic production:		*Francs.*
Gold	[1] 1,028	3,540,884.32
Silver—		
From dry or siliceous ores	80,747	[2]
From lead ores	184,562	[2]

[1] Extracted during 1909 from the silver and lead ores imported and treated in the factories of the country, calculated at 3,444.44 francs per fine kilogram. No gold is produced in Belgium.
[2] Calculated according to London and Paris quotations, 80 to 90 francs per fine kilogram on the average, during 1909.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: No answer can be given for lack of data. (See answer to No. 7.)

7. Government and bank notes outstanding at the end of the year 1909: There are no Government notes in Belgium. The National Bank, placed under the control of the State, of which it is the cashier, issues alone, in fact, notes payable at sight at its offices. These notes are legal tender among individuals as long as the bank pays them at sight and the State accepts them in its treasury.

The amount of notes outstanding on December 31, 1909, was 845,015,550 francs. On that date the coin stock of the bank amounted to 158,912,458.56 francs. The bank also holds foreign bills to the amount of 149,128,613 francs, always redeemable in gold.

8. As regards the actual currency of the country, gold is not at a premium in relation to silver coin or bank notes of the National Bank.

9. Laws passed during 1909 affecting the coinage, currency, or banking: (Laws published in Report of the Director of the Mint, 1909.)

10. The mint publishes an annual report, copies of which are sent to the Bureau of the Mint, Washington. There is no department of mines, as there are no mines of precious metals in Belgium.

11 (*a* and *b*). Import and export of gold and silver during the calendar year 1909:

IMPORT AND EXPORT OF GOLD AND SILVER INTO AND FROM BELGIUM DURING THE YEAR 1909.

GOLD (INCLUDING PLATINUM).

Countries.	General imports.			Special imports.		
	Coin.	Bullion.	Ore.	Coin.	Bullion.	Ore.
	Francs.	*Francs.*	*Francs.*	*Francs.*	*Francs.*	*Francs.*
Belgian Kongo		1,587,600	2,279,677.36		1,587,600	
Germany	235,600	3,448,800		12,400	1,152,000	
Austria-Hungary	46,500	7,200		3,100	7,200	
Bremen		3,600				
Brazil		32,400			32,400	
French possessions on West African coast		7,200			7,200	
French possessions on East African coast		3,600			3,600	
Spain		540,000			540,000	
France	29,214,400	43,970,400		21,700	3,484,800	

To the fractional pieces recoined, of the value of 976,458 francs, were charged a loss in weight of 9.48 per cent, with an inferior fineness to the legal standard of 0.835. These losses have been compensated for by an addition to the melt of 390.867 kilograms of fine silver, for which the price paid was 34,190.61 francs (being about 87.50 francs per kilogram). Including the expense of manufacture and assay, the cost of the recoinage has been 46,333.12 francs.

The total coinage of 11,356,458 francs has been divided as follows:

	Francs.
2-franc pieces	4,350,000
1-franc pieces	4,500,000
50-centime pieces	2,506,458
Total	11,356,458

These pieces on the average were manufactured very nearly at the correct weights. Those of 2 francs and of 1 franc were weighed singly for the requirements of the office of the comptroller.

The proportions of pieces acknowledged to be defective in weight or stamping has been 1.45 per cent for the 2-franc pieces, 0.92 per cent for those of 1 franc, and 0.97 per cent for those of 50 centimes. These amounts are greatly inferior to those assayed from the preceding coinage. The general average fineness of the pieces is 0.8345. Upon 3,650 samples assayed singly by the assay office, 12 have been found light and outside of the tolerance of manufacture.

The average number of pieces struck with one pair of dies has been about 31,600 for the 2-franc and 1-franc pieces and 91,000 for the 50-centime pieces.

Nickel and copper coins.

In 1909 the monetary factories began the coinage of 1,000,000 francs in 25-centime pieces with an alloyage of nickel and 200,000 francs in 2-centime pieces of copper.

On December 31 the amounts struck represented the value of 499,000 francs in nickel pieces and 111,000 francs in copper coins.

The supply of metal has been acquired by public awarding at the price of 4.15 francs for the nickel and 1.52 francs for the copper.

In the coinage of copper the remelt of 70,000 francs in copper coins retired from circulation by reason of wear was included, those pieces having lost an average of 13.13 per cent of their weights. The expense of the recoinage, metals included, amounted to 18,058 francs.

There have been coined besides for the Colony of the Kongo a first amount of 300,000 francs in special nickel coins of three denominations—20, 10, and 5 centimes. The type of 20 centimes is especially for the colony. They have been replaced in Belgium by those of 25 centimes by virtue of the law of February 3, 1908.

[Translation.]

NEW BELGIAN NICKEL COINS.

[From L'Economiste Européen, Paris, Mar. 25, 1910.]

A royal decree of the date of March 14, 1910, determined the type of new nickel Belgian coins to be as follows:

"These nickel coins will be pierced through the center with a hole having the diameter of 3½ millimeters for the 5-centime pieces, 4 millimeters for the 10-centime pieces, and 4½ millimeters for the 25-centime pieces. They will bear on the obverse an A (abbreviation of Altesse—"Highness"), surmounted by a royal crown and by an inscription of the words "Royaume de Belgique" or "Koninkrijk Belgie" ("Kingdom of Belgium"), under which is the date; on the reverse on the left side is a branch of laurel, and on the right side the indication of the value. The pieces will have a smooth rim.

"Our minister of finances is charged with the execution of this decree."

BULGARIA.

Answers to interrogatories, 1909.

* * * * * * *

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

	Francs.
In the National Bank of Bulgaria:	
Gold coin	31,000,000
Silver coin	17,000,000
In other banks:	
Gold bullion	1,000,000

7. Amount of Government notes outstanding at the end of the year 1909:

Issued by National Bank of Bulgaria, which performs the duty of public treasury:	Francs.
Notes outstanding—	
Gold	50,000,000
Silver	22,000,000
Gold holdings	31,000,000
Legal-tender silver holdings	17,000,000

8. Premium on gold during 1909: Seven-tenths centime per 20-franc gold piece. Highest premium, 40 centimes; lowest premium, 7 centimes.

[Translation.]

Bulgarian Silver Coinage.

[From L'Economiste Européen, Paris, June 3, 1910.]

The Bulgarian Government intends to proceed to make a coinage of 4,000,000 francs in silver pieces by way of adjudication (stamping and supplying), which will take place June 9.

These 4,000,000 francs are distributed as follows: Four hundred thousand pieces of 2 leva, being 800,000 leva; 3,000,000 pieces of 1 leva, being 3,000,000 leva; and 400,000 pieces of 50 stotinki, being 200,000 leva.

DENMARK.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909:

GOLD.

Denomination.	Number of pieces.	Value.
New coinage:		*Kroner.*
20 kroner	200,030	.....
10 kroner	216,716	.....
Total	416,746	6,167,760

Silver coinage: Nil.

2. (*a*) and (*b*). Coinage executed for foreign Governments or coinage executed by other Governments for Denmark during 1909: Nil.

3. Amount of fine gold and fine silver used in industrial arts during 1909: Nil.

4. Import of United States gold coin and amount of same deposited at mint and melted during 1909: Nil.

5. Amount of gold and silver produced from mines of the country during 1909: Nil.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

	Kroner.
Gold coin (about)	70,000,000
Gold bullion (about)	1,800,000
Silver coin (about)	23,000,000

7. Amount of Government and bank notes outstanding at the end of the year 1909:

	Kroner.
Notes outstanding	129,000,000
Gold holdings	67,500,000
Legal-tender silver holdings	6,500,000

8. There is no premium on gold.

9. Laws passed during 1909 affecting the currency: Nil.

10. A copy of the report of the Director of the Mint for the period April 1, 1908, to March 31, 1909, is inclosed herewith.

11 (a). Imports and exports of gold during the calendar year 1909:

Classification and country.	Imports.	Exports.
	Kroner.	*Kroner.*
Coin:		
Danish West Indies	100,000	
Norway		1,000,000
Sweden		3,000,000
Total	100,000	4,000,000
Bullion, Great Britain	3,700,000	

FINLAND.

Answers to interrogatories, 1909.

1. Amount of silver coined during the calendar year 1909: 816,000 pieces 25 penni (0.25 markka), valued at 204,000 Finnish marks.

2. (No reply.)

3. Estimated weight of fine gold and fine silver used in the industrial arts during the calendar year 1909: New bullion stamped at bureau of control, 252,850 grams of gold and 233,503 metric lods (1 lod=10 grams) of silver.

4. Total import of United States gold coin during the calendar year 1909: About $70,000.

5. Gold and silver produced from mines of the country during 1909: (No reply.) (See Annex A, following the answers to interrogatories.)

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In public treasury.	In Bank of Finland.	In circulation.
	Finnish marks.	*Finnish marks.*	*Finnish marks.*
Gold coin	20,490	16,029,510	15,100,000
Gold bullion		560,000	
Silver coin	150,000	2,853,730	12,250,000
Silver bullion		54,160	
Total	170,490	19,497,400	27,350,000

7. Amount of Government and bank notes outstanding at the end of the year 1909:

REPORT OF THE BANK OF FINLAND, DECEMBER 31, 1909.

FRANCE.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909:

Denomination.	Number of pieces.	Value.
GOLD.		*Francs.*
New coinage and recoinage:		
100 francs	20,000	
20 francs	9,636,955	
10 francs	598,795	
	10,255,750	[1] 1,200,728,340
SILVER.		
2 francs	1,000,265	
1 franc	10,923,790	
50 centimes	9,900,044	
	21,824,099	[2] 72,592,460.70

[1] Of which 7,483,830 francs was domestic recoinage.
[2] Of which 10,890,646 francs was domestic recoinage.

FOR TUNIS.

Denomination.	Number of pieces.
2 francs	303
1 franc	703
50 centimes	1,003
Total	2,009

FOR INDO-CHINA.

Denomination.	Number of pieces.
1 piaster	9,201,143
0.20 piaster	500,000
0.10 piaster	1,000,000
Total	10,701,143

2. Coinage executed for other governments during the year 1909:

FOR MONTENEGRO.

	Pieces.
5 perpers (silver)	60,010
1 perper (silver)	500,010
Total	560,020

FOR SIAM.

	Pieces.
1 tical (silver)	1,036,691

All coinage was executed at the Paris mint.

3. Fine gold and fine silver used in the industrial arts during the year 1909:

	Kilograms.
Gold	36,000
Silver	338,000

4. United States gold coin imported and deposited and melted at mint during 1909: French statistics do not class by countries gold coin imported into the country; it is consequently impossible to give the amount. None melted at mint.

5. Gold and silver produced from mines of the country during 1908:

Classification.	Kilograms (fine).	Value.
GOLD.		
		Francs.
From refinery	28	96,000
From placer mining	1,698	5,849,000
Colonial production:		
Indo-China	770	340,000
Guiana	4,098	11,065,000
Madagascar	3,149	9,448,000
SILVER.		
From mines	18,415	2,062,000
From refineries	61,184	6,850,000

The most recent statistics are for 1908.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1903 (*a*):

Character of stock.	In public treasuries.	In banks.
	Francs.	*Francs.*
Gold coin	[1] 4,800,000,000	[2] 3,487,000,000
Silver coin	[1] 2,130,000,000	[2] 873,200,000
Total	6,930,000,000	4,360,200,000

[1] Last account relative to stock in France was made in 1903.
[2] In Bank of France on Dec. 31, 1909.

7. Amount of Government and bank notes outstanding at the end of the year 1909: In Bank of France, notes outstanding, 5,139,465,135 francs; gold holdings, 779,000,000, not covered by legal-tender gold or silver coin or bullion.

8. Premium on gold: Gold was at par throughout the year 1909.

9. Laws passed during 1909 affecting the coinage, currency, or banking: Report to the minister of finances annexed hereto.

10. Report published on operations of mint: The report of La Commission de Controle de la Circulation Monetaire is sent herewith.

11. (*a*) Import and export of gold, (*b*) import and export of silver during the calendar year 1909:

GOLD.

Classification.	Imports.	Exports.
	Francs.	*Francs.*
Gold coin	79,366,000	143,754,000
Gold bullion [1]	312,916,000	37,314,000
Gold ore (including platinum)	425,000	
Gold manufactured articles	6,437,000	2,976,000

SILVER.

Silver coin	81,117,000	103,757,000
Silver bullion [2]	66,748,000	[3] 27,112,000
Silver ore	11,000	
Silver manufactured articles	178,000	1,862,000

[1] Origin of gold ingots imported:

	Kilograms.
From England	57,348
From Italy	1,225
From United States	18,437
From other countries	15,926

[2] Origin of silver ingots imported:

	Kilograms.
From England	114,451
From Belgium	31,031
From Italy	7,697
From other countries	501,215

[3] 265,808 kilograms, of which 140,100 kilograms went to England.

French statistics do not indicate for imports and exports of coin and ore the country of origin.

GERMANY.

[Translation.]

THE NEW MONETARY LAW (OF JUNE 1, 1909).

[From Bulletin de Statistique, Paris, September, 1909.]

The Reichsanzeiger of June 1C, 1909, has published the text of the monetary law of June 1, 1909, codifying the different regulations in force by which the old monetary law of July 9, 1873, has been modified.

We give below a translation of the new law:

ARTICLE 1. The gold standard is the monetary standard of the German Empire. The monetary unit is the mark, divided into 100 pfennigs.

ART. 2. The imperial coins are the following:

(1) Gold coins: 20-mark pieces, 10-mark pieces.

(2) Silver coins: 5-mark pieces, 3-mark pieces, 2-mark pieces, 1-mark pieces, 50-pfennig pieces.

(3) Nickel coins: 25-pfennig pieces, 10-pfennig pieces, 5-pfennig pieces.

(4) Copper coins: 2-pfennig pieces, 1-pfennig pieces.

ART. 3. There shall be coined from a kilogram of fine gold: 139.5 pieces of 20 marks; 279 pieces of 10 marks.

There shall be coined from a kilogram of fine silver: 40 pieces of 5 marks; 66⅔ pieces of 3 marks; 100 pieces of 2 marks; 200 pieces of 1 mark; 400 pieces of 50 pfennigs.

The alloy shall consist, for the gold coins, of 900 parts gold and 100 parts copper; for the silver coins, of 900 parts silver and 100 parts copper.

ART. 4. The operation of the coinage will be decided by the Federal Council. They will determine exactly the lawful weights and finenesses of the coins. If that weight and fineness have not been obtained absolutely for each coin, the allowance above or below must not exceed 0.0025 for the weight, and for the fineness, 0.002 for the gold coins, and 0.010 in the weight and 0.003 thousandths in the fineness for the silver coins. But for the masses, the weights and finenesses must be in conformity with the prescriptions of article 3.

ART. 5. The gold and silver coins of a value of more than 1 mark, bear on one side the imperial eagle with the inscription "Empire Allemand" ("German Empire"), the indication of their value in marks and the date; upon the other side, the effigy of the chief of the State, or emblem of the sovereignty of the cities at large, accompanied by a suitable inscription and the initial of the mint. Other details of decoration, the diameter of the pieces and ornamentation of the edge will be decided by the Federal Council. The Federal Council may make coins of 5, 3, and 2 marks with other designs under the title of commemorative coins.

ART. 6. The other coins of silver, copper, and nickel, will bear the indication of their value, the inscription "Empire Allemand," the indication of the year, the imperial eagle, and the initial of the mint. The arrangements of detail, with regard to the apportioning of the distinctive marks upon the two faces of the coins, their decora-

tion, the ornamentation of the edge, as well as their composition, weight, and diameter, shall be regulated by the Federal Council.

ART. 7. The coins shall be struck for account of the Empire in the different monetary factories of the Confederated States, which they shall ascribe to the coining. The coinage and issue of the coins shall be under the supervision of the Empire. Individuals shall have the right to have coinage made for their own account, in the monetary factories, of the 20-mark pieces, at a time when the factories are not employed for account of the Empire. The rights pertaining to coinage of that nature shall be determined by the chancellor in agreement with the Federal Council, but shall not be permitted for more than 14 marks per kilogram of fine gold. The difference between these rates and the indemnity claimed by the factories for the coinage is to be turned into the treasury of the Empire. They must be the same for all the monetary factories. The monetary factories are not to demand indemnities for this coinage above that given by the treasury of the Empire for the coinage of 20-mark pieces.

The chancellor, also, in agreement with the Federal Council, shall determine the amounts of coin to be apportioned to each monetary factory for coining and the uniform indemnity to be charged by each factory for each kind of coin. The acquisition of metals designed for the coinage is to be made upon order of the chancellor.

ART. 8. Until further ordered, the total amount of the silver coins shall not exceed 20 marks, and the total amount of nickel and copper coins, 2½ marks per head of the population of the Empire.

ART. 9. No one shall be obliged to receive in payments more than 20 marks in silver coins, nor more than 1 mark in nickel or copper coins.

The cash offices of the Empire and of the individual States are obliged to accept silver coins in payments without limitation. The Federal Council will designate the cash offices which shall deliver gold coins in exchange for silver coins to the minimum amount of 200 marks, and in exchange for nickel and copper coins to the minimum amount of 50 marks. They will at the same time arrange the detailed provisions for these exchanges.

ART. 10. The provisions relative to the acceptance in payments and in exchange (art. 9), shall not be applicable to pieces that are perforated or reduced in weight otherwise than by normal wear, nor to counterfeit coins.

ART. 11. Gold coins of which the weight shall be not more than 0.005 less than the limit of current rate (art. 3), and which have not intentionally or fraudulently been lightened, will be considered valid for all payments.

Gold coins which have not the proper weight for circulation, and which have been accepted in payment by the cash bureaus of the Empire, by individual States, by the Provinces, or by the people in general, as well as by institutions of credit and by the banks, must not be again returned to circulation by cash bureaus or other institutions.

Gold coins which, by result of long use and long circulation, shall have been diminished in weight in such proportion that they are not of proper weight for circulation will be retired for account of the Empire. The coins thus worn shall be accepted for their value at issue by all cash bureaus of the Empire and of the confederating States.

ART. 12. Silver, copper, and nickel coins which, by result of long use and long circulation shall have lost a considerable portion of their weight, or have become difficult of indentification, shall, nevertheless, still be accepted by all cash bureaus of the Empire and of the individual States, but shall be retired for account of the Empire.

ART. 13. The verification and stamping of the gold pieces coined by virtue of this law shall be established at weights equivalent to the lawful weights and the weights for circulation of the coins, likewise that of the multiples of those weights. For the verification and examination of those weights they will employ the regulations in the ordinance for weights and measures.

ART. 14. The Federal Council is authorized—

(1) To put out of currency the coins withdrawn from circulation.

(2) To render such decisions of policy deemed necessary for maintaining the monetary circulation under the right conditions.

(3) To arrange the time for which the foreign gold and silver coins shall no longer be offered and accepted in payments, and also to prohibit the circulation of foreign coins entirely.

(4) To decide if foreign coins shall be accepted in payments by cash bureaus of the Empire or the individual States in interior transactions at the rate officially published, and if so to determine that rate.

In the decree rendered for putting them out of circulation (No. 1), the Federal Council shall dictate the measures to be taken for that effect; the delay for their retirement shall be of two years. Their putting out of currency shall be brought to the knowledge of the public by the Reichsgesetzblatt (Bulletin of Laws of the Empire), and also by the journals (newspapers) charged with the publication of official communications of subordinate administrative authorities.

ART. 15. (1) All payments which, before the adoption of the imperial monetary unit, had to be made in coins of an individual State possessing another monetary unit, or in foreign coin lawfully assimilated to those coins, under reservation of the regulations in article 9, shall be made in coins of the Empire.

(2) In that which concerns gold coins of a class for which there is no lawful relation with silver coins, the conversion is made according to the relation of the lawful fine weight of fine gold in the coins with that which the contract for payment has established as the lawful fine weight of coins of the Empire.

For the conversion of other coins: The thaler to be calculated for 3 marks; the florin of south Germany for 1⅞ marks; the mark of Lubeck, and the current mark of Hamburg, for 1½ marks.

Other coins of the same origin will be convertible at the same ratio following the value which they represent in the system to which they appertain. For conversion into fractions of a pfennig from the imperial monetary unit, they shall be calculated at the ratio of one pfennig if they represent a half pfennig or more; fractions below a half pfennig shall not be considered.

(3) If obligations for payments were contracted after the adoption of the imperial monetary unit in coins of the old monetary systems of the individual States, or in other lawful coins, the payment must be made under reservation of the regulations of article 9, in application of the prescriptions of No, 2.

(4) In all judicial or notarial documents where mention is made of amounts of silver like all judicial decisions adjusted to the payment of a sum in silver, if the relation of that sum to the monetary unit of the Empire is legally fixed, they must be expressed in values of that unit, but it is permitted, nevertheless, to express it in the coin which is mentioned in the obligation.

ART. 16. The law of December 4, 1871, regulating the striking of gold coins of the Empire, the monetary laws of July 9, 1873, June 1, 1900, and May 19, 1908, modifying the monetary régime, are repealed. All references to the regulations of the repealed laws are replaced by references to the corresponding regulations of the present law.

[Translation.]

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined in 1909: During the calendar year 1909 the imperial gold coinage, including recoinage, was as follows:

GOLD.

Denomination.	Pieces.	Value.
		Marks.
Double crowns (20 marks)	5,562,964	111,259,280
Crowns (10 marks)	1,173,408	11,734,080
Total	6,736,372	122,993,360

Weight of same:	Kilograms (fine).
From Russian gold coins	0.4289
From Imperial gold coins withdrawn from circulation and from gold bars said to have been taken from the vaults of the Reichsbank	7,422.7503
Total	7,423.1792

During the calendar year 1909 the imperial silver coinage was as follows:

SILVER.

Denomination.	Pieces.	Value.
		Marks.
5 marks	50,000	
3 marks	13,637,560	
2 marks	125,000	
1 mark	7,026,249	
50 pfennigs	9,571,547	
Total	30,410,356	53,224,702.50

The silver coinage was made principally from silver bars purchased at the average current market price during the year 1909.

No gold coinage was executed at German mints during 1909, but silver was coined for German East Africa as follows:

	Rupees.
1-rupee pieces	200,000
½-rupee pieces	50,000
¼-rupee pieces	50,000
Total	300,000

No coinage was executed at other mints for Germany during 1909.

3. The amount of gold employed in industrial arts during the years 1906 and 1907 was as follows:

	1906	1907
	Marks.	*Marks.*
German gold coins	45,685,000	49,371,000
Foreign gold coins	2,540,000	2,026,000
Fine gold	35,506,000	40,219,000
Total	83,731,000	91,616,000

4. The amount of gold coin imported from the United States during 1909 is given in the answer to 11 (*a*). No United States gold coin was melted at the mint during 1909.

5. Amount of gold and silver produced from mines of the country during 1909:

GOLD.

Derivation.	Weight.	Value.
	Kilograms.	*Marks.*
From domestic gold ores	104.14	
From foreign gold ores	559.02	
From foreign and domestic sweeps	4,401.12	
Total	5,064.28	14,147,000

SILVER.

From domestic silver ores	165,875.63	
From foreign silver ores	167,163.51	
From foreign and domestic sweeps	67,522.69	
Total	400,561.83	28,137,000

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

	Marks.
Stock of Gold: Gold coinage and recoinage up to the end of December, 1909	4,545,532,880.00
Imperial gold coin in Reichsbank	320,170,000.00
Gold bars and foreign gold coin in Reichsbank	360,886,000.00
Total	681,056,000.00
Stock of silver:	
Silver coinage and recoinage up to the end of December, 1909	989,893,569.50
Amount of silver coin in Reichsbank on December 31, 1909	230,555,000.00

7. Amount of Government and bank notes outstanding at the end of the calendar year 1909, 2,223,633,000 marks, of which 1,457,409,000 marks were not covered by legal-tender gold and silver coin or bullion.

There are in imperial treasury notes outstanding 120,000,000 marks, which are equal to the avaliable war fund in gold coin which the Empire holds in reserve, and they bear no interest.

8. There is no premium on gold.

9. Laws passed during the year 1909 affecting the coinage, currency, or banking: The fundamental law of the present monetary system of Germany is that of June 1,

1909, abrogating the law of December 4, 1871, regulating the striking of gold coins in the Empire, the monetary laws of July 9, 1873, June 1, 1900, and May 19, 1908, modifying the monetary system. All references in the arrangements of the abrogated laws are replaced by corresponding references in the arrangements of this law.

The standard is gold monometallic, and the monetary unit the mark of 100 pfennigs. Two thousand seven hundred and ninety marks are manufactured from 1 kilogram of fine gold. Hence mark, or monetary unit, contains 0.358422939 grams of pure gold.

The maximum coinage charge for individuals is 14 marks in the case of 20-mark pieces per kilogram of fine gold.

The silver coins of the new system, 0.900 fine, are 5-mark, 3-mark, 2-mark, 1-mark, and 50-pfennig pieces, 5 grams of fine silver to a mark. The coinage of silver is solely on account of the State. The total coinage of silver was limited to 20 marks per capita of the population of the Empire. Silver is legal tender to the amount of 20 marks. All these coins are exchangeable for gold at the public treasuries.

10. No report on the operations of the mint is published.

11. Import and export of gold and silver during the calendar year 1909 was as follows:

SILVER.

Country of origin and destination.	Silver, fine, alloyed, and in dust and bars.		Silver coin.		Silver sweeps, etc.[1]	Pagament (broken and scrap silver).	Gold and silver not specified.	Silver ore.	
	Imports.	Exports.	Imports.	Exports.	Imports.	Imports.	Exports.	Imports.	Exports.

GREECE.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909: None.
2. Coinage executed at foreign mints for Greece during 1909: None.
3. Estimated amount of gold and silver used in industrial arts during 1909: Unknown.
4. Import of United States gold coin and amount deposited at mint and melted during 1909: None.
5. Gold and silver produced from mines of the country during 1909: Unknown.
6. Approximate stock of gold and silver coin and bullion in the country during 1909: Unknown.
7. Amount of government and bank notes outstanding at the end of the year 1909:

	Drachmas.
Government notes	73,775,975
Notes of banks of issue	68,661,652
Total	142,437,627

8. There is no premium on gold, but the actual currency of the country (paper) fluctuates from par to above par.

Premium during 1909:	
Highest	106.50
Lowest	100.00
Average	102.98

9. No laws were passed in 1909. A convention was concluded, however, with the Latin Union calling for the replacement of the fixed paper currency by subsidiary silver and also for the substitution of aluminum coinage for the nickel and copper now in use. Laws to make this convention effective will now settle conditions in the country.

ITALY.

Answer to interrogatories, 1909.

1. In 1909, 17,374 kilograms of silver were used for coining 1-lira pieces for a total amount of 3,474,800 lire. No gold was coined.
2. No coinage was made for other countries and no coinage was executed for Italy by foreign mints.
3. The working of precious materials not being governed by provisions of law and the free régime being in existence there are no reliable elements for giving an answer.
4. No gold coins were imported from the United States during 1909.
5. Gold extracted from the mines of the Kingdom amounts to 26.52 kilograms; silver amounts to 19,815.55 kilograms.
6. Situation of the gold and silver coins held by issuing banks on December 31, 1909:

Classification.	Bank of Italy.	Bank of Naples.	Bank of Sicily.
	Lire.	*Lire.*	*Lire.*
Gold coins	950,830,800.93	196,534,205.96	56,213,968.72
Silver coins, scudi (5-lire pieces) 0.900 fine	99,336,980.00	14,328,755.00	3,730,260.00
Fractional coins having legal currency	4,651,193.50	1,706,308.00	566,397.00

Metallic Stock of the Government.

Classification.	Nominal value in lire.
Gold coins:

[1] Including on Dec. 31, 1909, 87,464,283 lire, being at the Bank of Italy for the service of provincial treasury; including, moreover, 174,928,820 lire, being at the Bank of Deposit and Loans, of which 152,566,920 lire was a special reserve for 411,250,000 lire of notes issued by the Government and 22,361,900 lire for the operation of the Bank of Naples, in pursuance of art. 8 of the law of Jan. 17, 1897, No. 9.

[2] Including on Dec. 31, 1909, 101,891,130 lire in scudi (5-lire pieces); 5,246,837 lire in 1 and 2 lire pieces; 624,325 lire in coins of the colony of Eritrea (5-lire); 14,045 lire in smaller Eritrea Colony pieces, and 174,000 lire in Maria-Theresa thalers, belonging to the treasury and existing in the Bank of Italy.

[3] Including 3,956,966 lire existing at the Bank of Italy.

[4] Including 2,443,246 lire existing at the Bank of Italy and belonging to the treasury.

7. The Government notes circulating in the country on December 31, 1909, amounted to 432,924,715 lire, with a gold reserve of 174,928,220 lire. Bank notes on the same date amounted to 1,931,663,450 lire, with a reserve of 1,491,820,102.03 lire, of which 1,203,578,975.61 were in gold; 124,319,893.30 in silver, and 163,921,232.92 lire in securities allowed by law as a guaranty for circulation.

8. In 1909 the average exchange on Paris was of about 100.4388 lire, with a maximum of 100.7250 lire and a minimum of 100.0750 lire.

9. In 1909 the following provisions affecting the metallic and paper money were issued: Royal decree, January 28, 1909, No. 95, authorizing the issue of 4,000,000 bronze coins in Italian Somaliland; royal decree, April 1, 1909, No. 209, approving the type of bronze coins for Italian Somaliland; law, June 10, 1909, No. 358, approving and rendering executive the monetary convention for Italy signed at Paris on November 4, 1908, between the states of the Latin Union; royal decree, June 13, 1909, No. 361, which provides for the withdrawal from circulation of the mixed nickel 20-centesimi coins; royal decree, September 2, 1909, No. 684, for the coinage of new silver 1 and 2 lire pieces up to the amount of 9,000,000 lire.

10. No special reports on the works of the mint are published. A report on mines for 1909 is separately transmitted.

11 (*a*) and (*b*). Imports and exports of gold and silver during the calendar year 1909:

12. The modifications introduced in the Italian monetary system after 1901 are the following: The royal decrees February 13, 1908, No. 54, and June 13, 1909, No. 361, have provided for the withdrawal of pure nickel 25-centesimi coins and mixed nickel 20-centesimi coins; and the royal decree of January 15, 1908, No. 22, authorized the issue of pure nickel 20-centesimi pieces, in pursuance of the law of July 9, 1905, in the reorganization of small circulation.

[Translation.]

DECREE.

Royal decree of June 13, 1909, ordering the retirement from circulation of the 20-centesimi nickel (alloyed) pieces:

In consideration of the law of July 22, 1894, arranging for the issue of 20-centesimi nickel (alloyed) pieces; in consideration of the law of July 9, 1905, concerning the billon coin; and in consideration of our decree of January 23, 1908, authorizing the issue of pure nickel 20-centesimi pieces and arranging the conditions for their manufacture.

The council of ministers agreed upon the proposition of our minister secretary of state for the treasury, and we have willed and decreed:

Sole article.—The 20-centesimi pieces of nickel alloyage, issued in virtue of the law of July 22, 1894, to the dates of 1894 and 1895, shall cease to have lawful currency in the Kingdom June 30, 1910. From July 1, 1910, they will no longer be received in payments at the public pay offices, for amounts due the State; and they may be refused by individuals.

From July 1, 1910, to June 30, 1914, the 20-centesimi pieces of nickel alloyage will be exchanged at the treasuries of the Kingdom against the new centesimi pieces of pure nickel, for bronze coins, or in their deficiency, for all other lawful coins.

The coins which shall not have been exchanged on June 30, 1910, will lose their value.

Ordered.

[Translation.]

From the Report of the Mining Corporation of Rome we have obtained the following statistical data for 1909:

Gold produced from mines of Italy during 1909, 2,890 tons, valued at 91,150 lire (12 grams of gold to the ton).

Silver produced from Italian mines during 1909, 44 tons, valued at 67,800 lire (1.85 per cent of silver to the ton).

Product of gold from metallurgical works during 1909, 15,136 kilograms,[1] of the value of 34,000 lire; silver, 20,534 kilograms [1] of the value of 1,785,875 lire.

Silver extracted from argentiferous lead, 93 tons (800 grams of silver to the ton), valued at 17,364 lire.

Silver extracted at metallurgical works in the environment of the city of Genoa, from argentiferous lead, during 1909, 18,000 kilograms, valued at 1,566,000 lire.

Silver extracted by cupellation, 2,534 kilograms, valued at 219,875 lire (at 86.77 lire per kilogram).

Silver extracted from argentiferous zinc, 229 tons (350 grams of silver to the ton), valued at 248,353 lire. (Average price of silver per kilogram during 1909, 86.738 lire.)

There was an increase in the value of gold produced from all sources in 1909 over 1908 of 149,965 lire and a decrease in the silver product of 100 lire.

Importation and exportation of gold and silver through the customhouses during 1909:

	Kilograms.
Crude gold, in bars, dust, and scraps:	
Imports	5,490
Exports	8,517
Crude silver, in bars, dust, and scraps:	
Imports	39,208
Exports	34,470

MOROCCO.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909: None. (Information, the source of which is not mentioned herein, has been furnished by the British director of the "Banque d'Etat de Maroc."

2 (A) and (B). Coinage executed for other governments, or coinage executed by other governments for Morocco during 1909: None.

3. Amount of fine gold and fine silver used in the industrial arts during 1909: Silver bars are imported for the manufacture of native jewelry. Possibly the Comité des Douanes might know the amount. The silver usually comes by parcel post. Local silver coin is believed to be melted down for the same purpose, but to what extent is unascertainable. (The Comité des Douanes has been consulted, but has been unable to add any further information.)

4. United States gold coin imported and deposited at mint and melted during 1909: None.

5. Amount of gold and silver produced from mines of the country during 1909: None.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: Gold coin, unknown; silver coin, 978,330.30 rials (in State Bank only); silver bullion, unknown.

It is impossible to know the amount of either "Azizi" coin or "Hassani" coin in circulation. It is believed that 8,400,000 rials of "Azizi" and 10,000,000 rials of "Hassani" were coined, but more exact information might possibly be obtained from Messrs. Braunschwig and Haessner and Joachimsohn as to the former and Moses Pariente as to the latter, these having been the contracting firms.

7. Amount of Government and bank notes outstanding at the end of the year 1909: There are no Government or bank notes.

[1] All extracted from native ores.

8. Premium on gold for 1909:

	Per cent.
Highest	.59
Lowest	.43
Average	51.4

The actual currency of the country is silver.

9. Laws passed during the year 1909 affecting the currency: None.

10. Report published on operations of mint: None. (There is a mint at Fez which has occasionally struck copper coins. The silver in circulation was coined at Paris, Birmingham, and Berlin.

11. (*a*) Imports and exports of gold coin and bullion during 1909: The Commission des Douanes informs me that no gold was imported or exported during the year through the customhouse; what amount of gold may have entered the country in postal parcels, which did not pass through the customhouse, is unknown.

11. (*b*) Imports and exports of silver during the calendar year 1909: The Commission des Douanes has furnished the following statistics, which are incomplete, as a considerable quantity of silver was imported in postal parcels and did not pass through the customshouse.

Gold imports from—	Francs.
Tangier	24,557=$4,911.46
Larache	3,251= 650.20
Rabat	934= 186.80
Casablanca	10,316= 2,063.20
Mazagan	938= 187.60
Safi	6,037= 1,207.40

THE NETHERLANDS.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909:

Denomination.	Number of pieces.	Value.
		Florins.
Gold (new coinage), dukaten	136,203	773,633.04
Silver (recoinage):		
Guldens	2,000,000	
½ guldens	3,000,000	
¼ guldens	4,000,000	
⅒ guldens	10,000,000	
Total		5,500,000.00

2. Coinage executed for other governments or by other governments for the Netherlands during the year 1909: None.

3. Estimated weight of fine gold and fine silver used in the industrial arts during 1909: Gold, 31,734 fine ounces; silver, 472,228 fine ounces (can not be specified).

4. United States gold coin imported during 1909: Can not be specified. For total amount of import and export of gold and silver vide answers to No. 11 (*a*) and (*b*).

5. Gold and silver produced from mines of the country during 1909: Figures and particulars concerning the colonial production of gold are given by the minister for the colonies direct to the American legation at The Hague. The production of silver is of no importance.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In banks.	In circulation.
	Florins.	*Florins.*
Gold coin	31,144,350	47,800,000
Gold bullion	89,880,650	
Silver coin	35,594,973	95,579,000
Total	156,619,973	143,379,000

7. Government and bank notes outstanding at the end of the year 1909:

	Florins.
Banks of issue:	
Notes outstanding	299,264,000
Gold holdings	120,975,000
Legal-tender silver holdings	35,729,000

8. There is no premium on gold.

9. Laws passed during 1909 affecting the coinage, currency, or banking: None.

10. The annual report of the mint is regularly sent to the Director of the Mint, Washington.

11. (*a*) Import and export of gold, (*b*) import and export of silver during the calendar year 1909:

GOLD.

Classification.	Imports.	Exports.
	Florins.	*Florins.*
Coin (foreign)[1]	25,985,562	492,338
Bullion[1]	1,877,387	9,805
Ore[1]	86,560	2,300

SILVER.

Coin[1]	1,048,065	5,498,827
Bullion[1]	383,854	9,805
Ore[1]	1,644	280

[1] The different countries' import and export of gold and silver can not be specified. The figures given are those supplied by the official report of statistics. Especially those of the export are of little value as regards exactness.

12. Description of the coins of the country:

The fundamental monetary law of the Netherlands at the present time is that of May 28, 1901, altered by the law of December 31, 1906.

By the law of November 26, 1847, the Netherlands adopted the silver standard and maintained it in force until 1872, the monetary unit being the silver florin of the legal weight of 10 grams, 0.945 fine.

In 1873 (May 21) a bill was passed to suspend the coinage of silver on private account. This suspension lasted until May 1, 1874. In December of this year the coinage of silver was suspended anew, first, provisionally, and afterwards, definitely, and, for the time being, Holland had really no metallic standard of value, for gold was only a commodity. The balance of the indebtedness happened then to be favorable to Holland, and the foreign exchanges fell considerably. In order to arrest this fall a bill was passed in 1875 (June 6) opening the mint to the public for the coinage of gold, making the new standard coin a 10-florin gold piece, weighing 6.048 grams of fine gold, thus establishing the ratio in coinage of gold to silver of 1 to 15.625.

Holland is usually classed as a double-standard country. It would be more correct to say that it has a gold standard conjointly with the circulation, as a legal-tender, of the rixdaler, gulden, and half gulden. The currency is in the same provisional state of the so-called limping standard as in France, but the balance of indebtedness having also been rather in favor of Holland, no inconvenience has been felt arising out of the present arrangement, and the foreign exchanges have adjusted themselves as if Holland possessed a gold standard. Up to the present only 10-florin gold pieces with a tolerance of fineness of 1½ thousandths and a weight of 2 thousandths have been stamped.

The coinage charges are for gold 5 florins per kilogram, 0.900 fine, equal to 5.50 florins per kilogram fine, or 3.33 per mille. The mint is not bound to accept less than 100 kilograms for coinage of ducats, nor less than 300 kilograms for coinage of 10-florin gold pieces.

Out of the kilogram of pure gold there are manufactured 1,653.43 florins; out of the kilogram of pure silver, 105.82 florins. The ducat is a trade coin. Ducats are coined for India trading companies only.

The law of April 27, 1884, empowered the Government to melt down into bars the silver coins and sell the bars. The object of this law was to enable the Government to maintain the relative value of the gold and silver coins. This law is now embodied in section 4 of the law of May 28, 1901.

The monetary system of the Dutch colonies is the same as that of the mother country.

Netherlands' Colony of Luxemburg.

Answers to interrogatories, 1909.

1. In order to simplify the replies to the interrogatories, a few words on the monetary system might be given:

The Grand Duchy has the power to coin money. This principle is set forth in our constitution; but till now no use has been made of this power, except in the making of various coins of 10, 5, and 2½ centimes. These are current legal tender among private persons up to 5 francs for every payment; State financial offices must accept the same to larger quantity in the payment of taxes. In execution of the laws of 1852, 1854, 1859, 1864, 1869, and 1870, 600,000 francs' worth of bronze money was circulated throughout the Grand Duchy. A law of the 29th of December, 1900, authorized the withdrawal of all bronze money, with exception, however, of the 2½ centimes, and the substitution therefor of 500,000 francs' worth of nickel pieces of 10 and 5 centimes. By the law relating to the budget of 1908 the Government authorized the coining of 75,000 francs' worth of 5 and 10 centime nickel pieces and 10,000 francs' worth of 2½-centime bronze pieces.

The Grand Duchy having no money, the issues of 1870 and of 1900 were provided by the Bank of Brussels, the other issues were furnished by the Bank of Paris. In order to obviate the absence of gold and silver money, coins of the Latin Union have become current to their nominal value. German pieces which have been introduced in commercial and financial transactions are current at the rate of 1.25 francs per mark. United States gold and silver pieces are very rarely met with and only in isolated cases in our public treasuries.

To complete this statement respecting legal money, it should be added that in 1839 the values enumerated were expressed in Netherlands' florins in all public and administrative documents. By the law of December 20, 1848, the franc was adopted as the unit, in the carrying out of obligations prior to January, 1849, stipulated in florins, the value of the franc was fixed at 47½ per florin. The Luxemburg franc does not exist; it is only represented in metallic circulation. It is a term in accounts, a unit adopted in commerce and public administration in the management of their accounts. The value of the grand ducal franc, which custom has retained, is eight-tenths of the German mark, or 80 pfennigs. Moreover, at least in case of agreement expressly stipulating that the payment be made in effective francs, the rule at the State treasury is that they are made in German silver. At any rate the liberality granted all moneys admitted in our country is the same as in the country of origin.

2. According to information furnished me in regard to the consumption of gold and silver in industrial arts, it should be added that for the last 10 years no rings, bracelets, and chains have been made in the country; the importation of these metals is almost unknown. Fine jewelry is imported from France, the ordinary jewelry from Germany.

3. The importation and exportation of gold and silver coin of the Grand Duchy (the importation and exportation of gold and silver ingots are insignificant), speaking generally for the public treasuries, remains apparently the same and may be approximately fixed as follows:

	Francs.
Gold from the Latin Union	80,000
Silver from the Latin Union	60,000
	Marks.
German gold	2,000,000
German silver	700,000

As I have already had the honor to state, the importation of gold and silver from the United States is hardly anything. There are no gold or silver mines in the Grand Duchy and consequently no refineries of these precious metals. The amount of gold and silver in store in the State treasury, the banks, and in circulation may be approximately stated at 10,000,000 marks.

4. The Grand Duchy does not issue bank notes. Nevertheless, bank notes of the Bank of France, the National Bank of Belgium, the Reichsbank of Berlin, and of the International Bank of Luxemburg are accepted and given in our public treasuries at their equal value in gold. The treasury is authorized to accept and to give bank notes in payment; private persons are not obliged to accept them from the public treasuries.

The financial establishment founded at Luxemburg under the company name of the Banque Internationale is only authorized to issue bank notes payable to bearer, the refunding of which is guaranteed by a security.

At the office of the company the bank notes must be changed at their face value. To insure the exchange of these notes, the bank is under the obligation to retain at all times in its treasury in current silver, or in gold and silver ingots, destined exclusively for this purpose, a sum equal to one-third, at least, of the sum of the notes in circulation.

The sum total of the bank notes in circulation in the Grand Duchy (this of course according to the report of the circulation in the State treasury) may be stated approximately as follows:

	Francs.
Bank of France	250,000
National Bank	200,000
Reichsbank	20,000,000
International Bank	3,000,000

In conclusion, I would add that with regard to the advance of gold compared with the actual course of exchange of the country, there has been no fluctuation for several years.

(Signed) FRANÇOIS.

The COLLECTOR GENERAL.

DUTCH GOVERNMENT ASSAYS.

FIXED STANDARDS OF GOLD AND SILVER WARE FOR HOME TRADE.

[From Monthly Consular and Trade Reports, June, 1910.]

Writing from Rotterdam, Consul General S. Listoe says that all Dutch manufactures of gold and silver bear the stamp of a Government official to the effect that the contents have been assayed and found of the purity required by the law of 1852 and its subsequent additions and amendments.

This Government supervision safeguards all purchasers of jewelry, silverware, and similar articles. Dealers detected in an endeavor to evade the provisions of this law are punished by forfeiture of their wares and a monetary fine, which increases with each offense.

The special tax on manufactures of gold and silver is, respectively, 15 florins ($6.03) and 0.75 florin ($0.30) per hectogram (2 ounces, 15 pennyweight, 10 grains, troy weight) fine. There are four standards for gold, viz, 916, 833, 750, and 583 thousandths (22, 20, 18, and 14 carats), and two silver standards, 934 and 833 thousandths. A quality variation of 0.003 in gold and 0.005 in silver is allowed. Manufactures of gold under a purity of 0.583 are not guaranteed, but simply stamped to prove that the tax has been paid. Objects containing less than 25 per cent of either gold and silver are not considered as gold or silver ware. Assay offices are maintained at The Hague, Amsterdam, Rotterdam, Schoonhoven, Leenwarden, Utrecht, Arnheim, Bois le Duc, Groningen, Alkmaar, and Dordrecht.

All articles coming under this classification must, on being imported into the Netherlands, be assayed and pay the legal tax. Goods manufactured for export are not obliged to conform to these regulations. There were exported from the Rotterdam consular district to the United States manufactures of silver valued at $71,559 during 1909.

NORWAY.

Answers to interrogatories, 1909.

1. In the year 1909 no gold was coined. Of silver there were coined:

	Pieces.
1 crown	170,000
50 ore	100,000
25 ore	400,000
10 ore	200,000
Total	870,000

Total value, 520,000 crowns.

In this coinage Norwegian coin of a total value of about 54,500 crowns was melted. Foreign coin was not used as coin material.

2. No coining has been made for foreign countries, and no part of the above coinage was made by foreign mints.

3. Concerning the weight and value of gold and silver used in industry no information can be given.

4. No coined gold was imported from the United States of America during the year.

5. Output of gold and silver from mines of the country during 1909: The gold found in the country in 1909 was presumably inconsiderable. Accurate information in regard thereto can not be given.

According to a communication from the ministry of commerce, there was during 1909 a production of raw gold (or fluvial) of 1,815.513 grams, which amounts to (at 2.48 kroner the gram) a total value of 4,502.47 kroner.

At the Konigsberg silver mines there was produced between April, 1908, and June 30, 1909, from pure silver ore, about 8,287 kilograms of fine silver, which brought upon sale 542,611.29 crowns.

Other mines have not been (so far as is known) regularly worked to any extent.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: Here the only information that can be given is that the Norway Bank's surplus stock of gold at the end of 1909 amounted to about 30,293,800 crowns. In addition to this the bank had in its favor in Nationalbanken in Copenhagen and in Swedish Riksbank a balance of about 3,153,300 crowns, and deposited with foreign commission agents about 16,859,400 crowns. At this date (December 31, 1909) there was a total of 17,117,120 crowns in gold coin, of which there had been retired as worn or broken 2,430 crowns. Of silver small coin there was in circulation 12,492,158.50 crowns, of which, on December 31, 1909, 1,479,530 crowns were in the Government treasury.

7. No bank notes are issued by the State. Of Norway Bank's notes there were on December 31, 1909, 77,494,500 crowns in circulation, of which 27,188,000 were not covered by metal.

9. In 1909 no regulations were adopted concerning the Kingdom's coin and money.

10. A copy of Storthing's proposition No. 1, in which is found a report on the operations of the State's mint in Konigsberg during the period from April 1, 1908, to June 30, 1909.

11. (*a*) According to the statistics, the importation and exportation of gold in 1909 was as follows:

Classification and country.	Imports.	Exports.
	Crowns.	*Crowns.*
Coin and medals:		
Denmark	1,000,220	.....
Sweden	575	.....
Germany	2,000	[1] 31,992
Austria	100	.....
Other countries	.....	[1] 2,142
Total	1,002,895	34,134
Unworked gold, Germany	2,164	.....

[1] Coins.

11. (*b*) Importation and exportation of silver during 1909:

Classification and country.	Imports.	Exports.
	Crowns.	*Crowns.*
Coin and medals:		
Denmark	153,048	[1] 148,000
Holland	4,980	.....
Sweden	175,310	[1] 287,000
Germany	18,120	.....
Other countries	926	.....
Total	352,384	435,000
Unworked silver:		
Denmark	480	.....
Germany	638,040	.....
Total	638,520	.....
Silver bars to Germany (2,141.7 kilograms)	133,226	.....

[1] Coins.

12. There is inclosed a copy of Storthing's proposition No. 1 for 1908, in which is included as a supplement the treasury department's report concerning the establishment of a change in the stamp for the Kingdom's gold, silver, and bronze coins, which was the basis of the royal decree of November 19, 1907.

PORTUGAL.

Answers to interrogatories, 1909.

1. Amount of silver coined during the calendar year 1909:

Denomination.	Number of pieces.	Value.
New coinage:		*Reis.*
500-reis pieces	1,513,166	
200-reis pieces	7,650,000	
Total	9,163,166	2,286,583,500

During 1909 the following were retired from circulation:

	Reis.
1,000-reis pieces to the value of	476,000
500-reis pieces to the value of	51,717,000
200-reis pieces to the value of	2,530,705,600
100-reis pieces to the value of	835,992,400
50-reis pieces to the value of	75,937,950
Total	3,494,828,950

2. Coinage executed for other governments, or coinage executed at foreign mints for Portugal during 1909: None.

3. Estimated weight of fine gold and silver used in the industrial arts during the calendar year 1909: Not known.

4. Total import of United States gold coin and amount of same deposited at mint and melted during 1909: None.

5. Amount of gold and silver produced from mines of the country during 1909: This information in regard to 1909 is not yet known.

6. Approximate stock of gold and silver in the country on December 31, 1909:

	Reis.
Gold coin (in circulation)	7,967,002,000
Silver coin (in circulation)	36,797,019,900

Stock in public treasury and in banks is not known.

7. Amount of Government notes outstanding at the end of the year 1909: Not yet known.

8. Premium on gold during 1909:

	Per cent.
Highest premium	23.85
Lowest premium	10.10
Average premium	16.97

Actual currency of the country is silver and bank notes.

9. Laws passed during 1909 affecting the coinage, currency, or banking: No laws were passed. Copy of a decree herewith.

10. There are no reports published on operations of the mint or by a department of mines.

11. Imports and exports of gold and silver during 1909:

Country of origin and destination.	Gold.		Silver.	
	Bars.	Coin.	Bars.	Coin.

DECREE.

Ministry of finances and general directory of the treasury, office of the mint and stamped notes, first division.

Having soon to commence to distribute to the cash offices of the country the new 200-reis coins, whose issue was authorized by a decree of law September 9, 1908, and by which it was decided to retire to the mint the remainedr of coins of the same value of coinage prior to the present reign, which are to be retired from circulation by virtue of the requirements of the above-cited law by June 30, they will have to fix the time during which these coins will have to be exchanged for an equivalent amount of current coins or are to be received in payments to the State as well as at local agencies of the Bank of Portugal and in the municipalities of the continent and the islands.

The minister secretary of state and financial affairs is charged with the execution of this decree.

Made at the palace June 2, 1909.

FRANCISCO DE PAULA DE AZEREDO, *King.*

RUSSIA.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909:

Denomination.	Number of pieces.	Value.
		Rubles.
Gold (coins melted but not recoined)		1,842.00
Silver:		
1-ruble pieces	50,011	50,011.00
50-kopeck pieces	50,011	25,005.50
20-kopeck pieces	18,875,011	3,775,002.20
15-kopeck pieces	21,666,677	3,250,001.55
10-kopeck pieces	25,290,011	2,529,001.10
5-kopeck pieces	3,100,010	155,000.50
Total coinage	69,031,731	9,784,021.85
Recoinage		[1] 3,948,360.00
New coinage		5,835,661.85

[1] Domestic and foreign.

2. Coinage executed for other governments, or by other mints for Russia, during 1909: There was none.

3. Estimated weight of fine gold and fine silver used in the industrial arts during the year 1909:

Material used.	Gold.	Silver.
	Kilograms.	*Kilograms.*
New bullion, old plate, jewelry, etc	4,101.80	132,956.59

(Further there were produced for testing and stamping 56,949 gold and 139,525 silver watches.)

4. United States gold coin imported during 1909: 26,998.50 rubles.

5. Gold and silver produced from mines of the country during 1909:

Description.	Kilograms (fine).	Value.
		Rubles.
Domestic production:		
Gold, from deep mines and placer mining	48,720.7896	62,927,701
Silver	[1]	[1]

[1] The figures for 1909 are not yet known.

There is no colonial production.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In public treasury and Imperial Bank of Russia.	In circulation.
	Rubles.	*Rubles.*
Gold coin and bullion	1,173,968,731	577,200,000
Silver coin [1]	40,297,696	112,000,000
Silver bullion		
Total	1,214,266,427	689,200,000

[1] The figures relate to the coin of the fineness of 0.900 only.

7. Government and bank notes outstanding at the end of the year 1909:

Issued by—	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
	Rubles.		
Banks of issue	[1] 1,300,000,000	[2]	(The silver does not serve as a covering for the notes).

[1] Comprises 126,200,000 rubles in the Imperial Bank's cash and 1,173,800 rubles in circulation, and including the gold holdings abroad to the amount of 241,000,000 rubles.
[2] In accordance with the law of Aug. 29, 1897, the issue of the first 600,000,000 of paper money is to be guaranteed with 300,000,000 gold rubles; over and above 600,000,000, each paper ruble must be guaranteed by gold, ruble per ruble.

8. Premium on gold: Circulation of gold throughout the country is not exposed to agio. On the 1st of January, 1910, the total paper money in circulation was fully guaranteed, ruble per ruble, gold, and therefore the full amount of 300,000,000 rubles could be issued.

9. No new laws were passed regarding the coinage, circulation, currency, or banking.

10. The mint publishes no reports.

11. (*a*) Import and export of gold, (*b*) import and export of silver during the calendar year 1909:

Russian Coinage Law.

(June 7 (19), 1899.)

The Russian monetary system is based on gold. The monetary unit of the Russian Empire is the ruble, containing 17.424 doli. The ruble is divided into 100 copecks.

The coinage of the Russian Empire is gold, silver, and copper.

Gold coins of the following denominations are struck: Pieces of 15 rubles (imperials), pieces of 10 rubles, of 7 rubles 50 copecks, and of 5 rubles.

Silver and copper money is coined only from metal belonging to the treasury.

Silver is coined into pieces of 1 ruble, 50, 25, 20, 15, 10, and 5 copecks.

Copper money is coined in pieces of 5, 3, 2 copecks, 1 copeck, half a copeck, and a quarter of a copeck, at the rate of 50 rubles of coin from a pood of copper.

All dues, duties, receipts, payments, and all sums of money in accounts, deeds, and all transactions in general are reckoned in rubles.

Gold coin of full weight is legal tender for a payment of any amount.

Silver and copper coins serve as subsidiary coinage for circulation and payments.

A tender of payment of money in silver coins of 1 ruble, 50 copecks, and 25 copecks is legal tender among private persons only to an amount "not exceeding 25 rubles, and in other silver coins, as well as in copper coins, to the amount of 3 rubles." Government treasuries receive the above-mentioned coins to any amount, in all payments, with the exception of customhouse duties, in which case the amount of silver and copper coin to be received as legal tender is fixed by the customhouse regulations.

In 1896 a plan for the restoration of a metallic currency in Russia on the basis of the gold standard was submitted to the council of the Empire. As a result of the deliberations of that body an imperial decree of August, 1896, was issued fixing until January, 1898, the value of the imperial at 15 paper rubles and of the half imperial at 7.5 paper rubles.

The plans submitted to the council of the Empire in 1896 by the minister of finance contemplated the authorization of the coinage of new 10-ruble pieces corresponding exactly with the actual course of the bills of credit or paper rubles. The object of the projected reform was to substitute gold monometallism for the paper money based on silver (the silver or paper ruble). The reform in no way impairs, contracts, or modifies accounts either between parties in Russia itself or between Russians and foreigners. All that was sought to be effected by the reform was to fix and make permanent the gold parity of credit ruble as it actually existed.

The imperial decree of August 8, 1896, was confirmed by the ukase of January 3 (15), 1897. The full text of the latter is as follows:

"In order to put an end to the inconveniences which circumstances and the force of things have brought about in the monetary circulation of the country we have directed that there shall be deposited with the council of the Empire a plan elaborated by a special committee, having for its object the placing of our monetary system on a new basis in harmony with the existing situation, and also the regulation of the issues of the Bank of Russia.

"This question, on account of its importance and complexity, may still require long deliberation and discussion.

"To-day, on account of the urgent necessity of resuming the stamping of gold coins, and in order to stop the uncertainty arising among the people from the discrepancy between the nominal value of gold coins and the price at which they are exchanged for bills of credit or paper rubles, we have thought it well while awaiting our final decision after examination of the council of the Empire to cause to be stamped gold coin bearing the indication of the price fixed in our imperial decree of August 8, 1896.

"Therefore, in accordance with the plan which you have submitted, and which has been examined by a special committee, we direct you—

"(1) Without modifying in any way either the quantity of fine gold, or the fineness, or the weight, or the dimensions of gold coins as fixed by law (Monetary Law, articles 8, 9, 12, 17, 19, and 21), to cause to be stamped imperials and half imperials bearing as an indication of their price, the former 15 rubles and the latter 7 rubles 50 copecks, in conformity with the description approved by us at the same time as these presents.

"(2) After the manufacture of the gold coins on the bases indicated in article 1 of the present ukase, to put the coin aforesaid in circulation."

DESCRIPTION OF THE NEW GOLD COINS.

The obverse represents the portraits in profile of the left side of His Majesty the Emperor, with the circular inscription: "Nicolas II, by the Grace of God Emperor and Autocrat of all the Russias."

The reverse of the coin represents the imperial arms, with the following inscription below: On the piece of 1 imperial, 15 rubles and the year of coinage; on the piece of one-half imperial, 7 rubles 50 copecks and the year of coinage; on the edge a depressed inscription indicating the quantity of fine metal contained in the piece; "Order of His Majesty the Emperor."

(Communicated by the minister of finances to the directing Senate, that the same may be promulgated.)

His Majesty the Emperor, on the report of the minister of finances, has deigned to promulgate the following, January 3, 1897:

"With respect to engagements concluded in gold rubles and to payments to the treasury of customs duties and other taxes payable in gold coin, the imperials and half imperials mentioned in our ukase of January 3, 1897, shall be received—the former at the rate of 10 rubles and the latter, of 5 rubles in gold."

In accordance with the ukase of January 3, 1897, there was coined a piece of the value of 15 rubles (for the amount of 178,500,000 rubles), and another piece of the value of 7 rubles 50 copecks (for the amount of 126,200,000 rubles). In the course of time, however, such coins, in view of their comparatively high cost of value and non-conformancy of their nominal value with the decimal system, were gradually exempt from circulation and melted; according to the minister's order such pieces are not coined from 1897. By the ukase of November 14, 1897, there was inaugurated a new coin of 5 rubles' value, corresponding by its ingrediency of pure gold to one-third of an imperial, and by the ukase of December 11, 1898, a coin of 10 rubles' value, which both coins are now in circulation.

In addition to the ukase of January 3, 1897, the following laws are necessary for the full comprehension of the existing monetary system. (It may be useful to explain that whereas the imperials issued before Jan. 3, 1897, were at the nominal price of 10 rubles each, 1 ruble containing 26.134 doli fine gold; the new imperials were issued at the nominal price of 15 rubles each, 1 ruble containing 17.424 doli fine gold.)

THE UKASE OF AUGUST 29, 1897.

In our ukase of January 3, 1897, we caused gold coin to be stamped and issued bearing the inscription of the following prices: Fifteen rubles on the imperials, and 7 rubles 50 copecks on the half imperials. This measure brought the nominal price of gold coin in correspondence with the price fixed for the redemption of Government bank notes; at the same time it confirmed the valuation of Government bank notes, and put their circulation on the same basis as that of gold coin.

In consequence, the former laws concerning the covering in gold of Government bank notes issued are now not in accordance with our above-mentioned ukase.

Therefore, and in order to establish a firm basis for the issue of Government bank notes, we order the following:

The Government bank notes are issued by the Bank of State, the amount of issue being strictly limited by the real necessity arising from the circulation of money, and are covered in gold. The amount of gold to cover the notes must not be less than half of the total amount of notes issued, if this last amount does not exceed 600,000,000 rubles. Bank notes in circulation over and beyond 600,000,000 rubles must be covered in gold at least at the ratio of ruble for ruble, in such a way that every 15 rubles issued in bank notes should be covered in gold at least to the amount of 1 imperial.

THE UKASE OF NOVEMBER 14, 1897.

Having fixed by our ukase of January 3, 1897, the price of the imperial at 15 rubles and that of the half imperial at 7 rubles 50 copecks, we thereby put the circulation of Government bank notes and of gold coin on an identical basis, and established the price of a ruble as equal to one-fifteenth part of the imperial, such price being equivalent to the ratio of 17,424 doli fine gold in 1 ruble. After that, namely, in our ukase of the 29th of August of the same year, the foundation was laid of the issue of Government bank notes covered in gold, and the ratio of this gold covering was fixed at 15 rubles to 1 imperial.

At present, having found it useful to cause the inscription on the Government bank notes to agree with the rules of the above-mentioned ukases, and in accordance with your report, which has been looked into by a special committee, we direct you to have the following changed inscriptions put on the bank notes which will be prepared henceforth.

In lieu and place of the existing inscriptions, the value of the bank note is to be depicted and the following inscription put: The Bank of State redeems the bank notes in gold coin without any limitation of the amount (1 ruble equals one-fifteenth of an imperial and contains 17.424 doli fine gold). The heading and the second and third clauses of the extract from the manifesto are to be replaced by the following inscriptions: (1) The redemption of Government bank notes in gold coin is guaranteed by all the country's possessions; (2) The Government bank notes circulate all over the Empire on the same basis as gold coin. The third clause is to remain as it was.

THE UKASE OF NOVEMBER 14, 1897.

To our Minister of Finance:

In order to facilitate the settling of accounts in gold coin, we have deemed it good to approve your report, which was looked into by a special committee on the stamping and the issue, in addition to the imperials and the half imperials, of a 5-ruble gold coin, possessing the value of one-third of an imperial, in conformity with the description approved by us at the same time as these presents.

The weight of fine gold in the 5-ruble gold coin is fixed at 87.12 doli. This coin contains 900 parts of fine gold and 100 parts of copper. A standard pound of this fineness must contain 95 gold coins by 5 rubles plus 1 ruble and $3\frac{37}{71}$ copecks. The diameter of the 5-ruble coin is 72 points (1 point = 0.01 of a Russian inch = 0.254 millimeter). The weight of this coin is 1 zolotnik and 0.8 of a doli; in the fabrication of this coin the following deviations are permitted: (1) In the fineness 0.001 part higher or lower than the above-mentioned fineness; and (2) in the weight 0.3 of a doli, lower or higher than the above-mentioned weight. The limit of weight for the acceptance of the 5-ruble gold coin at its nominal value by the Crown is not less than 1 zolotnik; a 5-ruble coin weighing less than the above-mentioned limit is accepted only on the difference in price fixed by the law being paid.

Description of the outward appearance of the 5-ruble gold coin equal to one-third of an imperial:

The obverse represents the portrait in profile of the left side of His Majesty the Emperor, with the circular inscription: "Nicolas II, by the Grace of God Emperor and Autocrat of all the Russias."

The reverse of the coin represents the imperial arms, with the circular inscription, 5 rubles, and the year of the coinage. The coin has a patterned edge.

THE UKASE OF DECEMBER 11, 1898.

In order to facilitate the settling of accounts in gold coin we have deemed it useful to cause gold coin having the price of 10 rubles to be stamped and issued in addition to the imperials, half imperials, and the 5 rubles' coin.

Therefore, and in accordance with the report of the minister of finance, which has been looked into by the council of the Empire, we ordain:

I. That the striking of gold coin of the value of 10 rubles be made on the following basis: The weight of fine gold in the 10-ruble coin is fixed at 1 zolotnik 78.24 doli. This coin contains 900 parts of fine gold and 100 parts of copper. A standard pound of this fineness must contain 47 coins by 10 rubles plus 6 rubles and $3\frac{37}{71}$ copecks. The diameter of the 10-ruble coin is 89 points. The weight of this coin is 2 zolotniks plus 1.6 doli. In the fabrication of this coin the following deviations are permitted: (1) In the fineness, 0.001 part higher or lower than the above-mentioned fineness, and (2) in the weight, 0.4 of a doli lower or higher than the above-mentioned weight. The limit of weight for the acceptance of the 10-ruble gold coin at its nominal value by the

"To-day, on account of the urgent necessity of resuming the stamping of gold coins, and in order to stop the uncertainty arising among the people from the discrepancy between the nominal value of gold coins and the price at which they are exchanged for bills of credit or paper rubles, we have thought it well while awaiting our final decision after examination of the council of the Empire to cause to be stamped gold coin bearing the indication of the price fixed in our imperial decree of August 8, 1896.

"Therefore, in accordance with the plan which you have submitted, and which has been examined by a special committee, we direct you—

"(1) Without modifying in any way either the quantity of fine gold, or the fineness, or the weight, or the dimensions of gold coins as fixed by law (Monetary Law, articles 8, 9, 12, 17, 19, and 21), to cause to be stamped imperials and half imperials bearing as an indication of their price, the former 15 rubles and the latter 7 rubles 50 copecks, in conformity with the description approved by us at the same time as these presents.

"(2) After the manufacture of the gold coins on the bases indicated in article 1 of the present ukase, to put the coin aforesaid in circulation."

DESCRIPTION OF THE NEW GOLD COINS.

The obverse represents the portraits in profile of the left side of His Majesty the Emperor, with the circular inscription: "Nicolas II, by the Grace of God Emperor and Autocrat of all the Russias."

The reverse of the coin represents the imperial arms, with the following inscription below: On the piece of 1 imperial, 15 rubles and the year of coinage; on the piece of one-half imperial, 7 rubles 50 copecks and the year of coinage; on the edge a depressed inscription indicating the quantity of fine metal contained in the piece; "Order of His Majesty the Emperor."

(Communicated by the minister of finances to the directing Senate, that the same may be promulgated.)

His Majesty the Emperor, on the report of the minister of finances, has deigned to promulgate the following, January 3, 1897:

"With respect to engagements concluded in gold rubles and to payments to the treasury of customs duties and other taxes payable in gold coin, the imperials and half imperials mentioned in our ukase of January 3, 1897, shall be received—the former at the rate of 10 rubles and the latter, of 5 rubles in gold."

In accordance with the ukase of January 3, 1897, there was coined a piece of the value of 15 rubles (for the amount of 178,500,000 rubles), and another piece of the value of 7 rubles 50 copecks (for the amount of 126,200,000 rubles). In the course of time, however, such coins, in view of their comparatively high cost of value and non-conformancy of their nominal value with the decimal system, were gradually exempt from circulation and melted; according to the minister's order such pieces are not coined from 1897. By the ukase of November 14, 1897, there was inaugurated a new coin of 5 rubles' value, corresponding by its ingrediency of pure gold to one-third of an imperial, and by the ukase of December 11, 1898, a coin of 10 rubles' value, which both coins are now in circulation.

In addition to the ukase of January 3, 1897, the following laws are necessary for the full comprehension of the existing monetary system. (It may be useful to explain that whereas the imperials issued before Jan. 3, 1897, were at the nominal price of 10 rubles each, 1 ruble containing 26.134 doli fine gold; the new imperials were issued at the nominal price of 15 rubles each, 1 ruble containing 17.424 doli fine gold.)

THE UKASE OF AUGUST 29, 1897.

In our ukase of January 3, 1897, we caused gold coin to be stamped and issued bearing the inscription of the following prices: Fifteen rubles on the imperials, and 7 rubles 50 copecks on the half imperials. This measure brought the nominal price of gold coin in correspondence with the price fixed for the redemption of Government bank notes; at the same time it confirmed the valuation of Government bank notes, and put their circulation on the same basis as that of gold coin.

In consequence, the former laws concerning the covering in gold of Government bank notes issued are now not in accordance with our above-mentioned ukase.

Therefore, and in order to establish a firm basis for the issue of Government bank notes, we order the following:

The Government bank notes are issued by the Bank of State, the amount of issue being strictly limited by the real necessity arising from the circulation of money, and are covered in gold. The amount of gold to cover the notes must not be less than half of the total amount of notes issued, if this last amount does not exceed 600,000,000 rubles. Bank notes in circulation over and beyond 600,000,000 rubles must be covered in gold at least at the ratio of ruble for ruble, in such a way that every 15 rubles issued in bank notes should be covered in gold at least to the amount of 1 imperial.

THE UKASE OF NOVEMBER 14, 1897.

Having fixed by our ukase of January 3, 1897, the price of the imperial at 15 rubles and that of the half imperial at 7 rubles 50 copecks, we thereby put the circulation of Government bank notes and of gold coin on an identical basis, and established the price of a ruble as equal to one-fifteenth part of the imperial, such price being equivalent to the ratio of 17,424 doli fine gold in 1 ruble. After that, namely, in our ukase of the 29th of August of the same year, the foundation was laid of the issue of Government bank notes covered in gold, and the ratio of this gold covering was fixed at 15 rubles to 1 imperial.

At present, having found it useful to cause the inscription on the Government bank notes to agree with the rules of the above-mentioned ukases, and in accordance with your report, which has been looked into by a special committee, we direct you to have the following changed inscriptions put on the bank notes which will be prepared henceforth.

In lieu and place of the existing inscriptions, the value of the bank note is to be depicted and the following inscription put: The Bank of State redeems the bank notes in gold coin without any limitation of the amount (1 ruble equals one-fifteenth of an imperial and contains 17.424 doli fine gold). The heading and the second and third clauses of the extract from the manifesto are to be replaced by the following inscriptions: (1) The redemption of Government bank notes in gold coin is guaranteed by all the country's possessions; (2) The Government bank notes circulate all over the Empire on the same basis as gold coin. The third clause is to remain as it was.

THE UKASE OF NOVEMBER 14, 1897.

To our Minister of Finance:

In order to facilitate the settling of accounts in gold coin, we have deemed it good to approve your report, which was looked into by a special committee on the stamping and the issue, in addition to the imperials and the half imperials, of a 5-ruble gold coin, possessing the value of one-third of an imperial, in conformity with the description approved by us at the same time as these presents.

The weight of fine gold in the 5-ruble gold coin is fixed at 87.12 doli. This coin contains 900 parts of fine gold and 100 parts of copper. A standard pound of this fineness must contain 95 gold coins by 5 rubles plus 1 ruble and $3\frac{3}{171}$ copecks. The diameter of the 5-ruble coin is 72 points (1 point = 0.01 of a Russian inch = 0.254 millimeter). The weight of this coin is 1 zolotnik and 0.8 of a doli; in the fabrication of this coin the following deviations are permitted: (1) In the fineness 0.001 part higher or lower than the above-mentioned fineness; and (2) in the weight 0.3 of a doli, lower or higher than the above-mentioned weight. The limit of weight for the acceptance of the 5-ruble gold coin at its nominal value by the Crown is not less than 1 zolotnik; a 5-ruble coin weighing less than the above-mentioned limit is accepted only on the difference in price fixed by the law being paid.

Description of the outward appearance of the 5-ruble gold coin equal to one-third of an imperial:

The obverse represents the portrait in profile of the left side of His Majesty the Emperor, with the circular inscription: "Nicolas II, by the Grace of God Emperor and Autocrat of all the Russias."

The reverse of the coin represents the imperial arms, with the circular inscription, 5 rubles, and the year of the coinage. The coin has a patterned edge.

THE UKASE OF DECEMBER 11, 1898.

In order to facilitate the settling of accounts in gold coin we have deemed it useful to cause gold coin having the price of 10 rubles to be stamped and issued in addition to the imperials, half imperials, and the 5 rubles' coin.

Therefore, and in accordance with the report of the minister of finance, which has been looked into by the council of the Empire, we ordain:

I. That the striking of gold coin of the value of 10 rubles be made on the following basis: The weight of fine gold in the 10-ruble coin is fixed at 1 zolotnik 78.24 doli. This coin contains 900 parts of fine gold and 100 parts of copper. A standard pound of this fineness must contain 47 coins by 10 rubles plus 6 rubles and $3\frac{17}{171}$ copecks. The diameter of the 10-ruble coin is 89 points. The weight of this coin is 2 zolotniks plus 1.6 doli. In the fabrication of this coin the following deviations are permitted: (1) In the fineness, 0.001 part higher or lower than the above-mentioned fineness, and (2) in the weight, 0.4 of a doli lower or higher than the above-mentioned weight. The limit of weight for the acceptance of the 10-ruble gold coin at its nominal value by the

Crown is not less than 2 zolotniks and 0.6 of a doli; 10-ruble coin weighing less than the above-mentioned limit is accepted only on the difference in price fixed by the law being paid.

II. That after the 10-ruble coin has been manufactured in conformity with Schedule I, it be put in circulation.

The directing senate has to give the orders for putting these presents into execution.

Description of the outward appearance of the 10-ruble gold coin, approved by His Majesty the Emperor on December 18, 1898:

The obverse represents the portrait, in profile, of the left side of His Majesty the Emperor, with the circular inscription: "Nicolas II, by the Grace of God Emperor and Autocrat of all the Russias."

The reverse of the coin represents the imperial arms, with the circular inscription, 10 rubles, and the year of coinage.

On the edge a depressed inscription indicating the quantity of fine metal contained in the coin.

SERVIA.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909: None.
2. Coinage executed for other Governments, or by other mints for Servia during 1909: There is no mint in Servia. No new coinage for Servia was made during 1909.
3. Estimated weight of fine gold and fine silver used in the industrial arts during 1909: Impossible to obtain the required data, but the quantity is very insignificant.
4. United States gold coin imported or melted during 1909: None.
5. Gold and silver produced from mines of the country during 1909:

Description.	Kilograms (fine).	Value.
Domestic production:		
Gold from placer mining	160	$97,127.00
Gold contained in copper ore exported to United States		53,218.96
Silver from lead ores	50	900.00
Silver contained in copper ore exported to United States		4,937.83

6. Approximate stock of gold and silver coin and bullion on December 31, 1909:

Character of stock.	In public treasuries.	In banks.
Gold coin	$566,916	[1] $4,553,846
Silver coin	86,338	[1] 1,415,696
Total	653,254	[1] 5,969,542

[1] "The custom of depositing cash with banks is, to a small extent, practiced in this country. This especially applies to the peasant class, who in most instances keep cash concealed in a house. Therefore, the amount given of moneys in banks does not accurately represent the stock of gold and silver in the country. Moreover, it is estimated that the actual stock is four or five times larger than the amount given in reply to the interrogatory."

7. Amount of Government and bank notes outstanding at the end of the year 1909:

Issued by—	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
Banks of issue	[1] $692,888 [2] 9,276,720	$4,529,869	$1,327,578
Total	9,969,608	4,529,869	1,327,578

[1] In gold. [2] In silver.

8. Premium on gold during 1909:

	Per cent.
Highest	5¼
Lowest	(par).
Average	1 7/10

Actual currency of the country: Silver bank notes.

9. Laws passed during 1909 affecting the coinage, currency, or banking: (No reply.)

10. Report on operations of mint, or of the department of mines: There is no mint in Servia. The last report of the department of mines is for the year 1906; it is in the Servian language; one copy has been sent to the Department of State.

11. (*a*) Import and export of gold, (*b*) import and export of silver during the calendar year 1909:

GOLD.

Classification and country.	Imports.	Exports.
Gold in copper ore:		
United States of America		$53,218.96
France		87,346.00
Total		140,564.96

SILVER.

Silver in copper ore:		
United States of America		$4,937.83
France		3,673.00
Total		8,610.83

SPAIN.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined or recoined during the calendar year 1909: No new coinage and no recoinage.

2. No coinage executed for other Governments, and no coinage executed at foreign mints for Spain during 1909.

3. No estimate as to weight of fine gold and silver used in the industrial arts during the year 1909.

4. United States gold coin imported, or deposited at mint and melted during 1909: None.

5. Gold and silver produced from mines of the country during 1909:

Classification.	Kilograms (fine).	Value.
		Pesetas.
Domestic production:		
Gold from deep mines	5,016	15,048
Silver from dry or siliceous ores	3,656	344,856
Silver from lead ores	139,747	12,499,120

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In public treasuries.	In banks.	In circulation.
	Pesetas.	*Pesetas.*	*Pesetas.*
Gold coin	[1] 79,643,385.61	[2] 455,039,257.80	
Silver coin	769,865,438.15		130,000,000
Total	849,508,823.76		

[1] This amount is deposited in the Bank of Spain to the credit of the public treasury.
[2] In the Bank of Spain.

It has been impossible to obtain statistics as to bullion, the Spanish statistics giving only the total value in pesetas of the amounts of gold and silver.

7. Government and bank notes outstanding at the end of the year 1909:

Issued by—	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
	Pesetas.	*Pesetas.*	*Pesetas.*
Bank of Spain	1,670,998,175	402,926,036.49	769,865,438.15

8. Premium on gold during 1909:

	Per cent.
Highest	11.85
Lowest	6.80
Average	10.094

Actual currency of the country, gold, at premium of 7 per cent.

9. Laws passed during 1909 affecting the coinage, currency, or banking: None.

10. Report published on operations of mint: No report was published in 1909.

11. (*a*) Import and export of gold, (*b*) import and export of silver during the calendar year 1909:

SWITZERLAND.

[Translation.]

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909:

Denomination.	Number of pieces.	Value.
Gold (new coinage):		*Francs.*
20-franc pieces for account of the Confederation	200,000	4,000,000
20-franc pieces for account of the Swiss National Bank	200,000	4,000,000
Total	400,000	8,000,000
Silver (new coinage):		
2-franc pieces	300,000	600,000
1-franc pieces	900,000	900,000
50-centime pieces	1,000,000	500,000
Total	2,200,000	2,000,000
Silver (recoinage), from domestic coins[1]	120,000	600,000

[1] Old écus of 5 francs with the design of Helvetia sitting.

2. Coinage executed for other Governments, or by other mints for your Government during 1909: Not any.

3. Estimated weight of fine gold and fine silver used in the industrial arts during the calendar year 1909:

	Kilograms (fine).
Gold[1]	10,700
Silver[1]	80,500

NOTE.—The intrinsic value of the precious metals employed in the industrial arts during 1909 may be approximately estimated at 37,000,000 francs for gold and 7,000,000 francs for silver.

4. United States gold coin imported and deposited at mint and melted during 1909: To our knowledge, no United States gold coin has been sent direct to Switzerland. The federal mint does not melt foreign coins. The American gold carried by tourists has not been estimated for the reason that travelers are not subjected to any customs examination regarding the amount of coin they carry.

5. Gold and silver produced from mines of the country during 1909: As Switzerland possesses neither gold nor silver mines they can not reply to this question.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

[1] It is impossible to specify, even approximately, the amount referring to each article stamped.

Character of stock.	In public treasuries.	In banks.[1]	In circulation.
		Francs.	*Francs.*
Gold coin	(2)	114,338,802.08	[3] 180,000,000

[Translation.]

Consumption of the Precious Metals in Switzerland during 1909.

[From L'Économiste Européen, Paris, Jan. 7, 1910.]

According to a communication from the Federal office for receiving gold and silver, the Swiss stamping offices stamped 628,728 gold watch cases in 1909 against 565,679 in 1908; and 2,301,409 silver watch cases, against 2,123,875 in 1908.

There have also been stamped during the current year 122,062 articles of jewelry and gold and silver ware against 88,470 in 1908. The number of gold and silver bars assayed amounted to 19,134 against 16,511 in 1908.

More complete statistics have not been published up to the present. It may be of interest to recall that the weight of fine gold employed in Swiss industry in 1907 was estimated to have been about 11,000 kilograms. That valuation was made by the Federal bureau of gold and silver matters from the articles stamped and registered at the different bureaus of control and on the basis of observations made in the industry and commerce of watchmakers and jewelers.

It is not possible to state how much of that amount proceeded from the remelting of coins or other works, but it is probable that new gold coins are used in preference for making gold articles, at least. From an estimate furnished to the Federal bureau, the gold coins melted for industrial purposes amounted to about 5,000 kilograms.

The amount of silver employed in Swiss industry in 1907 was about 69,000 kilograms.

TURKEY.

[Translation.]

Turkey and the Latin Monetary Union.

[From L'Économiste Européen, Paris, Oct. 22, 1909.]

Through recent news from Constantinople we learn that the committee appointed to examine the question of the entry of Turkey into the Latin Monetary Union have decided in the affirmative. In their decision the committee observed that by entering the union Turkey would derive not only a moral but a material benefit, which may be valued at 30,000,000 or 40,000,000 francs a year.

The Government will shortly commence negotiations upon the subject with the interested powers. The Turkish pound will have the value of 20 francs; the medjidie of 5 francs; the present quarter-medjidie will henceforth have the value of 1 franc, and the piastre of 20 centimes.

It may be of interest to give some information regarding the present monetary system of Turkey. The monetary unit is the Turkish piastre of 40 paras. The

piastre has the par value of 0.2278 francs in French money. The following table gives a list of the legal coins of Turkey, with their diameters, weights, and finenesses:

Denominations.	Diameter of the pieces.	Legal fineness.	Legal weight.
Gold:	*Millimeters.*	*Thousandths.*	*Grams.*
500 piastres	35.75	916.66	36.082
200 piastres	27.5		18.041
100 piastres	22.5		7.216
50 piastres	18		3.608
25 piastres	14.75		1.804
Silver:			
20 piastres	37	830	24.055
10 piastres	27.25		12.027
5 piastres	24		6.013
2 piastres	18.75		2.405
1 piastre	15		1.202
½ piastre	13.75		1.601
Copper:			
10 paras	18.75	100	2.0046
5 paras	15		1.0023

The devices on the gold coins are as follows: Upon one face is the "Imperial Toughra" ("a Turkish standard composed of a short pike or staff, on the tip of which a horse's tail is fastened with a gold button"), surmounted by seven stars with two branches of laurel around the lower part; at the right of the "Imperial Toughra" is the inscription "El Ghazi" ("The victorious"), and between the "Toughra" and laurel branches, the year of the reign. The 500 and 250 piastres bear, besides, the indication of their value under the laurel wreath. On the reverse is a wreath of laurel surrounding the inscription: "Azze Nassrouhoû, zouribe fi Constantinie" ("after the conquest of Constantinople"), with the date of the Arabian year underneath. The edges of all these coins are grooved.

The 20-piastre silver piece bears on both faces a notched circle, 12 crescents and stars with 12 engraved flowers. On the obverse is the "Imperial Toughra," a branch of rosebush with blossom, and the year of the reign. In the center of the reverse is the inscription: "Azze Nassrouhoû, zouribe fi Constantinie," and the date.

The 10 and 5 piastre silver pieces have the same design as the 20 piastres, with the only difference that in place of the rosebush branch the inscription "El Ghazi" is substituted.

The 12 crescents which characterize the preceding coins are not reproduced upon the 1 and 2 piastres.

The half piastre bears on its face the "Imperial Toughra" surrounded by a wreath of laurel. At the side of the "Toughra" is the inscription "El Ghazi," with the year of the reign underneath. On the reverse in the inscription: "Azze Nassrouhoû, zouribe fi Constantinie," the Arabian year and the figures 20 (paras).

There are also in circulation other pieces of money not included in the reform of 1844, namely: The Altilik, which comprises 5, 2½, and 1¼ piastre pieces; the Bechlik, which comprises 2½ and ¼ piastre pieces; the Metallique, which comprises ½, ¼, and ⅛ piastre pieces. The diameters, weights, and finenesses of these coins are very variable.

The quantity of gold employed in Turkey in industries can not be valued. With regard to silver, the amount consumed in 1906, according to the report of our administration of coins and medals (France), appears to be 1,175 kilograms and, from the same report, the production of precious metals in Turkey, in 1904, 1905, and 1906, was as follows:

Years.	Gold.		Silver.	
	Weight.	Value.	Weight.	Value.
	Kilograms.	*Francs.*	*Kilograms.*	*Francs.*
1904	64	220,000	23,406	2,225,000
1905	53	183,000	16,697	19,990,000
1906	50	147,543	17,176	1,900,136

The monetary stock of the Ottoman Empire may be valued at 28,000,000 or 29,000,000 Turkish pounds for gold and 6,000,000 Turkish pounds for silver.

ASIA.

ARABIA.

Port of Aden.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined during the calendar year 1909: Nil.

3. Estimated weight of fine gold and fine silver used in the industrial arts during the year 1909: Nil.

4. United States gold coin imported or melted during 1909: Nil.

5. Gold and silver produced from mines of the country during 1909: Nil.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In Government treasury.	In banks.	In circulation.
Gold coin[1]	£6,000	£8,000	£11,000
Silver coin[1]	22,000	45,000	40,000
Total	28,000	53,000	51,000

[1] Figures roughly estimated; no statistics.

There is no gold bullion; silver bullion, if any, the amount unknown.

7. Amount of Government and bank notes outstanding at the end of the year 1909: Total notes held, probably 100,000 rupees=£6,666, Indian government notes held mostly by the treasury. No other notes in circulation. (Government treasuries with respect to Aden are located in Bombay; there are no statistics here except those of the trade of the port; no mints, statistical bureaus, nor boards of trade. The information gathered herewith is from the manager of the National Bank of India. It leaves much to be desired, but no better could be secured.)

8. There is no premium on gold. Actual currency of the country: £1=15 rupees (Indian silver currency).

9. No laws were passed in 1909 affecting the currency or banking.

10. Report on mint work: No mint.

11. (*a*) Import and export of gold, (*b*) import and export of silver during the year (Mar. 31, 1908, to Mar. 31, 1909):

NOTE.—The above figures are taken from the trade and navigation returns of the Aden Port Trust for the year ending Mar. 31, 1909. They are not to be implicitly relied upon.

12. Description of the coins of the country: The Maria Theresa dollar, which is used almost exclusively at Hodeidah; the mahmudi=to 20 gass=to 0.214 mark, is in use in Oman and the Nejd, also in eastern Arabia. The cabir (80 cabir=1 makkathaler=3.55 marks); the krusch=40 diwani=1.675 marks, and the diwani are unknown in the lower Yemen and evidently are coins found farther north in Arabia. The whole of southern Yemen and the country around Aden uses Indian and English currency. One sovereign (£1)=15 rupees; Rs.1=16 annas; Rs.1=12 pies, or 4 pice.

The pie is not a coin, but only a term used as the standard of lowest value, the equivalent of one-sixth of a penny in United States currency.

All the information contained in this circular pertains only to the British possessions in Arabia.

CHINA.

AMOY.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909: None.

* * * * * * *

6. Approximate stock of gold and silver coin and bullion in the district on December 31, 1909: Silver coin in Tai Wan Bank, $493,200 (gold); silver coin in circulation, $82,200 (gold).

7. Amount of Government and bank notes outstanding at the end of the year 1909:

Issued by—	Notes outstanding.	Legal-tender silver holdings.
Tai Wan Bank	$69,870.00	$69,870
Hongkong and Shanghai Bank	18,676.80	

The Taching Bank of Amoy reports that they put no bank notes into circulation until January 20, 1910, and that the amount of their bank notes outstanding (bank notes put into circulation) up to date, May 12, 1910, is $200,000, for which over $150,000 is held for their redemption.

These figures are Mexican, being equivalent to $82,000 gold at the present Government rate ($0.411).

8. Premium on gold during 1909:

Tai Wan Bank:	Per $100.
Highest	19 4/100
Lowest	12 1/100
Average	18 4/100

The actual currency of the country is as follows:

Tai Wan Bank, dragon dollar; Hongkong and Shanghai Bank, Mexican dollar. "Chopped yen and chopped British dollars are the currency at this port. They are circulated at a daily price in the market here. Last year the highest price was par and the lowest 12 per cent discount. The chopped Mexican dollar or, as it is called here 'Spanish dollar,' is the currency of this bank (Hongkong Bank) and the Customs' Bank; it is by weight at the rate of 72 taels for $100. It can not be circulated in the market except for payment of customs duties. The Hongkong and Chinese small coins are circulated at a daily price in the market. Last year the highest price was about 5 per cent discount and the lowest 8½ per cent discount. There are no gold and silver bullion in the market. The gold coin is circulated in the market at a daily price. Our notes issued amount to $45,491."

9. Laws passed during the year 1909 affecting the coinage, currency, or banking: None.

10. Report published on operations of mint: None.

11. (*a*) Import and export of gold during the calendar year 1909:

Exports from Hongkong:	
Gold coin	$34,477
Gold bullion	71,254

11. (*b*) Import and export of silver during the calendar year 1909:

SILVER.

Germans Introduce New Coins at Tsingtau.

[From Monthly Consular and Trade Reports, March, 1910.]

Vice Consul Edgar Kopp, of Tsingtau, transmits the following report on new currency at that port in China:

The German Government at Tsingtau, Kiaochow, has recently put into circulation nickel coins of 5 and 10 cent denominations, minted in Germany. The obverse of the coins bear the German eagle and an anchor. "Deutsch Kiautschau Gebiet" (German Kiaochow territory) is circularly inscribed around the eagle. The reverse bears the same as the obverse, but in Chinese characters.

The money has been issued to remedy the stringency of 5 and 10 cent coins of Chinese currency. Altogether $7,122 (United States currency) worth of coins have been put into circulation and the supply is insufficient.

To induce the Chinese to accept these coins the Government treasury recently published a proclamation offering to cash any amount of these nickel coins against Mexican dollars at par value, respectively, 20 and 10 to a dollar, and to accept them for legal tender. It was also announced that in future the use of Chinese and Hongkong coins will be restricted and later entirely barred from local circulation.

Hongkong and Chinese coins suffer a discount of 20 per cent, and no more than $1 ($0.407 United States currency) is accepted in small coins of these countries.

Hongkong.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined during the calendar year 1909: There is no mint in Hongkong. "With regard to coinage executed at foreign mints, I have to report that various banks here have coined for them, at the Bombay mint, British silver dollars. The information furnished by the banks here in regard to the number coined for Hongkong during the year 1909 varies from 6,000,000 to 8,374,685."

3. Estimated weight of fine gold and fine silver used in the industrial arts during the year 1909: No information.

4. United States gold coin imported during the year 1909: No information.
5. Gold and silver produced from mines of the country during 1909: No mines; no production.
6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

	Hongkong dollars.
Gold coin in banks (no gold bullion)	
Silver coin in banks	[1] 1,009,320
Silver bullion in banks	[2] 24,651,045
	[2] 600,591

There is no public treasury. No information regarding the amount of coin in circulation.
7. Bank notes outstanding at the end of the year 1909:

In banks of issue:	
Mexican dollars	[3] 16,687,651
Legal-tender silver holdings, Mexican dollars	[3] 14,600,000

No gold in colony.
8. Premium on gold: There is no gold in the colony. The actual currency of the colony is silver.
9. Laws passed during the year 1909 affecting the coiniage, currency, or banking: None.
10. Report published on operations of mint: No mint at Hongkong.
11. Import and export of gold and silver during the year 1909: No information.

STUART J. MILLER,
Vice Consul General in Charge.

MUKDEN.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909:

SILVER.

Denomination.	Number of pieces.	Value.
New coinage, 20-cent pieces	[1] 52,083,335	$10,416,667
Recoinage, 20-cent pieces	[2] 4,912,500	982,500
Total	56,995,835	11,399,167
Copper, 10 and 20 cash	23,609,267	.....

[1] 6,000,000 taels into 52,083,335 20-cent pieces.
[2] 870,000 Pei Yang dollars 90 per cent pure recoined into 20-cent pieces 80 per cent pure.

2. No coinage was executed for other Governments, or by other Governments for this Province during 1909.
3. Weight of fine gold and fine silver used in industrial arts during 1909: Unascertained.
4. United States gold coin imported or deposited at mint and melted during 1909: None so far as known.
5. Output of gold and silver from mines of the country during 1909: Not reported.
6. Approximate stock of gold and silver in the country on December 31, 1909:

Character of stock.	In public treasuries.	In banks.	In circulation.
Gold yen			1,147.00
Gold rubles			1,399.10
Silver coin	$245,000	$4,109,152.85	$4,099,600.85
Silver bullion	471,200	2,149,725.24	2,149,725.24
Total	716,200	6,258,878.09	6,249,326.09

[1] Equals 403,628 gold dollars.
[2] Figures based on confidential information.
[3] Figures furnished by colonial treasurer.

7. Amount of bank notes outstanding at the end of the year 1909:

Banks of issue:	
Notes outstanding	$52,640,904.60
Legal-tender silver holdings	[1] 716,200.00
Do	6,258,878.09
Total	6,975,078.09

8. There is no premium on gold.
9. Laws passed during 1909 affecting the coinage, currency, or banking: None.
10. There is no report published on the operations of the mint.
11. (*a*) Imports and exports of gold during 1909:

Exports (from Manchuria) to China:	
Gold coin	$2,120
Gold bullion	17,700

11. (*b*) Imports and exports of silver during 1909:

Classification and country.	Imports (Manchuria).	Exports (Manchuria).
Silver coin:		
China	$994,798	$850,871
Korea	84,221	17,070
Hongkong and Macao	14,760	
Japan and Formosa		270,703
Total	1,093,779	1,138,644
Silver bullion:		
China	4,262,446	305,635
Korea	350	4,270
Japan and Formosa		985
Total	4,262,796	310,890

Nanking Consular District.

Answers to interrogatories, 1909.

Note.—This consular district embraces the northern part of the Province of Kiangsu and the whole of Anhwei. Neither of the two mints in this district were in operation during the past year.

1. Amount of gold and silver coined during the calendar year 1909: Nil.
2. Coinage executed for other Governments, or by other mints for this Province during the year 1909: Nil.
3. Estimated weight of fine gold and fine silver used in the industrial arts during the year 1909: No statistics available.
4. United States gold coin imported, or deposited at mint and melted during 1909: Nil.
5. Gold and silver produced from mines of the country during 1909: Nil. There are one or two unimportant silver mines in Anhwei Province, but no figures as to their production are available.
6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: Nil.
7. Amount of government and bank notes outstanding at the end of the year 1909: Issued by Government ($1, $5, and $10 notes) $2,759,752 (Mexican);[2] bank notes, unknown, but insignificant. Gold holdings, nil. Legal-tender silver holdings, $3,320,508 (Mexican), including investments.
8. Premium on gold during 1909:

	Ounces silver.
Highest	[3] 43.00
Lowest	[3] 40.05
Average	[3] 41.75

9. No laws affecting coinage, etc., passed during 1909.
10. No report published. Neither mint in operation during 1909.

[1] Sycee dollars.
[2] The issue of the above Government notes is limited to $11,000,000.
[3] Equal to 1 ounce of gold.

11. (*a*) Import and export of gold during the year 1909: Nil.
11. (*b*) Import and export of silver during the year 1909:

SILVER.

Classification and country.	Imports.	Exports.
Silver coin, Nanking district	[1] $1,657,184	[1] $714,104
Silver bullion, Nanking district	[1] 879,285	[1] 1,378,413

[1] United States gold value.

NEWCHWANG.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined; coinage executed for other governments, or coinage executed by other governments for China during the calendar year 1909: Nil.

3. Amount of gold and silver used in industrial arts during 1909: No statistics available.

4. Import of United States gold coin and amount deposited at mints and melted during 1909: Nil.

5. Amount of gold and silver produced from mines of the country during 1909: Nil.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: Gold coin and bullion, nil. Silver coin, in banks, 50,000 haikwan taels at $0.65=$31,250 gold; 60,000 haikwan taels=$37,500 gold. Silver bullion, nil. It is impossible to divide the money in the banks from that in circulation, as the line of demarcation between banks and merchants is not very distinct, the more important firms having banks attached to them.

7. Government and bank notes outstanding at the end of the year 1909: Notes outstanding issued by Government (Ta Ching Bank, Moukden Government Bank, Bank of Board of Communications), 200,000 haikwan taels at $0.65=$125,000 gold. There is no law compelling these three semigovernmental Chinese banks to keep a reserve against their notes issued. By banks of issue (Russo-Chinese Bank, Yokohama Specie Bank) 200,000 haikwan taels at $0.65=$125,000 gold. No reserve kept specially at place of issue.

8. Premium on gold. There is no gold currency in this country.

9. Laws during the year 1909 affecting the currency: An edict was promulgated authorizing a stamp duty, but this tax was never imposed. An attempt was made by the local authorities to fix the rate of redemption of the transfer tael, but it was unsuccessful.

11 (*a*) Import and export of gold during the calendar year 1909: Gold imported, nil. Gold exported, from Shanghai, coin, $1,325 gold; bullion, $11,062 gold.

11 (*b*) Import and export of silver during the calendar year 1909:

SILVER.

[Values in gold.]

Classification and country.	Imports.	Exports.
Silver coin:		
Hongkong and Macao	$225	
Shanghai	10,313	$332,875
Chefoo	25,220	114,375
Swatow		11,117
Chin-wang-tao	12,500	
Inland waters places	4,818	5,075
Total	53,076	463,442
Silver bullion:		
Shanghai	773,485	57,343
Tientsin	1,250	
Chefoo	78,438	
Amoy		1,875
Chin-wang-tao	30,625	
Inland waters places	3,419	3,287
Total	887,217	62,505

PEKING.

Answers to interrogatories, 1909.

There was no national coinage during the year 1909. Mexican dollars, British (Hongkong) dollars, and the coinage of provincial mints made up the currency. No statistics are available.

SHANGHAI CONSULAR DISTRICT.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined; coinage executed for other governments, etc., during the calendar year 1909: None.

3. Estimated weight of fine gold and fine silver used in the industrial arts during 1909:

Material used.	Gold.	Silver.
	Fine ounces.	*Fine ounces.*
New bullion	2,152.00	145,630
Old plate, jewelry, etc.	24,614.53	84,614
Domestic coin		1,200,000
Foreign coin	684.00	
Total	27,450.53	1,430,244

4. United States gold coin imported during 1909: None.

5. Gold and silver produced from mines of the country during 1909: None.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In public treasuries.	In banks.	In circulation.
Silver coin	[1] 1,500,000	[2] $3,111,005	[3]
Silver bullion		[1] 5,634,000	

[1] Sycee taels. [2] Mexican. [3] No figures obtainable.

7. Government and bank notes outstanding at the end of the year 1909:

Government notes	$4,000,000
Notes of banks of issue	2,640,000

8. Premium on gold during 1909:

Premium on $1:	
Highest	[1] $2.44
Lowest	[1] 2.29
Average	[1] 2.38

9. Laws passed during the year 1909 affecting the coinage, currency, or banking: None.

10. Report on operations of mint: None.

11. (*a*) Import and export of gold, (*b*) import and export of silver during 1909:

GOLD.

Tientsin Consular District (Embracing the Provinces of Chihli and Shansi).

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined; coinage executed for other governments, or by other governments for Tientsin, during the calendar year 1909: None. The provincial mint (Province of Chihli) has been closed for some time, the machinery being removed to the Tu-chih Pu mint, which is under the direction of the Imperial Government. This mint is located in Tientsin. During the year 1909 it coined nothing but copper. The total coinage of copper for the year was 138,387,500 pieces of 20, 10, 5, 2, and 1 cash denominations; face value 1,333,721 dollars (Mexican).

3. Gold and silver used in the industrial arts during 1909: No statistics available; none kept.

4. United States gold coin imported and deposited at mint and melted during 1909: None imported (officially informed by the imperial maritime customs at Tientsin).

5. Gold and silver produced from mines of the country during 1909: There is some gold mined in Mongolia, in the northern part of this consular district, but it is impossible to get any information regarding the amount. There is no report made of the quantity and value of the product. No silver is mined.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: No information whatever can be obtained on these points.

7. Government and bank notes outstanding at the end of the year 1909: There are no direct government note issues. There is a large number of Chinese private banks which issue notes, but there is no record whatever of the amount of such issues. The various foreign banks located in Tientsin, Peking, and other cities have large note issues, but no information as to volume is obtainable.

8. Premium on gold: Yes.

Price of silver bullion:	Pence per ounce.
Highest	[1] 24¼
Lowest	[2] 23⅞
Average	[3] 23⅞

9. Laws passed during the year 1909 affecting the coinage, currency, or banking: No edicts issued on the subject.

10. There is no report of any mint published. The mining interests of the country are under the control of a bureau of the Nung Kung Shang Pu, or board of agriculture, industries, and commerce. No mining report has been published so far as can be learned, and no statistics of production appear to be kept.

11. Import and export of gold and silver during 1909: No reply.

[1] May 6, 1909. [2] Oct. 27 and Nov. 1. [3] For 1909.

[Translation.]

Copper Money in China.

[From L'Économiste Européen, Paris, November 19, 1909.]

A question has been taken up recently in the House of Commons on the subject of the depreciation sustained by the copper money in China during late years. According to Mr. Joynson-Hicks, that depreciation has not been less than 62 per cent in the space of four years; the tael, which was valued at 1,100 cash in September, 1905, was valued at 1,778 in September, 1909. Mr. Joynson-Hicks has inquired of the president of the board of trade whether that depreciation has attracted the attention of the Chamber of Commerce of Shanghai; if the commerce of the exports to Lancashire has not yet been affected; if, in conformity with the Mackay treaty of 1902, the Chinese Government has taken any measures to remedy that state of things; finally, if the English Government should not interfere under those circumstances.

In response to that inquiry the secretary of state for foreign affairs has declared that a heavy depreciation has, in fact, been taking place recently in the value of Chinese copper money, and that the British Government has made repeated applications to the Chinese Government in order to induce them to take the necessary measures for remedying this situation. No appreciable result, however, has been obtained up to the present time, but China has recently decreed regulations which permit us to hope that an improvement will take place before long.

INDIA.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909:

Denominations.	Number of pieces.	Value.
		Rupees.
Recoinage of domestic coins (silver):	22,238,746	22,238,746
Rupees	1,471,943	735,971.50
Half rupees	1,208,791	151,098.875
Eighth rupees		
Total	24,919,480	23,125,816.375

No gold coined.

2. (*a*) Coinage executed for other governments:

	Pieces.
Silver British dollars (for export to Singapore and Hongkong)	6,768,441
Silver 10-cent pieces for the government of the Straits Settlements	5,866,029
Total	12,634,470

There was also a coinage of 25,000 copper cent pieces, and 10,000 half-cent pieces for the Ceylon government.

2. (*b*) Coinage executed at foreign mints for India during 1909: Nil. (Sovereigns and half sovereigns are imported into this country in the ordinary course.)

3. Estimated weight of fine gold and fine silver used in the industrial arts during 1909: Information not available.

4. No imports of United States gold coin were reported during the year 1909.

5. Amount of gold and silver produced from mines of the country during 1909: Domestic production, gold from deep mines and from placer mining, 17,400 kilograms (fine); value, £2,128,554.

No silver is raised in India.

SUPPLY AND ISSUE OF CURRENCY NOTES.

9. (1) The head commissioner shall provide currency notes of the denominational values prescribed under this act and shall supply the commissioners and the currency agents subordinate to him with such notes as they need for the purposes of this act.

(2) The commissioners shall supply the currency agents subordinate to them, respectively, with such notes as those agents need for the purposes of this act.

(3) Every such note, other than a universal currency note, shall bear upon it the name of the town from which it is issued.

10. The name of the head commissioner, of one of the commissioners, or of some other person authorized by the head commissioner, or by one of the commissioners, to sign currency notes, shall be subscribed to every such note, and may be impressed thereon by machinery, and when so impressed shall be deemed to be a valid signature.

11. The officers in charge of circles of issue shall, in their respective circles, on the demand of any person, issue, from the office or offices of issue established in their respective circles, currency notes of the denominational values prescribed under this act, in exchange for the amount thereof—

(*a*) In rupees or half rupees or in gold coin which is legal tender under the Indian coinage act, 1906; or

(*b*) In rupees made and declared to be a legal tender under the provisions of the native coinage act, 1876.

12. Any currency agent to whom currency notes have been supplied under section 9 may, if he thinks fit, on the demand of any person, issue from his agency any such notes in exchange for the amount thereof in any coin specified in section 11.

CURRENCY NOTES, WHERE LEGAL TENDER AND WHERE PAYABLE.

13. The officers in charge of circles of issue shall, on the requisition of the comptroller general, issue to any Government treasury currency notes in exchange for gold coin which is not legal tender under the Indian coinage act, 1906, or for gold bullion at the rate of 1 rupee for 7.53344 grains troy of fine gold.

14. If the secretary of state for India in council consents to hold in gold coin or bullion, or in silver bullion, or in securities of the kinds mentioned in section 22, the equivalent in value to notes issued in India as a reserve to secure the payment of such notes, the Governor General in council may from time to time direct that currency notes shall be issued to an amount equal to the value of the coin, bullion, and securities so held by the secretary of state for India in council.

15. A universal currency note shall be a legal tender at any place in British India, and any other currency note shall be a legal tender at any place within the circle from which the note was issued for the amount expressed in the note in payment or on account of—

(*a*) Any revenue or other claim, to the amount of 5 rupees or upward, due to the Government of India, and

(*b*) Any sum of 5 rupees or upward, due by the Government of India, or by any body corporate or person in British India:

Provided that no currency note shall be deemed to be a legal tender by the Government of India at any office of issue.

CURRENCY NOTES, WHERE LEGAL TENDER AND WHERE PAYABLE—RESERVE.

16. A currency note shall be payable at the following offices of issue, namely:

(*a*) A universal currency note at any office of issue;

(*b*) A currency note other than a universal currency note at any office of issue in the town from which it was issued:

Provided that any such note issued before the commencement of this act shall also be payable—

(I) In the case of a note issued from the office at Cawnpore or Lahore, at any office of issue in Calcutta, and

(II) In the case of a note issued from the office at Karachi, at any office of issue in Bombay.

17. For the purposes of sections 15 and 16, currency notes issued from any currency agency shall be deemed to have been issued from the town appointed under section 5 to be the place of issue in the circle of issue in which that agency is established.

18. Where an office of issue is closed, the Governor General in council shall, by notification in the Gazette of India, direct that, with effect from the date of the closing of such office, all currency notes issued therefrom shall, for the purposes of sections 15 and 16, be deemed to have been issued from such other office as may be specified in such notification.

RESERVE.

19. The whole amount of currency notes at any time in circulation shall not exceed the total amount represented by the sovereigns, half sovereigns, rupees, half rupees, and gold bullion, and the sum expended in the purchase of the silver bullion and securities, which are for the time being held by the secretary of state for India in council and by the Governor General in council as a reserve to provide for the satisfaction and discharge of the said notes, and the said notes shall be deemed to have been issued on the credit of the Government of India as well as on the security of the said coin, bullion, and securities:

Provided that, for the purposes of this section, currency notes which have not been presented for payment in the case of notes of any denominational value not exceeding 100 rupees within 40 years, and in the case of notes of any denominational value exceeding 100 rupees within 100 years from the 1st day of April following the date of their issue, shall be deemed not to be in circulation:

Provided further, that all notes which are declared under the first proviso to this section not to be in circulation shall be deemed to have been issued on the credit of the Government of India and shall, if subsequently presented for payment, be paid from the revenues of the Government of India.

20. Subject to the provisions of section 19, the Governor General in council may at any time, if he thinks it expedient, convert any of the coin or bullion for the time being held by him as a part of the reserve into coin of any of the kinds mentioned in section 11 or into gold or silver bullion.

21. If any coin or bullion held by the secretary of state for India in council or by the Governor General in council as part of the reserve is transmitted by the secretary of state for India in council to the Governor General in council, or by the Governor General in council to the secretary of state for India in council, it shall be deemed during the period of transmission to remain part of the reserve referred to in section 19.

22. The securities mentioned in section 19 shall be securities of the United Kingdom of Great Britain and Ireland or of the Government of India, or securities issued by the secretary of state for India in council under the authority of act of Parliament and charged on the revenues of India, and the value of them at the price at which they are purchased shall not exceed one hundred and twenty millions of rupees:

Provided that the value at such price as aforesaid of such of the said securities as are not securities of the Government of India shall at no time exceed twenty millions of rupees.

23. The securities purchased by the Governor General in council shall be securities of the Government of India, and shall be held by the head commissioner and the master of the mint at Calcutta, or of such other mint as the Governor General in council may direct in this behalf, in trust for the secretary of state for India in council.

24. (1) The head commissioner may at any time, when ordered so to do by the Governor General in council, sell and dispose of any of the securities held under section 23.

(2) For the purpose of effecting such sales, the master of the mint at Calcutta or of such other mint as aforesaid shall, on a request in writing from the head commissioner, at all times sign and indorse the securities, and the head commissioner, if so directed by the Governor General in council, may purchase securities of the Government of India to replace such sales.

25. An account showing the amount of the interest accruing on the securities held as part of the reserve under this act, and the expenses and charges incidental thereto, shall be rendered annually by the head commissioner to the Governor General in council, and published annually in the Gazette of India.

PRIVATE BILLS PAYABLE TO BEARER ON DEMAND.

26. No person in British India shall draw, accept, make, or issue any bill of exchange, hundi, promissory note, or engagement for the payment of money payable to bearer on demand, or borrow, owe, or take up any sum or sums of money on the bills, hundis, or notes payable to bearer on demand, of any such person:

Provided that checks or drafts, payable to bearer on demand or otherwise, may be drawn on bankers, shroffs, or agents by their customers or constituents, in respect of deposits of money in the hands of those bankers, shroffs, or agents and held by them at the credit and disposal of the persons drawing such checks or drafts.

27. (1) Any person contravening the provisions of section 26 shall, on conviction by a presidency magistrate or a magistrate of the first class, be punishable with a fine equal to the amount of the bill, hundi, note, or engagement in respect whereof the offense is committed.

(2) Every prosecution under this section shall be instituted by the officer in charge of the circle of issue in which the bill, hundi, note, or engagement is drawn, accepted, made, or issued.

SUPPLEMENTARY PROVISIONS.

28. An abstract of the accounts of the department of paper currency, showing—

(*a*) The whole amount of currency notes in circulation;

(*b*) The amount of coin and bullion reserved, distinguishing gold from silver, and showing separately the amount of coin or bullion held by the secretary of state for India in council, or in transit from or to India, or in the custody of the mint master during coinage; and

(*c*) The nominal value of and the price paid for the securities held as part of the reserve, showing separately those held by the secretary of state for India in council and those held in India under section 23, shall be made up four times in each month by the head commissioner, and published as soon as may be in the Gazette of India.

29. (1) The Governor General in council may make rules to carry out the purposes and objects of this act.

(2) In particular and without prejudice to the generality of the foregoing power, such rules may—

(*a*) Fix the denominational values (not being less than 5 rupees) for which currency notes shall be issued;

(*b*) Provide for the alteration of the limits of any of the circles of issue;

(*c*) Declare the places at which currency notes shall be issued; and

(*d*) Fix and notify the conditions upon which lost or mutilated currency notes may be paid at offices of issue.

(3) Every such rule shall be published in the Gazette of India, and on such publication shall have effect as if enacted in this act.

30. The enactments mentioned in the schedule are hereby repealed to the extent specified in the last column thereof:

Provided that all securities purchased and notes issued under the Indian paper currency act, 1905, or any act thereby repealed, shall, if undisposed of or in circulation at the commencement of this act, be deemed to have been respectively purchased and issued under this act:

Provided also that all currency notes, which under section 29 of the Indian paper currency act, 1905, are to be deemed to have been issued from the office of issue in the town of Cawnpore, shall still be deemed to have been issued from that office.

THE SCHEDULE—ENACTMENTS REPEALED.

(See section 30.)

Year.	No.	Short title.	Extent of repeal.
1905	III	The Indian paper currency act, 1905	So much as has not been repealed.
1909	II	The Indian paper currency (amendment) act, 1909.	The whole.

10. A copy of the report on the operations of the mint for the official year 1908–9 and a copy of the report on mines for 1908 are inclosed herewith.

11. (*a*) Import and export of gold, (*b*) import and export of silver during the calendar year 1909:

Gold ore is not known to be imported into India.

Report of the Director of the Mint, British India.

From 1835 until 1899 the standard of this country was silver and the monetary unit the rupee, of the legal weight of 180 troy grains, fineness 0.916⅔ and containing 165 grains of fine silver.

The weight, fineness, and legal-tender power of the silver coins of India have remained unchanged since the enactment of Act No. XVII of 1835, which demonetized gold, though still permitting gold to be coined in the mints, and established the silver standard. That law provided that the company's rupee—that is, the rupee of the East India Co. (a term superseded in 1862 by the term "Government rupee"), should be of the weight and fineness mentioned above and that the rupee and half rupee should be unlimited legal tender in payment or on account.

Provision was also made for the coinage of subsidiary silver, namely, one-quarter and one-eighth rupees, commonly known as 4-anna and 2-anna pieces, which are legal tender for not more than the value of fractions of 1 rupee. These coins are of the same fineness as the rupee and half rupee, and of proportionate weight. The rupee and half rupee remain legal tender until they have lost more than 2 per cent below standard weight, or unless they have been defaced. The quarter rupee and eighth of a rupee are legal tender, if they are not more than 12½ per cent below standard weight and have not been defaced. Rupee and half rupee not more than 6¼ per cent below standard weight, and 4-anna and 2-anna pieces which are not more than 25 per cent below standard weight, are received at the treasuries at their nominal value (provided that they have not been fraudulently defaced) and are cut and withdrawn from circulation.

By Act VIII of 1893 the Indian mints were closed from the 26th of June of that year to the receipt of silver for coinage from the public, but the Government retained power to coin rupees and fractions thereof at the mints on its own account. The profits realized on the coinage of rupees is held as a gold reserve to guarantee the fixed rate of exchange.

Until 1835 gold coins were legal tender. They were the gold mohur, which was equivalent to 15 rupees, and a double gold mohur, or 30-rupee piece, a 10-rupee, and a 5-rupee piece. The mohur was eleven-twelfths fine gold and weighed 180 grains, of which 165 grains were fine gold. The other gold coins were of the same fineness and of proportionate weight. These gold coins ceased to circulate as currency since 1835 and, indeed, were practically not current before that year. Though a certain number were struck in the mints more or less regularly down to 1891–2, they were not struck for circulation, but were used by the public as ornaments or for other similar purposes. In the future these coins will not enter into circulation or be a part of the Indian monetary system. That system has been settled as follows: By Act VIII of 1893, Act XXII of 1899, and Act III of 1906, and the subsidiary notifications and orders issued under these acts.

The monetary standard is gold, and the unit is the sovereign coined in the royal mint in London, or in any branch of the royal mint. The sovereign is legal tender at the rate of 15 rupees, as long as it has not lost weight beyond the limit prescribed as the least current weight, or been called in. The half sovereign is also full legal tender at the rate of 7½ rupees. The Government for the present undertakes to receive sovereigns and half sovereigns from the public in exchange for rupees at the rate of 15 rupees and 7½ rupees, respectively; the Government also issues sovereigns and half sovereigns, as far as convenient, in exchange for rupees at those rates. Rupees and half rupees remain full legal tender, in payment or on account, side by side with the sovereign, at the rate of 15 rupees to the sovereign.

Report upon the Operations of the Paper Currency Department during the Year 1908–9.

Calcutta, *July 31, 1909.*

To the Secretary to the Government of India, Finance Department, Simla.

Sir: I have the honor to submit a report upon the operations of the paper currency department during the year 1908–9.

* * * * * * *

Our money consists of gold, silver, and notes. On the 1st of January, 1908, Government held £3,100,000 of sovereigns, and the presidency banks held £100,000. When the exchanges weakened, gold, in obedience to Gresham's law, began to disappear. By the 31st of October, 1908, practically the whole stock held by Government and the presidency banks was gone. This disappearance is more or less final, for the gold is exported, melted, or hoarded. In addition to this stock there was a considerable

quantity in the hands of the public which has suffered the same fate. During the last four years India has absorbed £15,000,000, the absorption in 1907–8 being no less than £6,000,000. What amount of this circulated must always remain a matter of more or less scientific guesswork, but it can not have been less than £2,000,000. The monetary loss of gold, therefore, is understated at £3,000,000+£2,000,000, or, say, £5,000,000. Turning to silver, the loss can be measured with accuracy by the amount of reverse consols sold, which came to £8,000,000. Turning lastly to notes, it can not, I think, be said that the drop in the circulation of high value notes is a diminution in our monetary supplies. In bad years the Government receives fewer rupees (which it converts into high value notes) and pays out more rupees (which it obtains by realizing high value notes). But the net result is merely a change in the form of currency held by Government and the people.

Summing up, therefore, during the worst period of last year, the monetary stocks of British India diminished by at least 5,000,000 sovereigns and £8,000,000 of rupees, whilst the circulation of high value notes dwindled, owing to bad harvests.

A noticeable change during the year has been the passing of Act II of 1909, by which the universal 5-rupee note has been extended to the Province of Burma. The alteration is too recent for us to judge of its effect. (A scheme for making 10-rupee and 50-rupee notes universal, has received the sanction of the secretary of state and will be introduced as soon as the necessary legislation is carried out.)

The year 1908–9 opened with a stock of gold in the currency reserve and treasuries in India valued at £2,922,286.5, and the closing balance was worth £86,004.5. (In addition to this, gold to the value of £1,500,000 was held in the currency chest in England.) There were no transactions in gold in India during the year on account of the gold standard reserve, as there was practically no profit creditable to the reserve, and the payments to it that were necessary were made in silver.

The net transactions with the public in the year under report resulted in the aggregate in an issue of nearly £2,600,000, against about £1,000,000 in the previous year, and a receipt of £1,000,000 in 1906–7.

Owing to adverse trade conditions, there were practically no imports of sovereigns during the year, the receipts at the currency offices from imports having amounted to the negligible sum of £75,000 against £5,250,000 in the previous year. The public demand for gold had therefore to be met entirely from the stock in the currency reserve and treasuries, which proved inadequate to satisfy the demand. The indents from the several Provinces for supplies of gold could not be complied with in full even at the beginning of the year, and the stock of gold in the currency offices was almost exhausted by the middle of the year, when issues to the public practically ceased.

The following figures show the net absorption of sovereigns from treasuries and currency offices in each of the five years ending 1908–9. The absorption in the year under report would have been higher than ever had gold been available:

1904–5	£2,200,000
1905–6	2,700,000
1906–7	3,900,000
1907–8	6,200,000
1908–9	2,400,000

* * * * * * *

The details of the gold held in India on the last day of the year are as follows:

Description.	Currency.	Treasury and mint.	Total.
Current-weight sovereigns and half sovereigns	£21,921	£60,771.5	£82,692.5
Light-weight sovereigns and half sovereigns	1,493	1,819.0	3,312.0
Total	23,414	62,590.5	86,004.5

As light-weight sovereigns and half sovereigns and gold bullion can not be utilized in India, a remittance of these coins and bullion to the value of £240,248.6 was sent to London in September, 1908.

The balance of the gold standard reserve at the beginning of the year stood at £18,318,054, made up as follows:

Purchase value of sterling securities	£13,180,521
Coined rupees held in India	4,000,000
Gold temporarily forming part of balances of secretary of state	1,131,223
Outstanding debt from treasury balances	310
Total	18,318,054

The most important transaction during the year in connection with the gold standard reserve was the sale in India of sterling bills on the secretary of state for £7,988,000, the par value of the bills being paid in rupees into the silver branch of the gold standard reserve in India, whilst the secretary of state paid for the same by equivalent withdrawals from the reserve in London (vide paragraphs 73 and 74 of the financial statement for 1909–10). To enable him to pay the bills, the secretary of state sold gold securities having a nominal value of £8,100,497. Including some minor transactions, the sale of gold standard reserve securities in 1908–9 amounted to £8,110,959 (nominal value), and resulted in a net loss of £121,109, as compared with the cost price of the securities, £7,760,747, the sale proceeds amounting to £7,639,638. This loss was, however, more than covered by additions to the reserve to the extent of £306,220.

* * * * * * *

The rupee coinage of the year amounted to 251 lakhs,[1] 148 lakhs at Calcutta and 103 lakhs at Bombay. No coinage was undertaken during the year from newly purchased silver, and the entire amount coined was from withdrawn and uncurrent coin.

* * * * * * *

STATEMENT OF WHOLE RUPEES COINED AND ISSUED FROM THE INDIAN MINTS, FROM 1903.

Calendar years.	Coined in Calcutta.	Coined in Bombay.	Total.
	Rupees.	*Rupees.*	*Rupees.*
1903	[1] 25,000 49,378,355	52,969,151	[1] 25,000 [2] 102,347,506

1909	3,800,000	2,766,970	[7] 6,566,970
Total	369,152,747	574,458,490	943,611,237

[1] Coined in 1902.
[2] Includes 1,166,451 rupees coined for native states.
[3] Includes 594,221 rupees coined for native states.
[4] Includes 328,000 rupees coined for native states.
[5] Includes 390,310 rupees coined for native states, and Rs. 433 lakhs (Calcutta 32 lakhs and Bombay 135 akhs) coined from gold standard reserve silver.
[6] Includes Rs. 94,766 coined for native states and Rs. 433 lakhs (Calcutta 168 lakhs and Bombay 265 lakhs) coined from gold standard reserve silver.
[7] Up to Mar. 31, 1909.

THE METALLIC RESERVE.

The following table shows the gross circulation and the composition of the metallic reserve of the currency department on the last day of each month of the year:

Month.	Gross circulation.	Coin and bullion reserve.			
		Silver coin.	Gold coin and bullion.	Silver bullion under coinage.	Gold coin and bullion in England.
1908.	*Rupees.*	*Rupees.*	*Rupees.*	*Rupees.*	*Rupees.*
April	462,600,000	252,900,000	33,300,000	800,000	55,600,000
May	448,100,000	262,800,000	23,900,000	800,000	40,600,000
June	451,500,000	271,000,000	19,100,000	800,000	40,600,000
July	481,000,000	300,500,000	19,100,000	800,000	40,600,000
August	446,100,000	285,400,000	14,300,000	800,000	25,600,000
September	438,500,000	285,500,000	6,500,000	800,000	25,600,000
October	442,500,000	293,700,000	2,400,000	800,000	25,600,000
November	435,500,000	290,500,000	1,700,000	800,000	22,500,000
December	420,700,000	275,600,000	1,800,000	800,000	22,500,000
1909.					
January	422,100,000	278,200,000	600,000	800,000	22,500,000
February	438,600,000	294,800,000	500,000	800,000	22,500,000
March	454,900,000	311,200,000	400,000	800,000	22,500,000

The chief feature of the year has been the exhaustion of the gold held.

[1] A lakh of rupees is 100,000.

WORKING OF THE MINTS AT CALCUTTA AND BOMBAY DURING THE YEAR 1908–9.

GOVERNMENT OF INDIA,
FINANCE DEPARTMENT,
Calcutta, December 22, 1909.

Receipts of gold.—The tenders of gold by the public at the mints were less in value than those of the preceding 12 months by over 7½ crores of rupees. Owing to adverse trade conditions there were practically no imports of sovereigns during the year.

The following statement compares the value and nature of the tenders with those of past years:

Year.	Calcutta mint.			Bombay mint.				Total value of gold tendered.
	Value of sovereigns and half sovereigns of current weight.	Value of light and uncurrent sovereigns and half sovereigns.	Total.	Value of sovereigns and half sovereigns of current weight.	Value of light and uncurrent sovereigns and half sovereigns.	Value of bullion.	Total.	
	Rupees.	*Rupees.*	*Rupees.*	*Rupees.*	*Rupees.*	*Rupees.*	*Rupees.*	*Rupees.*
1906–7....	49,638,547	779,963	50,418,510	14,520,000	5,840	187,422	14,713,262	65,131,772
1907–8....	29,137,155	105,105	29,242,260	54,584,760	2,123,695	.....	56,708,455	85,950,715
1908–9....	4,253,910	19,710	4,273,620	5,082,945	19,800	.....	5,102,745	9,376,365

Receipts of silver.—There were no receipts of purchased silver during the year.

The receipts of uncurrent and withdrawn silver coins amounted in nominal value to Rs. 16,431,667 and are classified as follows:

Description.	In thousands of rupees.
Government rupees and half rupees:	
Of 1835	102.76
Of 1840 (first issue)	3,176.00
Of 1840 (second issue)	8,864.20
Shroff-marked, defective, and dumb coins	397.10
Worn coins	2,728.80
Reduced rupees and half rupees	38.00
Total	15,506.86

Coinage of silver.—The silver coinage was as follows:

Denomination.	Calcutta mint.	Bombay mint.	Total.
	Rupees.	*Rupees.*	*Rupees.*
Rupees	14,800,000	10,330,598	25,130,598
Half rupees	788,249	.....	788,249
Quarter rupees	1,770,953	.....	1,770,953
One-eighth rupees	846,114	.....	846,114
Total	18,205,316	10,330,598	28,535,914

The outturn of rupees during the year 1908–9 was less than that of the previous year by nearly 15 crores. The coinage almost entirely represented the recoinage of 1835 and 1840 rupees and uncurrent coin. A small amount of coinage (to the extent of Rs. 50,000) was undertaken on behalf of the Shahpura chiefship, which has adopted British silver currency in place of Chitori coins in the Phulia Pargana.

Dollar coinage.—During the year 6,870,741 British dollars of the nominal value of Rs. 15,590,338 were coined at the Bombay mint.

Nickel coinage.—Twenty-two million five hundred and thirty-six thousand nickel 1-anna pieces of the nominal value of Rs. 1,408,500 were coined at the Bombay mint during the year 1908–9, as compared with 37,256,000 pieces in 1907–8. The net

gain on the nickel coinage which passed into circulation amounted to Rs. 1,111,336, against Rs. 1,771,726 in the preceding year.

Bronze and copper coinage.—The bronze coinage of the year consisted of pice, half pice, and pie pieces of the aggregate value of Rs. 1,103,958. Of this Rs. 3,500 represented the nominal value of single pice for the Sailana Darbar, for which a special reverse die was prepared in the mint.

The copper coinage comprised Straits Settlements cents, half cents, and quarter cents of the value of Rs. 133,338.

During the year under review there was a net loss of Rs. 1,071,185 on bronze and copper coinage, as compared with a net gain of Rs. 1,736,390 in the preceding year. The loss was due to the return of a comparatively larger number of coins from circulation during the year.

BOMBAY MINT.

Tenders of silver bullion from the exchange banks for coinage into British dollars amounted to 14,382,858 tolas fine. Of this amount silver of the outturn value of Rs. 15,655,863 was brought to account during the year.

The description and weight of the silver is as detailed below:

Description of silver tendered.	Amount in lakhs of tolas.[1]
American bar silver	119.34
London bar silver	19.26
San Francisco bar silver	5.23
Total	143.83

[1] A tola is 180 grains.

Recoinage into Government rupees of the silver currency of native states.

The conversion of the Chitori currency in the Phulia Pargana of the Shahpura chiefship was taken in hand during the year. The exchange value in Government rupees of the amount converted was Rs. 50,000.

Silver coinage.—The Government coinage for the year, which consisted of rupees only, amounted in value to Rs. 10,330,598. Of this amount Rs. 50,000 were on account of the Shahpura chiefship; the rest was wholly on Government account.

Six million eight hundred and sixty-nine thousand eight hundred and eighty-four British dollars were issued to exchange banks for export during the year. Of these, 6,813,993 were shipped to Hongkong, and 55,891 to Singapore.

The Indian Gold Reserve.

[From The Bankers' Magazine, New York, May, 1910.]

A remarkable recovery in the portion of the gold standard reserve kept by the Government of British India in gold and securities has taken place during the past 10 months. The severe pressure to which the sterling resources of the Indian Government were subjected during the crop failures of 1908 led to the reduction of the amount held in London by nearly one-half, an equivalent amount in silver rupees piling up in the meantime on India. The figures now available show, however, that the portion in London held in gold and securities increased from £7,916,100 on March 31, 1909, to £12,544,700 on January 31, 1910. The facts are brought out by the London Economist in a sharp expose of one of Mr. Moreton Frewen's breezy suggestions, that "the failure of an autumn's rain dissipates in a single season the gold standard reserve fund so laboriously accumulated during 15 years," etc. This insinuation, it is declared by the Economist of February 5 last, "conveys an untruth." The real situation is thus summed up by the London publication:

"During the great depression of 1908 the sterling portion was reduced (the reduction therein being made good by an increase in the rupee portion), but for the last year the sterling portion has been growing rapidly again, the rupee portion being correspondingly reduced, the total remaining unaltered except for the addition due to the receipt of dividends on securities. The figures that are of general interest in the matter are those showing the variations in the amount of the sterling portion during the 10 (not, as Mr. Frewen says, 15) years since the establishment of the reserve. They are given in the following statement:

STERLING RESOURCES HELD IN THE GOLD STANDARD RESERVE OF THE GOVERNMENT OF INDIA.

Year.	Resources held.	Year.	Resources held.
Mar. 31, 1901	£1,200,000	Mar. 31, 1906	£12,165,000
1902	3,454,200	1907	12,518,500
1903	3,810,300	1908	14,317,700
1904	6,376,500	1909	7,916,100
1905	8,362,600	Jan. 31, 1910	12,544,700

"The securities held on account of the reserve are, for the purpose of this statement, valued at cost price. The gold standard and the fixing of the value of the rupee has saved the laboring and commercial classes of India from the most terrible losses. The only people who ought to complain are owners of silver mines and speculators in exchange. And it is doubtful whether even the owners of silver or silver mines should attribute more than a tiny fraction of the depreciation to the action of the Indian Government."

BRITISH NORTH BORNEO.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined during the calendar year 1909: Nil.

3. Estimated weight of fine gold and fine silver used in the industrial arts during the year 1909: Nil.

4. United States gold coin imported during 1909: Nil.

5. Gold and silver produced from mines of the country during 1909: Nil.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: Silver coin (Straits Settlement dollars of 2s. 4d.), $225,000. (No banks.)

7. Amount of Government and bank notes outstanding at the end of the year 1909:

Government notes (Straits Settlement dollars of 2s. 4d.)	$435,636
Legal-tender silver holdings (Straits Settlement dollars of 2s. 4d.)	175,000

8. There is no premium on gold.

* * * * * * *

NOTE.—The real seat of government of the territory called "British North Borneo" is in London, England, No. 37 Threadneedle Street, the office of the British North Borneo Co. The paper money issued is a mere "promise to pay" dollars signed by the treasurer of the above-named company, located in Sandokan. "Dollars" means Straits Settlement silver dollars, rated 9 Straits Settlement dollars to equal 5 United States dollars, gold. There is no other currency in circulation.

JAPAN.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909:

Denomination.	Number of pieces.	Value.	Denomination.	Number of pieces.	Value.
GOLD COINS.		Yen.	SILVER COINS.		Yen.
New coinage:			New coinage:		
20-yen	559,000	11,180,000	50-sen	22,014,012	11,007,006
10-yen	2,170,000	21,700,000	20-sen	8,830,000	1,766,000
5-yen			10-sen	20,291,030	2,029,103
Total	2,729,000	32,880,000	Total	51,135,042	14,802,109
Recoinage:			Recoinage:		
Domestic coins (ancient)		25,951	Domestic coins (old)		10,681,725
Foreign coins		11,958	Foreign coins		651,693
Total recoinage		37,909	Total recoinage		11,333,418

NOTE.—The value of new gold and silver coins, as well as of recoined gold coins, represents their face value. The value of the recoined silver coins is calculated at the revised rate, 5 momme and 4 fun per 1 yen, the amount of domestic old silver coins and of foreign silver coins received being respectively 57,681 kwan and 317 momme, and 3,519 kwan and 141 momme.

Amount of gold and silver coins melted during the calendar year 1909:

	Yen.
Gold coins:	
Domestic (ancient)	25,951
Foreign	11,958
Total amount melted	37,909
Silver coins:	
Domestic (ancient)	353
Domestic (old)	8,083,125
Foreign	490,000
Total amount melted	8,573,478

NOTE.—Net weight of ancient gold coins and foreign gold coins is 8 kwan 81 momme 7 fun 7 rin; value calculated at the rate of 5 yen per momme pure gold.

Net weight of ancient silver coins is 2 kwan 764 momme 5 fun 4 rin. Value calculated at the current rate 127.57 yen per 1 kwan.

The value of old silver coins and foreign silver coins represents their face value.

Amount of modern gold and silver coins recoined:

	Yen.
Gold, 20-yen pieces	37,909
Silver:	
50-sen pieces	4,687,830
20-sen pieces	1,766,000
10-sen pieces	2,029,103
Total	8,482,933

NOTE.—The value of gold coins represents their face value. The value of 50-sen pieces and 20-sen pieces, silver, calculated at the revised rate of 1 yen per 5 momme 4 fun, the amount of old silver coins received for melting being 34,850 kwan 680 momme 5 fun. The value of 10-sen silver pieces calculated at the revised rate of 1 yen per 6 momme, the amount of old coins received for melting being 12,174 kwan 618 momme.

2. Coinage executed for foreign Governments and in foreign countries during the calendar year 1909:

Coinage executed for Korea:

	Yen.
Gold, 20-yen pieces	500,000
Silver, 20-sen pieces	400,000
Nickel:	
1-sen pieces	100,000
½-sen pieces	47,805
Total	147,805

NOTE.—The value of gold, silver, and nickel coins represents their face value.

Amount of Korean coins recoined during the calendar year 1909: None.

3. The weight of fine gold and silver used in industrial arts during the calendar year 1909 is unknown.

4. Amount of United States gold coins inported during 1909: $4,715, equal to 9,458 yen.

Amount of United States gold coins in the Bank of Japan at the close of the calendar year 1909: $1,334,757, equal to 2,674,050 yen.

Amount of United States gold coins melted at the Japanese mint during the calendar year 1909: 10,025 yen.

NOTE.—The value of United States gold coins calculated at the rate of 5 yen per 1 momme of pure gold, the amount melted being 2 kwan 4 momme 9 fun 5 rin.

5. Amount and value of gold and silver produced from mines in Japan during the calendar year 1909:

Sources.	Amount.	Value.	Sources.	Amount.	Value.
GOLD PRODUCED IN JAPAN PROPER.			SILVER PRODUCED IN JAPAN PROPER.		
1908.	*Momme.*	*Yen.*	1908.	*Momme.*	*Yen.*
From mines	907,922	[1] 4,539,610	From silver mines	31,259,833	[2] 4,265,717
From placers	51,519	[1] 257,595	From copper mines	32,846,707	[1] 4,476,453
Total	959,441	4,797,205	Total	64,106,540	8,742,170
1909.			1909.		
From mines	1,025,780	[2] 5,128,900	From silver mines	35,215,084	[2] 4,633,601
From placers	52,361	[2] 261,805			
Total	1,078,141	5,390,705			

[1] Actual value. [2] Estimated value.

Japan has no colonies.

NOTE.—Definite statistics for the calendar year 1909 have not yet been taken, hence only approximate estimates given by the bureau of mines.

The value of silver for the calendar year 1909 calculated at the rate of 131.58 yen per 1 kwan, which is the average quotation in the Osaka market.

The percentage of silver produced from lead mines, silver mines, and copper mines may be given below according to the average output of the five principal mines covering a period of five years:

	Per cent.
From lead mines	65.7
From silver mines	18.6
From copper mines	15.7

The percentage of silver produced from the principal mines with reference to gold produced in this country may be given as follows: 85.2 per cent (five-year average).

The amount of gold and silver produced in Formosa during the calendar year 1908 is given below. Definite statistics for 1909 have not yet been taken:

Sources.	Amount.	Value.
Gold produced from—	*Momme.*	*Yen.*
Mines	429,241	2,146,205
Placers	12,031	60,150
Total	441,271	2,206,355
Silver produced from lead mines	271,839	37,095

NOTE.—The value of silver calculated at the rate of 136.46 yen per 1 kwan, which was the average quotation in the Osaka market. "One kwan (or kin)=160 momme; 1 yen=1s. 9d. (1 yen in United States currency=$0.498)."

6. Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1909:

	Yen.
Gold coins:	
In Bank of Japan	2,150,826
Held as reserve for convertible notes	73,368,727
In circulation	26,521,484
Total	102,041,037
Gold bullion:	
In Bank of Japan	736,237
Held as reserve for convertible notes	144,474,548
Total	145,210,785
Silver coins:	
In national treasury	19,128,941
In Bank of Japan	1,119
In circulation	93,640,117
Total	112,770,177
Silver bullion:	
In national treasury	2,105,521
In Bank of Japan	843,569
Total	2,949,090
Grand total	362,971,089

NOTE.—The amount of coins in banks other than the Bank of Japan is included in the amount in circulation.

7. Amount of Government and bank notes outstanding at the close of the calendar year 1909: Convertible notes of the Bank of Japan, covered by reserve consisting of gold coins and bullion, 217,843,275 yen; covered by guaranteed reserve, 134,919,926 yen; total amount issued, 352,763,201 yen.

NOTE.—The amount in circulation is equal to the amount issued.

8. Premium on gold: The actual currency of Japan consists of gold coins and notes convertible into gold; hence there is no difference in value between currency and gold.

9. Laws passed during 1909 affecting the coinage, currency, and banks: There was no legislation relating to coinage and currency during the calendar year 1909. Laws enacted during 1909 relating to banks annexed herewith.

10. Reports published on operations of the mint and the bureau of mines: One copy of the mint report, in English, for the fiscal year ending March 31, 1909; one copy of the Statistical Report of the Department of Agriculture and Commerce, in Japanese and English, for the fiscal year ending March 31, 1909, inclosed herewith.

11. Import and export of gold and silver during the calendar year 1909:

GOLD.

Classification and country.	Imports.	Exports.
Gold coin and bullion:	*Yen.*	*Yen.*
British India and Straits Settlements		625
China	4,098,844	2,056,258
Kwantung Province	6,519	
Korea	6,359,267

[1] Ounces.

Following are the laws relating to banks enacted during the calendar year 1909:

LAW NO. 1, MARCH 1, 1909.

Those who possess bank notes to be exchanged for 1-yen silver coins issued by the Bank of Formosa shall apply for exchange to the Bank of Formosa by December 31, 1909.

In the case mentioned in the preceding paragraph, the Bank of Formosa shall give in exchange gold coins or the bank notes issued now by the bank according to the current quotation of silver. However, the current quotation of silver shall follow the notification of the governor general of Formosa.

Supplementary clause: This law shall take effect on the day of promulgation.

LAW NO. 10, MARCH 22, 1910.

The law of the Hokkaido Colonial Bank is amended as follows:

In articles 12, 13, 14, and 20 the words "loans of article 7, No. 1," are amended to read: "Loans redeemable in installments."

The following paragraph is added to article 25:

"For a period of five years following the elapse of the period mentioned in the preceding paragraph the Hokkaido Colonial Bank shall add to the reserve fund the whole of the dividends for the shares taken up by the Government, as provided for in the preceding article."

LAW NO. 32, APRIL 12, 1909.

The law of the Hypothetic Bank of Japan is amended as follows:

Paragraph 2 of article 15 is amended to read as follows:

"When, in the event of carrying out of the adjustment of cultivated fields in accordance with the law of adjustment of farm land, a union for the adjustment of farm land has applied for a loan or when owners of land to be adjusted apply for a loan on their joint responsibility, the Hypothetic Bank of Japan may make a loan without security, which is redeemable at a fixed date or in annual installments."

Supplementary clause: The date of operation of this law shall be determined by imperial ordinance.

(By virtue of Imperial Ordinance No. 330 of 1909 this law took effect on Dec. 1, 1909.)

LAW NO. 33, APRIL 12, 1909.

The law relating to agricultural and industrial banks is amended as follows:

Item 4 of article 6 is amended to read as follows:

"Loans prescribed in items 1 and 2 of this article without security, when in adjusting cultivated lands in accordance with the law of adjustment of cultivated lands, a union for the readjustment of cultivated lands has applied for a loan, or when owners of lands to be adjusted apply for a loan on their joint responsibility."

In article 7, II, the words "industrial guilds" are amended to read "union of industrial guilds" or "industrial guilds which are not members of a union of industrial guilds."

Supplementary clause: The date of operation of this law shall be determined by imperial ordinance.

(By virtue of Imperial Ordinance 330 of 1909 this law took effect on Dec. 1, 1909.)

LAW NO. 34, APRIL 12, 1909.

The law of the Hokkaido Colonial Bank is amended as follows:

In paragraph 3 of article 8, the words "industrial guilds" are amended to read "union of industrial guilds" or "industrial guilds which are not members of unions of industrial guilds."

Supplementary clause: The date of operation of this law shall be determined by imperial ordinance.

(By virtue of Imperial Ordinance No. 330 of 1909 this law took effect on Dec. 1, 1909.)

NOTE.—The reasons for the amendment given above may be summarized as follows:

The amendment to the law of the Hypothetic Bank of Japan is meant to enable the bank to make loans to fisheries or industrial guilds or take deposits therefrom.

The amendment to the law of agricultural and industrial banks is meant to extend the scope of loans to or deposits from fisheries, so that funds may be advanced more liberally.

The amendment to the law of the Bank of Formosa is meant to increase the amount of issuing bank notes in keeping with the general progress of the economic and financial world in Formosa.

The amendment to the Hokkaido Colonial Bank is meant to extend the scope of loans to fisheries.

SIAM.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909: No gold coinage. Silver, domestic recoinage, salungs (¼ tical), 137,779 pieces; value, 34,444.75 ticals.

2. (*a*) Coinage executed for other governments during 1909: Nil.

2. (*b*) Coinage executed at foreign mints for Siam during 1909: At Paris mint, 1,036,691 ticals.

3. Estimated weight of fine gold and silver used in the industrial arts during 1909: No information available in the ministry of finances.

4. United States gold coin imported and deposited at mint and melted during 1909: Nil.

5. Gold and silver produced from mines of the country during the calendar year 1909: The production of gold in Siam is so small as to be an unknown, negligible quantity. No silver is produced from the mines of Siam.

6. Approximate stock of gold and silver in the country on December 31, 1909:

Character of stock.	In public treasuries.	In banks.	In circulation.
Gold:	*Ticals.*	*Ticals.*	*Ticals.*
Coin		[1]	
Bullion	47,154.43	[1]	
Silver:			
Coin			
Bullion	33,212,376.00	[1]	[2] 100,000,000
	73,769.61	[1]	

[1] No information in the ministry of finances. [2] Estimated.

7. Amount of Government and bank notes outstanding at the end of the year 1909:

Issued by—	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
	Ticals.	*Ticals.*	*Ticals.*
Government	16,776,930		11,011,665.39
Banks of issue	62,103		[1]
Total	16,839,033		11,011,665.39

[1] No separate holdings.

8. Premium on gold: This question is not applicable to Siam, as the circulating medium is not gold, but silver or Government currency notes. The gold coins authorized under the gold standard act of 1908 have not yet been issued.

9. Laws passed during the year 1909 affecting the coinage, currency, or banking: No.

10. Report published on operations of mint: No.

11. (*a*) Import and export of gold, (*b*) import and export of silver, during the calendar year 1909:

GOLD.

Classification and country.	Imports.	Exports.

STRAITS SETTLEMENTS.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909:

Denomination.	Value.	
	Gold.	Silver.[1]
Domestic recoinage:		
Subsidiary silver	.....	$400,000
Straits dollars	.....	1,309,872
Total	.....	1,709,872

[1] Value in Straits dollars.

2. Coinage executed for other governments, or by other mints for Straits Settlements during the year 1909: None.

3. Estimated weight of fine gold and fine silver used in the industrial arts during 1909: Unknown.

4. United States gold coin imported during 1909: Unknown. Amount of same deposited at mints and melted during 1909: None.

5. Gold and silver produced from mines of the country during 1909:

Source of product.	Kilograms (fine).	Value.
		£ s.
Gold of domestic production	460.80	62,943 5
Gold from placer mining	(1)	.....
Silver of domestic production	377.00	.....

[1] An unrecorded amount of alluvial gold, about 1,000 ounces, in addition to the above, was won by an individual Malay gold washer in Pahang.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In public treasuries.	In banks.	In circulation.
Gold coin	£930	.....	(1)
Silver coin	[2] [3] $12,293,623	(4)	[2] $6,713,249
Silver bullion	[5] $8,400,679	.....	.....

[1] No gold in circulation.
[2] Value in Straits dollars.
[3] In dollars and half dollars.
[4] Unknown.
[5] Old dollars and half dollars.

7. Government and bank notes outstanding at the end of the year 1909:

	Straits dollars.
Government notes	29,878,505
Notes of banks of issue	555,515

8. Premium on gold during 1909:

	s. d.
Highest	2 4 1/16
Lowest	2 3 11/16
Average	[1] 2 4

Actual currency of the country: Straits dollars, silver and paper, with small coins (60 Straits dollars are legal equivalent of £7; that constitutes the gold basis of the currency of the country. Basis value is 2s. 4 1/16d. Banks allow $8.54 for a pound sterling).

The exchange value of the dollar fluctuated during 1909 from 2s. 3 13/16d. to 2s. 4 3/16d.; i. e., touched both extremes; working out, highest premium, two-thirds of 1 per cent; highest discount, two-thirds of 1 per cent; average, par.

9. Laws passed during the year 1909 affecting the coinage, currency, or banking:

ORDINANCE No. XXVII OF 1908.

[An ordinance further to amend "The currency note ordinance, 1899" (Dec. 2, 1908).]

(His seal.) John Anderson, governor and commander in chief.

It is hereby enacted by the governor of the Straits Settlements with the advice and consent of the legislative council thereof as follows:

1. This ordinance may be cited as "The currency note ordinance, 1899, amendment ordinance, 1908," and shall be read and construed as one with "The currency note ordinance, 1899," (hereinafter called "the principal ordinance"). Any copy of the principal ordinance printed after the commencement of this ordinance shall be printed with the amendments and additions required by this ordinance.

2. Section 3 of the principal ordinance is amended by inserting in the first line of subsection (2) after the word "Singapore" the words "and at such other places as the governor may appoint."

3. Subsection (4) of section 4 of the principal ordinance is repealed.

4. Section 7 of the principal ordinance is amended by the insertion of the words "or in London by the crown agents for the colonies" after the word "commissioners" in the third line of subsection (1) and of the words "or of the crown agents for the colonies" after the word "commissioners" in the fourth line of subsection (2) and also by the addition of a new subsection to be numbered (6) as follows:

"(6) The proportion of gold to silver in the coin portion of the fund shall as soon as practicable be raised to two of gold to one of silver."

5. Subsection (2) of section 7a of the principal ordinance is repealed and the following new subsection substituted therefor:

"(2) Of the reminted coins received from His Majesty's mint such number as is equal in face value to the total number of the old coins taken out to be reminted shall forthwith be placed in the coin portion of the fund for the ordinary purposes of the currency note issue."

6. Subsection (3) of section 7a of the principal ordinance is repealed and the following new subsection substituted therefor:

"(3) The balance, if any, of the reminted coins received by the commissioners, after replacing the old coins taken out to be reminted, shall first be applied in the payment of the costs of reminting and all charges in connection therewith and in making good any loss which may have been incurred by the sale as bullion of current coin and in the reminting of any subsidiary coin."

7. Subsection (4) of section 7a of the principal ordinance is repealed and the following new subsection substituted therefor:

"(4) If there shall still remain a balance of reminted coins after defraying the expenses mentioned in the preceding subsection, the whole or such part thereof as is equivalent in face value to the old coins still standing in the coin portion of the fund shall be exchanged for an equal number of the old coins so standing and the value as bullion of the old coins received in exchange shall be paid into a fund to be called the gold standard reserve."

[1] Par.

8. The following new subsection to be numbered (5) is added to section 7a:

"(5) Such further reminted coins, if any, as remain after the provisions of the preceding subsections have been satisfied, shall be exchanged for gold at such time or times as to the commissioners may seem fit and the gold so received in exchange shall be paid into the gold standard reserve."

9. The following new subsection to be numbered (6) is added at the end of section 7a:

"(6) After the old coins shall have ceased to be legal tender, the commissioners may, notwithstanding anything contained in this ordinance, continue to hold such old coins as still remain in the coin portion of the note guarantee fund for such time as the governor may direct.

"The proceeds of any sale of the old coins as bullion shall forthwith be paid to the note-guarantee fund, and the loss (if any) between the face value of these coins and the proceeds of their sale shall at once be made good to the note-guarantee fund from the gold-standard reserve so long as funds are available or otherwise at such time or times as the governor may direct."

10. Subsection (1) of section 7b of the principal ordinance is repealed and the following new subsection substituted therefor:

"(1) It shall be lawful for the commissioners to issue Straits Settlements dollars, 50-cent pieces, or currency notes in exchange for sovereigns payable in London to the crown agents for the colonies at a rate not less than the equivalent in sovereigns and not exceeding a rate which will afford a sufficient margin above the equivalent in sovereigns to cover all charges (including interest) which would be incurred in remitting to Singapore from London such equivalent in sovereigns."

11. Subsection (2) of section 7b of the principal ordinance is repealed and the following new subsections substituted therefor:

"(2) The sum so received in sovereigns may be kept in London in the custody of the crown agents. The equivalent in sovereigns of the Straits Settlements dollars, 50-cent pieces, and currency notes issued in the colony shall form part of the note-guarantee fund, and may be used by the commissioners for payments under the next succeeding section. The sum (if any) received in excess of the equivalent in sovereigns shall be paid into the gold-standard reserve.

"(3) In this section the expression 'equivalent in sovereigns' means the equivalent at the rate of 7 sovereigns for 60 Straits Settlements dollars."

12. Section 7c of the principal ordinance is repealed and the following new section substituted therefor:

"7c. (1) It shall be lawful for the commissioners to receive Straits Settlements dollars, 50-cent pieces, or currency notes in exchange for sovereigns payable in London by the crown agents for the colonies at a rate which will provide a sufficient margin above the equivalent in dollars to cover all charges (including interest) which would be incurred in remitting to London from Singapore the sovereigns so payable.

"(2) The Straits Settlements dollars, 50-cent pieces, or currency notes so received shall be kept in the custody of the commissioners. Such portion thereof as represents the equivalent in dollars of the sovereigns payable by the crown agents for the colonies shall be held by the commissioners for the ordinary purposes of the currency-note issue. The value in sterling of the sum in excess of such equivalent shall be credited to the gold-standard reserve.

"(3) In this section the expression 'equivalent in dollars' means the equivalent at the rate of 60 Straits Settlements dollars for 7 sovereigns."

13. The following new section, to be numbered 7d, is added to the principal ordinance:

"(7d) (1) It shall be lawful for the commissioners at any time when the amount of the silver coins forming part of the coin portion of the fund is less than one-sixth of the note issue to use any part of the gold forming part of the coin portion of the fund for the purchase of silver to be minted into current coin. The whole of the profit of such minting shall be paid into the gold-standard reserve.

"(2) The commissioners may at any time sell any silver coins forming part of the coin portion of the fund for the purchase of gold.

"(3) The proceeds of the sale of the silver coins shall be paid to the coin portion of the fund and the difference between the face value and the sale value of such coins in the case of a loss shall be made good to the coin portion of the fund from the gold-standard reserve, and in the case of a profit shall be paid into the gold standard reserve."

14. Section 9 of the principal ordinance is amended by omitting the words "general revenue of the colony" in the ninth line of subsection (2) and substituting therefor the words "gold-standard reserve."

15. Section 10 of the principal ordinance is amended by inserting between the word "fund" in the second line of subsection (4) (*b*) the following: "distinguishing gold from silver and showing separately the amount of coin held by the crown agents for the colonies or in transit from or to the colony or in the custody of the mint master during coinage," and by adding at the end of the same subsection the words "(*d*) the bullion value of the old dollars held as part of the note-guarantee fund under subsection (6) of section 7a."

16. Section 11 of the principal ordinance is repealed and the following new section substituted therefor:

"11. (1) The profits of minting subsidiary coin after deducting therefrom the costs of minting and all charges in connection therewith shall be paid to the gold-standard reserve, and any loss incurred in the conversion of the existing subsidiary coin into new subsidiary coin or by the sale of such coins as bullion shall be made good from the gold-standard reserve.

"(2) The gold-standard reserve shall be held in the custody of the commissioners or by the crown agents for the colonies, and shall be liable for all expenses of and incidental to the execution of this ordinance so far as they are not defrayed out of the income from the investment portion of the note-guarantee fund.

"(3) It shall be lawful for the commissioners to invest the whole or any portion of the gold-standard reserve in such gold securities as may from time to time be approved by a secretary of state. The interest accruing from such investments shall be paid to the gold-standard reserve.

"(4) Subject to the sanction of the governor, it shall be lawful for the commissioners, whenever it may be deemed necessary, to make use of any portion of the gold-standard reserve in the payment of currency notes.

"(5) Whenever the governor satisfies a secretary of state that the funds in the gold-standard reserve are sufficient, after meeting all liabilities against it, to cover the difference between the bullion value and the face value of all silver coins held by the commissioners as part of the note-guarantee fund, he may order the annual payment of the net balance to the gold-standard reserve made under the provision of subsection (2) of section 9 preceding, to be discontinued and the said net balance to be paid to the general revenue of the colony.

"(6) If the gold-standard reserve shall at any time be unable, either wholly or in part, to meet the demands upon it, then such demands shall be made good from the general revenue of the colony and the amount shall be recovered from the gold-standard reserve."

17. The following new section, to be numbered 15, is inserted after section 14 in the principal ordinance and the present sections 15, 16, and 17 of the principal ordinance are renumbered 16, 17, and 18:

"15. No person shall draw, accept, make, or issue any bills of exchange, promissory note, or engagement for the payment of money payable to bearer on demand, or borrow, owe, or take up any sum or sums of money on the bills or notes payable only to bearer on demand of any such person.

"Provided that checks or drafts payable to bearer on demand may be drawn on bankers or agents by their customers or constituents in respect of moneys in the hands of these bankers or agents held by them at the disposal of the persons drawing such checks or drafts.

"Any person contravening the provisions of this section shall, on conviction by a police court, be punishable with a fine equal to the amount of the bill, note, or engagement in respect whereof the offense is committed.

"Every prosecution under this section shall be instituted by the currency commissioners or by an agent duly authorized by them in writing.

"Notes issued by banks duly authorized by law so to do shall be exempt from the operation of this section."

18. This ordinance shall not come into operation unless and until the governor notifies by proclamation that it is His Majesty's pleasure not to disallow the same, and thereafter shall come into operation upon such day as the governor shall notify by the same or some other proclamation.

Passed this 27th day of November, 1908.

A. H. LEMON, *Clerk of Councils.*

[1] Straits currency.

12. Description of the coins of the country: "Legal tender (unlimited) in Straits Settlements and Federated Malay States consists of (1) sovereigns; (2) Straits Government notes of 1 dollar and upward; (3) coined dollars, silver (token) 2s. 4d. par. Basis, £7, equal to $60.

"The Straits Government is prepared normally to buy telegraphic transfers at 2s. $4\frac{3}{16}$d. (i. e., 28.1875 pence), or to sell same at 2s. $3\frac{13}{16}$d. (i. e., 27.8125 pence), thus keeping the sterling value of the dollar within boundaries which, in a country where the currency is on a gold basis (and not as here merely on a gold standard) would be called 'specie points' (i. e., at 2s. $3\frac{5}{16}$d.) it would possibly pay to import sovereigns from Australia or London, and at 2s. $3\frac{1}{16}$d. it might be good finance to ship sovereigns from here to London. By differentiating between gold basis and gold standard I merely point out that the Government is not under any legal obligation to give gold for notes and merely adopts the method of selling on London as an alternative device to maintain the efficiency of the gold standard."

OUTPUT OF GOLD AND SILVER IN THE FEDERATED MALAY STATES DURING 1909.

Items.	Weight.	Value.[1]
	Troy oz.	
Gold exported from the Federated Malay States in 1909	14,964.6	£57,987.16

Total	16,243.4	62,943.30

[1] Value at £3 17s. 6d. per ounce.

Silver: Twelve and fourteen-hundredths ounces of silver, worth about 25s., were exported from Negri Sembilan.

AMERICAN EMBASSY, LONDON, *April 25, 1910.*

AFRICA.

ABYSSINIA.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined during the calendar year 1909: None. No coinage was executed at Adis Ababa for foreign Governments, and no coinage was executed at foreign mints for Abyssinia during 1909.

3. Estimated weight of fine gold and fine silver used in the industrial arts during 1909: Very little. No statistics.

4. United States gold coin imported or deposited at mint and melted during 1909: None.

5. Amount of gold and silver produced from mines of the country during 1909: A small quantity of alluvial gold is washed by the natives in the rivers of western Abyssinia, but as it does not pass through the customs (is sold direct to merchants), no statistics are obtainable.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: Gold coin, approximately 1,000,000 Maria Theresa thalers; in public treasuries.

Silver coin (approximately):	Maria Theresa thalers.
In public treasuries	6,000,000
In banks	400,000
Total	6,400,000

7. Government and bank notes outstanding at the end of the year 1909: None.

8. Premium on gold during 1909:

Items.	Selling price.	Buying price.
	Francs.	*Francs.*
Highest premium	2.51	2.47
Lowest premium	2.22	2.17
Average premium	2.365	2.32

Actual currency of the country: Maria Theresa thalers and Menelik dollars.

9. Laws passed during 1909 affecting the coinage, currency, or banking: None.

10. There is no report published on the operations of the mint at Adis Ababa, which was not in operation during the year 1909.

11. (*a*) Import and export of gold during the calendar year 1909: None. There is a varying quantity of alluvial gold washed by the natives; the same is sold to merchants who use it for payment of foreign bills; it does not pass through the customs and no statistics are obtainable.

11. (*b*) Import and export of silver during the calendar year 1909: To Austria, approximate import by the Bank of Abyssinia and by private merchants during the year 1909, 2,500,000 Maria Theresa thalers (=$1,119,400 in United States currency).

12. Description of the coins of the country: Maria Theresa thaler equal to 54 to 80 kilograms salt, or 4.21 German marks (=2.32 francs or $0.44776 in United States currency).

EGYPT.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909: None. Nickel and bronze were coined, as hereunder:

Denomination.	Number of pieces.	Value.
New coinage:		*Egyptian pounds.*
Nickel—		
2-ochr-el-guerche	750,000	3,500
1-ochr-el-guerche	2,000,000	
Bronze—		
½-ochr-el-guerche	1,400,000	1,000
¼-ochr-el-guerche	1,200,000	

2. The coins enumerated under No. 1 were executed for the Egyptian Government, by the mint at Birmingham.

3. Fine gold and fine silver used in the industrial arts during the calendar year 1909: Unknown.

4. No imports of gold coin directly from the United States. United States gold coin deposited at mint and melted: None.

5. Gold and silver produced from mines of the country during 1909:

Description.	Kilograms (fine).	Value.
		£ E. s. d.
Domestic production:		
Gold from Barramia mines	90.209	12,304 11 10
Silver from Barramia mines	19.008	65 0 9

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In public treasuries.	In banks.	In circulation.
	Egyptian pounds.	*Egyptian pounds.*	*Egyptian pounds.*
Gold coin	202,823	Unknown.	Unknown.
Silver coin	624,779	2,587,500	

There is no gold bullion; stock of silver bullion unknown.

7. Bank notes outstanding at the end of the year 1909: Notes outstanding issued by National Bank of Egypt, 2,600,000 Egyptian pounds; gold holdings, 1,338,184 Egyptian pounds.[1]

8. Gold is not at a premium as compared with the actual currency of the country.

9. Laws passed during 1909 affecting the coinage, currency, or banking: None.

10. Report published on operations of mint: No report issued since 1906.

[1] Balance covered by securities (£ E. 1,261,815).

AMERICAN AGENCY AND CONSULATE GENERAL,
Cairo, March 27, 1909.

SIR: Referring to your letter of February 5, 1909, which contained the financial interrogatories in which you are especially interested, I beg leave to say in reply that, upon receipt of it, I went immediately to the officer of the financial adviser, who has just sent me a note, a copy of which I inclose to you. I tried to make personally some inquiries in the goldsmiths' bazaar, but was told that no definite estimates could be given. As the financial adviser's office is very keen on this point, I think there is no better source of information.

Your obedient servant,

LEWIS MORRIS IDDINGS,
Agent and Consul General.

DIRECTOR OF THE MINT,
Washington, D. C.

Copy.

CAIRO, *March 23, 1909.*

DEAR MR. IDDINGS: With reference to the inclosed letter from the Director of the Washington Mint, which you left with me some days ago, I have made inquiries on the three points raised by that letter.

(*a*) A few years ago, the head of the bureau de poinçonnement made some inquiries in the goldsmiths' bazaar with the object of arriving at an estimate of the amount of gold melted down into gold ornaments.

The estimate submitted for the year in question, 1905, was the enormous sum of £2,000,000, which, however surprising, was not inconsistent with the amount of gold coin registered through the customs as having been retained in the country during the period 1902–1905, viz, eleven millions sterling.

We are, however, quite unable to confirm the above estimate, which has not been made the subject of a systematic inquiry, and which, at best, does not amount to more than a rough guess.

(*b*) The output of gold from Egyptian mines was, in 1907, £20,714; in 1908, £7,868. As to the Sudan, I believe the output is confined to the Um Nabadi mine, which made no returns in 1907 and only a few hundred sterling in 1908. An inquiry from the Sudan government agent might elicit more precise information, if required.

(*c*) The question of the stock of gold coin in Egypt is bound up with that of the amount melted down in ornaments, since hoards may be kept in the form either of coin or of ornaments. In the absence of data for estimating the amount of the latter, any figures given of the stock of gold must include gold in all its forms.

The stock of gold usually stated as the stock of "gold coin" has formed the subject of several very diverse estimates. The following list, I believe, comprises them all:

Ottomar Haupt, 1891 (francs)	706,500,000
M. L. Muhleman, 1896 (dollars)	120,000,000
De Beaupuis, 1901 (pounds)	8,000,000
United States Mint, 1905 (dollars)	87,000,000
P. Arminjon and B. Michel, 1908 (Egyptian pounds)	33,000,000 to 41,000,000

It is a justifiable assumption that the only one of the foregoing estimates which is based on any scientific study is the last one. This has been worked out by the authors by a mathematical comparison of the curves of fluctuations in the gold and silver circulation during the last 20 years. The conclusion, however, is open to some discussion. Meanwhile their estimate remains, faute de mieux, as the only one which has any pretension to accuracy. The authors are careful to state that it includes coin lost, hoarded, and melted down.

"There is, of course, always a certain stock of coin in the hands of the banks, including, as the treasury correctly states, the 50 per cent of the coin held by the National Bank of Egypt against the note issue. This stock varies greatly according to the time of year and the activity of business, but it can never exceed a few millions, and, even were it accurately known, would furnish no guide to the amount of gold in the country.

"Messrs. Arminjon & Michel's method and estimates are explained in full in their work 'La Circulation, le Crédit et leurs Instruments en Egypte,' which can be obtained at any bookseller's in Cairo."

I hope the above information will meet the requirements of the Director of the Mint.

Yours, sincerely,

(Signed) H. P. Harvey.

[From Great Britain, House of Commons, Sessional Papers, 1905. 1904 Report on Egypt and Sudan.]

The Movement of the Currency.

[Note by Mr. Roussin. (P. 103.)]

At the opening of the year 1905 there was a superabundance of silver coin in circulation, due principally to a sudden fall in the price of cotton in December, 1904, which produced a corresponding restriction in the volume of trade and the demand for currency. Both gold and silver coin had been taken into circulation in large quantities during the preceding months; the issue of silver, indeed, surpassed all previous records, the total withdrawn from the Government treasuries during September, October, and November amounting to no less than £ E. 345,000.

It is highly probable that these large withdrawals were in a measure due to the anticipation on the part of certain sections of the public that the Government reserves would not prove sufficient to satisfy the demand for winter circulation, as in fact had been the case in the two preceding seasons. The ample provisions, however, which the Government had made rendered such a contingency practically impossible; £ E. 525,000 worth of new silver coin was struck during 1904, and the reserve in the treasuries never fell below £ E. 160,000.

After the demand for silver was artificially fostered in this way, the reaction following in the fall in cotton would naturally be the more severely felt. It was, as a matter of fact, shown in a marked manner throughout the country. Stocks of silver coin accumulated in the hands of bankers and merchants, who found it impossible to dispose of them. The superfluity of gold coin found its natural outlet through the medium of reexport, but that of silver remained as a clog on the international trade,

representing a lock-up of capital attended with loss to those who were unfortunate enough to find themselves its custodians.

To remedy this situation, and to relieve the community of an unequal burden, there was evidently some measure—and only one—indicated, to wit, the assumption of the charge by the Government. Arrangements were accordingly made in January to receive silver coin against gold at the Government treasuries and at the National Bank of Egypt. The circulation at once reduced itself and silver continued to flow into the treasury until the month of August, when the quantity in the hands of the public reached its minimum for the year. At this date the total amount returned to the Government out of the £ E. 345,000 in new silver coin issued nine months previously was £ E. 215,000, leaving £ E. 130,000 as a permanent addition to the circulation.

The following table shows at a glance the movement of the circulation from the opening to the close of the 1904–5 cotton season:

Coins.	In circulation.			Expansion.	Contraction.	Difference (i. e., net expansion).
	August, 1904.	November, 1904.	August, 1905.			
	£ E.	£ E.	£ E.	£ E.	£ E.	£ E.
Silver	1,801,000	2,145,700	1,931,400	344,700	214,300	130,400
Nickel	318,800	344,800	330,000	26,000	15,000	11,000
Bronze	10,900	11,200	11,700	800		800
Total	2,130,700	2,501,700	2,273,100	371,500	229,300	142,200

It may here be remarked that the contraction in the circulation of nickel coin is an unusual feature. Though introduced with some misgivings with the reform of the currency in 1886, the nickel coinage met with so great a success that the demand for it has, until this year, progressed almost independently of the periodical contractions exhibited in the circulation of silver.

The movement of the gold circulation during the 1904–5 seasons was similar, up to a certain point, to that of silver. Sovereigns were imported to the amount of 5,500,000, a portion of which was rendered superfluous, as has already been shown by the fall in the price of cotton. The redundancy thus created was accentuated by the liberation in January, 1905, of large reserves in specie held by the Caisse de la Dette, which, on being handed over to the Government in virtue of the new arrangement, were banked, and this contributed to swell the market resources. About 2,000,000 were shipped abroad, chiefly to England and India, in December and January. Part of this shipment, however, proved to have been premature, for fresh gold was imported in March and April, to be reexported in June and July. The total imports for the season aggregated £ E. 6,600,000, and the exports £ E. 3,600,000, leaving £ E. 3,000,000 as a permanent addition to the stock of gold in the country.

The expansion and contraction of the gold and silver circulation during the last four seasons are shown in the following table, collated with the cotton statistics for the same period:

Circulation.	1901–2	1902–3	1903–4	1904–5
GOLD.				
Imported (i. e., expansion)..... Egyptian pounds..	2,900,000	4,800,000	7,500,000	6,600,000
Exported (i. e., temporary expansion) retained..do....	1,800,000	1,800,000	2,500,000	3,600,000
Balance (i. e., permanent expansion).....do....	1,100,000	3,000,000	5,000,000	3,000,000
SILVER.				
Withdrawn from treasury (i. e., total expansion), Egyptian pounds.....	158,000	219,000	259,000	345,000
Returned to treasury (i. e., temporary expansion), Egyptian pounds.....	151,000	48,000	48,000	215,000
Balance (i.e., permanent expansion). Egyptian pounds..	7,000	171,000	211,000	130,000
COTTON.				
Quantity..... Cantars..	6,526,000	5,860,000	6,144,000	6,376,000
Value..... Egyptian pounds..	13,800,000	17,000,000	20,400,000	17,800,000

In the summer of 1905 it became necessary to make provision for the retirement in silver of the present season. The stock in the Government's hands at the end of July, including £ E. 100,000 in new coin received in March, amounted to £ E. 452,000. This sum would amply have sufficed the winter demand in any previous year, but in view of the very large crop anticipated and the possibility of high prices, it was thought advisable to supplement the reserve by a further £ E. 100,000, which was accordingly ordered from the Birmingham mint and arrived in November.

The event has shown that this extra provision was unnecessary, for the silver withdrawn from circulation up to the end of this year has not exceeded £ E. 214,000, as against £ E. 345,000 in 1904. The gold import which at the same period in 1904 amounted to 5,500,000, has reached only 3,500,000 in 1905.

The relative diminution in the demand for winter circulation has especial interest when contrasted with the fact that the cotton crop has come to market in rather larger quantities than last season and has commanded higher prices. Until the season has run its course it would be premature to assign to this phenomenon, with any certainty, its proper cause. The increasing stock of floating circulation, the restrictions in banking accommodation, the liberation of Government revenues formerly paid into the Caisse de la Dette, the expansion in the note circulation of the National Bank of Egypt; all these have probably been more or less important factors in the result. It may be that the movement of the silver circulation, though similar in appearance to that of the gold, is due, at least in part, to different causes, such as the absence of the artificial demand already described.

Trustworthy data bearing on the state of the circulation do not extend back over many years. It is hoped that a careful study of the details that are year by year accumulating may eventually throw light on the question of both general and particular interest in connection with the subject.

(Signed) L. G. ROUSSIN.

JANUARY 4, 1905.

[Memorandum by Mr. Roussin on the movement of the currency (p. 104).]

* * * * * * *

The Egyptian monetary system is on a gold monometallic basis, the unit being the Egyptian pound, which contains 7.4375 grams of fine gold ($4.943070626117); it is divided into 100 piasters. The British sovereign ($4.86655899823); the French 20-franc piece ($3.859052538), and Turkish pound ($4.396447027), are also legal currency in the country at the following fixed prices:

	Piasters.
Sovereign	97.50
20-franc piece	77.15
Turkish pound	87.75

The above-mentioned legal rates do not coincide with the mint par value of the several coins, which are as follows:

	Piasters.
Sovereign	98.45
20-franc piece	78.07
Turkish pound	88.94

All three kinds are therefore undervalued at the legal tariff rate, but while the differentiation against the sovereign is less than 1 per cent, those against the 20-franc piece and the Turkish pound amount to $1\frac{1}{16}$ per cent and $1\frac{1}{8}$ per cent, respectively.

Were the Egyptian mints open to free coinage of the Egyptian pound, the ordinary operation of Gresham's law would prevent the introduction of the undervalued foreign coins into circulation to any considerable extent. The gold coin or bullion imported would be taken to the mint and coined into Egyptian money.

Egyptian gold coins have not, however, been minted for many years, and very few of them remain in circulation. Their place is supplied by the legal tender foreign gold coins. But as between these coins, the legal tariff rates shown above discriminate considerably in favor of the sovereign, the 20-franc piece and the Turkish pound both being undervalued with respect to it. It follows, therefore, by Gresham's law again, that the former must drive the latter out of circulation; such is in fact the case, the currency of Egypt consisting almost exclusively of British sovereigns.

It is only when the exchange value of the pound sterling in francs rises sufficiently far above the mint par to compensate for the difference in the legal tariffs that it becomes feasible to import 20-franc pieces into Egypt at the same profit as sovereigns, and only then if the conditions of the Paris market permit of the obtaining of gold for export without a premium or other extra charges. The mint par of the pound sterling in francs is 25.2214 francs, but the legal tariff in Egypt gives it a conventional value

in francs of 25.2754. It is at the latter rate, therefore, that the sterling exchange must rise in Paris to permit of the profitable export of French gold from that center. It is, however, matter of common knowledge that the rate of exchange in Paris on London has fallen very short of this level during recent years.

The preponderance of the British coin is further strengthened by the comparative ease with which sovereigns can be obtained from the London money market. But, notwithstanding all the circumstances that militate in its favor and against the 20-franc pieces, the customs returns bear testimony to the efforts that have been made to introduce the latter coin into circulation, at the same time that they show with how little success those efforts have been rewarded. Thus the gold coin declared on importation and exportation at the customs during the last 18 years appear as follows:

Items.	Sovereigns.	20-franc pieces.	Other gold coins.	Total.
	£ E.	£ E.	£ E.	£ E.
Imports	60,600,000	7,600,000	3,100,000	71,300,000
Exports	29,600,000	6,300,000	2,600,000	38,500,000
Net imports	31,000,000	1,300,000	500,000	32,800,000

These figures indicate the small proportion of 20-franc pieces retained in the country out of the total imported, while, in the case of the sovereigns, more than one-half of the gross import has remained as a permanent addition to the stock of gold in the country.

The undervaluation of the 20-franc piece is no recent innovation, dating back, as it does, to the time of Mehemet Ali. It does not appear to have any practical utility. On the contrary, to confer legal tender on the 20-franc piece at its mint par equivalent would probably help to give stability to the Egyptian monetary system.

The subsidiary currency consists of silver, nickel, and bronze coins, which are coined in limited quantities by the Government according to requirements. Their token value is considerably above their metallic value, and they are legal tender only in small amounts. They represent decimal subdivisions of the Egyptian pound.

* * * * * * *

While it would be unsafe to put forward any estimate of the future demand for gold for this country, a conjecture may be hazarded that, given another cotton crop of equal value, the gold for extra currency will be less acute, and more easily satisfied, than on this occasion. The stocks of precious metals held in Egypt and yearly augmenting, the use of credit instruments is making gradual, though slow, progress, and it is reasonable to hope that both the local and foreign markets may be better prepared for the emergency.

Of hardly less interest than the phenomena exhibited by the expansion of the currency are those connected with the subsequent contraction. A certain portion of the extra currency required during the cotton season remains in circulation or it is hoarded; the remainder is returned, the surplus silver being paid into the Government treasury, while the surplus gold is exported. The quantities retained in circulation or hoarded out of the sums taken during the recent successful cotton seasons have been very large. The following are the figures of the gold coin that has been added to the permanent stock of the country during the last five years:

	Egyptian pounds.
1902-3	3,000,000
1903-4	5,000,000
1904-5	3,000,000
1905-6	1,640,000

These sums are far larger than would be required for circulating purposes by the normal rate of increase of the population. The excess is to be accounted for, partly by the stimulus given to commercial activity by profitable cotton seasons, coupled with the comparatively slow progress of the credit system, and partly by the predilection of the native for hoarding his gains. This prosperity is common, not only among the poorer class of natives, but also among the well-to-do. Some remarkable instances have recently been adduced to show that the native, even when possessed of hoarded wealth, will borrow money at interest in order to conceal the fact. Inquiries made among the native goldsmiths in Cairo have elicited the information that very large quantities of gold coins are annually melted down and converted into ornaments.

* * * * * * *

If the gold currency consisted of Egyptian coins only, fresh imports would be needed every autumn as at present, but the coin or bullion imported would need to be coined into Egyptian money before it could be used.

* * * * * * *

(Census of Egypt, 1907, population, 11,287,359.)

GOLD COAST COLONY.

Total quantity and value of gold and gold dust exported from the Gold Coast Colony by different mining companies during the year 1909, 254,303.55 ounces, valued at £982,591 18s. 9d.

Total quantity and value of concentrates exported from the Gold Coast Colony by different mining companies during the year 1909, 33,409.14 ounces, valued at £25,414 0 s. 11d.

T. J. WOOD,
Comptroller of Customs.

VICTORIABORG-ACCRA, *January 27, 1910.*

CAPE OF GOOD HOPE.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined, coinage executed for other Governments, or by other mints for Cape Colony during the calendar year 1909: None. No mint.

3. Estimated weight of fine gold and fine silver used in the industrial arts during 1909: Nil.

4. United States gold coin imported and deposited at mint and melted during 1909: Nil.

5. Gold and silver produced from mines of the country during 1909:

STATEMENT SHOWING GOLD PRODUCED FROM MINES AND DIGGINGS IN CAPE COLONY DURING THE YEAR 1909.

Locality.	Weight in kilograms.	Value.
		£ s. d.
Division of Knysna, Millwood	2.208219	[1] 274 0 11½
Wodehouse Kraal	2.726221	[2] 282 14 10
Total	4.934440	556 15 9½

[1] Taking £3 15s. as value per ounce. [2] Actual value.

The Millwood gold in the above return is from alluvial deposit; the Wodehouse Kraal gold is from reef formation.

No silver is recorded as having been produced.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

STATEMENT OF JOINT STOCK BANKS ON DECEMBER 31, 1909.

Assets and liabilities.	Total value.
	£ s. d.
Coin in bank coffers	6,381,868 4 11
Coin in transit	39,660 0 0
Bullion in hand or in transit	279,092 7 3
Cape government securities	1,708,626 18 7
Other government securities	2,764,341 17 7
Notes in hand of other banks	260,073 17 8
Reserve fund	2,645,721 19 3
Legal-tender notes in circulation	1,078,163 0 0
Other notes in circulation	723,570 0 0

NOTE.—The cash in hand of public officers on December 31, 1909, was £28,000.

7 and 8. Government and bank notes outstanding at the end of the year 1909; and premium on gold during 1909: No reply.

9. No new laws were passed during the year 1909 affecting the coinage, currency, or banking.

10. Annual Report of the Inspectors of Mines and Claims for 1908 is forwarded herewith.

11. (*a*) Import and export of gold, (*b*) import and export of silver during the calendar year 1909:

GOLD.

12. The coins of the country are the same as those of Great Britain.

KONGO.

BOMA.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909: Gold: New coinage, none; recoinage, Latin, English, and German gold used. Silver: New coinage, none. The withdrawal of Kongo coins has begun and they are being replaced by the divisional pieces of the Latin Union.

2 (*a*) and (*b*). Coinage executed for other governments and coinage executed at foreign mints for the Kongo during 1909: None.

3. Amount of fine gold and fine silver used in the industrial arts during the calendar year 1909: Gold, foreign coin, 10 kilograms (English); silver, without basis.

4. Import of United States gold coin and United States gold coin melted at mint during 1909: None.

5. Gold and silver produced from mines of the country during 1909: (No reply.)

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: In public treasuries, gold coin, 352,323.65 francs; silver coin, 1,473,200 francs.

7. Amount of Government notes outstanding at the end of the year 1909:

Government notes:	Francs.
100-franc notes	490
10-franc notes	1,239
Gold holdings	250,000

8. There is no premium on gold.

9. Laws passed during 1909 affecting the coinage, currency, or banking:

[Translation.]

Copper Coin for the Belgian Kongo.

[From L'Economiste Européen, Paris, April 2, 1909.]

The Official Bulletin of the Belgian Kongo contains a decree relative to the establishment of copper coin in the Belgian Kongo. That decree declares that the special copper coins for the colony shall be of 1, 2, 5, 10, and 20 centimes. Those of 1 and 2 centimes are to be made of pure copper, while the metal in the others shall be composed of nickel and copper, the alloy to contain an average of 25 per cent nickel. They are to be pierced in the center with a round hole of the diameter of 3.6 millimeters for the 1-centime pieces; 4.6 millimeters for the 2 centimes; 3.5 millimeters for the 5 centimes; 4 millimeters for the 10 centimes; and 4.5 millimeters for the 20 centimes. They will carry on the obverse a double L, surmounted by the royal crown repeated five times around the center of the coin and legend "Congo belge-Belgisch-Congo;" on the reverse, the five-pointed star and the arms of the colony—the hole in the coin forming the center of the star—with the indication of the value and the fineness.

The copper coins shall be struck with a grooved rim and those of nickel with a smooth rim.

The weight is fixed for the 1 centime at 2 grams; 2 centimes, 4 grams; 5 centimes, 2½ grams; 10 centimes, 4 grams; 20 centimes, 6 grams. The diameter is fixed for the 1-centime pieces at 18 millimeters; 2 centimes, 23 millimeters; 5 centimes, 19 millimeters; 10 centimes, 22 millimeters; 20 centimes, 25 millimeters.

The odd copper and nickel coins established by the decrees of July 27, 1887, and August 27, 1906, shall continue to have provisional currency in the colony. A royal regulation will arrange the date on which these coins shall not have further currency and shall not be received any longer in the cash offices of the State.

[Translation.]

The Silver Coins of the Belgian Kongo.

[From L'Economiste Européen, Paris, May 7, 1909.]

The Official Bulletin of the Belgian Kongo has published the following regulation, dated April 14, and put into execution by law of October 18, 1908:

Article 1. The silver coins of 5 francs, 2 francs, 1 franc, and 50 centimes, coined by the Independent State of the Kongo by virtue of the decree of the reigning King, July 27, 1887, shall cease to have legal currency in the colony from October 1, 1909.

Art. 2. Up to July 1, 1911, these coins shall be exchanged against the coins of account (legal coins) by the colonial treasury at Brussels and by the cash offices of the Kongo, which shall be designated by the minister of the colonies. They shall continue to be received at all the public cash offices of the colony up to the date above mentioned in discharge of taxes, contributions, or for any other payment.

Following after that decree the same bulletin published a regulation by the minister of the colonies designating the cash offices of the colony set apart to the services of finances for the exchange of the above-described coins.

Paper Relative to Article 11 of the Law upon the Government of the Belgian Kongo.

[Extract from the report of the parliamentary commission of the XVII to the session of the Chamber of Representatives of April 3, 1908.]

Article 9 (of the plan). "Gold and silver coins shall have currency in Belgium and the Kongo under the same conditions.

"A royal decree will arrange the date at which the silver coins struck by the Independent State of the Kongo shall not have further currency and shall not be any more exchanged by the colonial treasury.

"The profit which will result from the coining of Belgian coins necessary for the colony shall be assigned to the colonial budget.

"It is lawful for the King to coin special copper coins for the colony; these coins will not have currency in Belgium."

That arrangement is just as important for Belgium as for the future colony:

For Belgium, by reason of the revulsion that the measure may have upon the monetary situation.

For the colony, where the free introduction of the coin is called to exercise a happy influence upon the native.

Belgium made part of the Latin Union. What will eventually be the effect of the annexation of the immense territories of the Kongo and the necessities of the inhabitants for coin upon the convention of those countries to which Belgium has been a party?

They consider that that question will be the first to occupy the convention.

10. No report is published on the operations on the mint. There is no department of mines.

11. (*a*) Import and export of gold during 1909: Imports, gold coin, 100,000 francs; exports, gold coin, 1,154,210 francs.

11. (*b*) Import and export of silver during 1909: Imports, silver coin, 1,830,000 francs; exports, silver coin, 830,016.50 francs (divisional coins of the Independent State of the Kongo and of Greece).

Independent State of the Kongo.

French, German, and English coins; brass wire, mitako, equal to 52–55 centimeters, 25 millimeters thick, equal to 8 cents.

Silver pieces of 5 francs, 2 francs, 1 franc, and 50 centimes (decree of July 27, 1887); copper pieces of 1, 2, 5, and 10 centimes (same decree); state notes of 10 and 100 francs (decree of February 7, 1896); nickel pieces of 5, 10, and 20 centimes (decree of August 27, 1906). The silver pieces will not have currency after October 1, 1909; they will be exchanged for legal tender, in the public pay offices, until July 1, 1911.

Belgian Kongo.

The gold and silver coins coined by the countries of the Latin Union having currency in Belgium have currency in the colony, as well as the English gold pieces (pound sterling, valued at 25 francs; half pound, valued at 12.50 francs) and German (20 marks, valued at 24.40 francs; 10 marks, at 12.20 francs). The notes of the Belgian National Bank have currency provisionally.

The notes and coins of the late Independent State of the Kongo continue to have currency in the Belgian Kongo, with the above-mentioned restriction concerning the silver pieces.

The Greek silver pieces of 2 francs, 1 franc, and 50 centimes and 20 centimes are no longer accepted in the pay offices of the colony since September 1, 1909.

Colony of the Kongo.

The monetary system of the late Independent State of the Kongo was regulated by the decree of the reigning King, with date of July 27, 1887.

The coin of account was the gold franc. The legal-tender coin of payment was the 20-franc piece, which was not coined. The fractional silver coins being the 5-franc, 2-franc, 1-franc, and 50-centime pieces, struck under the same conditions as to fineness, tolerance, and diameter as the coins of the Latin Union. These fractional coins being exchangeable at the treasury of the state in Brussels against their values, or payable at sight. The odd coins being copper pieces of 10, 5, 2, and 1 centimes.

A decree of August 27, 1906, created, besides, odd coins with nickel alloyage, in denominations of 20, 10, and 5 centimes. There were coined:

	Francs.
In fractional silver coins	1,900,000.00
In copper coins	[1] 49,300.70
In nickel coins	235,000.00

By virtue of article 11 of the law of October 18, 1908, upon the Government of the Belgian Kongo, the gold and silver coins having currency in Belgium have currency under the same conditions in the Belgian colony. It is lawful for the King to coin special copper coins for the colony. These coins do not have legal currency in Belgium.

[1] 15,485.70 francs were remelted in 1906 and 1908, and the metal was used for the coinage of nickel alloyed coins.

In conformance with the provisions of that law, a royal decree of April 14, 1909, has demonetized the silver coins of the Independent State of the Kongo. These coins ceased to have legal currency in the colony from October 1, 1909; but up to July 1, 1911, they will continue to be accepted by the colonial treasury and the public cash offices of the Kongo.

The International Monetary Convention of November 4, 1908, carried the quotas of coins for each state of the union to 16 francs per head of the population, and estimated the population of the Belgian Kongo for the application of that provision to 10,000,000 inhabitants. The coinages must be made by the employment of Belgian écus. By special provision Belgium has been authorized to use equally the silver coins issued by the Independent State of the Kongo for the manufacture, which are thus incorporated with the 5-franc pieces.

In 1909 a first amount of 900,000 francs of these coins has been remelted. The counter value has been assigned to the colony. During the year the national bank has remitted to the minister of the colonies and various organizations operating with the Kongo, such as the special committee of the Katanga, the Bank of the Kongo, etc., the following coins:

	Francs.
Gold	170,000
Belgian écus	994,250
Belgian coins of 2 francs	252,000
Belgian coins of 1 franc	682,250
Belgian coins of 50 centimes	260,000
Total	2,358,500

On January 1, 1910, the colony, besides, had 1,000,000 francs in silver coins of the Independent State of the Kongo which had not yet been remelted. They must also take into account the silver coins of various countries of the union which have been imported through the ordinary way of exchange.

A decree of March 15, 1909, created for the colony sepcial coins with nickel alloyage, of 20, 10, and 5 centimes, and copper coins of 2 and 1 centimes. The same decree regulated that the copper and nickel coins issued by the Independent State of the Kongo should continue to have provisional currency.

The nickel and copper coins are pierced in the center with a circular hole. The design is the same for the various types and not different from the old coins of the State of the Kongo, except by the double inscription, "Congo-belge-Belgisch-Congo." The weights and diameters of the 10 and 5 centime pieces are the same as the Belgian pieces of the same value. The 20-centime piece weighs 6 grams and has a diameter of 25 millimeters.

In 1909 the monetary factories coined an amount of 300,000 francs in nickel coins, namely:

	Francs.
20-centime pieces	60,000
10-centime pieces	150,000
5-centime pieces	90,000

The net profit of this coinage assigned to the colony amounted to 254,000 francs.

A new coinage of nickel for 1,000,000 francs is going to be made.

MADAGASCAR.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909: Gold, 63,990 francs; silver, 19,734,911 francs.

2. Coinage executed for other governments, or by other mints, for Madagascar during 1909: No mint in Madagascar (coinage for same made at French mint).

3. Estimated weight of fine gold and fine silver used in the industrial arts during 1909:

Material used.	Gold.	Silver.
	Fine ounces.	
New bullion	232,919	
Old plate, jewelry, etc	168,062	
Foreign coin	325,799	
Total	726,780	

4. United States gold coin imported during 1909: None.
5. Gold and silver produced from mines of the country during 1909:

Description.	Kilograms (fine).	Value.
		Francs.
Gold:		
From deep mines	668.005500	1,870,415.40
From placer mining	3,021.863629	8,487,818.16
Total	3,689.869129	10,358,233.56

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: Though request has been made upon the governor general of Madagascar for the approximate stock of gold and silver coin and bullion and stock in the public treasuries and banks and in circulation, the following figures were given:

	Francs.
Gold coin	63,990
Silver coin	19,734,911

It must be stated, however, that after investigation at the agency of the Comptoir National d'Escompte de Paris at Tamatave, the stock in the public treasuries, banks, and in circulation, given by the director of that establishment, amounted, on December 31, 1909, to 26,000,000 francs.

7. Government and bank notes outstanding at the end of the year 1909: There are no bank notes issued in Madagascar, that Government not having the privilege to issue any.

8. There is no premium on gold.

9. No laws were passed during 1909 affecting the coinage, currency, or banking.

10. Report on operations of mint: No mint.

11 (*a*). Imports and exports of gold during the calendar year 1909: Gold ore was exported from Madagascar valued at 10,207,967 francs.

11 (*b*). Imports and exports of silver during the calendar year 1909: None.

MONTENEGRO.

Memorandum on Montenegrin Coinage.

The Montenegrin coinage is based on the units of para and perpera or crowns; 100 para = 1 perpera or crown. The pieces are of copper (1 and 2 para), nickel (10 and 20 para), silver (1, 2, and 5 crowns), gold (10, 20, and 100 crowns).

The copper pieces are of an alloy containing 950 parts of copper, 40 parts of tin, and 10 parts of zinc. The nickel pieces are without alloy. The silver pieces contain 835 parts of silver and 165 parts of copper. The gold pieces contain 900 parts of gold and 100 parts of copper.

The total number of pieces struck to date is as follows:

Denomination.	Weight.	Number of pieces.	Total value.
	Grams.		*Crowns.*
1 para (copper)		200,000	2,000
2 paras (copper)		850,000	17,000
10 paras (nickel)	2.000	1,000,000	100,000
20 paras (nickel)	4.000	1,000,000	200,000
1 crown (silver)	5.000	500,000	500,000
2 crowns (silver)	10.000	300,000	600,000
5 crowns (silver)	25.000	60,000	300,000
10 crowns (gold)	3.750	40,000	400,000
20 crowns (gold)	7.500	30,000	600,000
100 crowns (gold)	375.000	300	30,000

TABLE OF WEIGHTS OF MUSKAT (MASKAT).

7 ratties (i. e., gunj) = ¼ ibrami or mitkal.
14 ratties (i. e., gunj) = ½ ibrami or mitkal.
21 ratties (i. e., gunj) = ¾ ibrami or mitkal.
28 ratties (i. e., gunj) = 1 ibrami or mitkal.
7 mitkals or ibrami (8 huruf) = 1 riyal or kursh.
6 riyals = 1 kyass.
24 kyass = 1 mann.
7½ mann = 1 ferra.
20 ferras = 1 kandi.

NOTE.—The Sultan misunderstood, and gave the weights in use in Oman. The key to his table is the "riyal" or "kursh," which are but different names for the Maria Theresa dollar.

SOUTH AFRICA.

TRANSVAAL.

Answers to interrogatories, 1909.

1 and 2. No coinage executed. The mint has not been worked since the British occupation of the Transvaal.

3 Estimated weight of fine gold and fine silver used in the industrial arts during the calendar year 1909: No returns.

4. United States gold coin imported and deposited at mint and melted during 1909: Nil.

5. Output of gold and silver from the mines of the country during 1909:

Derivation.	Kilograms (fine).	Value.
Gold:		
From deep mines (reef)	226,851.677	[1] £30,980,587
From placer mining (alluvial)	51.720	[1] 7,063
Total	226,903.397	[1] 30,987,650
Silver:		
Contained in gold bullion [2]	24,892.259	[3] 84,420
Contained in shipments of Baba minerals [2]	418.342	[3] 1,320
Total	25,310.601	[3] 85,740

[1] Value at £4.24773 per fine ounce.
[2] No silver is produced direct from silver mines.
[3] Commercial value.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In public treasuries.	In banks.	In circulation.
		£. s. d.	
Gold:			
Coin	Nil.	3,382,531 10 00	[1]
Bullion	Nil.	273,897 12 11	
Silver:			
Coin	Nil.	91,731 5 3	[1]
Bullion	Nil.		
Total		3,748,160 8 2	

[1] No statistics available.

7. Amount of Government and bank notes outstanding at the end of the year 1909: There were no Government notes outstanding on December 31, 1909. Banks of issue (notes outstanding): £574,916 10s. Gold holdings and legal-tender silver holdings: Nil.

8. Premium on gold: This would depend on the current rate of exchange. No statistics available. Gold is the standard currency of the colony. Silver is legal tender up to 40s.; copper up to 1s.

9. No laws were passed during the year 1909 affecting the coinage, currency, or banking.

10. Report published on operations of mint: (See answer to question No. 1.)

11. (*a*) Import and export of gold, (*b*) import and export of silver during the calendar year 1909:

GOLD.

Classification and country.	Imports.	Exports.
Gold coin:		
Portuguese East Africa	[1] £663,700	
Other States in South Africa Customs Union	[1] 1,458,154	
Total	[1] 2,121,854	
Gold bullion, United Kingdom	378	
Gold ore, United Kingdom		£30,660,886

SILVER.

Silver coin:		
Portuguese East Africa	[1] £5,600	
All other States in the South African Customs Union	[1] 50,706	£29,185
Total	56,306	29,185
Silver bullion, United Kingdom	165	

[1] All British coin.

Raw gold is described by the Transvaal Chamber of Mines as follows: "Raw gold is bullion recovered from the ore by amalgamation, cyaniding, or other processes before it has been refined. It contains anything up to, say, 950 parts of pure gold to the thousand parts."

THE TRANSVAAL GOLD OUTPUT, 1909.

[From The Mining Journal, London, Jan. 15, 1910.]

Months.	The Rand.		Outside districts.		Total.

ZANZIBAR.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined, coinage executed by other governments, or by other governments for Zanzibar during the calendar year 1909: None.

3. Gold and silver used in the industrial arts during 1909: Unknown.

4. United States gold coin imported during 1909: None.

5. Gold and silver produced from mines of the country during 1909: None.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: In public treasuries, 1,864 rupees; in banks, unknown; in circulation, unknown.

7. Amount of government and bank notes outstanding at the end of the year 1909:

	Rupees.
Notes outstanding (Government)	805,000
Legal-tender silver holdings (Government)	550,155

8. Highest premium on gold during 1909: Rs. 15/2. Actual currency of the country, Government of India rupee; sovereign of Rs. 15.

9. Laws passed during 1909 affecting the coinage, currency, or banking:

CURRENCY (AMENDMENT) DECREE.

Decree by His Highness Seyyid Ali Bin Hamoud, Sultan of Zanzibar. No. 21 of 1909.

In the name of the most merciful God.

Whereas it is expedient to issue currency notes under "The currency decree, No. 3 of 1908," of denominations different from those set forth in section 5 (1) of the said decree:

It is hereby decreed as follows:

1. In section 5, subsection (1), after the figures and word "20 rupees," the following figures and word shall be inserted: "50 rupees," and after the figures and word "100 rupees," the following words and figures shall be inserted, "and any multiple of 100 rupees as from time to time shall be determined by the currency board."

2. This decree may be cited as "The currency decree, 1909," and shall be read and construed as one with "The currency decree, 1908," and the two decrees may be cited as "The currency decrees, 1908 and 1909."

Given at Zanzibar this 2d day of December, 1909.

(For His Highness Seyyid Ali Bin Hamoud):

KHALED BIN MAHOMED BIN SAID.

11. (*a*) Import and export of gold during the calendar year 1909: Gold bullion exported to India to a value of 14,700 rupees.

11. (*b*) Import and export of silver during the calendar year 1909:

Classification and country.	Imports.	Exports.
	Rupees.	*Rupees.*
Silver coin:		
Germany	133	.....
Aden	183,350	.....
Muscat	2,020	.....
India	1,160,865	652,178
British East Africa	18,572	115,050
Italian Benadir	56,533	852
German East Africa	4,000	79,844
South African ports	14,100	.....
Total	1,439,573	847,924

AUSTRALIA.

COMMONWEALTH.

Answers to interrogatories, 1909.

1. Amount of gold and silver coined during the calendar year 1909:

Denomination.	Number of pieces.	Value. £	s.	d.
New coinage:				
Sovereigns	9,610,779	.....		
Half sovereigns	230,116	.....		
Total	9,840,895	9,725,837	0	9
Recoinage, domestic and foreign [1]		188,008		

[1] Separate returns not available; light gold coin received for coinage.

Up to the end of 1909 British silver coin was supplied to the Commonwealth States of Australia; since then a local silver currency is, under an arrangement with His Majesty's Government, gradually taking its place. There is no coinage of silver in the Commonwealth mints.

2 (*a*) and (*b*). Coinage executed for other Governments, and coinage executed at foreign mints for Australia during 1909: Nil.

3. Fine gold and fine silver used in industrial arts during the calendar year 1909: Gold, about, 45,104 fine ounces (no details as to classification). Silver: No information available.

4. Amount of United States gold coin imported or deposited at mint and melted during 1909: No record.

5. Output of fine gold and fine silver from mines of the country during the calendar year 1909:

States, etc.	Kilograms (fine).	Value.
COLONIAL PRODUCTION.		
New South Wales	6,366.494	£889,546
Victoria	20,346.444	2,778,956
Queensland	14,168.035	1,935,178
South Australia	397.956	54,354
Western Australia	49,613.298	6,776,274
Tasmania	1,392.574	190,201
Total Commonwealth	92,285.343	12,604,509

6. Approximate stock of gold and silver coin and bullion in the country on June 30, 1909: Stock in banks, £26,297,843. Amount in public treasury and in circulation: Not available.

7. Amount of Government and bank notes outstanding June 30, 1909:

Issued by—	Notes outstanding.	Gold holdings and legal-tender silver holdings.
Government	£1,554,720	[1]£553,210
Banks of issue	3,510,627	
Total	5,065,347	553,210

[1] There is no special allocation of gold and silver to cover note issue.

8. There is no premium on gold.

9. Laws passed during 1909 affecting the coinage, currency, or banking: An important act has just passed the Commonwealth Parliament providing for issues of notes by the banks to be supplanted by Government issues, to be secured by a reserve held by the treasury, a copy of which will be forwarded to you.

10. The Commonwealth mints being hand mints, no separate reports are published beyond those included in the Annual Report of the Deputy Master of the Royal Mint, London.

11. (*a*) Import and export of gold, (*b*) import and export of silver during 1909:

THE COMMONWEALTH OF AUSTRALIA.

No. 11 of 1910. (Assented to Sept. 16, 1910.)

[An act relating to Australian notes.]

Be it enacted by the King's Most Excellent Majesty, the Senate, and the House of Representatives of the Commonwealth of Australia, as follows:

PART I.—*Preliminary.*

1. This act may be cited as the Australian notes act, 1910.
2. This act shall commence on a day to be fixed by proclamation.
3. In this act, unless the contrary intention appears, "bank" means a person or company carrying on the business of banking; "bank note" means a bill or note for the payment of money issued by a bank and payable to bearer on demand and intended for circulation; "constable" includes any member of the police force of the Commonwealth or of a State or of part of the Commonwealth; "treasury bill" means a treasury bill under this act.
4. (1) From and after six months after the commencement of this act—
(*a*) A bank shall not issue, or circulate as money, any note or instrument for the payment of money issued by a State and payable to bearer on demand; and
(*b*) A note or instrument for the payment of money issued by a State and payable to bearer on demand shall not be a legal tender.
(2) A bank which, in contravention of this section, issues or circulates as money any note or instrument issued by a State and payable to bearer on demand shall be liable to a penalty not exceeding five hundred pounds.
(3) Proceedings for an offense against this section shall only be instituted by the attorney general or by a person acting under his authority.

PART II.—*Australian notes.*

5. The Governor General may authorize the treasurer from time to time to—
(*a*) Issue Australian notes.
(*b*) Reissue Australian notes; and
(*c*) Cancel Australian notes.
6. (1) Australian notes may be issued in any of the following denominations, namely, ten shillings, one pound, five pounds, ten pounds, or any multiple of ten pounds, and shall—
(*a*) Be issued from and bear date at the Commonwealth treasury;
(*b*) Be a legal tender throughout the Commonwealth and throughout all territories under the control of the Commonwealth; and
(*c*) Be payable in gold coin on demand at the Commonwealth treasury at the seat of government.
(2) Until the Parliament meets at the seat of government, the seat of government for the purposes of this section shall be deemed to be at Melbourne.
(3) Australian notes shall bear thereon the signatures of such officers as the treasurer directs. The signatures may be made in the handwriting of the officers or may be made by engraving, lithography, or any mechanical process approved by the treasurer.
7. In issuing Australian notes the treasurer may use the note forms of any State or of any bank, with such alterations as he thinks necessary, notwithstanding that such forms have printed or written upon them a date antecedent to the commencement of this act.
8. (1) The moneys derived from the issue of Australian notes and any interest thereon shall be placed to the credit of an account called the Australian notes account, which shall be a trust account within the meaning of the audit acts, 1901–1906.
(2) Part of the moneys standing to the credit of the Australian notes account shall be held by the treasurer in gold coin for the purposes of the reserve provided for in section nine of this act, and the treasurer may invest the remainder or any part thereof—
(*a*) On deposit in any bank, or
(*b*) In securities of the United Kingdom, or of the Commonwealth, or of a State.
(3) The treasurer may sell or dispose of any securities in which any moneys to the credit of the Australian notes account are invested.
(4) The moneys standing to the credit of the Australian notes account may be expended—
(*a*) In the redemption of Australian notes, and
(*b*) In the payment of the expenses of the administration of this act.

9. (1) The treasurer shall hold in gold coin a reserve as follows:
(*a*) An amount not less than one-fourth of the amount of Australian notes issued up to seven million pounds; and
(*b*) An amount equal to the amount of Australian notes issued in excess of seven million pounds.
(2) In ascertaining the amount of Australian notes issued, the amount of notes which have been redeemed shall not be included.
10. The treasurer shall not pledge any Australian notes or deposit them with any bank or person as security for money.
11. (1) On the last Wednesday of each month, an officer appointed for the purpose by the treasurer shall prepare and sign a statement, showing at that date—
(*a*) The number and amount of Australian notes issued and not redeemed, and
(*b*) The amount of gold coin held by the treasurer for the purposes of this act.
(2) The statement shall be countersigned by the treasurer and published in the Gazette.
12. (1) Every bank shall—
(*a*) Keep, in accordance with the prescribed form, a record of all bank notes issued or reissued by the bank after the commencement of this act and not redeemed by the bank at the close of business on Monday of every week, and
(*b*) On or before the 31st day of March in each year, send to the treasurer a copy of such record for the previous calendar year, verified by a declaration in accordance with the prescribed form.
Penalty: Five hundred pounds.
(2) This section shall not come into force until the day on which the bank notes tax act, 1910, commences.

PART III.—*Treasury bills.*

13. The treasurer may, from time to time, issue treasury bills to such an amount as he thinks proper, but so that the total amount of the bills issued shall not exceed the amount of Australian notes issued and not redeemed at the time when the bills are issued.
14. Treasury bills shall—
(*a*) Be in accordance with the prescribed form;
(*b*) Be for such sums as are prescribed;
(*c*) Be for such period, not exceeding five years from the date of issue, as is prescribed;
(*d*) Be signed as prescribed; and
(*e*) Bear interest at a rate not exceeding four pounds per centum per annum.
15. (1) The principal and interest payable in respect of treasury bills shall be chargeable on and payable out of the consolidated revenue fund, which is hereby appropriated for the purpose.
(2) The interest payable in respect of treasury bills shall be paid half yearly at such dates and places as the treasury appoints.
16. Treasury bills may be sold or disposed of in the Commonwealth or in any place beyond the limits of the Commonwealth.
17. The moneys raised by the sale or disposal of any treasury bills shall be applied toward the redemption of Australian notes.

* * * * * * *

AUSTRALIA'S DECLINING GOLD YIELD.

AMERICAN CONSULATE GENERAL,
Sydney, December 24, 1909.

SIR: I have the honor to inform you that, according to present indications, Australia's yield of gold promises to become less and less. This contingency arises almost entirely from natural causes. The rich alluvial deposits in the known mining districts are being worked out, as well as the rich surface quartz formations. The falling-off in the yield is not confined to any one State; Western Australia, Victoria, Queensland, and New South Wales all have to record a decline, due to the depletion of the richer ore. But this means that ore bodies of low grade, which have been passed by, are now being tested and they will, with the improvement in processes, be turned to account. The gold yield of Australasia for the first 11 months of this year amounts to 3,122,512 ounces (fine) as against 3,223,041 ounces (fine) for the corresponding period

in 1908. The figures for this year compare with those for the corresponding term in 1907 and 1908 as follows:

State.	1907	1908	1909
	Ounces.	*Ounces.*	*Ounces.*
Victoria	629,845	597,871	577,207
New South Wales	222,614	203,032	183,028
Queensland	416,486	415,616	408,737
Western Australia	1,543,097	1,508,752	1,461,188
South Australia[1]	11,000	7,200	6,800
Tasmania[1]	55,000	55,500	55,000
Total Commonwealth	2,878,042	2,787,971	2,691,960
New Zealand	433,944	435,070	430,552
Total	3,311,986	3,223,041	3,122,512

[1] Approximate.

I have the honor to be, sir, your obedient servant,

JOHN P. BRAY,
Consul General.

The honorable ASSISTANT SECRETARY OF STATE,
Washington, D. C.

NEW ZEALAND.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined, coinage executed for other Governments, or by other Governments during 1909: Nil.

3. Estimated amount of fine gold and fine silver used in the industrial arts during 1909: Nil.

4. Total import of United States gold coin and amount of same deposited at mint and melted during 1909: Nil.

5. Amount of gold and silver produced from mines of the country during 1909: Colonial production, gold from deep mines, 15,750.26 kilograms (fine), valued at £2,006,960; silver from dry or siliceous ores, 56,417.73 kilograms (fine), valued at £180,872.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: In banks, coined gold, silver, and other coined metals, £4,977,994 2s. 1d.; gold and silver bullion, £112,850 10s. 10d.

7. Amount of Government and bank notes outstanding at the end of the year 1909: Notes of banks of issue, £1,573,954 9s. 2d.

8 and 9. No reply.

10. Report on operations of mint and department of mines for 1909: Copy of report of department of mines herewith.

11. (*a*) Import and export of gold, (*b*) import and export of silver, during the calendar year 1909:

GOLD.

AMERICAN EMBASSY, *London, July 7, 1910.*

SIR: With reference to the embassy's letter of the 3d ultimo and previous correspondence respecting the production of gold and silver in the British colonies, I have the honor to transmit herewith for your information a copy of a dispatch which has been received from the governor of New Zealand by the foreign office, giving a return of the production of gold and silver in New Zealand for 1909.

I am, sir, your obedient servant,

FRED. MORRIS DEARING,
Second Secretary of Embassy.

[Copy.]

GOVERNMENT HOUSE,
DOMINION OF NEW ZEALAND,
Wellington, May 2, 1910.

MY LORD: I have the honor to inform your lordship that the quantities of gold and silver entered for export from New Zealand for the year ended December 31, 1909, were: Gold, 506,371 ounces, equal to 15,750.26 kilograms, valued at £2,006,900; silver, 1,813,830 ounces, equal to 56,417.73 kilograms, valued at £180,872.

I have, etc.,

(Signed) PLUNKET,
Governor.

The EARL OF CREWE, *K. G., etc.*

QUEENSLAND.

Answers to interrogatories, 1909.

1 and 2 (*a*). No mint in Queensland.

2 (*b*). Coinage executed at foreign mints for Queensland: Information not available.

3. Fine gold and fine silver used in industrial arts during the calendar year 1909: Information not available.

4. Amount of United States gold coin imported during 1909: $180.06.

5. Gold and silver produced from mines of the country during 1909:

Classification.	Ounces (fine).	Value.
Colonial production:		
Gold from deep mines	455,577	$9,417,543.74
Silver from dry or silicious ores	1,001,383	482,236.08

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In public treasuries.	In banks.
Gold and silver coin	$2,675,387.57	$13,050,940.77
Gold and silver bullion		712,528.60
Total	2,675,387.57	13,763,469.37

7. Government notes outstanding at the end of the year 1909, $7,934,842.85 (not covered by legal tender gold and silver coin or bullion); gold and legal tender silver holdings, $5,259,455.28.

8. There is a premium on gold.

9. No laws were passed during 1909 affecting the coinage, currency, or banking.

10. Copy of report of department of mines forwarded under separate cover.

11. (*a*) Import and export of gold, (*b*) import and export of silver, during the calendar year 1909:

7. Amount of Government and bank notes outstanding at the end of the year 1909: No issue of Government notes. Notes of banks of issue, £497,940, more than covered by total coin and bullion, £2,321,634.
8. There is no premium on gold.
9. Laws passed during 1909 affecting the coinage, currency, or banking: Bills of exchange act, 1909.
10. Report on operations of the mint: No mint in South Australia.
11. (*a*) Import and export of gold, (*b*) import and export of silver during the calendar year 1909:

GOLD.

Classification and country.	Imports.	Exports (oversea).
Gold coin:		
United Kingdom		£7,500
Hongkong		90
Ceylon		2,500
India	£1,000	10,000
New South Wales	440,000	
Western Australia		
Total	441,000	20,090
Gold bullion:		
United Kingdom	16	
Hongkong		1,997
Total	16	1,997
Gold ore		120

SILVER.

Classification and country.	Imports.	Exports (oversea).
Silver coin:		
United Kingdom	£3,000	.....
New South Wales [1]	700	.....
Victoria	800	.....
Total	4,500	.....
Silver bullion:		
Ceylon	.....	£166,760
India	.....	74,320
China	.....	5,030
Total	.....	246,110
Silver ore:		
United Kingdom	.....	5,200
Belgium	.....	26,915
France	.....	6
Netherlands	.....	38,616
New South Wales	65,396	.....
Total	65,396	70,737

[1] A large quantity of concentrates (silver-lead) was imported from New South Wales, but the figures are not available.

NOTE.—Imports (of coin) from other States are shown above, but the exports to other States are not available.

TASMANIA.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined and coinage executed for other Governments or by other Governments during the calendar year 1909: Tasmania is part of the Commonwealth of Australia and has no separate mint of its own.

3. Estimated weight of fine gold and fine silver used in the industrial arts during the calendar year 1909: No means of ascertaining, but probably insignificant quantities:

4. Amount of United States gold coin imported and deposited at mint and melted during 1909: Not any gold coin was imported except transfers from some other States of the Commonwealth. No United States coin used here.

5. Gold and silver produced from mines of the country during the calendar year 1909: Colonial production, gold from deep mines and placer mining, 44,777.366 ounces (fine), valued at £190,201 ($895,613.16).

RETURN SHOWING THE QUANTITY AND VALUE OF GOLD AND SILVER PRODUCTS FOR THE STATE OF TASMANIA DURING THE YEAR ENDING DECEMBER 31, 1909.

Classification.	Quantity.	Value.
Gold [1] ..... ounces..	44,777.366	£190,201
Silver-lead ore ..... tons..	80,378.35	298,880

[1] Fine gold, including gold contained in blister copper and silver-lead bullion.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909: Amount in public treasuries, none in Tasmania. Amount in banks (totals of amounts of gold coin, gold bullion, silver coin and silver bullion only can be given; no means of ascertaining separate amounts), £704,800 15s. 3d. ($3,429,809.20). Amount in circulation, £250,000 ($1,216,625), or about 25 per cent per head of the population.

7. Amount of Government and bank notes outstanding at the end of the year 1909: No Government notes issued here.

Value of bank notes in circulation on December 31, 1909, £156,434 ($761,286).

8. There is no premium on gold; currency is always at a parity with gold.

9. No laws were passed in Tasmania affecting the coinage, currency, or banking during 1909.

10. No mint report issued separately for Tasmania. Annual report of mines of Tasmania not yet issued; will be forwarded when published.

11. (*a*) Import and export of gold during the calendar year 1909: No gold imported except, possibly, transfers from other States. For value exported see answer to preceding question.

11. (*b*) Import and export of silver during the calendar year 1909: No silver imported except, possibly, transfers from other States. For value exported see answer to question 10.

12. Coinage system of the country: Coinage is the same as for the rest of Australia; English system of pounds, shillings, and pence used. Unit is a pound sterling.

STATE OF VICTORIA.

Answers to interrogatories, 1909.

1 and 2. Amount of gold and silver coined: Coinage executed for other governments or at other mints for the State of Victoria during the calendar year 1909:

Denomination.	Number of pieces.	Value.
GOLD.		
Sovereigns	3,029,538	£3,029,538
Half sovereigns	186,094	93,047
Total	3,215,632	[1] 3,122,585
SILVER.[2]		
Half crowns (2s. 6d.)		1,600
Two shillings		800
One shilling		1,200
Sixpence		3,200
Threepence		2,000
Total		8,800

[1] Of this value, £2,982,465 was from new coinage and £140,120 from recoinage of domestic gold coins.
[2] This silver coinage was struck in London and would appear in the London mint returns; the denominations will be found enumerated herein. British silver coin of the face value of £5,563 was withdrawn from circulation and forwarded to the London mint for recoinage. No silver coinage was executed at Melbourne mint.

3. Estimated weight of fine gold and fine silver used in the industrial arts during 1909: Not ascertainable.

4. United States gold coin imported and deposited at mint and melted during 1909: Imported, approximately $1,000 in the hands of travelers; melted at mints, too insignificant to be recorded.

5. Gold and silver produced from mines of the country during 1909:

Derivation.	Ounces (fine).	Value.
Victoria production:		
Gold from deep mines and placer mining	[1] 654,222	£2,778,936
Silver from lead and copper ores	[2] 21,655	2,310

[1] As far as can be ascertained, 233,000 ounces of the above gold was obtained from alluvial and the remainder from quartz mines.
[2] This silver was extracted from gold at the mint and was the only silver produced in the State.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In public treasuries.	In banks.	In circulation.
Gold coin	Nil	£7,788,457	£529,620
Gold bullion	Nil	423,723	.....
Silver coin	Nil	274,628	119,145
Total	.....	8,486,808	648,765

7. Amount of Government and bank notes outstanding at the end of the year 1909: No Government notes issued. Notes of banks of issue, £865,252, fully covered by gold coin and bullion.

8. There is no premium on gold.

9. Laws passed during the year 1909 affecting the coinage, currency, or banking:

AN ACT RELATING TO CURRENCY, COINAGE, AND LEGAL TENDER.

(Assented to Sept. 4, 1909.)

Be it enacted by the King's Most Excellent Majesty, the Senate, and the House of Representatives of the Commonwealth of Australia as follows:

1. This act may be cited as the coinage act 1909.

2. In this act, unless the contrary intention appears—

"British coins" means coins which have been issued in accordance with the laws of the United Kingdom and which have not been called in in pursuance of those laws;

"Australian coins" means coins which have been issued in accordance with this act, and which have not been called in in pursuance of this act.

3. The standard weight and standard fineness of the gold, silver, and bronze coins of the denominations mentioned in the schedule are as specified in the schedule. (See answer to No. 12.)

4. (1) The treasurer may cause to be made and issued silver and bronze coins of the denominations specified in the schedule.

(2) All silver and bronze coins to be made and issued shall be of the weight and fineness specified in the schedule.

(3) In the making of silver and bronze coins a remedy (or variation from the standard weight and fineness specified in the schedule) shall be allowed of an amount not exceeding the amount specified in the schedule.

(4) The treasurer may cause to be made and issued nickel coins of the denominations, weight, and fineness specified in any proclamation under this act.

5. (1) A tender of payment of money, if made in coins which are British coins or Australian coins of current weight, shall be a legal tender—

(*a*) In the case of gold coins, for the payment of any amount;

(*b*) In the case of silver coins, for the payment of an amount not exceeding forty shillings, but for no greater amount; and

(*c*) In the case of bronze coins, for the payment of an amount not exceeding one shilling, but for no greater amount.

(2) A coin shall be deemed to be not of current weight if it has become diminished in weight by wear or otherwise—

(*a*) In case it is a British coin, so as to be of less weight than the weight specified as the least current weight in the law of the United Kingdom applicable to the coin; and

(*b*) In case it is an Australian coin, so as to be of less weight than the weight specified as the least current weight in any proclamation under this act.

6. No piece of gold, silver, copper, or bronze, or of any metal or mixed metal, of any value whatever (other than a British or Australian coin), shall be made or issued as a coin or as a token for money, or as purporting that the holder thereof is entitled to demand any value denoted thereon. Penalty: Twenty pounds.

7. Every contract, sale, payment, bill, note, instrument, and security for money, and every transaction, dealing, matter, and thing whatever relating to money, or

involving the payment of or the liability to pay any money, which is made, executed, or entered into, done, or had, shall be made, executed, entered into, done, and had according to the coins which are current and are legal tender in pursuance of this act, and not otherwise, unless the same be made, executed, entered into, done, or had according to the currency of some British possession or some foreign state.

8. (1) The Governor General may by proclamation do all or any of the following things, namely:

(*a*) Determine the dimensions of and design for any Australian coin;

(*b*) Determine the denominations, weight, and fineness of any Australian nickel coin and the amount of remedy allowance to be allowed in the making thereof;

(*c*) Diminish the amount of remedy allowed by the schedule in the case of any Australian coin;

(*d*) Determine the least current weight of any Australian coin;

(*e*) Call in Australian coins of any date or denomination or any Australian coins before any date specified in the proclamation;

(*f*) Direct that any coins other than silver or bronze shall be current and be a legal tender for the payment of any amount not exceeding the amount specified in the proclamation and not exceeding five shillings; and

(2) Every proclamation under this section shall come into operation on a date therein specified and shall have effect as if it were enacted in this act.

9. Moneys standing to the credit of the trust fund may be invested by the treasurer in the purchase of bullion for coinage.

10. For the purposes of the treasury accounts coin made in pursuance of this act shall be considered as bullion until issued for circulation.

11. The Governor General may make regulations, not inconsistent with this act, prescribing all matters and things which are necessary or convenient to be prescribed for giving effect to this act.

SCHEDULE.

Denomination.	Imperial weight.	Metric weight.	Imperial weight.	Metric weight.
Gold:	*Grains.*	*Grams.*	*Grains.*	*Grams.*
Five pounds	616.37239	39.94028	612.50000	39.68935

Silver bullion:		
Great Britain	£1,304	50,485
New Zealand	1	
Total	1,305	50,485
Silver ore: Belgium		34,933

Victoria Banking Returns.

[From The Australasian Insurance and Banking Record, Melbourne and Sydney, January, 1910.]

* * * * * * *

For the year (1909) there is a large increase in deposits—the increase being divided nearly equally between Government deposits and "other" deposits, and a moderate contraction of advances, the general position thus being easier. The holdings of coin and bullion show for the year the large increase of £1,181,046, and the ratios to call and total liabilities are therefore much higher.

* * * * * * *

An increase of £3,077,145 in total deposits for 1909 compares with a decrease of £1,630,746 for 1908, while a decrease in advances of £795,816 for 1909 compares with an increase of £472,456 for 1908.

* * * * * * *

THE NOTE CIRCULATION.

The note circulation on December 31, 1909, was £865,252, which shows an increase over 1908 of £23,648. There was a decrease in 1908 of £47,753. The improvement is doubtless attributable to greater activity in the country districts, where the circulation is comparatively large.

COIN AND BULLION.

The holdings of coin and bullion on December 31, 1909, was £8,491,775, which shows an increase over 1908 of £1,161,046.

* * * * * * *

WESTERN AUSTRALIA.

Answers to interrogatories, 1909.

1. Amount of gold coined during the calendar year 1909: At the royal mint, Perth branch:

Denomination.	Number of pieces.	Value.
Sovereigns	4,524,241	£4,524,241
Half sovereigns	44,022	22,011
Total	4,568,263	4,546,252

There was no recoinage.

2. Coinage executed for other governments: No. Coinage executed at other mints for Western Australia: Silver and bronze coin (imperial currency), executed at the London mint, was issued to the banks for circulation to the following extent: Silver, £11,200; bronze, £280.

3. Estimated weight of fine gold and fine silver used in the industrial arts during 1909:

New bullion issued by royal mint, Perth branch:	Fine ounces.
Gold	99
Silver	1,504
Approximate estimate from manufacturers:	
Fifty-four men working at an average of 15 ounces per month per man, equals fine gold used for the year	9,720
Six chainmakers working at an average of 40 ounces per man per month, equals for the year	2,880
Total fine gold used for the year	12,600
The approximate quantity of fine silver used equals that which is mostly used for alloying purposes.	2,500

These figures are only approximate and based on the practical knowledge of manufacturers.

4. Total import of United States gold coin, and amount of same deposited at mint and melted during 1909: Nil.

5. Amount of gold and silver produced from mines of the country during the calendar year 1909: Fine gold, 49,618 kilograms, equal to 1,595,269 ounces, valued at £6,776,273; fine silver, 4,112 kilograms, equal to 132,203 ounces, valued at £14,322.

6. Approximate stock of gold and silver coin and bullion in the country on December 31, 1909:

Character of stock.	In banks.	In circulation.
Gold coin	£1,934,464	£275,000
Silver and bronze coin	[1] 552,978	105,000
Total	2,487,442	380,000

[1] Silver coin.

(The estimate of coin in circulation is based on inquiries made in 1906.)

In the banking returns the banks do not distinguish gold and silver coin, the official classification being "coined gold and silver and other metals," but it may be assumed that the holdings of silver and bronze coin and silver bullion are only nominal.

7. Amount of bank notes outstanding at the end of the year 1909: Issued by banks of issue, £351,978. No special reserve against note issue is required in Western Australia.

8. Gold is at par, and has no premium.

9. Laws passed during 1909, affecting the coinage, currency, or banking: Commonwealth of Australia coinage act, 1909, and bills of exchange act, 1909.

10. The report of the Perth branch of the royal mint is included in the report of the deputy master and comptroller of the mint, London. A copy of the report of the department of mines for 1909 will be forwarded by the department of mines when ready to the Bureau of the Mint, Treasury Department, Washington, United States of America.

11. (*a*) Imports and exports of gold, (*b*) imports and exports of silver, during the calendar year 1909:

GOLD.

Classification and country.	Imports.	Exports.
Gold coins:		
New South Wales		£540,000
Victoria		410,000
South Australia		440,000
Total Australian States		1,390,000
Germany		450,000
India and Ceylon		1,040,000
South Africa		525,000
United Kingdom		97,907
Total		3,502,907
Gold bullion:		
Victoria		70,198
India and Ceylon		[1] 563,881
United Kingdom	£24	1,507,442
Total	24	2,141,521
Ore and furnace products:		
Germany		3,407
United Kingdom		45,756
United States		17,101
Total		66,264

SILVER.

Silver coins, United Kingdom	£18,200	
Silver bullion, United Kingdom	27	£14,541
In matte:		
United Kingdom		1,118
United States		710
Total		16,369

[1] £563,881, which mainly consists of 10-ounce fine gold bars specially prepared at royal mint, Perth branch, for Indian market.

COMPARATIVE STATEMENT OF GOLD BULLION ENTERED FOR EXPORT AND RECEIVED AT THE PERTH BRANCH OF THE ROYAL MINT DURING THE YEARS 1907, 1908, AND 1909.

Year.	Export.	Mint.	Total.	Value.		
	Ounces.	*Ounces.*	*Ounces.*	£.	s.	d.
1907	431,803.14	1,265,750.45	1,697,553.59	7,210,749	6	2¾
1908	356,353.96	1,291,557.17	1,647,911.13	6,999,981	10	10½
1909	386,370.58	1,198,898.83	1,595,269.41	6,776,273	14	7½

REPORT

OF THE

DIRECTOR OF THE MINT.

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
December 14, 1909.

SIR: In compliance with the provisions of section 343, Revised Statutes of the United States, the following report covering the operations of the mints and assay offices of the United States during the fiscal year ended June 30, 1909, being the thirty-seventh annual report of the Director of the Mint, is respectfully submitted:

DEPOSITS OF GOLD BULLION.

The value of the gold contained in original deposits at the mints and assay offices during the fiscal year 1909 was $142,124,941.59, and the value of uncurrent domestic gold coin deposited was $3,432,288.62, making a total of $145,557,230.21.

The redeposits during the year, consisting of bullion transferred from one office to another and bars bearing the stamp of one of the mints or assay offices, which had been paid out, amounted to $46,757,462. The total value of gold bullion and uncurrent domestic and foreign coin received, including redeposits, amounted to $192,314,693. Domestic bullion deposited contained 6,435,350 standard ounces, of which 2,691,889 standard ounces were crude bullion requiring parting and refining. There were contained in refinery bars (less than 0.992 in fineness) 641,690 standard ounces, and 3,101,771 standard ounces of refined bullion (0.992 and over in fineness). The latter was received from private refineries, chlorination and cyanide works.

UNCURRENT DOMESTIC GOLD COIN FOR RECOINAGE.

Uncurrent and mutilated United States gold coin containing 184,486 standard ounces was received for recoinage, the coining value of which in new coin was $3,432,288.62. Of this amount 69,735 standard ounces were purchased over the counter at the different mints and assay offices, and 114,751 standard ounces were contained in coin transferred by the Treasury for recoinage. The difference between the face value of the mutilated and uncurrent gold coin received during the year and the value of the same in new coin was $26,049.38, which sum represents the loss on recoinage.

DEPOSITS OF JEWELERS' BARS.

Jewelers' bars and old plate containing 284,814 standard ounces of the value of $5,298,857 were received.

REDEPOSITS OF GOLD BULLION.

The redeposits contained 2,513,214 standard ounces of gold of the value of $46,757,462, fine bars representing 2,399 standard ounces ($44,634), and unparted bars representing 2,510,815 standard ounces ($46,712,828), as follows:

DEPOSITS AND PURCHASES OF SILVER.

The deposits of silver received at the mints and assay offices during the fiscal year ended June 30, 1909, for return to depositors in fine or unparted bars, with the weight and fineness stamped thereon, aggregated 3,597,155.34 standard ounces. The United States assay office at New York received the greater part of these deposits.

The government of the Philippine Islands deposited at the United States mint, San Francisco, silver coin issued under the act of March 3, 1903, containing 8,127,302.80 standard ounces, for recoinage into coins of reduced weight and fineness, as authorized by the act of June 23, 1906.

The Government of San Salvador deposited for coinage at the mint, San Francisco, 557,148.53 standard ounces of silver.

The purchases and deposits of silver bullion at the mints and assay offices of the United States during the fiscal year 1909 were as follows:

Item.	Standard ounces.
Silver purchased	4,141,124.62
Silver parted from gold deposits and purchased	2,739,529.43
Uncurrent domestic coin for recoinage	729,971.04
For return in fine bars	3,597,155.34
For Philippine coinage	8,127,302.80
For San Salvador coinage	557,148.53
Total	19,892,231.76

UNCURRENT DOMESTIC SILVER COINS FOR RECOINAGE.

Uncurrent and mutilated domestic silver coins received for recoinage contained 733,261 standard ounces of the value of $912,300 in new subsidiary coin. The net loss on this recoinage was $65,018.

Jewelers' bars and old plate containing 556,693 standard ounces were deposited.

REDEPOSITS OF SILVER BULLION.

The redeposits contained 3,261,789 standard ounces of silver—fine bars representing 253,349 standard ounces, unparted bars representing 2,152,546 standard ounces, and mint bars representing 855,894 standard ounces as follows:

[a] Includes 461,686 fine ounces Hawaiian coin.
[b] Includes 148,788 fine ounces Hawaiian coin.
[c] Includes 6,901 fine ounces Philippine special assay coins.
[d] Includes 3,647 fine ounces Hawaiian coin.
[e] Includes 3,456 fine ounces Philippine special assay coins.
[f] Includes 3,895 fine ounces Hawaiian coin.
[g] Includes 2,663 fine ounces Philippine special assay coins.
[h] Includes 4,680,791 fine ounces Philippine coins.
[i] Includes 3,411 fine ounces Philippine assay coins and 8,866,622 fine ounces Philippine coins for recoinage.
[j] Includes 5,739 fine ounces Philippine assay coins and 7,314,573 fine ounces Philippine coins for recoinage.

NEW DESIGN FOR THE ONE-CENT PIECE.

With the approval of the Secretary of the Treasury the new design for the bronze one-cent piece was adopted in April, 1909. On the obverse the head of Lincoln appears instead of the Indian head which this piece had borne since 1864.

The engraver of the mint at Philadelphia was instructed to prepare dies, and coinage of this piece was commenced in May. No coins were paid out until after the close of the fiscal year. A stock was accumulated at the Philadelphia mint to enable that institution to be in a position to fill orders promptly. The distribution of this piece was commenced on August 2, 1909.

COINAGE OF THE UNITED STATES, FISCAL YEAR 1909.

The domestic coinage was as follows:

Denomination.	Pieces.	Value.
Gold	10,655,469	$108,180,092.50
Silver, subsidiary	53,371,200	11,093,810.00
Nickel, 5-cent pieces	11,588,558	579,427.90
Bronze, 1-cent pieces	54,662,295	546,622.95
Total	130,277,522	120,399,953.35

Of the subsidiary coinage made during the year $1,407,000 were from uncurrent domestic coin received for recoinage and $9,686,810 from silver purchased under provisions of section 3526 of the Revised Statutes.

MUTILATED STANDARD SILVER DOLLARS PURCHASED AND USED IN SUBSIDIARY SILVER COINAGE.

There were purchased as bullion and melted at the mints and assay offices 1,293 mutilated silver dollars during the fiscal year 1909, which were for use in the manufacture of subsidiary silver coins.

Fiscal year.	Amount.	Fiscal year.	Amount.
1883	$621	1898	$1,365

COINAGE FOR THE PHILIPPINE GOVERNMENT.

Owing to the advance in the price of silver bullion in 1905 and 1906, the bullion value of the silver contained in two Philippine pesos and the subdivisions thereof, as authorized by the act of March 2, 1903, was greater than that of one dollar in United States gold coin.

For the purpose of preventing the melting and exportation of the coins from the islands as a result of the appreciation in the price of silver, Congress passed an act on June 23, 1906, authorizing the government of the Philippine Islands to reduce the weight and fineness of the coins as authorized under the act of March 2, 1903, and to recoin the coins previously made. Under date of December 6, 1906, the Philippine Commission passed an act fixing the weight and fineness of the Philippine coins.

The weight and fineness of the Philippine silver coins authorized under the act of March 2, 1903, and of the reduced weight and fineness authorized under the act of June 23, 1906, are as follows:

Denomination.	Act of March 2, 1903.		Act of June 23, 1906.	
	Weight in grains.	Fineness.	Weight in grains.	Fineness.
Peso	416.00	900	308.640	800
50 centavo	208.00	900	154.320	750
20 centavo	83.10	900	61.728	750
10 centavo	41.55	900	30.864	750

The total Philippine coinage under the act of March 2, 1903, from April, 1903, to December 31, 1906, was as follows:

Denomination.	Pieces.	Value.	Silver consumed.
		Peso.	*Fine ounces.*
Pesos, silver	27,024,358	27,024,358.00	21,078,999.24
50 centavo, silver	6,128,518	3,064,259.00	2,390,122.02
20 centavo, silver	7,997,768	1,599,553.60	1,246,152.22
10 centavo, silver	11,357,557	1,135,755.70	884,824.67
5 centavo, nickel	9,999,884	499,994.20	
1 centavo, bronze	37,845,284	378,452.84	
Half centavo, bronze	17,752,884	88,764.42	
Total	118,106,253	33,791,137.76	25,600,098.15

RECOINAGE OF PHILIPPINE COINS.

Under the act of Congress approved June 23, 1906, and the act of the Philippine Commission dated December 6, 1906, providing for the recoinage of Philippine silver coins issued under the act of March 2, 1903, into coins of a reduced weight and fineness, there were received at the mint, San Francisco, and melted for recoinage up to June 30, 1909, the following:

Denomination.	Pieces.	Fine ounces.
Pesos	22,862,873	17,828,264.16
50-centavo	4,815,000	1,875,136.87
20-centavo	4,490,500	697,283.64
10-centavo	5,829,000	452,346.16
Mixed Philippine coins	425	149.85
Total	37,997,798	20,853,180.68

Of the coins manufactured for the Philippine government under the act of March 2, 1903, there were remaining in the Philippine Islands, June 30, 1909, the following coins:

Denomination.	Pieces.	Value in pesos.
Pesos	4,161,485	4,161,485.00
50-centavo	1,313,518	656,759.00
20-centavo	3,507,268	701,453.60
10-centavo	5,528,557	552,855.70
Total	14,510,828	6,072,553.30

The following coinage was executed during the fiscal year 1909 at the United States Mint, San Francisco, for the Philippine government:

Denomination.	Pieces.	Fine ounces.
Silver:		
Pesos	14,546,944	7,482,947.99
50-centavo	1,092,000	263,308.50
20-centavo	705,000	67,997.25
10-centavo	1,740,000	83,911.50
Bronze:		
1-centavo	3,924,612	
Total	22,008,556	7,898,165.24

The total silver coinage to June 30, 1909, from coins received from the Philippine Islands for recoinage and from bullion purchased for such coinage was as follows:

Denomination.	Coined from new bullion, acts of March 2, 1903, and June 23, 1906.		Coined from Philippine coins received for recoinage, act of June 23, 1906.		Total.	
	Pieces.	Fine ounces.	Pieces.	Fine ounces.	Pieces.	Fine ounces.
Pesos	93,445	48,068.11	36,126,000	18,583,214.40	36,219,445	18,631,282.51
50-centavo	3,306,126	797,189.63	2,100,000	506,362.50	5,406,126	1,303,552.13
20-centavo	3,216,152	310,197.86	2,735,000	263,790.75	5,951,152	573,988.61
10-centavo	5,765,193	278,026.42	4,030,000	194,346.75	9,795,193	472,373.17
Total	12,380,916	1,433,482.02	44,991,000	19,547,714.40	57,371,916	20,981,196.42

The total coinage including recoinage made for the Philippine government under authority of the acts of March 2, 1903, and June 23, 1906, was as follows:

Denomination.	Made at United States mint, Philadelphia.	Made at United States mint, San Francisco.	Total.
Silver:			
Pesos	2,806,859	60,436,944	63,243,803
50-centavo	4,317,644	7,217,000	11,534,644
20-centavo	6,618,840	7,330,080	13,948,920
10-centavo	6,618,839	14,533,911	21,152,750
Nickel:			
5-centavo	19,000,384		19,000,384
Bronze:			
1-centavo	37,845,784	[a] 3,924,612	41,770,396
½-centavo	17,753,384		17,753,384
Total	85,961,734	93,442,547	179,404,281

[a] Recoinage of one-half centavo pieces.

COINAGE FOR SAN SALVADOR.

The mint at San Francisco coined for the Government of San Salvador 693,170 silver peso pieces during the fiscal year 1909.

BARS MANUFACTURED.

During the fiscal year 1909 there were manufactured by the mints and assay offices the following:

Description.	Standard ounces.	Coining value.
Gold bars	5,278,563.668	$98,205,831.04
Silver bars	6,537,088.21	7,719,663.04
Total		105,925,494.08

WORK OF THE GOVERNMENT REFINERIES.

There were received and operated upon by the refineries connected with the coinage mints during the fiscal year 1909 gold and silver as shown by the following table:

Mint.	Gold.		Silver.	
	Standard ounces.	Value.	Standard ounces.	Coining value.
Philadelphia	1,668,892.456	$31,049,161.97	3,149,873.14	$3,665,306.92
San Francisco	2,518,687.792	46,859,307.75	1,222,347.03	1,422,367.45
New Orleans	53,934.799	1,003,438.12	125,151.23	145,630.52
Denver	2,042,995.755	38,009,223.35	1,839,604.62	2,140,630.83
Total	6,284,510.802	116,921,131.19	6,336,976.02	7,373,935.72

SILVER BULLION ON WHICH CHARGES WERE MADE.

In order to show the amount of the above-mentioned silver bullion treated by the government refineries on which charges were received and the amount handled for parting purposes the following table is presented:

Mints.	Silver bullion on which charges were collected.	Silver bullion owned by the Government retained by the refinery for parting purposes on which there were no charges.	Total.
	Standard ozs.	*Standard ozs.*	*Standard ozs.*
Philadelphia	2,578,437.07	571,436.07	3,149,873.14
San Francisco	1,123,782.05	98,564.98	1,222,347.03
New Orleans	35,742.62	89,408.61	125,151.23
Denver	601,793.56	1,237,811.06	1,839,604.62
Total	4,339,755.30	1,997,220.72	6,336,976.02

NOTE.—Refinery operations suspended at the assay office at New York during reconstruction of building.

PURCHASE OF SILVER.

The table following shows the amount and cost of silver bullion purchased for the subsidiary silver coinage during the fiscal year 1909:

Stock of silver bullion.	Standard ounces.	Cost.
Purchased under section 3526, Revised Statutes, at the Treasury Department	3,786,644.27	$1,729,224.28
Purchased under section 3526, Revised Statutes, at mints	300,327.53	139,609.63
Partings, charges, and fractions purchased	2,762,638.59	1,322,947.28
Melted assay coins purchased	6,749.14	3,708.00
Mutilated coins purchased	2,595.82	1,201.55
Surplus bullion purchased	21,698.70	11,192.11
Total	6,880,654.05	3,207,942.80

QUANTITY AND COST OF SILVER PURCHASED FOR SUBSIDIARY COINAGE AT EACH MINT AND AT THE ASSAY OFFICE AT NEW YORK DURING THE FISCAL YEAR 1909.

BALANCES OF SILVER BULLION.

The balances of silver bullion on hand June 30, 1909, at the mints and assay offices of the United States for the coinage of subsidiary silver coins, and also for coinage for the Philippine Islands, were as follows:

Items.	Standard ounces.	Cost.
For subsidiary silver coinage	7,492,044.11	$4,223,789.15
Silver bullion for Philippine coinage	1,544,162.67	1,341,018.57
Tota	9,036,206.78	5,564,807.72

COURSE OF SILVER.

The London price of silver 0.925 fine (British standard) for the twelve months ending June 30, 1909, ranged from 22d. to 24 1/16d., the average price being 23.7024d. At the lowest price the equivalent for an ounce fine in the money of the United States was $0.48226; the highest, $0.54528; and at the average price, $0.51958. At the lowest price the bullion value of the standard silver dollar was $0.373; at the highest price, $0.42174; and at the average price, $0.4186. The monthly fluctuations are shown in the following table:

HIGHEST, LOWEST, AND AVERAGE PRICE OF SILVER BULLION AND VALUE OF A FINE OUNCE EACH MONTH DURING THE FISCAL YEAR 1909.

Month.	Highest.	Lowest.	Average price per ounce, British standard, 0.925 fine.	Equivalent value of a fine ounce with exchange at par ($4.8665).	Average monthly price at New York of exchange on London.	Equivalent value of a fine ounce based on average monthly price and average rate of exchange.	Average monthly New York price of fine bar silver.

DISTRIBUTION OF SILVER DOLLARS.

The number of dollars on hand June 30, 1908 and 1909, and the distribution from each mint during the year was as follows:

Items.	Philadelphia.	San Francisco.	New Orleans.	Total.
In mints June 30, 1908	$106,850,900	$61,401,432	$29,581,825	$197,834,157
Total	106,850,900	61,401,432	29,581,825	197,834,157
In mints June 30, 1909	106,693,926	61,401,432	29,574,649	197,670,007
Distributed from mints during the year	156,974		7,176	164,150

SEIGNIORAGE ON SILVER COINAGE.

The seigniorage on the coinage of subsidiary silver coins during the fiscal year ended June 30, 1909, was $5,800,917.80, which, added to the balance on hand July 1, 1908—$114,366.16—gives a total of $5,915,283.96 to be accounted for during the year. The amount deposited in the Treasury was $5,913,687.14, leaving a balance on hand June 30, 1909, of $1,596.82.

Including the balance on hand at the mints, July 1, 1878, the net seigniorage on silver coined from that date to June 30, 1909, was $157,467,155.61.

The earnings, gains, and expenditures were as follows:

EARNINGS AND EXPENDITURES.

The earnings and gains of the mint service during the fiscal year 1909 were as follows:

Charges for parting and refining	$290,176.82
Charges for alloy	16,725.87
Charges for assaying and stamping	33,848.02
Seigniorage on minor coinage	843,654.47
Seigniorage on subsidiary coinage	5,800,917.80
Seigniorage on recoinage of minor coins	3,324.34
Profits on medals and proof coins	4,764.51
Charges received for mounting, etc., medal-fund account	392.87
Charges for the manufacture of medals, etc	8,255.47
Deposit melting-room grains and sweepings	32,634.76
Surplus bullion recovered by operative officers	34,829.99
Gain on bullion shipped to mint for coinage	3,334.04
Proceeds of sale of old material	913.65
Receipts from special assays of bullion and ore	3,397.00
Receipts for manufacturing appliances for government and other institutions	4,037.36
Charges received for coinage for Philippine government and Salvador	181,442.09
Gain on light-weight United States gold coin for recoinage	250.71
Remnants of bullion returned by the assayer	919.92
Charges for treatment of deposit melting-room sweeps	41.35
Total earnings and gains	7,263,861.04

The expenditures were as follows:

Salaries of officers and clerks	$220,017.52
Wages of workmen and adjusters	983,916.44
Contingent expenses, less amount paid to reimburse wastage and loss on sweeps sold	227,413.84
Parting and refining expenses, less amount paid to reimburse wastage and loss on sweeps sold	247,275.98
Wastage of operative departments	23,833.52
Wastage of operative departments, minor coinage operations	1,372.81
Loss on sweeps sold during the year	9,263.95
Expenses of distributing minor coins	2,831.66
Expenses of medal fund (charges paid, mounting, etc.)	385.50
Loss on recoinage of minor coin	10,666.69
Loss on bullion shipped to mint for coinage	244.62
Wastage Philippine minor coinage	248.53
	1,727,471.06

APPROPRIATIONS AND EXPENDITURES.

The act of May 22, 1908, making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year 1909 contained specific appropriations for the support of the mints and assay offices, amounting to $1,367,450.

The earnings of the several mints amounted to $192,680.35 and were deposited in the Treasury to the credit of the appropriations for "Wages of workmen" and "Contingent expenses" of the respective mints.

Of the appropriation made for "New machinery and appliances," mint at Philadelphia, by the act of June 6, 1900, there remained on hand at the close of the fiscal year 1908	$10,062.79	
Of this amount there has been expended during the fiscal year 1909	8,917.62	
Leaving an unexpended balance June 30, 1909, of		1,145.17
Of the appropriations made for "New machinery and appliances," mint at Denver, by the acts of June 6, 1900, March 3, 1903, April 28, 1904, and March 3, 1905, there remained on hand at the close of the fiscal year 1908	4,195.51	
Of this amount there has been expended during the fiscal year 1909	3,852.50	
Leaving an unexpended balance June 30, 1909, of		343.01

Appropriations and Expenditures, Fiscal Year 1909.

APPROPRIATIONS AND EARNINGS.

Institution.	Salaries.	Wages of workmen.	Contingent expenses.	Total.

EARNINGS AND EXPENDITURES OF THE REFINERIES OF THE COINAGE MINTS AND ASSAY OFFICE AT NEW YORK, FISCAL YEAR 1909.

The earnings on account of parting and refining bullion during the fiscal year ended June 30, 1909, all of which were deposited in the Treasury, amounted to $325,006.81; the expenditures on the same account aggregated $258,590.79; and net earnings over expenditures $66,416.02.

The earnings and expenditures of the several mints and the assay office at New York were as follows:

Institution.	Charges collected.	Surplus bullion.	Expenditures.
Philadelphia	$101,741.86	$8,846.72	$74,508.00
San Francisco	54,143.81	6,532.43	78,084.01
New Orleans	4,005.08	1,543.23	1,655.26
Denver	86,519.21	17,581.54	42,977.75
New York	43,766.86	326.07	61,365.77
Total	290,176.82	34,829.99	258,590.79

APPROPRIATIONS AND EXPENDITURES, OFFICE OF THE DIRECTOR OF THE MINT, FISCAL YEAR 1909.

Under the act of May 22, 1908, there was appropriated for the office of the Director of the Mint to meet the expenses of that office for the fiscal year 1909 the sum of $36,770.

The expenditures from the appropriations for salaries, supervising the annual settlements at the mints and assay offices, collecting and compiling statistics of the production of gold and silver in the United States, for incidental expenses and the purchase of and subscription to books and pamphlets, and contingent expenses for the laboratory aggregated $34,666.69, leaving an unexpended balance to the credit of the various appropriations of $2,103.31.

In addition to the above appropriations, the act of May 22, 1908, contained a specific appropriation of $65,000 for "Freight on bullion and coin between the mints and assay offices." The expenditures from this appropriation for the fiscal year 1909 amounted to $55,756.69, leaving an unexpended balance of $9,243.31 to the credit of the appropriation.

There was also a specific appropriation of $300,000, under the act of May 27, 1908, for "Transportation of money from the mint at San Francisco, 1909," of which $277,434.12 was expended, leaving a balance of $22,565.88.

APPROPRIATIONS AND EXPENDITURES, OFFICE OF THE DIRECTOR OF THE MINT, FREIGHT ON BULLION AND COIN BETWEEN MINTS AND ASSAY OFFICES, AND TRANSPORTATION OF MONEY FROM MINT AT SAN FRANCISCO, 1909.

Appropriations.	Amount appropriated.	Amount expended.	Unexpended balance.
Salaries	$30,120.00	$29,693.34	$426.66
Contingent expenses	6,650.00	4,973.35	1,676.65
Freight on bullion and coin	65,000.00	55,756.69	9,243.31

Total	249,196.50	105,272.22	354,468.72
Salaries	220,017.52		220,017.52
Wages of workmen	983,916.44	153,318.57	1,137,235.01
Total	1,453,130.46	258,590.79	1,711,721.25

LABORATORY OF THE BUREAU OF THE MINT.

From the coinage of the calendar year 1908 the assayer of this bureau tested 425 gold and 666 silver coins, all of which were found within the legal requirements as to weight and fineness.

In the gold coins the greatest deviation above standard (the legal limit being 0.001 above or below) was 0.0003, while the greatest deviation below was 0.0006.

The greatest deviation of silver coins above standard (the limit being 0.003 above or below) was 0.0009, while the greatest deviation below was 0.0013.

The following table summarizes these assays:

Fineness.	Philadelphia.		San Francisco.		New Orleans.		Denver.		Total.	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
898.7		1								1
898.9		3						1		4
899.1		8		1		5		5		19
899.3		28		2		12		4		46
899.4	2						1		3	
899.5	7		2			1	2		11	1
899.6	9	23		18		14	7	6	16	61
899.7	30		2	1		1	12		44	2
899.8	52	25	2	8		20	18	8	72	61
899.9	59		1			2	33		93	2
900.0	68	13	4	8		15	27	13	99	49
900.1	37						14		51	
900.2	18	5	1	3		15	5	17	24	40
900.3	7						5	15	12	15
900.4		4		2		7				13
900.7				3		3		12		18
900.9								1		1
Total	289	110	12	46		95	124	82	425	333
Average fineness.	899.916	899.61	899.842	899.829		899.836	899.911	900.058	899.913	899.815

In addition to the above there were examined 334 Philippine silver coins, all of which were within the legal requirements as to weight and fineness. Also 68 assays of miscellaneous gold were made in settlement of differences between the Denver mint and the Seattle assay office, and 55 samples of ores were assayed for the United States Geological Survey.

THE ASSAY AND VALUATION OF GOLD BULLION.[a]

[By Frederic P. Dewey, assayer, Bureau of the Mint.]

The Bureau of the Mint of the United States Treasury maintains 13 offices for the purchase of gold bullion, and this paper describes an investigation to establish the reasonable differences in the assay results at the various institutions which may be commercially allowable in the settlements between them. Beginning with the comparative assay of proof gold at the Philadelphia mint and the Utrecht mint, which shows 0.00002 as the closest agreement now possible, nine tables of comparative results, taken from the regular work of the service, are given. These tables begin with very fine gold, produced in an electrolytic refinery, showing close agreement in the assay results, and follow through decreasing gold fineness and increasing amounts and complexity of base metals to very impure and complex bars produced at cyanide mills, some of which give widely varying results. Next is given a series of results on samples, prepared and sent out to various laboratories in the service, to test the influence of different metals and various combinations upon the agreement of the assay results; 11 samples were sent out and each one was assayed from 44 to 71 times, making a total of 623 assays. To these are added 107 assays of identical samples of coin gold.

On a previous occasion,[b] I have endeavored to show the degree of accuracy that may be expected in the ordinary every-day analysis of various materials, and on another

[a] This paper was read at the Seventh International Congress of Applied Chemistry, London, May 27 to June 2, 1909; also at the Spokane meeting of the American Institute of Mining Engineers in September, 1909.

[b] The actual accuracy of chemical analysis, Trans. A. I. M. E., xxvi, 370 (1896); Jour. Am. Chem. Soc., vol. xviii, No. 9, p. 808 (Sept., 1896).

occasion[a] I have called attention to the accuracy of the commercial assay for silver. The present paper deals chiefly with an effort to establish certain commercial standards of agreement or accuracy in the assaying of gold bullion for purchase in the various laboratories of the United States mint service.

Besides the coinage mints at Philadelphia, New Orleans, Denver, and San Francisco, and the large assay office on Wall street in New York City, all of which purchase and refine bullion, the Mint Bureau of the United States Treasury maintains eight smaller assay offices, scattered about through the mining districts of the country which purchase bullion and ship it to the mints to be refined. These smaller offices were established as an aid to the mining industry of the country by giving the small miners the opportunity to sell their bullion easily and quickly for cash.

Owing to the particular and rigid methods of bookkeeping of the Treasury Department, the mints are compelled to treat the bullion sent to them from the assay offices in exactly the same manner as the bullion deposited directly by individuals, and the prices are carefully determined at which the assay office bullion should be charged against the mint in the Treasury accounts. Naturally, discrepancies sometimes arise between the mints and the assay offices. A very large proportion of these are small and are easily adjusted. In fact, most of them adjust themselves automatically, as they are on both sides of the account, and the gains and losses over a period of time will counterbalance each other. On rare occasions, however, the differences require adjustment by umpire assays in the laboratory of the Bureau of the Mint at Washington. For several years I have been gathering data upon the subject, and have had a series of assays made in order to establish standard limits of differences which might be considered as allowable on different classes of bullion.

The methods of assaying followed in the various institutions are substantially the same, and have grown up as the result of many years of experience, so that with careful work on pure bullions the results obtained at different institutions ought to agree very closely; but with impure bullions—that is, bullions containing other constituents besides gold and silver—the chances for variations in the results increase. The action of different impurities varies widely. Only small amounts of some impurities induce excessive variations in the results, while comparatively large amounts of others have but little effect, and, on the other hand, a combination of several impurities in a bullion may be most disastrous to any agreement of the assay results.

The bullion is handled in the same manner at all the institutions. It is weighed as received, and then melted. Generally a simple melting with soda or borax, or both, is sufficient, but sometimes it is more or less refined in the pot. In the case of large melts, 1,000 ounces or over, or of very impure bullion, a small sample may be dipped or poured out from the well-stirred pot and granulated in water. The granulations are used for the assay sample. In general, however, the metal is cast into bars, and these bars are chipped, top and bottom, to obtain the assay samples. The bars are again weighed and the assays made, when the value of the deposit is calculated from this data. If, however, the various assays made on a deposit do not agree well enough to satisfy the assayer, the bar is remelted, with or without refining in the pot.

The determination of gold in ores by the fire assay, when properly executed, is justly regarded as one of the most accurate of analytical methods. With ordinary care and an excellent bead balance, 1 part of gold in more than 20,000,000 parts of ore can be readily and accurately determined. The determination of 1 part of gold in 5,000,000 parts of ore is very easily done. Until recently, however, it was rare for commercial ore assaying to attain to the accuracy of 1 part in 5,000,000.

The ability to determine gold in ores with such great accuracy is due to the fact that very large amounts of ore, up to 0.25 kg., are taken for the assay, and on a high-grade button balance the resulting bead can be weighed to $\frac{1}{10}$ mg. In assaying bullion, however, such extreme accuracy is out of the question, for the simple reason that there is a limit to the amount of bullion that can be taken for the assay. To obtain the most accurate results the assay sample must be weighed on the same high-grade balance on which is weighed the resulting cornet, and the sample must also be weighed with the same degree of care and accuracy as the cornet. Now, the load that a very sensitive bead balance will safely carry is generally limited to 1 g., and the amount of metal generally taken for a gold-bullion assay is 0.5 g., or one-half of the maximum load of the balance.

Another point in bullion assaying which militates against extreme accuracy in the results lies in the fact that the cornet which is weighed is itself gold, and, in high-grade bullions, it is a very large part of the sample taken for the assay, so that even slight

[a] The accuracy of the commercial assay for silver, Jour. Am. Chem. Soc., vol. xvi, No. 8, p. 505 (Aug., 1894); Accuracy in silver assaying, Jour. Soc. Chem. Ind., vol. xv, No. 6, p. 434 (June 30, 1896).

errors in the handling of the cornet, resulting in slight losses or gains in its weight, count heavily against the highest accuracy of the results.

About two years ago samples of proof gold were exchanged between the Philadelphia mint and the Utrecht mint, and these samples were assayed in comparison with the utmost care at both institutions, with the result that the Utrecht proof was pronounced slightly the best by both mints. The difference in the results of the assays at the two places was only 0.00002. This is by far the most careful and exhaustive comparison of gold bullion assays known to me, and undoubtedly represents the limit of accuracy at present attained by human skill in such work.

Table I shows a series of results obtained by three assayers working in the same laboratory upon fine gold from an electrolytic refinery. Each assayer worked upon the same sample in each set of assays as averaged, the samples being cut from both the tops and bottoms of the bars. While there is a possibility that there may be some difference in composition between the tops and bottoms of the bars, yet in such high-grade material as this any such difference must be slight, and 8 tests upon the subject showed a maximum difference between the top and bottom of only 0.0001, which is considerably less than many of the differences between individual assays. On the whole, then, the figures may be taken as fairly representing the ordinary run of commercial work upon such high-grade bullion. It will be noted that in several cases the figures exceed 1,000, which is due, in part at least, to the high grade of the material. It may also be due in part to the presence in the electrolytic gold of unusual impurities in very small amounts. These data emphasize the necessity of averaging a large number of assays to get a satisfactory determination of the fineness in such very high-grade material.

Table II shows results obtained by various assayers in a single laboratory in assaying granulation samples from a wide variety of bullion.

The figures given in Table III are all taken from a single shipment and show the accuracy that can be obtained upon material of fairly uniform composition, being mostly gold and silver, with but little base metal present. This table shows, first, the results obtained at the assay office where the bullion was originally purchased; and, second, the results obtained upon the same material when shipped to a mint. In some of these samples there is undoubtedly a difference between the tops and bottoms of the bars, but the figures show the agreement that may be expected between two institutions in arriving at the value of such deposits.

Table IV gives the assays of 14 bars which were referred to the bureau laboratory for adjustment, although the average differences between the mint and the assay office were only slight.

The handling of bullion produced at mills using the cyanide process of gold extraction has given a great deal of trouble.

Even when properly prepared such bars are likely to be troublesome, but when, as not infrequently happens, the slimes are not properly purified before being melted into bars, they may give no end of trouble.

A very mild case of variation in cyanide bars is shown in Table V. As received, these bars were chipped and the chips assayed. Since the figures thus obtained were considerably higher than the shipper's figures, the bars were then carefully bored and the borings assayed. Finally, the bars were remelted, with small losses in each case, and granulations taken. The granulations were then assayed.

Table VI exhibits the results obtained by sampling three cyanide bars, high in gold and very low in silver, in three different ways. The assays show a wide variation on the chip samples. While the drill-sample assays are fairly concordant for this class of material, the dip-sample assays agree much better and are to be preferred.

Silver fineness	5.5	8.0	8.0
Weight	1,169.06 oz.	1,228.40 oz.	1,171.16 oz.

An assay office had received a cyanide bar which showed 546, 545.5, 546.2, 546 fine in gold. This was considered satisfactory, and it was shipped to a mint, but the chip samples there yielded most varying results, as follows: 544.6, 535.2, 543, 535, 542.4, 555.6. The bar was then remelted, and granulations showed 550.2 and 551.2. Another cyanide bar received at the same assay office from the same mill showed 592, 593.9, 592.9, 593.3 fine in gold, and was accepted. It was shipped to the same mint, where chips showed 603.6 and 590, while borings showed 588 and 588.6. The bar, which weighed 559.65 ounces Troy, was remelted, with a loss of 1.78 ounces, and granulations from the melt showed 601.8 and 601.8 fine in gold.

Having had a great deal of trouble with some bars from this mill, while others gave but little trouble, the assay office gave one of the bad bars a very thorough treatment by melting and refining in the pot. As received, the bar weighed 643.30 ounces Troy, and was probably about 847 fine in gold. It was melted seven times, when it weighed 502.01 ounces, showing a loss of 141.29 ounces in weight. The final bar was 933.4 fine in gold and 21 fine in silver. The gold loss from this excessive course of meltings was only approximately 3.75 ounces, most of which could undoubtedly be recovered from the slags.

The details of the meltings are shown in Table VII. It should be noted that the fourth melt shows practically no refining, and the weight was only slightly reduced, so that no practical change is shown in the assays.

TABLE VII.—CYANIDE BAR, MELTED SEVEN TIMES.

	917.6	916.8
	917.1	916.9
Sixth melt, 504.82 ounces	928.6	928.6
	929.2	928.8
	929.4	928.6
	930.0	928.8
Seventh melt, 502.01 ounces	933.5	933.3
	933.2	933.4
	933.3	933.7
	933.7	933.4

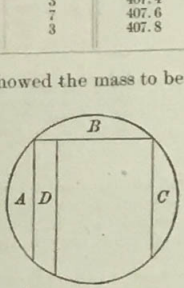
From an extensive series of tests made at the San Francisco mint it was found that, as a rule, in the cyanide bars from several California plants the chip samples taken from the outside of the bars would be about 2.5 fine less in gold than the borings when taken away from the edges of the bar, and that the borings gave satisfactory samples of the bars.

Thirteen miscellaneous deposits were united in a mass melt and cast into 17 bars, weighing 2,841.77 ounces. Each bar was chipped twice and each chip was assayed in duplicate for gold. The following table shows the number of times the stated fineness was obtained:

TABLE VIII.—MASS MELT ASSAYS.

Fineness.	Number.	Fineness.	Number.	Fineness.	Number.	Fineness.	Number
405.0	.....	406.0	3	407.0	8	408.0	5
405.2	.....	406.2	5	407.2	6	408.2	4
405.4	1	406.4	3	407.4	8	408.4	3
405.6	.....	406.6	7	407.6	2	408.6	1
405.8	4	406.8	3	407.8	5	408.8	.....

The average of the 68 assays showed the mass to be 407.16 fine in gold.



When made from the highest grade of metals our coin gold, 900 gold and 100 copper, does not segregate. The gold used may contain a very small amount of silver, but should be as free as possible from all other impurities, and the copper should be of the highest purity possible. Occasionally, in practice, however, there will be some segregation due to some impurities present in minute amounts. On one occasion an inside strip cut from a double eagle was assayed six times and yielded the following gradually decreasing figures: 900.2, 900.1, 899.9, 899.85, 899.5, 899.45. On another

occasion a double eagle was cut as indicated in fig. 1 and the following results were obtained:

	Gold fineness.			
	A.	B.	C.	D.
Bureau	899.12	900.47	899.89	899.70
	899.45	900.38	899.85	899.58
	899.20	.....	.....	.....
	899.45	.....	.....	.....
Mint	899.4	900.2	.....	.....
	899.4	900.5	.....	.....
	899.5	900.2	.....	.....
	899.5	.....	.....	.....

One of our most annoying and yet very interesting and instructive cases was a lot of foreign coin gold, the product of a mint which is very careful in the manufacture of its coins. Twelve deposits of this material were received at the Philadelphia mint from the New York assay office. It was supposed to be 916⅔ fine in gold, the balance being copper, and very uniform in composition, but the New York assays showed considerable variation. At Philadelphia one man assayed each deposit in duplicate, and he was checked by another man with a single assay, as shown in Table IX.

TABLE IX.—FOREIGN COIN GOLD ASSAYS.

	GOLD FINENESS.											
First assayer	917.6	916.4	916.4	917.6	917.5	917.1	915.6	917.3	917.6	914.7	917.0	917.0
	918.3	917.9	917.9	917.8	917.9	917.5	917.3	917.3	917.5	916.8	916.9	917.1
Second assayer	917.2	917.3	917.7	917.3	916.5	916.3	917.2	916.3	916.0	915.8	915.4	916.0

This bullion was diluted with copper to bring it down to the United States standard. While our standard is 900 fine, and the law allows a variation of one one-thousandth up or down, so that legally the coins may run from 899 to 901 fine in gold, yet the working limits adopted at the mints are much narrower than the legal limits, and generally no gold ingots are passed by the assayer below 899.7 fine nor above 900.2 fine.

In making ingots from this metal an unusual number of melts had to be rejected and remelted for want of uniformity. It was expected that the coins made from this bullion would run low, but none of those regularly tested did. In fact, two from one delivery were most unusually high, viz, 900.6 and 900.7. Thereupon 12 coins were selected from the same delivery and 46 assays were made upon them, with the following results:

	Gold fineness.
3 assays showed	899.7
3 assays showed	899.8
5 assays showed	899.9
4 assays showed	900.0
7 assays showed	900.1

	Gold fineness.
3 assays showed	900.2
11 assays showed	900.3
5 assays showed	900.4
4 assays showed	900.5
1 assay showed	900.7
46	

The trouble with this metal undoubtedly arose from the presence of a small amount of some impurity causing a segregation of the gold, but enough work to decide what this was could not be given to the matter. In a similar case, with a different high-grade foreign coin gold at the San Francisco mint, the trouble was traced to the presence of a minute amount of antimony.

In order to get a much wider range of comparison, and to test the influence of the different metals and of various combinations upon the gold assay, a series of samples was prepared in the bureau laboratory and sent out to various laboratories in the service for assay. In preparing the samples the metal was thoroughly mixed by stirring when molten and remelted as often as appeared necessary. They were finally cast into small bars, and when sufficiently ductile were rolled out thin. The strips were cut into small squares, and these were mixed up and the samples for each institution taken out of the mixed pile of pieces. In the case of the brittle bars, they were hammered out and rolled until they crumbled to pieces. The larger pieces were then cut up, and the whole mixed before the samples were taken out.

All through the preparation of the samples very great care was exercised, so that in each set every sample sent for assay should be identical, and thus eliminate from the

assay results all chances of differences being due to differences in the samples operated upon, and to confine the differences shown to the actual assay work. In one very base sample, which will be further noted, it was not possible to adhere to this rule because the metal was too hard.

In making such small melts it is practically impossible to adhere to any predetermined composition with any degree of closeness.

The first sample sent out was gold about 105 fine in silver and about 10 fine in copper; seventy-one assays of this sample were made in 9 laboratories, with the following results:

	Gold fineness.		Gold fineness.
3 assays showed	884.1	19 assays showed	884.7
3 assays showed	884.2	7 assays showed	884.8
5 assays showed	884.3	3 assays showed	884.9
6 assays showed	884.4	—	
11 assays showed	884.5	71	
14 assays showed	884.6		

The averages obtained in the different laboratories were:

Gold fineness.	Gold fineness.	Gold fineness.
884.271	884.517	884.663
884.433	884.517	884.738
884.438	884.631	884.788

A sample approximately 500 fine in silver, 110 fine in copper, and 50 fine in lead was assayed sixty-four times in 9 laboratories, with the following results:

	Gold fineness.		Gold fineness.
2 assays showed	340.9	3 assays showed	341.7
7 assays showed	341.0	5 assays showed	341.8
11 assays showed	341.1	3 assays showed	341.9
7 assays showed	341.2	4 assays showed	342.0
2 assays showed	341.3	1 assay showed	342.1
3 assays showed	341.4	—	
7 assays showed	341.5	64	
9 assays showed	341.6		

The averages obtained in the different laboratories were:

Gold fineness.	Gold fineness.	Gold fineness.
341.016	341.163	341.600
341.038	341.467	341.863
341.150	341.520	341.913

Two samples were both about 25 fine in mixed base metals, while one was approximately 360 fine in silver, and the other was about 450 fine in silver. The first sample was assayed sixty-one times in 9 laboratories, with the following results:

	Gold fineness.		Gold fineness.
1 assay showed	617.6	6 assays showed	618.4
4 assays showed	617.7	4 assays showed	618.5
3 assays showed	617.8	9 assays showed	618.6
9 assays showed	618.0	2 assays showed	618.7
8 assays showed	618.1	—	
6 assays showed	618.2	61	
9 assays showed	618.3		

The averages obtained in the different laboratories were:

Gold fineness.	Gold fineness.	Gold fineness.
617.725	618.233	618.388
618.025	618.283	618.467
618.138	618.320	618.480

The second sample was assayed sixty times in 9 laboratories, with the following results:

	Gold fineness.		Gold fineness.
4 assays showed	528.6	10 assays showed	529.3
7 assays showed	528.7	7 assays showed	529.4
3 assays showed	528.8	2 assays showed	529.5
3 assays showed	528.9	1 assay showed	529.6
4 assays showed	529.0	—	
7 assays showed	529.1	60	
12 assays showed	529.2		

The averages obtained in the different laboratories were:

Gold fineness.	Gold fineness.	Gold fineness.
528.671	529.175	529.267
528.800	529.238	529.283
528.963	529.250	529.300

Having on hand some ferruginous bullion, I attempted to prepare a sample for this work, but experienced considerable difficulty in getting a satisfactory metal, owing to the separation of magnetic globules on solidification. By melting several times with niter I finally obtained a sample that did not show visible segregation, and it must have been close to saturation with iron. It was about 763 fine in gold and 185 fine in silver, so that the entire base metals, including the iron, were only about 52 fine.

This sample was assayed forty-seven times in 9 laboratories, with the following results:

	Gold fineness.		Gold fineness.
2 assays showed	762.9	9 assays showed	763.7
5 assays showed	763.0	4 assays showed	763.8
3 assays showed	763.2	5 assays showed	763.9
5 assays showed	763.3	2 assays showed	764.0
6 assays showed	763.4	—	
4 assays showed	763.5	47	
2 assays showed	763.6		

The averages obtained in the different laboratories were as follows:

Gold fineness.	Gold fineness.	Gold fineness.
762.975	763.417	763.683
763.175	763.467	763.700
763.300	763.500	763.833

It having been supposed that much of the difficulty with cyanide gold bars was due to the zinc left in the slimes and going into the bars, a sample was prepared which was nearly 590 fine in gold, about 245 fine in silver, slightly over 130 fine in zinc, and containing a little copper and very little lead.

This sample was assayed fifty times in 8 laboratories, with the following results:

	Gold fineness.		Gold fineness.
1 assay showed	588.9	6 assays showed	589.6
3 assays showed	589.0	2 assays showed	589.7
4 assays showed	589.1	5 assays showed	589.8
3 assays showed	589.2	3 assays showed	589.9
7 assays showed	589.3	—	
7 assays showed	589.4	50	
9 assays showed	589.5		

The averages obtained in the different laboratories were as follows:

Gold fineness.	Gold fineness.	Gold fineness.
589.040	589.417	589.567
589.400	589.475	589.800
589.400	589.483	

A simple inspection of these results shows very clearly that zinc alone does not materially militate against agreement in the assay work itself, and if it is the cause of the trouble with cyanide bars it must be owing to its causing segregation, and thus preventing the proper sampling of the bars by chipping or boring. Other elements may also be active in producing segregation in such bars, either by themselves or through combinations with the zinc or other metals present. A low-grade and very base bar along this line was prepared to run about 100 fine in zinc, 200 fine in copper, and 50 fine in lead. It was about 268 fine in gold and 370 fine in silver. This bar was very hard, and it was impossible to prepare identical samples for the various laboratories. It was simply cut into pieces and a piece sent to each institution.

This sample was assayed forty-four times in 8 laboratories, and while the difference between the highest and the lowest result is only 1.7 fine, yet the results are scattered all along through the range, and there is only a slight concentration of the results about one point. This is, of course, due in part to the fact that the samples assayed were not identical.

The results obtained were:

	Gold fineness.		Gold fineness.
1 assay showed	268.0	1 assay showed	268.9
3 assays showed	268.1	4 assays showed	269.0
6 assays showed	268.2	3 assays showed	269.1
6 assays showed	268.3	1 assay showed	269.3
4 assays showed	268.4	3 assays showed	269.6
3 assays showed	268.5	3 assays showed	269.7
3 assays showed	268.6	—	
3 assays showed	268.8	44	

It has long been known in a practical way that the presence of arsenic in a gold bullion prevents any agreement in the assays. Fortunately, however, the presence of arsenic very plainly reveals itself in the melting of the bullion, and when found the melter proceeds to refine the bullion in the pot, and ultimately removes it very completely before the bullion can be accepted.

Three test samples containing arsenic were prepared, and they yielded most astonishing and interesting results. The first sample was approximately 785 fine in gold, 107.5 fine in silver, 100 fine in copper, and 7.5 fine in arsenic. This is only a small proportion of arsenic, and yet it completely prevented any agreement whatever in the assay results. This sample was assayed sixty-five times in 10 laboratories. The lowest result obtained was 779.7 fine in gold, and the highest 792.4, with an extreme difference of 12.7 in the fineness. Moreover, there is the utmost divergence in the results as well as no agreement whatever; 30 results were obtained only a single time each, 11 only twice each, 3 only three times each, and only a single result was obtained four times. In only three instances did one laboratory obtain the same result twice.

A sample approximately 675 fine in gold, 200 fine in silver, 100 fine in zinc, 24 fine in lead and copper, and only 1 fine in arsenic yielded a trifling better set of results, but still very widely divergent. This sample was assayed sixty-two times in 10 laboratories. The lowest result obtained was 671.4 fine in gold, and the highest 681.4, showing an extreme difference of 10 in the fineness; 31 results were obtained a single time only, 10 only twice each, 2 only three times each, and only a single result was obtained five times. In three instances one laboratory obtained the same result twice, and in one case a laboratory obtained the same result three times.

It would appear, however, that the influence of arsenic upon the assaying of high-grade bullion containing only trifling amounts of base metals is far less injurious. While the results on a sample running approximately 865 fine in gold, 130 fine in silver, 1 fine in arsenic, and only 4 fine in other base metals can not be considered satisfactory, yet they are very much better than those yielded by the other two arsenical bullions. This ample was assayed fifty-three times in 9 laboratories, with the following results:

	Gold fineness.		Gold fineness.
1 assay showed	864.1	1 assay showed	865.6
1 assay showed	864.3	3 assays showed	865.7
2 assays showed	864.4	4 assays showed	865.8
2 assays showed	864.7	3 assays showed	865.9
2 assays showed	864.8	5 assays showed	866.0
2 assays showed	865.0	2 assays showed	866.1
3 assays showed	865.1	3 assays showed	866.2
4 assays showed	865.2	1 assay showed	866.6
8 assays showed	865.3	—	
2 assays showed	865.4	53	
4 assays showed	865.5		

The averages obtained in the different laboratories were:

Gold fineness.	Gold fineness.	Gold fineness.
864.933	865.233	865.500
865.183	865.286	865.517
865.200	865.300	865.717

As in so many other directions, antimony behaves similarly to arsenic in assaying gold bullion, but its influence is not so pronounced. A sample of bullion approximately 723 fine in gold, 245 fine in silver, 1 fine in antimony, and 31 fine in mixed base metals, copper, lead, zinc, was assayed forty-six times in nine laboratories. The lowest assay obtained was 721.3, and the highest 725.1, showing a range of 3.8 in the fineness. However, 24 of the results, or just over a half, ranged from 722.8 to 723.9 fine, and outside this range only two results were obtained more than a single time.

Finally, some of our gold coin was melted up and assayed one hundred and seven times on identical samples in 5 laboratories, with the following results:

	Gold fineness.		Gold fineness.
6 assays showed	899.6	32 assays showed	900.0
10 assays showed	899.7	5 assays showed	900.1
26 assays showed	899.8		
28 assays showed	899.9	107	

The actual average of this sample is 899.879 fine in gold.

With these results as a basis, the investigation of the subject is being continued with the hope of ascertaining the causes of the variations shown and improving the agreement in the results attained. It is, for instance, well known that gold cornets are not pure gold. They always carry some silver, and I have never failed to find copper in them when tested for with great care. On several occasions I have found lead present on testing the silver nitrate solution from parting a large number of cornets at one time in a platinum basket. The amounts of these base metals present in the cornets are, of course, quite small, and their influence is corrected by the proof assay, in the same way that it corrects for the silver left in the cornets. I am, however, carrying on a series of quantitative determinations of base metals present in gold cornets, the results of which I hope to publish at some future date. Again, it is assumed that the proof furnishes a very close correction for the assays, but it is evident that the proofs themselves must be subject to variations and it is known that cupels containing proofs and touching each other in the furnance may show appreciably different results. A very large collection of proof figures is being made for the purpose of studying this question. Also the question of absorption of the precious metals by the cupel is most important and is being investigated.

PROCEEDINGS OF THE ASSAY COMMISSION, 1909.

The following-named gentlemen are hereby designated as commissioners to test and examine the weight and fineness of the coins reserved at the several mints during the calendar year 1908, pursuant to the provisions of section 3547 of the Revised Statutes:

Hon. William E. Borah, United States Senate; Hon. George E. Roberts, Chicago, Ill.; Hon. William H. Edmunds, Yankton, S. Dak.; Dr. S. Weir Mitchell, Philadelphia, Pa.; Prof. Leverett Mears, Williams College, Mass.; Mr. Ambrose Swasey, Cleveland, Ohio; Mr. Gardner F. Williams, Washington, D. C.; Mr. James H. Manning, Albany, N. Y.; Mr. Farran Zerbe, Tyrone, Pa.; Mr. John E. Wilkie, Washington, D. C.; Mr. Joseph Auld, Burlington, Vt.; Mr. H. W. Child, Helena, Mont.; Mr. William. J. McCaughey, Washington, D. C.; Mr. George M. Root, Sioux Falls, S. Dak.; Mr. J. A. Cauldwell, Wilkes-Barre, Pa.; Hon. Ira W. Wood, House of Representatives; Mr. John Hays Hammond, New York, N. Y.; Hon. Pearl Wight, New Orleans, La.; Mr. J. B. Tiffany, New York, N. Y.; Dr. Willlam Sturgis Bigelow,

Boston, Mass.; Hon. William D. Bynum, Muskogee, Okla.; Mr. Truxton Beale, Bakersfield, Cal. (Dr. H. G. Torrey, ex officio member.)

The commission met at the mint at Philadelphia on February 10, 1909, and Hon. Ira W. Wood was elected chairman.

The following committees were appointed by the chairman with the approval of the commission:

Committee on counting.—Mr. Tiffany, chairman; Messrs. Manning, Zerbe, Auld, Cauldwell, and Child.

Committee on weighing.—Doctor Bigelow, chairman; Messrs. Wilkie, McCaughey, and Bynum.

Committee on assaying.—Professor Mears, chairman; Messrs. Williams, Mitchell, Swasey, Root, and Torrey.

The committee on counting reported that the packages containing the pieces reserved by the several mints for the trial of coins were delivered to them, and that they were compared with the transcripts kept by the Director of the Mint and found to be correct. After verification the coins were delivered to the committees on weighing and assaying.

The coins reserved by the mints for the purposes of the assay commission were as follows:

Gold coins from the mint at Philadelphia, 6,397, of the value of $99,205.

Silver coins from the mint at Philadelphia, 8,102, of the value of $1,400.05.

Gold coins from the mint at San Francisco, 164, of the value of $1,450.

Silver coins from the mint at San Francisco, 2,827, of the value of $671.

Silver coins from the mint at New Orleans, 6,697, of the value of $2,210.

Gold coins from the mint at Denver, 2,212, of the value of $31,540.

Silver coins from the mint at Denver, 8,279, of the value of $1,918.

The coins reserved on account of coinage executed for the Philippine Islands were as follows:

	Pieces.
Mint at Philadelphia:	
Pesos	1
50 centavos	1
20 centavos	1
10 centavos	1
Mint at San Francisco:	
Pesos	10,478
50 centavos	801
20 centavos	768
10 centavos	1,682

The committee on assaying reported receiving and making assays of coins reserved from the mints at Philadelphia, San Francisco, New Orleans, and Denver, representing the deliveries made by the coiners to the superintendents during the calendar year 1908.

The highest assay value of the gold coinage (the limit of tolerance being one one-thousandth) was at—

Philadelphia	900.5
San Francisco	900.1
Denver	900.2

The lowest assay value of the gold coinage (the limit of tolerance being one one-thousandth) was at—

Philadelphia	899.7
San Francisco	899.8
Denver	900.0

The highest assay value of the silver coinage (the limit of tolerance being three one-thousandths) was at—

Philadelphia	900.2
San Francisco	901.3
New Orleans	901.1
Denver	901.8

The lowest assay value of the silver coinage (the limit of tolerance being three one-thousandths) was at—

Philadelphia	899.1
San Francisco	900.0
New Orleans	899.3
Denver	899.1

The highest assay value[a] of the Philippine silver coinage was at—

San Francisco (pesos)	802.0
San Francisco (subsidiary)	749.8

The lowest assay value of the Philippine silver coinage was at—

San Francisco (pesos)	799.2
San Francisco (subsidiary)	748.8

The committee also tested the quartation silver and found it free from gold, and the lead used in the assay of gold bullion and found it free from gold and silver. The acid used in the humid assay of silver was found to be free from silver and also from chlorine.

The balances used were tested and found to be correct.

The committee reported the assays as entirely trustworthy, and that none of the coins tested differed from the standard of fineness by a greater degree than the amount allowed by law.

The committee on weighing respectfully reported examining sample coins selected at random from those reserved by the several mints. The weighing was made on a balance by Henry Troemner, of Philadelphia. The weights employed were furnished under seal by the Director of the Bureau of Standards, and were accompanied by a certificate, stating their variations in mass from the standards fixed by law. The balance was carefully tested and found to be sufficiently accurate without making corrections.

The secondary troy pound of the mint was compared with the standard pound and found to be correct within 1 part in 350,000. Three separate pounds built up of working weights of the mint were found to be correct within 1 part in 50,000.

The details of the weighings indicated that the deviations from the statutory standard weights of the coins examined were all within the legal tolerance, consequently the committee on weighing pronounced the examination of the weights of the coinage of the several mints during the year 1908 to be satisfactory.

The committee on resolutions submitted the following:

Recognizing that the national coin collection in the mint at Philadelphia is a serious educational institution, and that it is one deserving of greater financial aid that it may be made more complete and instructive, and that it is now inconsiderable, except in the coinage of the United States, when compared with coin collections of many countries, be it

Resolved, That it is the sense of the members of the Annual Assay Commission of 1909 that the mint coin collection should be made as complete as possible; and that since there are over 100,000 visitors to the mint annually, many of whom, we believe,

[a] By the act of June 23, 1906, the standard fineness of the Philippine peso was reduced to 800.0 and the subsidiary coins to 750.0 fine.

would purchase a mint souvenir in the form of an artistic medal if they knew that the profits from the sale of such medal would be devoted to the improvement of the coin collection, it is

Recommended that a medal, of a different design each year, be made and offered for sale to visitors, and that the profits derived from the sale of such medal be devoted to the improvement of the national coin collection.

We further believe that the striking of this medal should be made close to public view, thus demonstrating the process of coining better than the distant view the visitors now have of the coining operations; and that medallic art effects not practical in our coinage could be produced in a medal.

Inasmuch as medals and medalettes have been sold to visitors at the mint for many years, the profits from which have not served a public purpose, it is believed that these resolutions can be made operative without congressional action. And be it further

Resolved, That the thanks of the members of the Assay Commission of 1909 be extended to the Director of the Mint, and to the superintendent, officers, and employees of the Philadelphia mint for their many courtesies during the session.

MINT OF THE UNITED STATES AT PHILADELPHIA, PA.

The following table shows by weight and value the gold and silver deposited during the fiscal year 1909:

Metal.	Deposits.	Redeposits.	Standard ounces.	Coinage value.
Gold	3,156	2,366	1,561,534.174	$29,051,798.69
Silver	655	226	3,838,417.59	4,466,522.29
Total	3,811	2,592		33,518,320.98

Of the above amount of silver bullion 5,769.45 ounces standard are the surplus bullion recovered by the melter and refiner in his operations during the fiscal year 1908, and of the above amount of gold bullion 475.511 ounces standard are the surplus bullion recovered by the melter and refiner in his operations during the fiscal year 1909.

ASSAYER'S DEPARTMENT.

The number of assays made in this department was as follows:

Deposits and purchases	31,992
Ingots (gold and silver)	5,042
Refinery	9,220
Special assays	1,163
Sweeps assays	430
Total	47,847

In addition to this, 350 ounces of proof gold and 475 ounces of proof silver were made.

Of the 417 melts of gold ingots made by the melter and refiner, 384 were passed; 33, while within the standard fineness required by law, were returned for remelting. No melts were condemned. There were 1,839 melts of silver ingots made, of which 1,831 were passed, 6 returned for remelting, and 2 condemned.

The fineness of gold melts passed was:	
4 melts at	899.6
22 melts at	899.7
79 melts at	899.8
99 melts at	899.9
146 melts at	900.0
26 melts at	900.1
7 melts at	900.2
1 melt at	900.3
	384

The fineness of silver melts passed was:	
77 melts at	898
95 melts at	898½
542 melts at	898¾
280 melts at	898½
580 melts at	899
175 melts at	899¼
65 melts at	899½
11 melts at	899¾
6 melts at	900
	1,831

Melter and Refiner's Department.

During the fiscal year the melter and refiner received from the superintendent gold bullion containing by assay 3,332,697.306 standard ounces, of the value of $62,003,670.81, his legal allowance for wastage being 3,332.697 standard ounces, of the value of $62,003.67.

He also received silver bullion containing by assay 10,868,012.24 standard ounces, of the value of $12,646,414.24, his legal allowance for wastage being 16,302.02 standard ounces, of the value of $18,969.62. He returned to the superintendent 3,333,172.817 standard ounces of gold and 10,862,727.65 standard ounces of silver.

He operated upon bullion as follows:

Items.	Gold.	Silver.
	Standard oz.	*Standard oz.*
Ingots	2,530,559.040	7,187,152.96
Refinery	1,668,892.456	3,149,873.14
Total	4,199,451.496	10,337,026.10

The excess of gold and silver operated upon over the amounts charged during the year is due to duplicate operations.

Upon the settlement of the melter and refiner's accounts, June 30, 1909, there was found an apparent gain upon the gold bullion during the fiscal year of 475.511 standard ounces, and in the operations upon the silver bullion an apparent loss of 5,284.59 standard ounces.

The melts made aggregate as follows:

Melts.	Bars.	Ingots.	Anodes.	Deposits.	Special.	Total.
Gold	188	417	1,024	3,405	371	5,405
Silver	903	1,839	.....	624	.....	3,366
Total	1,091	2,256	1,024	4,029	371	8,771

During the fiscal year two silver melts were condemned.

Number, Weight, and Value of Gold and Silver Bars for Industrial Use.

Metal.	Bars.	Standard ounces.	Coinage value.
Gold	3,880	498,362.797	$9,271,866.04
Silver	4,405	1,051,597.95	1,223,677.60
Total	8,285	.....	10,495,543.64

During the year 183 barrels of sweeps were gathered, containing by assay 1,128.323 standard ounces of gold and 3,743.35 standard ounces of silver. There were 245 barrels of old sweeps reworked, containing by assay 1,619.100 standard ounces of gold and 3,698.87 standard ounces of silver.

The operations of the refinery were as follows:

Bullion.	Gold.	Silver.
	Standard oz.	*Standard oz.*
Sent to the refinery 4,844,051.86 gross ounces, containing by assay	1,668,802.456	3,149,873.14
Bullion received from refinery	1,668,407.808	3,145,002.79
Sweeps	808.750	2,587.91
	[a] 324.102	[b] 2,282.44

[a] Apparent gain. [b] Apparent loss.

Silver bullion sent to the refinery upon which refining charges were collected contained by assay 2,578,437.07 standard ounces, and silver owned by the Government and returned to the refinery for parting purposes upon which no parting charges were collected contained by assay 571,436.07 standard ounces.

			Troy ounces.
During the year the melter and refiner received from the superintendent minor coinage metal			17,034,826.36
Delivered prior to settlement:			
Bronze ingots	11,739,311.50		
Nickel ingots	3,777,560.40		
		15,516,871.90	
Delivered in settlement:			
Ingot copper	813,822.91		
Nickel shot	615,913.00		
Zinc	3,191.00		
Zinc and tin alloy	31,757.00		
Bronze residue	2,752.00		
Nickel residue	553.00		
Wastage	50,865.55		
		1,517,954.46	
			17,034,826.36

Coiner's Department.

The coiner received gold, silver, nickel, and bronze from the superintendent during the fiscal year as follows:

GOLD.

		Standard ounces.
Received from superintendent July 1, 1908, to June 30, 1909		2,340,380.115
Returned prior to settlement June 30, 1909	2,241,793.164	
Returned in settlement June 30, 1909	98,526.759	
		2,340,319.923
Wastage in gold		60.192

SILVER.

Received from superintendent July 1, 1908, to June 30, 1909		6,756,883.29
Returned prior to settlement June 30, 1909	6,547,455.21	
Returned in settlement June 30, 1909	208,304.71	
		6,755,759.92
Wastage in silver		1,123.37

NICKEL.

Received from superintendent July 1, 1908, to June 30, 1909		3,777,560.40
Returned prior to settlement June 30, 1909	3,400,706.58	
Returned in settlement June 30, 1909	361,596.90	
		3,762,303.48
Wastage in nickel		15,256.92

COPPER-BRONZE.

Received from superintendent July 1, 1908, to June 30, 1909		11,739,311.50
Returned prior to settlement June 30, 1909	8,225,285.41	
Returned in settlement June 30, 1909	3,479,566.10	
		11,704,851.51
Copper-bronze wastage		34,459.99

During the fiscal year ended June 30, 1909, this department received 2,340,380.115 standard ounces of gold, of which 2,242,109.995 standard ounces, of the value of $41,713,674.325, were operated upon, from which there were produced 1,060,116.222 standard ounces of coin of the value of $19,723,092.50, all delivered to the superintendent during the fiscal year prior to the settlement, and 165.820 standard ounces of coin delivered to the superintendent at settlement upon which there was a wastage of 60.192 standard ounces, of the value of $1,119.85, being 5.14 per cent of the legal allowance.

The percentage of coin produced from the amount operated upon was 47.27 per cent.

During the same period the coiner also received 6,756,883.29 standard ounces of silver, of which 6,568,728.99 standard ounces, of the value of $8,172,621.66, were operated upon, from which there were produced 3,816,614.92 ounces of coin of the value of $4,748,510 in subsidiary coin delivered to the superintendent during the fiscal year prior to settlement, and 19,969.79 standard ounces of coin delivered to the superintendent at settlement, upon which there was a wastage of 1,123.37 standard ounces of the value of $585.14, being 16.63 per cent of the legal allowance.

The percentage of coin produced from the amount operated upon was 58.41 per cent.

There were also delivered to the coiner during the same period 3,777,560.40 ounces of nickel ingots, from which were produced 1,862,715.87 ounces of 5-cent pieces of the face value of $579,427.90, upon which there was a wastage of 15,256.92 ounces.

During the same period the coiner also received 11,739,311.50 ounces of copper-bronze ingots, from which there were produced 5,323,326.90 ounces of 1-cent coin of the face value of $532,382.95, upon which there was a wastage of 34,459.99 ounces.

Owing to experimental work in new gold coins during the past year the percentage of coin produced from the amount of metal operated upon is somewhat lower than otherwise would have been.

The following table shows the coinage executed during the year:

Denomination.	Pieces.	Value.
GOLD.		
Double eagles	317,610	$6,352,200.00
Eagles	526,311	5,263,110.00
Half eagles	1,179,115	5,895,575.00
Quarter eagles	884,883	2,212,207.50
Total	2,907,919	19,723,092.50
SILVER.		
Half dollars	1,838,600	919,300.00
Quarter dollars	8,656,600	2,164,150.00
Dimes	16,650,000	1,665,060.00
Total	27,145,800	4,748,510.00
MINOR.		
5-cent nickel pieces	11,588,558	579,427.90
1-cent bronze pieces	53,238,295	532,382.95
Total	64,826,853	1,111,810.85
Grand total	94,880,572	25,583,413.35

ENGRAVER'S DEPARTMENT.

All the dies used in the coinage operations of all the mints of the United States are made in the engraving department at Philadelphia.

The number of dies prepared for United States coinage last year was 2,230. In addition 408 dies were made for Philippine coinage, 17 for San Salvador, 61 for medals, and 156 master dies, hubs, and experimental dies for the new gold and minor coinage.

The following table shows the number of proof coins and medals and their nominal value manufactured during the fiscal year:

Article.	Pieces.	Nominal value.
Gold medals	154	$4,542.86
Silver medals	1,562	1,368.06
Bronze medals	43,109	9,764.99
Gold-proof coins	766	5,837.50
Silver-proof coins	1,872	530.40
Minor-proof coins	5,828	174.84
Total	53,291	22,158.65

MINOR COINAGE.

The manufacture of the 1-cent bronze and 5-cent nickel coins has, until this fiscal year, been confined to the Philadelphia mint. The Fifty-ninth Congress at its first session authorized the making of these coins at the other mints, and a few 1-cent bronze pieces were made during the fiscal year at the San Francisco mint.

The coinage of minor coin during the fiscal year 1909 at the Philadelphia mint is shown in the following table:

Denomination.	Value.
1-cent bronze	$532,382.95
5-cent nickel	579,427.90

No blanks for minor coinage were purchased during the fiscal year.

The amount of metal purchased for the manufacture of minor coinage was 217,192 avoirdupois pounds, at a cost of $28,589.74.

The amount of uncurrent copper, nickel, and bronze coins transferred from the Treasury during the year for conversion into current coins, cost, and seigniorage are shown by the following table:

Old copper cents		$200.82
Nickel 1-cent coins		677.70
Bronze 1-cent coins		30,431.60
Bronze 2-cent coins		338.90
Nickel 3-cent coins		578.73
Nickel 5-cent coins		192,339.00
Total		224,566.75
Cost of nickel added to 1-cent metal to convert into 5-cent alloy for recoinage into nickel 5-cent coin		25.39
Cost of tin and zinc added to old copper-cent metal to convert into bronze 1-cent alloy for recoinage into bronze 1-cent coin		4.55
Cost of metal of same alloy added to nickel 3-cent metal for recoinage into nickel 5-cent coin		9.36
Seigniorage (gain by recoinage)		3,324.34
Total		227,930.39
Coinage executed, nominal value:		
Bronze 1-cent coin	$30,167.10	
Nickel 5-cent coin	157,211.60	
		187,378.70
Loss by recoinage		10,666.69
Balance, not recoined		29,885.00
Total		227,930.39

The seigniorage, or gain, on recoinage of minor coin was $3,324.34, as against a loss of $10,666.69, showing a net loss of $7,342.35.

The seigniorage on the coinage of nickel and bronze coins coined from purchased metal was $830,877.04, which, less a net loss of $7,342.35 on the recoinage of minor coin and a wastage of the operative officers in the minor coinage operations of $1,323.75, gives a net seigniorage on minor coin of $822,210.94.

The total amount of the several types of minor coin manufactured at this mint from 1793, when the first coinage of copper cents was made, until June 30, 1909, aggregated $53,819,274.52. There have been melted for recoinage $5,003,859.44, leaving outstanding June 30, 1909, $48,815,415.08, the product of this mint.

The several types and denominations of minor coin issued, manufactured by the mint at Philadelphia since its establishment, the amount remelted, and the amount outstanding June 30, 1909, are set forth in the following table:

MINOR COINS ISSUED, REMELTED, AND OUTSTANDING.

Denomination.	Coined.	Remelted.	Outstanding June 30, 1909.
Copper cents	$1,562,887.44	$380,542.45	$1,182,344.99
Copper half-cents	39,926.11		39,926.11
Copper-nickel cents	2,007,720.00	802,835.55	1,204,884.45
Bronze cents	17,094,680.00	348,458.16	16,746,221.84
Bronze 2-cent pieces	912,020.00	339,667.82	572,352.18
Nickel 3-cent pieces	905,768.52	282,668.86	623,099.66
Nickel 5-cent pieces	31,296,272.45	2,849,686.60	28,446,585.85
Total	53,819,274.52	5,003,859.44	48,815,415.08

Minor coins to the amount of $1,078,229.95 have been distributed throughout the States and Territories of the United States during the fiscal year 1909—$656,963.10 in nickel 5-cent pieces and $421,266.85 in bronze 1-cent pieces.

The expenditure for the distribution of minor coin for the same period was $2,757.68.

ALL SEIGNIORAGE.

The seigniorage on the coinage of purchased metal for the fiscal year was $2,901,384.28, as shown by the following table:

Item.	Coined.	Seigniorage.
Subsidiary silver coins	$3,586,510.00	$2,070,507.24
Minor coins	1,111,810.85	830,877.04
Total	4,698,320.85	2,901,384.28

VISITORS.

A large number of visitors from all States of the Union and from foreign countries visited the mint during the year, 70,992 having been shown through by the several guides.

NUMBER OF EMPLOYEES.

The force of employees at the end of this fiscal year shows a reduction of 12 from the number carried on the rolls at the end of the previous fiscal year. The total number on the rolls at the close of the fiscal year was 460, distributed in the several departments as follows:

Department.	Male.	Female.	Total.
General	184	43	227
Assayer's	13	.....	13
Melter and refiner's	64	1	65
Coiner's	91	48	139
Engraver's	16	.....	16
Total	368	92	460

PERCENTAGE OF LOSS IN MELTING DURING THE FISCAL YEAR ENDED JUNE 30, 1909.

Bars, kings	0.0085
Dust	.0420
Retort	.0487
Unretorted amalgam	.6205
Miscellaneous	.0439

MINT OF THE UNITED STATES AT SAN FRANCISCO, CAL.

During the fiscal year ended June 30, 1909, one change was made among the operative officers of this mint, Mr. E. R. Leach becoming melter and refiner, on August 4, 1908, succeeding Mr. C. M. Gorham, who resigned. Mr. Gorham had given many years of faithful services to the Government, having been assistant coiner, and coiner, in this mint for over thirteen years, and melter and refiner for nearly seven years.

The manufacture of United States minor coin was instituted at this mint during the year, and on November 27, 1908, the first 1-cent pieces ever made at the San Francisco mint were delivered by the coiner to the superintendent. The 1-cent bronze pieces struck during the year amounted to $14,240.

The following table shows by weight and value the gold and silver deposited during the fiscal year:

Metal.	Deposits.	Redeposits.	Standard ounces.	Coinage value.
Gold	7,544	233	2,203,992.167	$41,004,504.21
Silver	4,988	.....	9,196,212.29	10,701,047.02
Total	12,532	233	.....	51,705,551.33

Of the above amount of silver bullion 8,127,302.80 standard ounces of Philippine silver coin were received for recoinage for the government of the Philippine Islands.

ASSAY DEPARTMENT.

The following tables show the operations of the department for the fiscal year ended June 30, 1909:

Gold assays		51,691
Silver assays		29,367
Sweep assays		216
Total		81,274

Melter and Refiner's Department.

The melter and refiner received and operated upon gold and silver bullion during the fiscal year, as follows:

GOLD BULLION.

Received:	Standard ounces.	
Settlement bullion, August 4, 1908	2,427,129.764	
Settlement bullion, April 1, 1909	3,493,645.674	
Deposits	2,042,845.852	
Redeposits	180,694.546	
Clippings	2,112,889.860	
Coiner's bars, coins, etc.	1,008.310	
Total		10,238,214.206
Delivered:		
Ingots	5,187,870.730	
Fine bars	125,481.600	
Sweeps	416.283	
Settlement, March 31, 1909	3,493,645.674	
Settlement, June 30, 1909	1,430,253.050	
Total		10,237,667.337
Wastage		546.869

SILVER BULLION.

Received:		
Settlement bullion, August 4, 1908	3,391,394.88	
Settlement bullion, April 1, 1909	2,844,691.80	
Silver purchase account San Salvador	557,148.53	
Philippine recoinage	8,127,454.70	
Deposits	419,048.96	
Redeposits	48,200.49	
Clippings	7,509,606.51	
United States coins for recoinage, etc.	35,441.44	
Total		22,932,837.31
Delivered:		
Ingots	17,798,558.85	
Fine bars	255,554.09	
Sweeps	6,456.92	
Transfer to assay offices, etc.	240.03	
Settlement, March 31, 1909	2,844,691.80	
Settlement, June 30, 1909	2,039,705.94	
Total		22,945,207.13
Surplus		12,449.82

The same officer operated upon the following minor coinage metal:

MINOR COINAGE METAL.

Received:	Troy ounces.	
Copper account United States minor coinage	583,333.32	
Philippine coins, account Philippine Island recoinage	648,632.20	
Clippings	508,661.04	
Alloy (zinc and tin)	43,545.82	
Settlement bullion, April 1, 1909	455,383.78	
Total		2,239,556.16
Delivered:		
Ingots	1,316,474.60	
Settlement, March 31, 1909	455,383.78	
Settlement, June 30, 1909	461,796.03	
Total		2,233,654.41
Wastage		5,901.75

Ingot Melts Made.

Metals.	Number.	Condemned.
Gold	1,729	5
Silver	10,850	38
Bronze	943	.....

Bronze ingots for the coinage of American 1-cent pieces and Philippine 1-centavo pieces were made this year for the first time, no difficulty whatever being experienced in their manufacture.

Refinery.

The refinery operations were as follows:

GOLD BULLION.

	Standard ounces.	
Sent to refinery:		
Bullion, no charges	1,346,101.961	
Crude bullion, with charges	1,172,585.831	
Total		2,518,687.792
Returned from refinery:		
Fine gold	2,385,081.799	
Settlement metal	132,915.340	
Total		2,517,997.139
Wastage		690.653

SILVER BULLION.

Sent to refinery:		
Bullion, no charges	98,564.98	
Crude bullion, with charges	1,123,782.05	
Total		1,222,347.03
Returned from refinery:		
Mint fine silver	1,141,330.83	
Settlement metal	88,047.09	
Total		1,229,377.92
Excess		7,030.89

In addition to the fine gold and silver produced, 90,459 troy ounces of electrolytic copper were recovered from the crude bullion and scrap copper used in the refinery operations. As this copper can be used for alloy for gold and silver coin, and as an arrangement has been made whereby the refinery will get credit for it, the production of electrolytic copper will be a source of considerable income for the refinery.

During the year we discarded the horizontal system of silver refining for the vertical, which we find very much cheaper and more satisfactory in every respect.

All deposits of fine gold assaying less than 999 were sent to the refinery and rerefined. The large excess in silver is due to the recovery of silver from these deposits.

Sweep cellar.

There were gathered in sweeps 292 barrels, containing 819.880 standard ounces of gold and 5,497.52 standard ounces of silver.

Coiner's Department.

During the fiscal year ended June 30, 1909, the coiner operated on 4,959,391.800 standard ounces of gold, 17,568,001.39 standard ounces of silver, and 1,316,474.60 troy ounces of copper.

He delivered to the superintendent during the same period 2,839,666.250 standard ounces of gold coin, valued at $52,831,000; 9,755,659.52 standard ounces of silver coin, valued at $16,627,114, and 796,502 troy ounces of copper coin, valued at $53,486.12.

Of the above, 557,147.86 standard ounces in silver pesos were coined for the Government of San Salvador, and 8,775,739.16 standard ounces of silver coin, in pesos and subsidiary, and 654,102 troy ounces of copper were coined for the government of the Philippine Islands.

The following table exhibits the coiner's deliveries for the fiscal year:

Denomination.	Pieces.	Value.
Gold:		
Double eagles	2,540,000	$50,800,000
Eagles	162,100	1,621,000
Half eagles	82,000	410,000

The number of pieces coined aggregated 29,051,826. The coinage of gold for fifty continuous working days amounted to $51,382,500. The percentage of coin produced from the amount operated upon was: Gold, 58.47; silver, 57.17; copper, 56.15.

From the operation on gold there was an excess of 2.367 ounces and from the operations on silver a wastage of 9,391.13 ounces, or 58.55 per cent of the legal allowance.

A few months' trial of the new water-cooled rolling mill, which was installed during the year, has demonstrated that this roll is a great improvement over the old machines in lessening the vibration and noise, formerly so objectionable, and in increasing the accuracy of the work. The continuous flow of water keeps the roll cool and at an even temperature, thus preventing the expansion that was so hard to guard against under the old methods.

The bronze coins manufactured at this mint during the year were made on the silver presses. Two new presses for bronze coining are now being installed to handle this class of work.

NUMBER OF EMPLOYEES.

The total number of employees in this mint at the close of the fiscal year 1909 was 237, distributed as follows:

Department.	Male.	Female.	Total.
General	85	1	86
Assayers	14	.....	14
Melter and refiners	61	.....	61
Coiners	38	38	76
Total	198	39	237

The number of employees during the year approximated 311, but in June 26 men and 48 women were furloughed.

VISITORS.

During the year 51,038 visitors were shown through the mint.

MINT OF THE UNITED STATES AT NEW ORLEANS, LA.

The standard weight and value of gold and silver deposited at the mint during the fiscal year was as follows:

Metal.	Deposits.	Redeposits.	Standard ounces.	Coinage value.
Gold	844	.....	47,975.813	$892,573.14
Silver	73	1	1,452,917.190	1,690,667.26
Total	917	1	.....	2,583,240.40

There were purchased over the counter 2,745.417 standard ounces of uncurrent domestic gold coin, of the face value of $51,793.50 producing in new coin, $51,077.53, showing a loss in recoinage of $715.97; and 123.33 standard ounces of uncurrent domestic silver coins, of the face value of $157.30, producing in new coins $153.44, showing a loss in recoinage of $3.86.

The Treasurer transferred for recoinage uncurrent domestic subsidiary silver coins of the face value of $85,425, containing 63,209.40 standard ounces, producing in new coins $78,643.11, showing a loss by wear of $6,781.89.

There were deposited 127.777 standard ounces (unrefined) domestic bullion, producing in gold coin $2,377.24.

There were deposited 1,468.88 standard ounces (unrefined) silver domestic bullion, producing $1,709.24.

There were deposited 41,679.317 standard ounces (unrefined) gold foreign bullion, producing in gold $775,429.15.

There were deposited 21,995.43 standard ounces (unrefined) silver foreign bullion, producing $25,594.68.

The following table shows the countries from which the bullion was received:

Country.	Gold.		Silver.	
	Standard ounces.	Coinage value.	Standard ounces.	Coinage value.
Mexico	448.621	$8,346.43	145.10	$168.84
Nicaragua	39,506.139	734,997.93	21,681.65	25,229.56
Honduras	172.767	3,214.27	40.25	46.84
Guatemala	1,532.373	28,509.27	124.37	144.72
Colombia, South America	19.417	361.25	4.06	4.72
Total	41,679.317	775,429.15	21,995.43	25,594.68

Foreign gold coin containing 262.173 standard ounces of the coinage value of $4,877.64 and foreign silver coin containing 19,658.50 standard ounces of the value of $22,875.34 in standard silver dollars was received.

Gold bullion amounting to 3,069.596 standard ounces and coinage value of $57,108.63, and silver bullion amounting to 6,469.17 standard ounces and coinage value of $7,528.39 in standard silver dollars was obtained from jewelers' bars, old plates, etc.

PERCENTAGE OF LOSS IN MELTING.

Bars and kings	0.01080
Dust	.04035
Unretorted amalgam	.12101

Total	3	14	17
	1,033	1,667	2,700

Melter and Refiner's Department.

The melter and refiner received and operated upon 163,824.384 standard ounces of gold bullion, and returned at the settlement 148,230.658 standard ounces, showing a surplus of 73.015 standard ounces. He also received and operated upon 4,297,687.35 standard ounces of silver and returned at the settlement 80,704.95 standard ounces, showing a gain of 401.82 standard ounces. From 64 barrels of sweeps there were obtained 68.946 standard ounces of gold and 2,833.69 standard ounces of silver.

The number of gold and silver melts made and the number condemned by the assayer is as follows:

Items.	Melts.	Condemned.
Gold	17	4
Silver	469	4
Total	486	8

MELTS MADE DURING THE YEAR.

Fine gold	34	Silver deposits	74
Fine silver	17	Grain bars	21
Mass melts	31	Granulations	68
Gold deposits	844	Miscellaneous	25
Superintendent's bars	12		

REFINERY OPERATIONS.

The weight of gold and silver operated upon in the refinery is as follows:

Items.	Standard ounces.
Gold bullion	53,934.799
Silver bullion	126,064.44

Amount of bullion received from the refinery:

Items.	Standard ounces.
Gold bullion	53,906.416
Silver bullion	126,064.44

Thus showing loss in gold of 28.383 standard ounces and gain in silver of 913.21 standard ounces.

Silver bullion on which charges were collected contained 35,742.62 standard ounces; silver bullion owned by the Government on which there was no charge contained 89,408.61 standard ounces.

COINER'S DEPARTMENT.

During the fiscal year the coiner received and operated upon 4,246,412.60 standard ounces of silver and 14,770.900 standard ounces of gold.

He manufactured during the same period 2,386,574.875 standard ounces of silver coin, valued at $2,969,300, and 9,191.250 standard ounces of gold coin, valued at $171,000, aggregating 10,689,600 pieces, as shown by the following table:

Denomination.	Pieces.	Value.
Gold:		
Half eagles	34,200	$171,000.00
Total gold	34,200	171,000.00
Silver:		
Half dollars	3,667,400	1,833,700.00
Quarter dollars	2,912,000	728,000.00
Dimes	4,076,000	407,600.00
Total silver	10,655,400	2,969,300.00
Total coinage	10,689,600	3,140,300.00

The percentage of coin produced from the amount operated upon was, silver, 56.20; gold, 62.22.

At the annual settlement of his accounts it was found that there had been a wastage during the year of 1,037.075 standard ounces of silver, being 24.42 per cent of the legal allowance, and of gold 0.813 standard ounce, being 11.008 per cent of the legal allowance.

MINT OF THE UNITED STATES AT DENVER, COLO.

The standard weight and value of bullion received during the fiscal year 1909 was as follows:

Metal.	Deposits and purchases.	Redeposits.	Standard ounces.	Coinage value.
Gold	3,943	1,206	1,862,127.862	$34,644,239.27
Silver	1,434		1,524,636.63	1,774,122.61
Total	5,377	1,206		36,418,361.88

Domestic bullion, unrefined, carried 496,239.124 standard ounces gold of a coinage value of $9,232,355.79, and 334,906.50 standard ounces silver of a coinage value of $389,709.38.

From chlorination and cyanide plants were received 365,537.969 standard ounces gold of a coinage value of $6,800,706.39, and 17,685.52 standard ounces silver of a coinage value of $20,579.51.

Purchases for subsidiary silver coinage aggregated 1,003,642.72 standard ounces of a coinage value of $1,167,875.16 in standard dollars, or $1,248,700.12 in subsidiary silver coin.

Redeposits by United States assay offices amounted to 995,471.779 standard ounces gold of a coinage value of $18,520,405.19, and 163,646.61 standard ounces silver of a coinage value of $190,425.15.

There were purchased over the counter during the year gold and silver coins of a face value, respectively, of $552 and $32.50, and of a coinage value of $511.52 in gold and $34.88 in subsidiary silver.

PERCENTAGE OF WEIGHT REMOVED IN MELTING.

The following table exhibits the percentage of weight removed in melting deposits for the year:

Description.	Weight before melting.	Base removed.	Per cent removed.
Gold:	*Ounces.*	*Ounces.*	
Bars	710,084.89	2,360.62	0.0033
Retorts	184,927.05	2,643.74	.0142
Dust	2,098.76	114.29	.0423
Gold exchanges	931.58	1.81	.0019
Miscellaneous	5,267.28	62.50	.0118
Silver:			
Bars	275,793.40	2,551.39	.0092
Retorts	27,900.76	572.70	.0205
Dust	109.54	14.84	.1354
Silver exchanges	2,236.68	41.35	.0184
Miscellaneous	2,598.28	53.73	.0206

The main halls and stairways of this mint building have been very handsomely decorated, the designs being highly artistic, and several mural paintings typical of mining, manufacturing, and commerce, reflecting exceptional talent in conception and execution on the part of the artist, adorn the vestibule and corridor at the main entrance.

The elaborate carvings of patriotic designs on marble slabs over the main doorway and 13 windows have been completed.

New, and what are believed to be highly effective, ventilating devices have been installed in the refinery.

During the year 91,954 visitors witnessed coinage operations from the balconies.

OFFICERS AND EMPLOYEES.

The number of officers and employees in the mint at the close of the fiscal year was as follows:

Department.	Men.	Women.	Total.
General	62	2	64
Assayer's	11		11
Melter and refiner's	28		28
Coiner's	28	53	81
Total	129	55	184

ASSAYER'S DEPARTMENT.

The operations of this department during the fiscal year 1909 were as follows:

Items.	Number of samples operated on.		
	Gold.	Silver.	Total.
Deposits	5,104	622	5,726
Exchange bars	32	11	43
Return bars	7	3	10

Silver	22,491
Sweeps, lots, and preliminaries	640
Forest Service	498
Ounces of proof gold made	145
Cupels made	46,000
Lead cut and rolled	46,000

FINE GOLD DETERMINATIONS.

The reported finenesses of the refined gold melts during the fiscal year 1909 were as follows:

Fineness.	Number of melts.	Fineness.	Number of melts.
998.0	1	999.3	38
998.2	1	999.4	57
998.7	1	999.5	68
998.8	2	999.6	32
998.9	10	999.7	3
999.0	25	999.8	3
999.1	24		
999.2	36	Total	301

INGOT FINENESSES.

The reported finenesses of the gold and silver ingot melts during the fiscal year 1909 were as follows:

Fineness.	Number of melts.	Fineness.	Number of melts.
Gold:		Silver—Continued.	
899.8	20	898.9	78
899.9	166	899.0	136
900.0	298	899.1	77
900.1	25	899.2	67
		899.3	70
	509	899.4	34
Remelted	1	899.5	25
		899.6	33
Total	510	899.7	16
		899.8	13
Silver:		899.9	4
898.6	23	900.0	3
898.7	54		
898.8	104	Total	737

MELTER AND REFINER'S DEPARTMENT.

The melter and refiner received from the superintendent during the fiscal year 1909:

GOLD ACCOUNT.

		Standard ounces.
In bullion		2,961,626.487
Returned prior to settlement	2,716,326.627	
Returned at settlement	246,209.592	
		2,962,536.219
Surplus in gold recovered		909.732

SILVER ACCOUNT.

In bullion		2,966,357.37
Returned prior to settlement	2,766,470.74	
Returned at settlement	201,302.66	
		2,967,773.40
Surplus in silver recovered		1,416.03

The surplus was recovered from unreported fractions of assays, from the difference between standard and actual fineness of ingots delivered, and from fractional gains in weights of deposits.

The following melts were made:

Melts.	Gold.	Silver.	Gold and silver.	Total.
Deposits	4,175	623	.....	4,798
Anodes	144	676	.....	820
Cathode ingots	50	25	.....	75
Sweats	.....	.....	926	926
Ingots	510	737	.....	1,247
Mint bars	310	114	.....	424
Slimes	.....	.....	550	550
Settlement bars	20	28	.....	48
Miscellaneous	.....	.....	176	176
Total	5,209	2,203	1,652	9,064

Ingot melts condemned: None. Remelts: Gold, 1; silver, none.

The sweeps cellar extracted 1,436.204 standard ounces of gold and 3,199.24 standard ounces of silver, and produced 974 sacks of mill tailings which contained 324.562 standard ounces of gold and 1,949.86 standard ounces of silver.

Refinery operations, covering a period of nearly ten months, were as follows:

GOLD ACCOUNT.

		Standard ounces.
Delivered to the refinery		2,042,995.755
Returned prior to settlement	1,974,442.981	
Returned at settlement in bars	69,087.602	
Returned at settlement in sweeps	64.858	
		2,043,595.441
Surplus in gold returned		599.686

SILVER ACCOUNT.

Delivered to the refinery		1,839,604.62
Returned prior to settlement	1,729,610.04	
Returned at settlement in bars	109,215.78	
Return at settlement in sweeps	521.03	
		1,839,346.85
Loss in silver operations		257.77

The refinery also recovered 39.35 ounces of sponge platinum and 1,352 avoirdupois pounds of electrolytic copper.

EARNINGS OF REFINERY.

Charges collected	$87,115.17
Surplus bullion recovered	17,581.54
Platinum	885.37
Copper	199.42
Total	105,781.50

COINER'S DEPARTMENT.

During the fiscal year 1909 the coiner received from the superintendent 2,812,280.060 standard ounces of gold, making therefrom $35,455,000 in coin, on which there was a wastage of 52.538 standard ounces, being 3.73 per cent of the legal allowance.

During the same period the coiner received from the superintendent 3,451,574.05 standard ounces of silver, making therefrom $2,850,000 in subsidiary silver coin, on which there was a wastage of 1,201.58 standard ounces, being 34.81 per cent of the legal allowance.

The following table shows the denomination, number of pieces, and the value of the coin made.

Denomination.	Pieces.	Value.
Gold:		
Double eagles	401,250	$8,025,000
Eagles	958,000	9,580,000
Half eagles	3,570,000	17,850,000
Total	4,929,250	35,455,000
Silver:		
Half dollars	780,000	390,000
Quarter dollars	7,968,000	1,992,000
Dimes	4,680,000	468,000
Total	13,428,000	2,850,000
Total coinage	18,357,250	38,305,000

The per cent of coin produced from the amount of ingots operated on was: Gold, 67.76 per cent; subsidiary silver, 66.37 per cent.

ASSAY OFFICE OF THE UNITED STATES AT NEW YORK, N. Y.

The report on the business of this office for the fiscal year 1909 is as follows:

Bullion received.	Deposits.	Redeposits.	Standard ounces.	Coinage value.
Gold	10,557	1	3,210,774.615	$59,735,341.67
Silver	2,375	25	4,883,286.60	5,682,338.76
Total	12,932	26		65,417,680.43

The gross weight of the above bullion was 7,597,984.99 ounces, a decrease from last year of 4,223,140.42 ounces.

The value of the foreign gold bullion and coin deposited was $11,551,049.93, a decrease from last year of $67,637,342.35.

The value of the domestic gold coin and bullion deposited was $48,184,291.73, a decrease from last year of $4,419,350.96.

The sources of domestic gold bullion and coin were as follows:

From new production in United States and Territories	$6,430,774.21
For private refineries	37,415,804.31
From jewelers, bars, plate, etc	3,801,527.36
From redeposited bullion	203.70
From United States gold coin of light weight	535,982.15
Total	48,184,291.73

This statement shows a decrease compared with last year in the amount of gold bullion received from private refineries of $4,151,240.11 and from United States gold coin of light weight of $250,000.12.

Of the fine silver received during the year, 1,443,504.70 standard ounces consisted of Treasury purchases.

The redeposited silver consisted of 52,138.48 standard ounces, contained in fine bars made at this office, and 29,173.87 standard ounces, contained in fine bars made at the mint of the United States, Philadelphia, Pa., and 98.12 standard ounces, contained in unparted bars made at the United States assay office, Deadwood, S. Dak.

The unparted bullion received during the year has been transmitted to the United States mint, Philadelphia, Pa., for treatment, as the parting operations have not been resumed during the year.

The surplus bullion recovered by the melter and refiner in his operations was 735.98 ounces, fine silver, and he incurred a wastage of 110.354 ounces, fine gold.

The amount of bullion delivered to and returned by the melter and refiner to the superintendent during the fiscal year 1909 was as follows:

Items.	Delivered to melter and refiner.	Returned by melter and refiner.
	Standard oz.	*Standard oz.*
Gold	3,305,403.804	3,305,281.188
Silver	5,024,310.39	5,025,128.15

The grains and fluxes from the deposit melting room yielded $7,483.61, the sweeps (54 barrels) $5,527.05.

There were stamped during the year 47,434 gold bars and 13,379 silver bars; previous year 50,903 gold bars and 15,451 silver bars.

Gold bars issued to depositors of bullion for domestic use	$3,561,870.67
Gold bars exchanged for gold coin for domestic use	18,968,029.63
Total gold bars issued for use in the arts, etc	22,529,900.30

showing an increase of $2,335,601.64 compared with last year.

The value of gold bars exchanged for gold coin for export was $17,390,896.26, being a decrease compared with last year of $23,408,291.70. The income from the exchange of gold bars for gold coin was $16,692.84.

The force employed in this office at the close of the year comprised 77 men and 2 women, including the superintendent, assayer, melter, and refiner, and others distributed as follows:

General department	27
Melter and refiner's department	39
Assayer's department	13
Total	79

No actual operations on the new refinery building have taken place during the fiscal year ended June 30, 1909, but operations are now under way.

Assayer's Department.

There were assayed 10,557 melts of gold deposits and 2,375 melts of silver deposits, a total of 12,932 melts, involving 64,790 assays. The fine gold and fine silver melts assayed were about 462, and the fineness was stamped upon 47,434 bars of gold and 13,379 bars of silver, a total of 60,813.

Special assays numbered 898, being largely samples of articles of jewelry and manufacturers' samples.

Assays were made on 155 barrels of sweeps and on 140 consolidated melts for shipment to the United States mint at Philadelphia, Pa., with the usual incidental ones for the melter and refiner, etc.

All proof gold, proof silver, and cupels used were made in this department.

Melter and Refiner's Department.

The melter and refiner received during the fiscal year 1909 the following metal:

Items.	Gross amount.	Standard gold.	Standard silver.
	Standard oz.	*Standard oz.*	*Standard oz.*
Settlement metal, June 30, 1908	240,779.73	94,389.849	140,624.03
Gold deposits, July 1, 1908, to June 30, 1909	3,265,279.12	3,177,091.973	270,873.96
Silver deposits, July 1, 1908, to June 30, 1909	3,032,334.97	33,682.642	3,168,907.94
Silver purchases	1,300,370.90		1,443,504.70
Deposit melting-room grains and fluxes, first, second, and third quarters		239.340	399.76
Total	7,838,764.72	3,305,403.804	5,024,310.39

The melter and refiner returned during the year the following:

Items.	Gold.	Silver.
	Standard oz.	*Standard oz.*
Bars	3,203,245.552	4,931,448.12
Sweeps	628.828	922.48
Settlement, June 30, 1909:		
Bars	101,338.760	92,606.34
Sweeps	68.048	151.21
Total	3,305,281.188	5,025,128.15

There were received and melted 10,557 deposits of gold and 2,375 deposits of silver, producing 47,434 gold bars, 10,857 fine silver bars, 2,522 mint silver bars, and 14,472 unparted bars, containing the following standard ounces of gold and silver:

Kind of bar.	Bars.	Gold.	Silver.
		Standard oz.	*Standard oz.*
Gold	47,434	2,144,035.462	
Silver:			
Fine	10,857		2,219,224.82
Mint	2,522		1,027,861.26
Unparted	14,472	1,059,210.090	1,684,362.04
Total	75,285	3,203,245.552	4,931,448.12

There were returned from the melters and delivered to the superintendent as consolidated unparted mint bars: Gold, 302,624.929 standard ounces; silver, 243,265.41 standard ounces.

In the settlement of June 30, 1909, there was a wastage of 122.616 standard ounces of gold and an excess of 817.76 standard ounces of silver.

The percentage of loss in melting gold deposits was as follows:

Items.	Half year ending December, 1908.	Fiscal year ending June 30, 1909.
Bars and kings	0.08788	0.10295
Dust	4.64054	4.63686
Retort	5.83298	5.84807
Mixed coin	.16418	.15964
United States coin	.07912	.06782
Miscellaneous	1.65110	1.64562

MINT OF THE UNITED STATES AT CARSON, NEV.

[Conducted as an assay office.]

The value of the deposits at this mint during the fiscal year 1909 showed an increase of $841,608.97, a gain of over 47 per cent over those of the previous year. The value of the gold deposited was $2,552,309.07, and that of silver $50,380.44. Nearly all of this product originated in Nevada. California contributed but 3,820.253 ounces of gold and 1,391.43 ounces of silver, while 30.683 ounces of gold and 1.77 ounces of silver were received from Alaska. The greater part of the Nevada product originated in the Goldfield district.

Deposits of bullion to the number of 1,052 were received during the year. This was an increase in number of 182 over the previous year.

Seventy-one assays of ore were made, embracing 17 for the Department of Agriculture and 3 for the General Land Office.

The operations of the mint required a total of 5,330 assays. This number includes deposits, mass melts, bullion and ore assays for gold, silver, copper, and lead.

PERCENTAGE OF LOSS IN MELTING.

Description.	Fiscal year 1909.
Bars, kings	0.0080
Dust	.0857
Retort	.0840
Unretorted amalgam	.6442
Miscellaneous	.1403

NOTE.—The heavy loss in melting bars, kings, is accounted for by the fact that a large percentage of the deposits were cyanide bars, containing an excessive quantity of base metal.

Eight persons (including the assayer in charge), 7 men and 1 woman, comprised the entire force for nine months of the year, and 1 man was added for the last quarter.

The following table shows the amount of deposits, earnings, and expenditures, and the percentage of net expenses to deposits.

Item.		Amount.
Deposits:		
Gold	$2,552,309.07	
Silver (coinage value in standard dollars)	50,380.44	
		$2,602,689.51
Earnings		4,610.25
Expenditures		12,988.00
Percentage of net expenses to deposits, 0.32181.		

ASSAY OFFICE OF THE UNITED STATES AT BOISE, IDAHO.

During the fiscal year 1909 there were received at this office 1,697 deposits of gold bullion, all of domestic production. The States from which deposits were made are California, Idaho, Montana, Nevada, Oregon, Utah, and Washington. No silver bullion or coin were received for assay.

The amount of deposits shows an increase over those of last year of $202,219.18.

The weight before melting of the bullion received was 85,252.51 ounces, and after melting 81,766, the average loss in melting being 0.0409.

Mass melting for the year showed a loss of $31, but there was a net gain on shipments to the mint of $20.10.

PERCENTAGE OF LOSS IN MELTING.

Description.	Half year ending December 31, 1908.	Year ending June 30, 1909.
Bars and kings	0.0207	0.0172
Dust	.0670	.0695
Retort	.0531	.0685
Miscellaneous	.0184	.0286
Amalgam	.6367	.6701

In addition to the assayer in charge there are 9 men employed at this institution, viz. a chief clerk, clerk, 2 assistant assayers, an assistant melter, 3 laborers, and a night watchman.

The following table shows the amount of deposits, earnings, expenditures, and the percentage of net expenses to deposits:

Item.		Amount.
Deposits:		
Gold	$1,047,774.02	
Silver (coinage value in standard dollars)	34,841.96	
		$1,082,615.98
Earnings		4,652.76
Expenditures		13,310.24
Percentage of net expenses to deposits, $0.79908.		

ASSAY OFFICE OF THE UNITED STATES AT HELENA, MONT.

During the fiscal year 1909 there were received at this office 894 deposits.

Number of assays made		4,040
Number of cupels manufactured		9,000
Inquartation silver manufactured		144
Total weight of deposits before melting	ounces	144,065.31
Average per cent of loss in melting	do	.04701

Fifty-two mass melts were made from 704 bars, weighing 28,901.56 ounces, valued at $443,631.93.

Cost of handling bullion was $0.1257 per ounce.

In handling the deposits received at this institution during the fiscal year the following losses and gains were sustained:

1. A loss of $7.72 was incurred in the general department.

2. A loss of $35.85 in shipments to the mint arose from a difference in the weight at which the bullion was shipped by this institution and the weight at which it was received by the mint at Philadelphia.

3. A gain of $4.39 was made in mass melts.

4. In the assaying department a gain of $7.13 was made and is accounted for by taking advantage of the swing of the needle in weighing the clips from 894 deposits.

5. During the above-mentioned period there were recovered from sweeps 27.880 standard ounces of gold, and 14 standard ounces of silver, coinage value of which was $534.98.

ORIGIN OF BULLION PURCHASED.

Origin.	Gold.		Silver.	
	Standard ounces.	Value.	Standard ounces.	Coinage value.
Montana	92,947.153	$1,729,249.00	43,541.28	$50,666.22
Other domestic	5,607.801	104,331.13	3,383.01	3,936.59
Foreign	649.693	12,087.30	229.88	267.50
Foreign coin	13.141	244.48	.15	.17
Deposit melting room grains	27.880	518.69	14.00	16.29

Percentage of net expense to deposits, 0.95016.		

ASSAY OFFICE OF THE UNITED STATES AT CHARLOTTE, N. C.

During the year 1909 there were received at this office 229 deposits of gold bullion, principally from the Appalachian Range.

In addition to the assays of regular bullion deposits, there were made 165 assays of ores for which fees amounting to $472.50 were received.

The weight of bullion before melting was 7,390.51 ounces and after melting was 7,282.50 ounces, an average loss in melting of 1.46 per cent.

STATEMENT OF LOSS IN MELTING GOLD DEPOSITS.

	Per cent.
Bars and kings	0.61
Retort	6.74
Dust	7.63
Unretorted amalgam	35.19

The force of this office consists of 2 officers, 1 clerk, and 2 laborers.

The following table shows the amount of deposits, earnings, and expenditures, and the percentage of net expenses to deposits:

Item.		Amount.
Deposits:		
Gold	$110,095.85	
Silver (coinage value in standard dollars)	967.70	
		$111,063.55
Earnings		1,166.06
Expenses		4,494.29
Percentage of net expenses to deposits, 2.99668.		

ASSAY OFFICE OF THE UNITED STATES AT ST. LOUIS, MO.

The value of the gold and silver bullion deposited at the United States assay office, St. Louis, Mo., during the fiscal year 1909, amounted to $554,588.53, showing a gain of $112,303.30 in the value of deposits compared with the year 1908.

There were 314 deposits of bullion received, which were melted and assayed; 47 special bullion assays made (for which a charge of $2 each was collected), and 35 special assays of ores for gold and silver (for which a charge of $3 each was imposed).

The bullion weighed 30,805.86 troy ounces before melting and 30,695.70 troy ounces after melting, an average loss of 0.00357 per cent. The following table shows the losses per cent in melting the various classes of bullion deposits:

Description.	Fiscal year ended June 30, 1909.
Mutilated and uncurrent United States coin	0.00058
Bars, kings	.00150
Retort	.01879
Placer	.04612
Jeweler's, dentist's scrap and waste gold leaf, etc.	.03079

The following table shows the amount of deposits, earnings, and expenditures, and the percentage of net expenses to deposits:

Item.		Amount.
Deposits:		
Gold	$553,686.47	
Silver (coinage value in standard dollars)	902.06	
		$554,588.53
Earnings		676.73
Expenditures		3,706.05
Percentage of net expenses to deposits, 0.54622.		

ASSAY OFFICE OF THE UNITED STATES, AT DEADWOOD, S. DAK.

There were deposited in this office during the fiscal year 1909, 277 deposits of gold bullion, all from the Black Hills of South Dakota, valued at $1,329,965.43, consisting of 65,368.316 standard ounces of gold and 97,212.51 standard ounces of silver.

Number of bullion assays determined	334
Number of button assays determined	5
Number of ore assays, gold and silver, determined	30
Number of ore assays, copper, determined	3
Number of ore assays for gold and silver determined for Forestry Department	108
Number of ore assays for tin for Forestry Department	9
Number of ore assays for copper for Forestry Department	3
Number of ore assays for silica, iron, and lead for Forestry Department	3
Number of ore assays for gold and silver for United States Geological Survey	21
Number of ore assays for tin for United States Geological Survey	10
Number of ounces of quartation silver manufactured	174
Number of cupels manufactured	3,775
Total weight of deposits before melting (ounces)	167,883.45
Total weight of deposits after melting (ounces)	166,385.21
Per cent of average loss in melting	.892

Average cost in handling bullion melted and assayed was $0.0371 per ounce.

The deposit melting room grains for the year amounted to $659.97.

A loss of $92.88 in shipments to the mint, due to difference in weight and assays.

Deposits classified as follows show the following results:

Kind.	Number.	Average fineness.		Loss in melting.
		Gold.	Silver.	
				Per cent.
Bars, kings	262	0.3925	0.473	0.87
Dust	8	.9105	.084	.408
Retort	6	.627	.309	7.56
Old jewelry	1	.463	.137	1.119

The office force consists of 5 men.

The following table shows the amount of deposits, earnings, and expenditures, and percentage of net expenses to deposits:

Items.		Amount.
Gold	$1,216,795.57	
Silver (coinage value in standard dollars)	113,169.86	
		$1,329,965.43
Earnings		2,372.88
Expenditures		7,728.24
Percentage of net expenditures to deposits, 0.40266.		

ASSAY OFFICE OF THE UNITED STATES AT SEATTLE, WASH.

There were received at this office during the fiscal year 1909, 2,059 deposits of gold and 2 redeposits.

Number of bullion assays determined	6,000
Number of ore assays and analyses determined for the Forestry Department	265
Number of special bullion assays received	21
Number of return bars	7
Number of ounces of quartation silver manufactured	400
Number of cupels manufactured	15,000
Total weight of deposits before melting (ounces)	1,075,323.18
Total weight of deposits after melting (ounces)	1,072,248.38
Average percentage loss in melting	.285

There were 1,141 bars, each below 300 ounces, massed into 58 larger bars, the total weight of which was 54,517.57 ounces. The gain in weight from massing these bars was 2.41 ounces, showing an average gain of 0.0021 of an ounce on each deposit.

Average cost of handling bullion melted and assayed was $0.0397 per ounce.

A net loss of $381.30 resulted from the operations of the year, the source of same being as follows:

1. A loss of $176.32 in the melting department. This loss is due to the fact that depositors are allowed full weight for the granules or pannings from each deposit, whereas these granules almost invariably run lower in fineness than the bar and also contain more or less slag.

2. A loss of $116.55 in the assay department, the greater part of which undoubtedly arises from the clipping of bars.

3. A gain of $218.13 in the general department, this gain being the result of two years' accumulation of grains swept from trucks and from the packing-room floor. This includes only bullion for which the depositor has been paid, consequently should be shown as a gain in the general department. The truck sweepings accruing from bars which have not been weighed after melting are not included in this amount.

4. A gain of $1.56 in mass melts. The gain from the swing of the needle in massing the 1,141 bars netted a gain of about $43, but loss in assay practically canceled this gain.

5. A loss of $308.12 in shipments to the mint, due entirely to difference in assays.

The loss in shipments to the mint was made up from the gains in charges. The net loss in operations within the office, amounting to $73.18, was made up from bullion recovered from melting-room slag.

The deposit melting-room grains for the year amounted to $664.33, but none of this amount was taken to reimburse losses.

The slag from the melting room for years 1908 and 1909 was reduced in a small smelting furnace erected for that purpose, but the resulting bullion was so largely iron that satisfactory assays could not be obtained. It will be necessary to refine this metal with air, but the work has been delayed, owing to lack of proper tubing to insert in the molten metal. Electro-quartz tubing proved to be unsatisfactory with this very base bullion. In two hours' refining about 2 feet of the tubing was eaten away by the oxides and 50 ounces of iron were removed. Three hundred ounces of metal were treated. For use in treating good grade bullion the electro-quartz tubing should give excellent satisfaction. The work of refining this bullion will be continued as soon as fire-clay tubes can be delivered.

Of the 2,061 deposits received, the entire number were deposits of gold bullion, 2,035 being crude and 26 refined. Only one of the refined bars was of domestic production, the other 25 coming from refineries of British Columbia.

The number of employees at the end of the fiscal year was 30 (all male), but for seven months of the year only 25 were employed.

Items.		Amount.
Deposits:		
Gold	$19,137,296.31	
Silver (coinage value in standard dollars)	176,830.98	
		$19,314,127.29
Earnings		25,503.08
Expenditures		44,669.29
Percentage of net expenses to deposits, 0.00923.		

As in previous reports, attention is again called to housing this office in a new building. Other assay offices doing but a fraction of the annual business are comfortably located in buildings of their own, and the prospect of a rapid increase in population and values of real estate in this city would seem to point to this as an opportune time to secure a location and erect a building.

ASSAY OFFICE OF THE UNITED STATES AT SALT LAKE CITY, UTAH.[a]

There were received at this office during the fiscal year 1909, 130 deposits of gold.

Number of bullion assays determined		350
Number of cupels manufactured		7,000
Total weight of deposits before melting	ounces	49,413.75
Total weight of deposits after melting	do	49,295.40
Average percentage of loss in melting		0.239

These were 76 bars, all under 300 ounces in weight, massed into seven larger bars, the total weight of which was 1,958.30 ounces. The gain in weight from massing was 0.11 ounce, showing an average gain of 0.0014 of an ounce on each deposit.

The average cost of handling bullion melted and assayed was $0.31197.

A net gain of $44.01 resulted from the operations of the year, the source being as follows:

1. Loss of $18.58 in the assaying department, due to the clipping of bars, and also to the fact that depositors are allowed full weight for the granules, while the granules are lower in fineness than the bar. The granules are delivered to the assayer and put into his chips bar.

[a] Institution opened on February 1, 1909, to June 30, 1909.

2. Gain in shipments to the mint of $48.26.
3. Gain in massing bars of $14.33.

The deposit melting-room grains for the year amounted to $41.52.

Of the 130 deposits received, the entire number were gold bullion crude, and all of domestic production, except one from Australia.

STATEMENT OF GOLD BULLION DEPOSITED AT THE UNITED STATES ASSAY OFFICE, SALT LAKE CITY, UTAH, DURING THE FISCAL YEAR ENDED JUNE 30, 1909.

Source.	Gold.	Value.	Silver.	Coinage value.
	Standard ounces.		*Standard ounces.*	
Alaska	2.602	$48.41	0.26	$0.30
Arizona	8.581	159.65	3.87	4.50
California	47.238	878.84	.89	1.04
Colorado	13.693	254.74	3.60	4.19
Idaho	38.485	716.00	1.49	1.73
Nevada	9,775.389	181,867.66	21,268.19	24,748.44
Oregon	1.803	33.54	1.07	1.25
South Dakota	9.927	184.69	1.12	1.30
Utah	17,386.732	323,474.02	241.50	281.02
Wyoming	3.991	74.25	.45	.52
Australia	11.253	209.36	.26	.30
Jewelers' bars	109.407	2,035.46	19.27	22.42
Deposit melting room grains	2.190	40.75	1.64	1.91
Precipitation	.927	17.25		
Total	27,412.218	509,994.62	21,543.61	25,068.92

Total receipts, coinage value, $535,063.54.

All above unrefined. No refinery bars, and no redeposits received. The last item, which is shown as "Precipitation," was a deposit of gold which was precipitated from solution found in the laboratory of a coin sweater, who was arrested here.

The following table shows the number of each kind of deposit, and the average percentage loss in melting each kind:

Description.	Number of deposits.	Average loss.
		Per cent.
Bars and kings	102	0.132
Retort	3	3.866
Miscellaneous	25	1.278

The number of employees at the end of the fiscal year was seven, all males; but from March 15 to May 12, 1909, there were eight.

The following table shows the amount of deposits, earnings, and expenditures, and the percentage of net expenses to deposits:

Items.		Amount.
Deposits:		
Gold	$509,994.62	
Silver (coinage value in standard dollars)	25,068.92	
		$535,063.54
Earnings		791.95
Expenditures		16,068.54
Per cent net expenses to deposits, 2.85509.		

SUMMARY OF OPERATIONS, WASTAGE, AND LOSS, FISCAL YEAR 1909.

The institutions of the mint service consist of the coinage mints at Philadelphia, San Francisco, New Orleans, and Denver; the mint at Carson, which at present is conducted as an assay office; the assay office at New York, which, like each of the coinage mints, operates a refinery; and the minor assay offices at Boise, Helena, Charlotte, St. Louis, Deadwood, Seattle, and Salt Lake City. Bullion is received at the assay offices on the same terms as at the mints, except that an additional charge of one-eighth of 1 per cent is made at the former. Bullion purchased at the assay offices becomes the property of the Government and is shipped to the mints at the expense of the Government.

OPERATIONS.

The quantity of precious metals operated upon in the different departments of the mints and assay office at New York during the fiscal year 1909 aggregated 27,292,233 standard ounces of gold and 74,028,139 standard ounces of silver.

The figures in the table following are the actual figures as obtained at the settlement of the accounts of the officers in charge. The figures in the article showing the operations of each mint or assay office are for the entire fiscal year up to June 30.

WASTAGE AND LOSS ON SALE OF SWEEPS AND GAINS FROM OPERATIONS.

The value of the precious metals wasted in the metallurgical and mechanical departments was $23,833.52. A loss of $9,263.95 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same, as described in the following table.

Items.	Mint at—				Assay office at New York.	Total.
	Philadelphia.	San Francisco.	New Orleans.	Denver.		
Melter and refiners' gold wastage		$10,173.93			$2,281.22	$12,455.15
Melter and refiners' silver wastage	$2,752.62					2,752.62
Coiners' gold wastage	1,119.85		$15.12	$977.45		2,112.42
Coiners' silver wastage	585.14	4,804.31	476.98	556.90		6,513.33
Loss on sale of sweeps	3,211.80	2,956.75	1,007.94	1,381.83	705.63	9,263.95
Total	7,669.41	18,024.99	1,500.04	2,916.18	2,986.85	33,097.47
Paid as follows:						
From contingent appropriation	4,795.56	13,253.73	1,500.04	2,233.33		21,782.66
From parting and refining appropriation	2,873.85	4,771.26		682.85	2,986.85	11,314.81
Total	7,669.41	18,024.99	1,500.04	2,916.18	2,986.85	33,097.47

The wastage and losses aggregated $33,097.47. Against these losses there were gains arising from the operations in bullion amounting to $70,798.79, as follows:

Character of gains.	Fiscal year 1909.
Surplus bullion returned by operative officers	$34,829.99
Precious metals received in grains and sweeps	32,634.76
Gains on bullion shipped from the minor assay offices to the mints for coinage	3,334.04
Total	70,798.79

Deducting the incidental gains on bullion from the value of the total operative wastage and loss on sale of sweeps, there has been a net gain in the operations of the mints during the fiscal year of $37,701.32.

RECEIPTS AND DISPOSITION OF GOLD BULLION, FISCAL YEAR 1909.

RECEIPTS.

The receipts of gold bullion at the mints and assay offices aggregated $192,305,855.25, as shown by the following table:

Institution.	Deposited.		Surplus bullion recovered.	Redeposited.	Total.
	Deposits.	Uncurrent United States coin transferred for recoinage.		Receipts from assay offices.	
Philadelphia	$1,669,417.15	$2,127,796.81	[a] $1,329.87	$25,244,408.14	$29,042,951.97
San Francisco	38,006,434.51	6,846.61	[b] 1,557.28	2,989,665.94	41,004,504.34
New Orleans	890,870.19		[c] 1,712.33		892,582.52
Denver	16,104,446.82		19,387.25	18,520,405.20	34,644,239.27
New York	59,735,341.07		7,217.14		59,742,558.81
Carson	2,551,871.90		437.17		2,552,309.07
Helena	1,850,547.72		518.69		1,851,066.41
Boise	1,047,220.42		553.60		1,047,774.02
Charlotte	110,048.04		47.81		110,095.85
St. Louis	553,629.95		56.52		553,686.47
Deadwood	1,216,155.39		640.18		1,216,795.57
Seattle	19,136,634.47		661.84		19,137,296.31
Salt Lake	509,953.87		40.75		509,994.62
Total	143,382,572.10	2,134,643.42	34,160.45	46,754,479.28	192,305,855.25

[a] Of this amount $248.58 was gain on United States light-weight coin melted.
[b] Of this amount $2.13 was gain on United States light-weight coin melted.
[c] Of this amount $9.40 was gain on shipments to Philadelphia mint.

DISPOSITION.

The disposition of gold bullion contained in the above table is as follows:

Institution.	Bars paid depositors.	Shipped to the mint for coinage.	Sold in sweeps.	Bars exchanged for coin.	Coinage.	Wastage.	Total.
Philadelphia	$271,400.09		$44,140.54	$9,000,465.95	$19,723,092.50	$30,432.93	$29,069,532.01
San Francisco	26,704.68		7,761.35	2,307,836.65	52,831,000.00	10,173.93	55,183,476.61
New Orleans	15,384.06	$15,278.71	1,805.62		171,000.00	20.60	203,488.99

COST OF MAINTENANCE.

The deposits, earnings, and expenditures of the minor assay offices during the fiscal year 1909 were as follows:

Institutions.	Number of deposits.	Value of deposits of gold and silver.	Earnings.	Expenditures.	Percentage of net expenses to deposits.
Carson	1,052	$2,002,689.51	$4,610.25	$12,988.00	0.32181
Boise	1,697	1,082,615.98	4,652.76	13,310.24	.79968
Helena	894	1,906,011.51	4,326.30	22,436.56	.95016
Charlotte	229	111,063.55	1,166.06	4,494.29	2.99668
St. Louis	314	554,588.53	676.73	3,706.05	.54622
Deadwood	277	1,329,965.43	2,372.88	7,728.24	.40266
Seattle	2,059	19,314,127.29	25,503.08	44,609.29	.00923
Salt Lake City (since Feb. 1, 1909)	130	535,063.54	791.95	16,068.54	2.85509
Total	6,652	27,436,125.34	44,100.01	125,401.21	

FREIGHT CHARGES ON BULLION AND COIN.

The freight charges on bullion shipped to the mints by the assay offices and on coin shipped from the mints to the assay offices during the fiscal year 1909 aggregated $55,756.69.

MOVEMENT OF GOLD FROM THE PORT OF NEW YORK.

The superintendent of the United States assay office at New York has prepared the following tables, giving exports of gold through the port of New York:

STATEMENT OF UNITED STATES GOLD COIN AND GOLD BULLION EXPORTED FROM THE PORT OF NEW YORK TO EUROPE DURING THE FISCAL YEAR ENDED JUNE 30, 1909.

Date.	Country.	Amount.	Rate of exchange.
1908.

RECAPITULATION OF GOLD EXPORTS TO EUROPE.

Classification.	France.	England.	Netherlands.
United States coin	$3,310,000	$12,350,325	$4,000,170
Foreign coin	17,814,767	188,120	
United States assay office bars		1,420,000	
Other bullion		19,253	
Total	21,124,767	13,977,698	4,000,170
Grand total of exports to Europe			$39,102,635

During the same period there were shipped to West Indies, Mexico, Central and South America, Cuba, etc., the following:

United States coin	$26,877,230	
Foreign coin	1,728,050	
Total gold exports to other ports		$28,605,280
Grand total of gold exports		67,707,915

The imports during the same period were as follows:

From Europe:	
United States coins	$2,677
Foreign coins	2,078,029
Bullion	236,984
Bullion in ore, etc	22,319
Total gold imports from Europe	2,339,939

From other ports (West Indies, Mexico, Central and South America, Cuba, etc.):	
United States coins	$330,215
Foreign coins	207,710
Bullion	2,718,495
In ore and base bullion	603,859
Total gold imports from other ports	3,860,279
Grand total of gold imports	6,200,218

The copper matte exported during the same period is said to have contained no gold and silver.

NET EXPORTS UNITED STATES GOLD COIN.

The net exports of United States gold coin since January 1, 1870, are as follows:

Period.	Imports.	Exports.
Jan. 1 to July 1, 1870		$6,384,250
Fiscal year—		
1871		55,491,719
1872		40,391,357
1873		35,661,863
1874		28,766,943
1875		59,309,770
1876		27,542,861

UNITED STATES GOLD COIN IN CANADA.

The holdings of United States gold coin in the treasury of the Dominion of Canada on December 31, 1908, was $54,909,076. The holdings of the charter banks (31 in number), on the same date aggregated $15,679,259, or 79.96 per cent of their specie holdings. The total amount of United States gold coin in Canadian reserves on the foregoing date was therefore $70,588,335.

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1908.

Among the purveyors of gold and silver bars for use in the industrial arts the United States mint at Philadelphia and the United States assay office at New York hold the foremost places; consequently, the larger portion of the material consumed in the arts is brought under government notice and is a matter of public record. The following table gives the value of the gold and the quantity of the silver bars issued by the government institutions and private refineries during the calendar year 1908.

GOLD AND SILVER BARS ISSUED BY THE GOVERNMENT INSTITUTIONS AND MANUFACTURED BY PRIVATE REFINERIES FOR USE IN THE INDUSTRIAL ARTS DURING THE CALENDAR YEAR 1908.

Material used.	Value of gold issued by—			Weight of silver issued by—		
	Government institutions.	Private refineries.	Total.	Government institutions.	Private refineries.	Total.
				Fine ounces.	*Fine ounces.*	*Fine ounces.*
Domestic bullion	$8,147,514.90	$260,456.00	$8,407,970.90	681,295.08	15,161,517.00	15,842,812.08
Foreign material	2,846,767.12	207.00	2,846,974.12	1,829,103.63	2,661,838.00	4,490,941.63
United States coin	197.17	334,713.00	334,910.17	.....	1,938.00	1,938.00
Old jewelry, etc	14,686,845.78	2,034,300.00	16,721,145.78	324,364.21	3,115,366.00	3,439,730.21
Total	25,681,324.97	2,629,676.00	28,311,000.97	2,834,762.92	20,940,659.00	23,775,421.92

Estimating that the total amount of gold coin used in the arts during the calendar year has been $3,500,000 and silver coin $100,000, equivalent to 77,344 fine ounces, the total industrial consumption would be as follows:

Material used.	Gold.	Silver.
		Fine ounces.
Domestic bullion	$8,407,970.90	15,842,812.08
Foreign material	2,846,974.12	4,490,941.63
United States coin	3,500,000.00	77,344.00
Old material	16,721,145.78	3,439,730.21
Total	31,476,090.80	23,850,827.92

1909.						
January	2,584,987.70	2,414,110.61	4,999,098.31	26,482.15	328,414.92	354,897.07
February	583,972.58	1,398,475.18	1,982,447.76	15,806.85	272,582.08	288,389.53
March	705,446.78	4,012,155.33	4,717,602.11	23,207.62	345,614.74	368,822.36
April	666,837.54	3,386,415.12	4,053,252.66	22,691.62	344,506.66	367,198.28
May	648,293.45	4,361,144.81	5,009,348.26	20,235.79	281,923.87	302,159.66
June	555,676.89	3,379,877.72	3,935,554.61	34,521.33	288,440.45	322,961.78
Total	9,000,465.95	36,359,475.67	45,359,941.62	271,400.09	3,561,868.67	3,833,268.76

Of the total value of bars ($45,359,941.62) exchanged for coin, $19,391,034.23 were exported, and $25,968,907.39 were used in the industrial arts.

THE WORLD'S INDUSTRIAL CONSUMPTION OF THE PRECIOUS METALS IN 1908.

This bureau estimates the world's consumption of the precious metals in the arts during the calendar year 1908 as follows: Gold, of the value of $113,996,000, equivalent to 5,514,557 ounces, fine; and silver, 91,835,000 ounces, fine, of the commercial value of $49,122,542. In these estimates only new material is taken into account.

PRODUCT OF GOLD AND SILVER IN THE UNITED STATES IN 1908.

The detailed statistics of the product of gold and silver in the United States for the calendar year 1908 are presented in a special report to the Secretary of the Treasury.

The distribution of the product among producing States and Territories was as follows:

APPROXIMATE DISTRIBUTION BY PRODUCING STATES AND TERRITORIES OF THE PRODUCT OF GOLD AND SILVER IN THE UNITED STATES FOR THE CALENDAR YEAR 1908.

[As estimated by the Director of the Mint.]

State or Territory.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
Alabama	1,993	$41,200	400	$200
Alaska	960,669	19,858,800	204,600	109,400
Arizona	120,937	2,500,000	2,900,000	1,551,200
California	935,074	19,329,700	1,703,700	911,300
Colorado	1,106,385	22,871,000	10,150,200	5,429,400
Georgia	2,719	56,200	200	100
Idaho	69,829	1,443,500	7,558,300	4,042,900
Illinois			2,000	1,100
Michigan			294,100	157,300
Missouri			49,400	26,400
Montana	152,865	3,160,000	10,356,200	5,539,500
Nevada	565,475	11,689,400	9,508,500	5,086,100
New Hampshire	179	3,700	6,300	3,400
New Mexico	14,817	306,300	400,900	214,500
North Carolina	4,716	97,500	1,300	700
Oregon	43,823	905,900	56,100	30,000
Philippine Islands	13,763	284,500	1,300	700
Porto Rico	29	600		
South Carolina	2,598	53,700	200	100
South Dakota	374,529	7,742,200	197,300	105,500
Tennessee	179	3,700	60,900	32,600
Texas	24	500	447,000	239,100
Utah	190,922	3,946,700	8,451,300	4,520,600
Virginia	174	3,600	300	200
Washington	12,273	253,700	86,800	46,400
Wyoming	368	7,600	3,500	1,900
Total	4,574,340	94,560,000	52,440,800	28,050,600

WORLD'S COINAGE.

In the appendix will be found a table, revised from the latest information received, exhibiting the coinages of the various countries of the world during the calendar years 1906, 1907, and 1908. The following is a summary of the same:

COINAGE OF NATIONS.

Calendar year.	Gold.	Silver.
1906	$366,326,788	$155,590,466
1907	411,803,902	221,651,826
1908	327,018,200	194,692,737

The above figures represent, as nearly as this bureau has been able to ascertain, the total value of the gold and silver coinages executed in the world during the years given.

It must be borne in mind, however, that the total of these coinages does not correctly represent the amount of new gold and new silver made into coins during the year, for the reason that the coinages as reported include the value of domestic and foreign coins melted for recoinage, as well as old material, plate, etc., used in coinage.

In the circular letter of inquiry prepared at this bureau and sent to foreign governments through the Department of State, asking for information on these subjects, it was especially requested that each country report the amount of such recoinages. This has been done in many instances, but not in all.

COINAGE OF GOLD AND SILVER OF THE MINTS OF THE WORLD BY CALENDAR YEARS SINCE 1873.

Calendar year.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Coining value.
1873	12,462,890	$257,630,802	101,741,421	$131,544,464

VALUES OF FOREIGN COINS.

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
Washington, October 1, 1909.

In pursuance of the provisions of section 25 of the act of August 28, 1894, I hereby proclaim the following estimate by the Director of the Mint of the values of foreign coins to be the values of such coins in terms of the money of account of the United States, to be followed in estimating the value of all foreign merchandise exported to the United States on and after October 1, 1909, expressed in any of such metallic currencies.

CHARLES D. NORTON,
Acting Secretary.

VALUES OF FOREIGN COINS.

Country.	Standard.	Monetary unit.		Value in terms of U. S. gold dollar.	Coins.

MONETARY STATISTICS OF FOREIGN COUNTRIES.

The statistics of the production and coinage of the precious metals, imports and exports of gold and silver, amount of bank and government notes, both covered and uncovered, of the different foreign countries, published annually in the reports of this bureau, are obtained directly from the governments of such countries by the representatives of the United States accredited to them.

A copy of the interrogatories covering the points on which information is sought from the governments of foreign countries is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint. The interrogatories sent are as follows:

1. What was the amount of gold coined during the calendar year 1908 by denominations and values? What amount of this was recoinage? Domestic and foreign coins melted given separately.

2. What was the amount of silver coined during the calendar year 1908 by denominations and values? What amount of this was recoinage, and what amount was from new bullion? Domestic and foreign coins melted given separately. If any coinage was executed at foreign mints, please give separate statement.

3. Was any coinage executed for other governments during the year 1908? If so, state character and amount of same.

4. What was the weight of fine gold used in the industrial arts during the calendar year 1908? What amount of this was new gold, what amount old gold, and what amount coins?

5. Same questions as to silver.

6. What was the import and export of gold during the calendar year 1908? (Coin, bullion, and ore, as well as their weight and value, should be given separately, if possible.) If practicable, give imports and exports by countries.

7. Same question as to silver.

8. What was the total import of United States gold coin during the calendar year 1908?

9. What was the amount of United States gold coin deposited at the mints and melted during the year 1908?

10. What was the weight, expressed in kilograms fine, and the value of the gold produced from the mines of the country during the calendar year 1908? Give the product of the colonies of the country, naming them separately.

11. What was the weight, expressed in kilograms fine, of the silver produced from the mines of the country during the calendar year 1908? Also give product of the colonies of the country.

12. What was the weight and what the value of the output of gold from the refineries of the country during the year? Give the sources of this output if practicable.

13. Same question as to silver.

14. What, approximately, was the stock of gold coin and bullion in the country at the close of the calendar year 1908? Give stock in public treasuries and banks and in circulation separately, at the close of the calendar year 1908.

15. Same question as to silver.

16. What was the amount of Government notes outstanding at the end of the year 1908?

17. What was the amount of Government notes outstanding not covered by legal-tender gold and silver coin or bullion at the end of the year 1908?

18. What was the amount of bank notes outstanding at the end of the year 1908?

19. What was the amount of bank notes outstanding not covered by legal-tender gold and silver coin or bullion at the close of the year 1908?

20. What was the actual currency of the country, gold, silver, or inconvertible paper, during 1908?

21. Is gold at premium as compared with the actual currency of the country? And if it is, what was the highest, lowest, and average premium during the year 1908?

22. Were any laws passed during the year 1908 affecting the coinage, issue, or legal-tender character of the metallic or paper currency? If so, please forward copies of the same.

23. Is there a report published on the operations of the mint? If so, please forward a copy, also a report of the department of mines for 1908.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1909, was for a period prior to my appointment and entry upon duty as Director of the Mint, and was prepared under the direction of R. E. Preston, examiner.

Respectfully,

A. PIATT ANDREW,
Director of the Mint.

Hon. FRANKLIN MACVEAGH,
Secretary of the Treasury.

No. 28.—MONETARY STATISTICS OF FOREIGN COUNTRIES.

The bureau is under obligations to representatives of the United States for information obtained from official sources for data respecting the monetary conditions of the respective countries to which they are accredited.

NORTH AMERICA.

CANADA.

AMERICAN CONSULATE-GENERAL,
Ottawa, March 25, 1909.

SIR: In response to Department of State circular dated January 21, 1909, relative to the production, coinage, etc., of gold and silver in foreign countries, I have the honor to state that the full data requested in the accompanying Treasury circular are not obtainable, but I beg leave to forward the following information relative to the subject indicated.

The total amount of gold coin held in the Dominion treasury on December 31, 1908, was $61,170,791, of which $54,909,076 was gold coin of the United States. The amount of silver held in the treasury on the same date was $502,601. The amount of specie (gold or silver) held by the chartered banks of Canada on December 31 last was $27,099,074; but it is impossible to say how much of this amount was in gold or how much in gold coin of the United States.

The gold production in Canada during the year 1908 was valued at $9,559,274 and the silver value was $11,667,197.

The total amount of Dominion note circulation outstanding December 31, 1908, was $79,434,693; the amount of the note circulation of the chartered banks of Canada outstanding on the same date was $73,058,234.

The gold coin imported into Canada during the calendar year 1908 amounted to $8,942,115, of which $8,874,928 came from the United States, $50,008 from Great Britain, and $17,179 from other countries.

During the same year the importation of gold bullion in bars amounted to $693,815, of which all but $831 came from the United States. Silver bullion in bars to the amount of $333,534 was imported from the United States.

The export of gold-bearing quartz, nuggets, etc., during the year amounted to $7,827,466; of this amount, $7,715,675 went to the United States.

The export of silver, metallic, contained in ore, concentrates, etc., amounted to $12,403,282, of which total $9,989,694 went to the United States, $1,396,261 to Great Britain, and $1,017,327 to other countries. During the calendar year 1908 gold bullion was exported from Canada to the United States to the value of $4,400 and gold coin to the value of $4,132,492. Gold coin exported to other countries amounted in value to $7,267. Silver coin was exported in the same year to the total value of $713,671, of which $713,039 went to the United States.

The operations of the Canadian mint has been very limited on account of the fact that for two years immediately prior to its opening, in 1908, an unusual amount of silver had been coined in England on Canadian account. At the very close of 1908 the mint coined 678 sovereigns.

The following table shows the year of coinage, place of manufacture, and amount of silver coined for the past four years:

Year.	Place of coinage.	Amount.
1904		
1905	England	$350,000
1906	do	450,000
1907	do	809,440
	do	1,186,000

The amount of silver coined during the year 1908 at the Ottawa mint was as follows:

50-cent pieces	$60,630.00
25-cent pieces	116,656.25
10-cent pieces	76,103.10
5-cent pieces	59,889.00
Total	313,338.35

Of this amount, $22,397 was produced by recoining worn silver and $290,941.35 was produced from new bullion. The deputy master estimates that fine gold of the approximate value of $1,450,000 was used in the industrial arts during the year 1908 in Canada.

It is impossible to estimate the amount of American silver now current in Canada, but during the fiscal year 1905–6 the Canadian government undertook to collect and export it through the banks, and during that year a recent return shows that $580,224 of such silver was in that way shipped from Canada. Since that date there has been no governmental attempt to keep American silver out of circulation, and it is in somewhat general use throughout Canada.

I have the honor to be, sir, your obedient servant,

JOHN G. FOSTER, *Consul-General.*

DIRECTOR OF THE MINT,
Washington, D. C.

AMERICAN CONSULATE,
Rimouski, Quebec, July 10, 1909.

SIR: I have the honor to report that numerous attempts have been made in the past few years to collect and deport American silver coins from the Dominion, with little success. In March last the Canadian banks again began to agitate the matter, and later formulated a plan for the purpose of substituting Canadian silver, and this has been presented to the government for its approval and assistance.

The arrangement, in all probability, will be similar to the one in vogue a couple of years ago, which was that all branch banks in the Dominion (and there are 2,026 of these) were to collect American silver and forward it to the head offices, there to be expressed to correspondents in the United States, the Dominion government defraying the expense of transportation and allowing the banks a commission of seven-eighths of 1 per cent for their trouble.

While there is only a small quantity of American silver in circulation in this locality, there are sections of the Province where it is more in evidence than Canadian coinage. There are, however, a considerable quantity of American bills in circulation in this as well as all other sections of the Dominion. While these are received as freely as Canadian bills, they are not paid out by the banks, but are collected and forwarded by banking institutions to their respective correspondents in New York, principally, for account of exchange.

Am transmitting herewith a clipping upon the subject from the Montreal Herald, dated July 8, 1909, which is of interest.

I have the honor to be, sir, your obedient servant,

FREDERICK M. RYDER, *Consul.*

ASSISTANT SECRETARY OF STATE,
Washington, D. C.

UNITED STATES SILVER COINS WILL BE DEPORTED FROM DOMINION.

CANADIAN BANKERS' ASSOCIATION ARRANGE TO COLLECT ALL AMERICAN SILVER COIN AND SEND IT BACK.

The Herald understands that the department of finance at Ottawa has approved of a plan, submitted by the Canadian Bankers' Association, for the resumption of the collection and deportation of American silver.

On inquiry at the office of Mr. John Knight, secretary of the Bankers' Association, the Herald learned that the work of collecting and deporting American silver will be commenced immediately.

It is estimated that in the western provinces of the Dominion one-half of the silver in circulation is United States coinage, and the assistance given the government by the banks in replacing American silver with that of our own country in the increase of seigniorage (profit derived by the government on bullion brought to the mint to be coined) is very considerable and of course means a good thing for the country, though not for the banks themselves.

It is estimated that the American silver in circulation in Canada is quite 40 per cent of the total in circulation.

About two years ago the banks arranged with the government to have American silver deported from the country, but at the end of the year the government grant expired and the whole arrangement fell through. It is believed that the present plans, however, will be permanent, for sentimental as well as business reasons.

MEXICO.

AMERICAN EMBASSY, *March 31, 1909.*

Answers to interrogatories, 1908.

1. The amount of gold coined during the calendar year 1908 was $8,900,000, being in coins of $10. Neither domestic nor foreign coins were melted down for recoinage.

2. The amount of silver coined during the calendar year 1908 was $7,889,000, as follows:

$1 pieces	$7,575,000
50-cent pieces	244,000
25-cent pieces	70,000

Recoinage of domestic money was to the extent of $1,985,085 (face value), which yielded $46,169 of pure silver (200.418 kilograms); and recoinage of Central American currency, collected in the State of Chiapas, had the face value of $600,065.93, yielding pure silver to the value of $12,709 (167.370 kilograms); the rest of the coinage was from bullion. No coinage was executed in foreign mints.

3. No coinage was executed for foreign governments.

4 and 5. (No reply.)

6 and 7. Imports and exports of gold and silver during the calendar year 1908: Statistical reports concerning importation are formed in accordance with the customs tariff, and as the latter embraces gold and silver in one column, it is not possible to determine the amount and value of one and the other.

EXPORTATION OF GOLD AND SILVER DURING THE FISCAL YEAR 1907–8.

GOLD.

Classification and country.	Weight.	Value in Mexican dollars.

To Great Britain	1,693.305	73,556.69
Total	20,402.511	768,580.90
Total silver		93,012,766.23

Amounts relative to gold and silver give the kilograms and grams of pure gold and silver contained in the respective articles exported.

Gold is valued at $1,333.33 per kilogram, and silver is valued at the average price it had had during each month in the London market.

8 and 9. No United States gold coin was deposited at or melted down in this mint. No information can be obtained concerning the amount and value of silver and gold in coins imported from abroad, because section 191 of the customs tariff embraces both in one column.

10 and 11. The production of gold and silver during 1907–8 was as follows:

Items.	Kilograms.	Value.
Gold	30,395.454	$40,527,183.27
Silver	2,151,014.213	85,366,904.06

The American ambassador at Mexico City submits the following figures for the production of Mexico, 1908–9:

	Kilograms.
Gold (fine)	33,661.264
Silver (fine)	2,291,260.570

* * * * * * *

18 and 19. Bank notes in circulation on December 31, 1908, represent a value of $87,644,497.

M. YRIGOYEN.

CENTRAL AMERICA.

COSTA RICA.

AMERICAN CONSULATE,
San José, March 4, 1909.

Answers to interrogatories, 1908.

1, 2, and 3. No gold or silver coined or recoined in Costa Rica or at foreign mints. No coinage for foreign governments.

4 and 5. No data as to gold and silver used in arts. Quantity negligible.

6 and 7. No gold or silver was imported in 1908.

Exported:	
Gold bullion	$592,068
Silver bullion	81,288
Gold coin	20,856

All bullion and coin to United States; bullion nearly all to New York and probably to Philadelphia mint. Above amount of coin is all reported at statistical office; nearly all American gold.

American gold in banks is less than a year ago by over $200,000. Exchange was unusually high during the year; a fair inference that all gold drawn from banks was exported. Not improbable that a considerable amount of American gold in circulation one year ago was exported also; greater part went to United States.

8 and 9. No United States gold coin was imported or deposited at mint during 1908.

10 and 11. Weight and value of gold and silver from mines of the country and colonies of the country during 1908, none. Costa Rica has no colonies.

12 and 13. Value of output of gold and silver from refineries of the country during 1908: See answer to questions 6 and 7. There are no refineries in Costa Rica.

14 and 15. Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1908:

	Colones.[a]	
Gold, in banks		
Foreign gold (practically all American)	1,238,040	=$575,688.60
In circulation, approximately		418,866.21
	1,500,000	697,500.00

American gold (estimated), $500,000 to $600,000; no exact data from which to estimate American gold in circulation.

	Colones.	
Silver, in banks		
Held to secure government silver certificates	57,804.05	=$26,878.88
In circulation, approximately	684,000	=318,060.60
	150,000	= 69,750.00

No data as to unshipped bullion, but amount small.

16 and 17. Government notes outstanding at the close of the calendar year 1908:

	Colones.	
Old issue	25,336.75	=$11,781.59
Issue of 1900	2,500.00	= 1,162.50

All covered by legal-tender gold. Six hundred and eighty-four thousand colones in silver certificates covered by silver. (See answer to question No. 15.)

18 and 19. Bank notes outstanding at close of 1908:

	Colones.	
Total emission	4,450,000	=$2,069,250.00
Retired, deteriorated	43,320	= 20,143.80
Outstanding	3,141,415	= 1,460,675.98

[a] Colon equals $0.465.

Bank notes outstanding not covered by legal-tender coin: None. Banks hold in excess of 50 per cent legal reserve.

20. Actual currency of the country: Gold, fractional silver, government and bank notes payable on demand in gold, silver certificates.

21. Gold is not at a premium.

22 and 23. No monetary laws were passed in 1908. Costa Rica has no mint or department of mines.

Finance and Commerce in 1908.

[From Bulletin of the International Union of the American Republics, July, 1909.]

* * * * * * *

On March 31, 1909, the banks of issue of the Republic held $512,185 in bank bills and a reserve fund of $237,392. A comparison of the cash on hand in the banks of issue in December, 1906, with the balances maintained in December, 1908, showed the domestic and foreign gold reserve to have decreased in the latter year as compared with the former to the extent of about $279,000. The decrease is accounted for by the short crops of previous years, which necessitated gold shipments to meet deficits in trade abroad. A new banking institution under the name of Banco Mercantil de Costa Rica with a capital of $500,000 was recently established in the capital and is conducting a successful business.

* * * * * *

Gold and silver bullion was exported in 1908 to the amount of $738,858.

* * * * * * *

GUATEMALA.

American Legation, *November 8, 1909.*

Answers to interrogatories, 1908.

1, 2, and 3. No coinage.

4. Weight of gold used in industrial arts during 1908: About 20 ounces, of which two-thirds was old gold and one-third from coins.

5. Weight of silver used in industrial arts during 1908. About 1,000 ounces, of which one-third was from old silver and two-thirds from coins.

6. Import of gold, about $10,000. (Custom duties on exported coffee payable in gold now paid by drafts.)

7. Import of silver, about $500.

8. Total import of United States gold coin during 1908: Not over $10,000.

9. United States gold coin deposited at mint and melted: None.

10. Gold produced from mines of the country during 1908: Absolutely impossible to be found out.

11. Silver produced from mines of the country during 1908: None.

12 and 13. Output of gold and silver from refineries of the country during 1908: None.

14. Approximate stock of gold in the country at the close of the calendar year 1908: Not over one million.

15. Approximate stock of silver in the country at the close of the calendar year 1908: In the banks $100,000, and in private hands about $7,000,000.

16 and 17. The Government has not issued notes by itself, but is responsible for bank notes issued for the amount of nearly $60,000,000, not covered by any legal-tender gold or silver coin or bullion.

18 and 19. Amount of bank notes outstanding at the end of the year 1908: About $8,000,000 that, according to decree 634, must be guaranteed by the banks keeping in their safes 30 per cent; the law does not say in which class of coin that guaranty fund must be kept.

20. Actual currency of the country: Inconvertible paper and nickel. Nickel not over $3,000,000.

21. Premium on gold during 1908: Highest, 18 for 1; lowest, 13½ for 1; average, 15½ for 1.

22. Laws passed during 1908: The National Assembly (Congress) gave authority to the President to settle the financial and economic problems, including loans.

23. No (mint) reports published.

HISTORY OF THE CURRENCY OF GUATEMALA.

Previous to and during the administration of Rafael Carrera (1840–1865) gold and silver were imported into Guatemala from other countries, chiefly England, and recoined in Guatemala.

During the administration of Justo Rufino Barrios (1875–1883) silver was the coin of the country and was at a premium. There was one emission of paper money, conditions at the time necessitating this forced issue, but it was so unfavorably received that it was quickly retired.

During the administration of Manuel L. Barillas (1885–1892) silver was the coin of the country. There were two emissions of paper currency, both of which were badly received and quickly retired, the second being converted into interior bonds to the amount of $3,000,000.

During the administration of Jose Maria Reina Barrios (1892–1898) the Guatemalan mint coined silver and recoined old silver from other republics. These coins varied greatly—from 0.900 down to 0.600 fine.

There was also a decree that 30 per cent of the import duties should be paid in gold, so that quite an amount of gold came into the country.

One year previous to his death he permitted the banks to suspend specie payment during one year, but was assassinated before the year was over.

Manuel Estrada Cabrera came into power before the end of the year and permitted the banks to continue issuing paper currency indefinitely without specie payment, owing to the fact that the Government owed the banks considerable amounts of money, and the Government and banks agreed to continue this policy until the Government was in a position to repay the banks in silver. Upon this happening, the banks were also to resume payment of their obligations for paper money in circulation by changing same for silver. During this administration silver as well as gold disappeared and the export of precious metals was prohibited, but most of the currency disappeared nevertheless.

To take the place of minor silver coins—that is, for changing purposes—50, 25, 12½, 6¼, and 3⅛ cent pieces (cedulas) were issued, but met with little acceptance, therefore obliging the Government to replace same with nickel.

During this administration the Government emitted $6,000,000 paper currency, which is still in force and is supposed to be available for payment of duties. The same were to have been relieved after a certain number of years, but this agreement was never carried out.

During the administrations of Justo Rufino Barrios, Manuel Lisandro Barillas, and Reina Barrios the banks were obliged to keep a surplus of 40 cents in silver for each paper dollar issued, and the banks during these administrations were considered quite solvent; but when the present administration came into power, while all the banks (say 6) may have had a total circulation of from 10,000,000 to 15,000,000, it is generally believed that to-day, although there is a circulation of between 50,000,000 and 60,000,000, not 1,000,000 of silver exists in the banks. The only institution which has any silver security in safe for every bill in circulation of its own paper issue is the Banco Americano, it having only 180,000 paper money of its issue in circulation and fully 220,000 silver in safes to guarantee same. Two of the other institutions, the Guatemala and Occidente banks, have between them fully 33,000,000 to 40,000,000 of their own paper in circulation, without any visible guaranty for same.

During the administration of Carrera and Justo Rufino Barrios silver had a premium over gold until about 1882, when gold took the supremacy and, until the death of Barrios, ruled between 5 and 18 per cent.

During the administration of Barillas exchange varied between 18 and 22 per cent. During the Reina administration, and until 1893, exchange varied from 18 to 30 per cent. From 1893 to 1897, when the banks were permitted to stop specie payment, exchange varied between 70 and 130 per cent premium, owing to demonetization of silver. During the first weeks of paper currency exchange fell to 124 per cent premium, owing to foreign loans made and guaranteed by the banks against which foreign exchange was sold, but this caused the banks such a heavy loss that they were soon forced to abandon this policy, and exchange rose to 4 for 1, or 300 per cent premium.

During this administration with the issue of the comite bancario bills by the Government and the prohibition of silver export, exchange quickly climbed from 300 premium to 800 premium, 9 pesos for $1 gold, from 1898 to 1900, and during 1902–3 it rose to 2,300 premium, or 24 for 1, owing to destructions of earthquake. For a short period in 1909 exchange fell to 4 for 1, owing to construction of the Northern Railroad, which brought some gold, more or less $2,000,000, into the country and revived confidence; this continued, varying during 1903 to 1906 from 19 for 1 to 16 for 1, according to the size of coffee crops. During 1906–7, owing to new people taking hold of the

Northern Railroad and the rather large crop of coffee of that year, exchange fell to 10½ for 1, but gradually commenced to go up, and during 1907–8 varied between 11 and 17 for 1; from 1908–9 the ruling rates have been between 15½ and 18 for 1. A thorough lack of confidence exists among bankers and merchants as to the value of the paper money, and only such is held from week to week as is necessary for small change; otherwise same is immediately converted into gold and sent abroad.

AMERICAN LEGATION, *July 30, 1909.*

SIR: I have the honor to transmit herewith a copy and translation of a note from the minister for foreign affairs, dated yesterday, quoting a letter addressed to him by the minister of finance, in which he furnishes certain data concerning the monetary system and the coinage of gold and silver in the Republic of Guatemala.

I regret that I have been unable to obtain information more in conformity with the request contained in the letter of the Secretary of the Treasury to the Secretary of State, dated January 18 last.

None of the executive or departmental offices of the Guatemalan Government make any pretense to collect or keep statistics, and to my many efforts and personal appeals to the minister of the treasury here to supply me with the information requested in the before-mentioned circular letter of our Treasury Department, I received the invariable answer that, owing to the absence of statistics, it was impossible for the Government to comply with our request.

I have the honor to be, sir, your obedient servant,

WM. HEIMKE.

DIRECTOR OF THE MINT,
Treasury Department, Washington, D. C.

[Translation.]

REPUBLIC OF GUATEMALA,
DEPARTMENT OF FOREIGN AFFAIRS,
Guatemala, July 25, 1909.

Mr. MINISTER: In response to the most attentive communication of your excellency dated the 5th of February of the present year, relative to furnishing some information concerning the monetary system of Guatemala, I have the honor to transcribe to you the communication which I have received relative thereto, dated yesterday, from the department of finance and public credit, which says:

"Mr. MINISTER: Referring to your attentive official communication under date of March 2 last, which refers to a communication addressed to you by the American legation, I have the honor to report to you the following: The standard and weight of our currency, according to the fiscal legislation, is the following: National gold coin of 5 pesos, with a weight of 8 grams and 65 milligrams and with a diameter of 21 millimeters; coins of 2 pesos and 50 cents, with a weight of 4 grams and 32 milligrams and a diameter of 19 millimeters; coins of 1 peso, with a weight of 1 gram and 612 milligrams and a diameter of 14 millimeters. Therefore every kilogram of gold of a standard of 0.900 produces 124 pieces of 5 pesos each.

"The national silver coins are the following: The peso, which has a weight of 25 grams, of a standard of 0.900 and a diameter of 37 millimeters; the half peso, with a weight of 12 grams and 500 milligrams, of a standard of 0.900 and a diameter of 31 millimeters; the 25-cent piece, which weighs 6 grams and 250 milligrams, of a standard of 0.835 and with a diameter of 24 millimeters. Therefore every kilogram of silver of the above-named fineness produces 40 pesos, 80 half pesos, and 160 pieces of 25 cents.

"In order to facilitate change in small transactions, it was decreed in May, 1899, to coin 300,000 pesos in small coins of a standard of 0.600 fine, in coins of 12½ cents, 6¼ cents, and 3⅛ cents; and with the same object, in the year 1900, it was decreed to coin or to bring from abroad 2,000,000 pesos in coins made of nickel of the same values above mentioned. At the present time there is no coinage, and since the year 1897 the country has been on a paper basis."

I remain, Mr. Minister, with all consideration, your very attentive servant,

G. AGUIRRE.

His Excellency WILLIAM HEIMKE,
Envoy Extraordinary and Minister Plenipotentiary of the United States of America, Present.

HONDURAS.

AMERICAN LEGATION,
Tegucigalpa, March 31, 1909.

Answers to interrogatories, 1908.

1, 2, and 3. No gold or silver was coined, and no coinage was executed for other governments during the year 1908.
4 and 5. No data obtainable as to gold used in arts, probably none. Silver used in arts: No data; amount insignificant.
6. No gold imported. Exported, 14,684 ounces.
7. No silver imported. Exported, 978,450 ounces.
8 and 9. No United States gold coin was imported or deposited at mint and melted during the year 1908.
10 and 11. Amount of gold and silver produced from mines of the country during 1908: No data.
12 and 13. Output of gold and silver from refineries of the country during 1908: There are no refineries in Honduras.
14 and 15. Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1908: No gold; no data as to silver.
16 and 17. No government notes issued.
18 and 19. Bank notes outstanding at the end of the year 1908: 323,475.50 pesos.
20. Actual currency of the country: Silver.
21. Premium on gold during 1908: Average, 155 per cent; lowest, 145 per cent; highest, 170 per cent.
22. No law was passed as to coinage.
23. No reports of mint published; same has been closed during 1908.

The Central American Convention of Tegucigalpa.

[From Bulletin of the International Union of the American Republics, April, 1908.]

On January 20, 1909, and in accordance with the convention on future Central American conferences signed at Washington on December 20, 1907, the Governments of the Central American Republics, through their delegates assembled in the first Central American conference in Tegucigalpa, the capital of Honduras, entered into an important convention to unify the monetary system, customs duties, weights and measures, fiscal laws, and consular service.

Regarding the monetary system, the convention prescribes as the basis for the currency that is to be established the gold and the silver peso in parity, leaving to the conference of 1910 to fix the date from which the Government shall proceed with the conversion of their monetary systems. The new money shall be composed of the following coins: $20, $10, $5, and $1 gold; $1, $0.50, $0.25, and $0.10 silver; and $0.05 and $0.01 nickel; their fineness, weight, tolerance, diameter, and thickness shall be the same as those of the corresponding coins of the United States. The gold and the silver coins shall have on the obverse the coat of arms of the respective country with the inscription "Republic of ——" on the upper part and the date of coinage and the fineness on the lower; in the reverse, the coat of arms of Central America, with the inscription "15th of September, 1821," on the upper part and the value of the coin on the lower. Nickel coins shall have on the obverse the bust of Columbus, with the date of coinage on the lower part and in the reverse the coat of arms of the federation with the inscription "Republic of ——" on the upper part.

LOCAL PROCLAMATION

(Of February 13, 1908.)

Constituting a 5-cent piece of bronze and nickel in British Honduras.

[From Report of the Minister of Finances, Paris, 1908.]

In consideration of the terms of section 4 of the decree of 1894, upon the monetary system, I have, with the approval of the treasurer and of the secretary of state, created a new piece of 5 cents, of bronze and nickel, to be coined under the direction of the master of the mint, for issue in British Honduras.

In consideration that by section 5, paragraph 2, of the said decree it is stipulated that in case where new pieces are coined, section 5 of the said decree, limiting the free power of the coins for British Honduras, shall be from the date arranged by the governor in a proclamation approved by the treasurer and the secretary of state, indicating in a schedule for each piece the characteristics corresponding to those which are indicated in Note III of said decree, applicable to the new pieces the same as if the note of the proclamation was joined to that third note.

Consequently, we, Eric John Eagles Swayne, with the approval of the lords commissioners of His Majesty's treasury and the very honorable secretary of state for the colonies, declare and arrange by these presents February 13, 1908, as the date for section 5 of the decree upon the monetary system of 1894 shall be applicable to the new fractional 5-cent pieces of bronze and nickel, of which, according to the requirements of note third of the aforesaid decree, the characteristics are indicated in the following schedule:

FRACTIONAL COINS.

Denomination.	Metal.	Legal weight.	
		Grains.	Grams.
5 cents (0.05 of a dollar).....	Bronze and nickel.....	86.0	3.6287

[Translation.]

CURRENCY OF THE REPUBLIC OF PANAMA.

[From L'Economiste Européen, Paris, January 22, 1909.]

* * * * * * *

The monetary unit of the Republic is the balboa, a gold coin, weighing 1.672 grams, of 0.900 fineness. The United States of America's dollar and its multiples have legal currency for their nominal value.

The coinage of the gold coins may be made in pieces of 1, 2½, 5, 10, and 20 balboas.

The silver coins are the following: The piaster, weighing 25 grams and equivalent to fifty one-hundredths of a balboa; the half-piaster, weighing 12½ grams; the fifth piaster, weighing 5 grams; the tenth piaster, weighing 2½ grams; and the twentieth piaster, weighing 1¼ grams, all of the fineness of 0.900. The national silver coins have legal currency in all transactions.

SAN SALVADOR.

AMERICAN LEGATION, *April 21, 1909.*

Answers to interrogatories, 1908.

1. The Government of Salvador possesses no mint; no gold was coined in the year 1908.

2. No silver was coined in Salvador in 1908, but 1,600,000 colones were coined for the Government of Salvador in Belgium, and 800,000 colones for the Banco Occidental of San Salvador in San Francisco, Cal., in the year 1908.

3. No coinage was executed for other governments.

4. The amount of fine gold used in the arts was equivalent in value to approximately $35,000; the gold used was exclusively coins melted over.

5. The amount of fine silver used in the arts was equivalent in value to approximately $5,000; of this a very small quantity was old silver, the balance Colombian, Chilean, and Bolivian coins not in circulation in Salvador.

6 and 7. No gold was imported during 1908. Silver to the value of 2,400,000 colones, as stated in No. 2, was imported in 1908.

TABLE SHOWING THE EXPORTATION OF GOLD AND SILVER, 1908.

Description.	Net weight.	Value in United States gold.
	Kilograms.	
Scraps of gold and silver	3,680.0	$3,876.00
Ingots of gold and silver	13,959.0	317,461.27
Gold ingots	1,256.7	438,694.61
Gold bullion	901.6	252,729.65
Silver ingots	193.2	55,304.80
Auriferous silver	4,813.9	121,420.90
Total	24,804.4	1,189,487.63

8 and 9. No United States gold coin was imported during 1908, and none deposited or melted.

10 and 11. Amount of gold and silver produced from mines of the country during 1908: No mining statistics except the custom-house figures are available, and as they do not always discriminate between shipments of gold and silver, sometimes grouping both metals under one invoice, it is not possible to give the total production of gold and that of silver separately, except as shown in the accompanying table, viz: "Exportation of gold and silver, 1908."

12 and 13. There are no refineries in Salvador. (The Government of Salvador possesses no mint and maintains no mining or geological bureaus; moreover, there are no mining or engineering societies in Salvador. Consequently it has been a matter of great difficulty to obtain accurate statistics.)

14. There is no stock of gold coin or bullion in Salvador.

15. Approximate stock of silver coin and bullion in the country at the close of the calendar year 1908: According to the minister for the treasury there was in circulation at the close of the year 1908 the sum of $5,294,455.73.

16 and 17. The Government issues no notes.

18 and 19. The amount of bank notes outstanding at the end of 1908 was $3,868,648; according to the laws of Salvador, these notes are secured by deposits in silver coin or bullion in the vaults of the respective banking houses by 50 per cent of their face value.

20. The actual currency of the country was $9,163,003.73—$5,294,455.73 in silver and $3,868,648 in bank notes.

21. Gold is at a premium in Salvador; exchange in 1908 fluctuated from 140 per cent to 175 per cent.

22. No laws were passed in 1908 affecting coinage, issue, etc.

23. No mint; no report published.

DOMINICAN REPUBLIC.

AMERICAN LEGATION.
Santo Domingo, March 11, 1909.

Answers to interrogatories, 1908.

1, 2, and 3. Amount of gold and silver coined and coinage executed for other governments during the calendar year 1908: None.

4 and 5. Weight of fine gold and fine silver used in industrial arts during 1908: Amount inappreciable.

6 and 7. Import and export of gold and silver coin and bullion during 1908: Gold coin from the United States, $265,377; silver coin from the United States, $94,311.

8 and 9. Import of United States gold coin and United States gold coin deposited at mint and melted during 1908: Answered by No. 6.

10, 11, 12, and 13. Amount of gold and silver produced from mines of the country and output of same from refineries of the country during 1908: None.

14 and 15. Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1908: No official data obtainable.

16, 17, 18, and 19. Only the Government has assumed responsibility for the bank notes referred to, as follows: Nominal value, $791,562. The notes have been deprived of legal tender quality, and the bank of issue is no longer in existence. The notes are not in circulation, but are held by speculators.

20. Actual currency of the country: United States gold; also national coin, which passes at 5 to 1 and is legal tender to the amount of 30 per cent.
21. Premium on gold: None.
22. No laws were passed during 1908 affecting the currency.
23. No report is published on operations of the mint.

HAITI.

AMERICAN LEGATION,
Port au Prince, April 26, 1909.

Answers to interrogatories, 1908.

1, 2, and 3. No gold or silver was coined, recoined, or melted during 1908. There is no mint in Haiti.
4 and 5. There are no statistics showing the amount of fine gold or fine silver used in the arts. Other than in photography there seems to be no industrial use of gold or silver.
6. During 1908, the importation of gold into Haiti amounted to $680,116.39. There are no statistics available showing exports of gold during 1908.
7. No silver was imported during 1908. Some Haitien silver coins were exported as bullion, but it is impossible to give value.
8 and 9. The importation of United States gold into Haiti during 1908, amounted to $680,116.39. No gold coin has been melted. There is no mint in Haiti.
10, 11, 12, and 13. There was no gold or silver produced either from the mines of the country or refined during 1908.
14 and 15. No statistics are kept as to the stock of gold and silver in the country, in public treasuries, banks, or in circulation. There is no gold or silver bullion in Haiti.
16 and 17.—Government notes outstanding: On December 31, 1908, there were outstanding 8,756,998 gourdes, paper. This amount was not covered by gold or silver coin or bullion.
18 and 19. There are no bank notes in Haiti.
20. The actual currency of the country is inconvertible paper, nickel and copper coins.
21. Gold is at a premium as compared with the actual currency of the country. The highest premium during 1908 was 900 per cent; the lowest premium was 495 per cent, with an average premium of 642 per cent.
22. Authority was given by the law of May 14, 1908, for the emission of 2,000,000 gourdes, paper, in 5-gourde bills, and the coinage of 400,000 gourdes in 50-cent nickel pieces. The law of August 21, 1908, authorized the coinage of 2,000,000 gourdes of 50-cent nickel pieces. These nickel coins were all made in the United States and put in circulation as soon as received. (Copies of laws annexed).
23. There is neither mint nor department of mines in Haiti.

LAW.

Nord Alexis, President of the Republic, using the power that article 69 of the constitution grants him;

Considering that to overcome the insurrection of the cities of Gonaives and St. Marc, the Government was compelled to incur heavy expenses, which it is necessary to regulate and pay without delay; that it is immediately indispensable to restore to the current service the funds that have been used in part payment of these expenses and to pay off the balance.

Considering, on the other hand, that the consequences of that insurrection must financially reverberate on the fiscal period 1908–9, in paralyzing the affairs in general, in disorganizing the public service, in obliging the State to consider with urgency the necessities of the future with a view of guaranteeing peace;

On the report of the secretary of state for finance and commerce and the advice of the council of the secretaries of state, has proposed, and the legislative corps has voted the following law:

ARTICLE 1. The secretary of state for finance is authorized, upon the promulgation of the present law, to make an emission of 2,400,000 gourdes, of which 2,000,000 shall be in notes of the value of 5 gourdes each, and 400,000 gourdes in nickel pieces of 50 cents, dated 1908, which amount is destined to cover both the expenses made for the suppression of the insurrection of the cities of St. Marc and Gonaives and the deficit of the fiscal year 1908–9.

The share of the two fiscal periods shall be estimated at the rate of 1,000,000 gourdes for the period 1907–8, and 1,400,000 gourdes for the period 1908–9.

ART. 2. The notes shall be rose color and divided into 20 series of 100,000 gourdes each. The guaranty shall be the proceeds of $12,000 American gold, to be drawn monthly from the 25 per cent surtax levied on the total import duties, and sold at the rate of the day exclusively, for 5-gourde notes, and shall commence three months after the first three series are put in circulation.

It is understood that in no case shall the $12,000 appropriated be diverted from the purpose for which it is intended. This amount shall be under the exclusive responsibility of the secretary of state for finance and the director of the office of receipts and expenses.

The 20 series shall bear the letters from A to T, and shall be numbered from 1 to 20. They shall be of a smaller size than the notes at present in circulation. Each note shall bear on its face at the top the words "Liberty, Equality, Fraternity, Republic of Haiti;" in the center the coat of arms of the Republic; at the two sides the effigy of the President of Haiti. A little lower shall follow these words: "This note, the issue of which is authorized by the law of May 14, 1908, is legal tender in the Republic of Haiti for the sum of 5 gourdes, and its redemption is guaranteed by the appropriation provided by the said law."

On the reverse there shall be printed under the figure "5," indicating the value of the note, the following words: "Those who shall counterfeit or falsify the notes of this issue and those who shall make use of the counterfeited or falsified notes shall be punished according to the law."

Each series of these notes shall be signed by a delegate of the department of finance, a member of the chamber of accounts, and by the director of the bureau of receipts and expenses. They shall each receive a recompense of 250 gourdes per series and the director of the bureau of receipts and expenses an additional 2,500 gourdes.

The 50-cent nickel pieces shall be coined under the conditions fixed by the law of August 20, 1907.

ART. 3. From the first to the eighth of each month, at the latest, the proceeds of the $12,000 of the preceding month sold at the rate of the day against notes of 5 gourdes, shall be publicly burned under the care and supervision of a commission composed of one senator, one deputy, and two citizens chosen by the President of Haiti.

ART. 4 (additional). The withdrawal of the 5-gourde notes being effected, the proceeds of the $12,000 shall be employed conjointly with that of the appropriation provided in article 2, of the law of July 5, 1907, to withdraw from circulation the other paper currency according to the manner established by the preceding article.

ART. 5. The manufacture and other expenses of this issue shall be borne by the guarantee appropriated for the reimbursement of the 2,000,000 gourdes. However, the secretary of state for finance is authorized to make the advance for the service of the issue from the treasury funds if necessary.

ART. 6. This law repeals all laws or provisions of law that are contrary thereto. It shall be executed under the supervision of the secretary of state for finance and commerce, who shall, moreover, take all the administrative and necessary measures to assure its proper fulfillment.

Passed by the house of representatives, May 11, 1908.
Passed by the Senate, May 14, 1908.
Signed by President Nord Alexis, May 18, 1908.

LAW.

Nord Alexis, President of the Republic, in view of article 69 of the constitution;

Considering that it is indispensable to meet the supplementary credits of the fiscal year 1907–8;

Considering that the sum of 1,000,000 gourdes, voted by the law of May 14, 1908, belonging to the budgetary deficit becomes insufficient in view of the new credits granted to the different departments;

Considering, on the other hand, that it is necessary to restore to the fiscal year 1907–8 the 500,000 gourdes appropriated for the victims of the fires of July 5, 6, and 10 last;

The house of representatives, on the proposal of the secretaries of state, has voted the following law:

ARTICLE 1. To be able to pay the supplementary credits of the fiscal period 1907–8 and reimburse the 500,000 gourdes diverted from that fiscal year, the Government is authorized, either to contract a loan to the best advantage of the state, not to exceed the sum of 2,000,000 gourdes, or to have coined 50-cent nickel pieces similar to those of the last coinage, not to exceed the said sum of 2,000,000 gourdes.

ART. 2. The cost of the coinage, in case that the Government shall have recourse thereto, including the expenses for the shipment and all other expenses, that is to say, about $44,600, shall be entered as expenses and the entry which shall be accompanied by all the vouchers shall be classified in the budget of finances for the fiscal year 1908–9 under "chapitre unique."

ART. 3. The present law abrogates all laws or provisions of laws contrary thereto. It shall be executed under the supervision of the secretary of state for finances and commerce.

Given at the palace of the house of representatives at Port au Prince, August 19, 1908, year 105 of the independence.

The president of the house:

G. DESROSIERS.

The secretaries:

J. B. LAURENT.
EMILE MARCELIN.

Given at the national house at Port au Prince, August 21, 1908, year 105 of the independence.

The president of the Senate:

S. ARCHER.

The secretaries:

D. THEODORE and D. LEREBOURS.

In the name of the Republic, the President of Haiti directs that the above law of the legislative body be vested with the seal of the Republic, published and executed.

Given at the national palace, October 27, 1908, year 105 of the independence.

The secretary of state for finance and commerce:

F. MARCELIN.

SOUTH AMERICA.

ARGENTINE REPUBLIC.

FINANCIAL STATISTICS, 1907–8.

[From Bulletin of the International Union of the American Republics, April, 1909.]

In 1907 the banks of the Argentine Republic had on deposit $29,028,792 gold, as compared with $26,474,471 gold in 1908, and $729,328,111 national money in 1907, as compared with $809,323,321 national money in 1908.

The funds on hand in gold in the government conversion office at the end of 1908 amounted to $126,482,515.76, as compared with $105,113,871.59 on hand at the close of 1907, or an increase in 1908 of $21,368,644.26. The government conversion office (caja de conversion) is an institution established for the redemption or exchange of paper money for gold at a fixed rate of exchange.

THE MONETARY SITUATION IN THE ARGENTINE REPUBLIC.

[From L'Économiste Européen, Paris, September, 1909.]

Up to 1881 the Argentine Republic had an incongruous monetary system, which consisted, in great proportion, of paper money of a continually fluctuating value; so they generally effected their commercial transactions in foreign coin.

During many years Argentina was subjected to a forced currency. The paper money had its origin in the issue of 290,000 pesos, made by the Banque d'Escompte,

established by virtue of a law of the Province of Buenos Aires, of date of June 22, 1822. In 1826, when the Banque d'Escompte was changed into the Banque Nationale, their issue amounted to 2,694,856 pesos; in 1837, when the Banque Nationale was converted into the Hotel des Monnaies, they increased to 15,283,540 pesos, and in 1854, when the Hotel des Monnaies was changed into the Banque de la Province, to 203,915,206 pesos.

In 1881 the stock of inconvertible paper reached 882,071,156 pesos, in consequence of the successive issues of the national and provincial governments.

In 1875 they attempted to establish a sound monetary system, but, owing to the economic and financial circumstances under which the country was sustained, the project failed.

In 1881 a second attempt had more success. Under the administration of General Roca, M. Romero being then minister of finances, a law was promulgated establishing the gold or silver peso as monetary unit; the first with the weight of 1.6129 grams and fineness of 0.900; the second with the weight of 25 grams and fineness of 0.900. That law also established the metallic conversion of the depreciated paper money.

The monetary situation has not been improved because the forced currency that for some years had been suppressed was reestablished in January, 1885, and the premium made its appearance anew. In June, 1885, it reached to 50 per cent; the serious political and financial emergencies of 1890 again favored the depreciation of the paper money, and the premium reached 215 per cent in the month of April, 1885.

In spite of that overthrow of the paper money, of which the true causes were the misuse of the issues of paper to serve the needs of the Government, to supply those for speculation, the economic dominion of the Republic, as will be seen farther on, was not attained.

The large new issues of paper money had the result of making the premium mount up to 364 per cent in October, 1891. In consequence the monthly quotation of gold with relation to the paper money fluctuated between 359 and 290 in 1893; 433 and 307 in 1894; 377 and 311 in 1895; 332 and 266 in 1896; and 317 and 274 in 1897.

The different succeeding administrations have all declared their strong intention to redeem all, or to reduce the amount of the paper circulation, at least; none of them accomplished results which can be considered decisive.

One of the most favorable plans for establishing a sound monetary system is due to M. José Maria Rosa, who, in August, 1899, presented a plan of reform to Congress to soon make a law for the conversion of the paper money. The plan rested upon the following fundamental bases:

First. To fix the rate at which they would make the intended conversion directly in conformity with the true present valuation of coin.

Second. To compose an effective metallic reserve to guarantee and make that conversion possible, by which, pending such time, the coin would gain stability.

Third. To maintain the fixed standard by the two following means:

(*a*) The establishment of a bureau, working in some sense automatically, in the cash conversion office (established in 1890), in order to serve to give elasticity to the paper money, of which the circulation may be increased or diminished at the ratio of the quantity of gold deposited in exchange therefor.

(*b*) Intervention into the international exchanges by means of the Banque de la Nation.

We were told that Congress approved the plan, which assured the substitution of gold for the paper money at the rate of 44 centavos in gold per paper peso, and authorized the receipt and issue upon the part of the Treasury of gold and paper in that proportion.

Unfortunately the plan of economic financiering and strict administration which would insure the success of that important reform has not been followed, as results prove.

The cash conversion office was established in 1890, at the time of the crisis which disordered the country. This institution was to serve in utilizing the resources which they supplied to quickly redeem the paper money. The intention was good * * * but it was never put into execution. The Government had made a pledge to retire 15,000,000 pesos in notes each year. In 1891 there were only 1,248,032 pesos retired, and in 1892, 3,586,255, making a total of 4,834,287 pesos, instead of the 30,000,000 provided. It is thus that the cash conversion office was stranded, we may say, upon its foundation. That establishment is still maintained, but they have renounced their original work of the redemption of paper money and are nothing more to-day than administrative machinery.

We wish to remark, in closing this chapter, that according to recent statistics the amount of notes in circulation in the Argentine Republic in March, 1909, amounted to 694,004,908 paper pesos, equivalent to 285,561,115 gold pesos (1,427,905,575 francs).

By way of compensation the funds of conversion were 25,500,000 gold pesos (127,500,000 francs) on the same date, and there existed on deposit at the cash conversion office 182,148,132 gold pesos (910,740,660 francs), making a total of 207,648,132 gold pesos (1,038,240,660 francs).

From these figures it results that the paper circulation of the Argentine Republic is actually guaranteed by a stock of gold of 63.78 per cent of their total valuation.

Although we may calculate by the preceding that their efforts have often been insufficient, the later Argentine administrations are, however, preoccupied with reinstating a normal circulation in the country. They must acknowledge the truth, that the task is not an easy one.

The Caja de Conversion.

[From the Economist, London, October, 9, 1909.]

The caja de conversion is the Spanish name of the Argentine conversion treasury, and it may interest some of the readers of the Economist to be informed of the origin and working of this imitation of the issue department of the Bank of England. In October, 1899, the amount of paper money in circulation was, in round numbers, about $283,000,000. A few years previously, while Doctor Pellegrini was acting as President of the Republic, the premium on gold was quoted one day on the Bolsa at 364 per cent; that is to say, $464 in paper had to be given in exchange for $100 in gold; but from that date the premium began to fall, and the descent became more rapid after the danger of war with Chile had disappeared, and in consequence of the influx of gold caused by good harvests.

This rapid fall alarmed the stock owners and farmers, the debtors who had contracted liabilities in gold, the persons who were receiving salaries in gold, and the holders of securities for gold, while the mass of the people who were paid for their services in paper, and those to whom debts were owing in paper, and the holders of paper securities rejoiced at the anticipation of the approaching rise of paper money to its par value. The retail shopkeepers benefited by the fall of the premium, as a very long time elapsed before they reduced the prices in paper which they had raised to cover the high premium. Those who were interested in preventing the fall of the premium on gold constituted the most influential classes, and therefore it was determined to establish a fixed rate for the conversion of paper into gold and vice versa.

Accordingly a law, No. 3871, was passed on October 31, 1899, for accomplishing three objects, (1) the fixing of the convertible value of the paper dollar at 44 cents gold; (2) the creation of the caja de conversion for receiving deposits in gold and giving paper money in exchange for the same at the said rate, and, on the other hand, giving gold (so long as any part of the deposits remained in the caja), in change for paper money at the same rate of 44 cents gold for every dollar in paper; (3) the formation in the Bank of the Nation of a fund for the conversion (at the same rate) at some future time of the $283,000,000 paper money, which (except $50,000,000 issued for the capital of the Bank of the Nation) represented the issues that had been made by the nation to the guaranteed banks, nearly all of which (including the National Bank and the Bank of the Province of Buenos Ayres) had stopped payment and were in liquidation, and the liability for which issues had been assumed by the nation. It had received gold from some of the provinces—the proceeds of loans which they had obtained—in exchange for bonds given to them to be deposited in the National Bank at the rate of 85 per cent of the amount of paper money issued to them, but this gold had been thrown away on the Bolsa in an insane attempt to stop the rise of the premium. The said bonds were returned to the nation in exchange for its assumption of responsibility for the paper currency. The nation did not receive any gold for the bonds deposited as guaranty for the $50,000,000 in notes issued to the National Bank, and some of the provinces gave promissory notes, which were never paid, for their guaranty bonds.

The curious rate of 44 per cent was arrived at by calculating the average premium on gold during the six months preceding the date of the conversion law, which was found to have been 127.27 per cent, equivalent, as nearly as possible, to the rate of conversion fixed. (Obviously it would have been much more convenient for the purposes of calculation to fix the rate at either 40 or 50 per cent.)

For a short time gold was deposited in the caja, and it could be obtained in exchange for paper; then, in consequence of a bad harvest, gold became scarce and there was not a dollar in the caja, and gold had to be bought on the Bolsa at a small premium; but in June, 1902, the influx of gold into the country had begun, and though the amount in the caja has since varied considerably, attaining its maximum every year in May or the beginning of June and falling to its minimum in the beginning of October, there

has never been a cessation of conversion at the above-mentioned rate. This year the stock of gold in the caja has been increasing almost continuously; on January 1 it was only $126,000,000; to-day it is close upon $173,000,000 ($172,959,911). On June 30, 1908, it was a little over $120,000,000. On September 9, 1907, the amount was $112,363,200; on September 9, 1908, it was $120,499,334. The large addition to the stock of gold in the last twelve months must be attributed in part to the realization of loans by the nation, by the municipality, and by the Province of Buenos Ayres, and in part to the investment of foreign capital in new banks, in industrial enterprises, and in the purchase of national bonds and cedulas.

The gold in the caja does not belong to the nation; the law declares it to be a sacred deposit, which may be used only for paying it on demand to those who present paper to be exchanged for it at the fixed rate.

In exchange for the $172,959,911 gold the caja has issued paper money of the nominal value of $393,090,707; there is also in circulation the old currency to the amount of $283,000,000, making together a paper currency of more than $676,000,000, to which must be added about $10,000,000 (of paper value) in nickel and copper coins.

The conversion fund in the Bank of the Nation constitutes the only guaranty (beyond the responsibility of the nation) for the $283,000,000 in paper and the $10,000,000 in coins. The equivalent in gold at the fixed rate of these two amounts is $128,920,000.

The amount of the fund is now $28,000,000 gold, and two laws (Nos. 4569 and 4600) of date subsequent to the law 3871 fixed $30,000,000 gold as the limit of the fund, as it was considered that the amount would be sufficient for maintaining the convertibility of the paper currency, otherwise unguaranteed, when it should be decided to make it convertible; but the minister of finance has announced in his budget proposals for 1910 that the $30,000,000 limit (which will probably be reached during the year) will not be maintained, and he proposes that $9,000,000 gold shall be included in the authorized expenditure of next year for additions to the fund.

The law 3871 directed the conversion fund to be formed from the following sources: Five per cent additional duty on imports (which has since been suppressed); the profits of the Bank of the Nation, now applied to the increase of its capital and the formation of a reserve; the surplus assets of the National Bank, in liquidation, now received by the Bank of the Nation; the proceeds of the sale of the Andine Railway (not yet sold, but directed by the bill passed by the Chamber of Deputies a few days ago to be used for the expense of irrigation works); $6,967,650 gold in national cedulas, the property of the State (given to the Bank of the Nation to increase its capital); lastly, such sums as might be devoted to the fund by the annual budgets, which, as is seen, is the only source from which the fund of $28,000,000 has been obtained.

The Bank of the Nation is authorized by the law 3871 to use the conversion fund for operations in foreign exchange, and in its balance sheets the amount of the fund appears as a liability, and in the assets there appears an item of "foreign correspondents," which, presumably, represents the drafts, bills, etc., which it has purchased with the fund or portions of it.

The law 3871 authorizes the National Government to declare, by decree issued three months beforehand, the convertibility of the old currency at the said rate of 44 cents gold per dollar paper. When this decree has been issued, it is probable that the caja de conversion will become a department of the Bank of the Nation, to which the conversion fund will be transferred, and the employment of the latter in exchange operations will then cease.

The amount of paper money in circulation may appear to be excessive for a population of about 6,500,000, but there is very little gold or silver used, and the use of checks is limited to the large business houses. The retail shopkeepers and private individuals pay and receive in paper money almost exclusively.

The movement of checks through the Bank Clearing House has not exceeded $360,000,000 national money (about £30,000,000) (gold being reduced to paper) in any month of this year. An addition must, of course, be made to this amount of the checks paid at the counter, of which the total amount can not be estimated.

On July 31 (the latest return of balances) the 22 banks of the capital held $51,941,919 gold and $296,045,195 national money. Then there are the exchange offices in all parts of the Republic, which must possess in the aggregate a very large amount of foreign and national paper money and gold and silver, and the mortgage and loan associations, the railway, tramway, shipping, insurance, and other companies must also hold a very large aggregate amount of paper money and some gold, so that the paper currency is really not in excess of the public needs. In fact, in some of the provinces it has at times been so scarce that the governments have issued bonds and certificates of indebtedness, in forms somewhat similar to national notes, which, being received in payment of taxes, were accepted by tradesmen at par. The National Government declared such issues to be unconstitutional. This was disputed by the provinces, and the question has not been decided, for the currency imitations were

withdrawn, the Bank of the Nation having increased the capital of its branches in the provinces in general.

The stability of the Argentine monetary system depends upon the continuance of the prosperity of the pastoral and agricultural industries, and upon the maintenance of peace with the neighboring Republics. The latter condition is not likely to be disturbed, notwithstanding that the increase of the Brazilian navy has made it necessary for the Argentine Republic to adopt adequate means of defense.

As regards the staple industries of this country, they are now spread over such an immense area, which is being constantly enlarged, that the Republic may be considered practically secure against such a general failure of production as to cause a derangement of the monetary system by the necessary outflow of gold in satisfaction of public and private obligations.

BOLIVIA.

Answers to interrogatories, 1908.

1. No gold was coined during 1908.

2. During the year 1908 The Casa Nacional de Moneda of Potosi coined 719,171 kilograms fine silver, with a value of 24,881.50 bolivianos. By virtue of the preparatory measures for the gold standard the silver coinage was almost void.

3. The casa de moneda (mint) did not effect any coinage for other countries.

4 and 5. The employment of gold and silver in the industrial arts is insignificant.

6. Thirty-five kilograms 496 grams of fine gold in nuggets, with a commercial value of 59,225 bolivianos, were exported.

7. The figure of exportation of silver was 156,482 kilograms 34 grams, with a value of 8,058,092 bolivianos.

8 and 9. No American gold was imported.

10 and 11. The quantities of gold and silver extracted from the mines have been noted in the answers Nos. 6 and 7.

12 and 13. There are no refineries in the country.

14. Approximate stock of gold: Gold coins existed in the banks on December 31, 1908, to the amount of £507,845.

15. Approximate stock of silver: Silver coins, to December 31, 1908, 1,302,286.76 bolivianos.

16, 17, 18, and 19. The Government issues no paper money, the banks being the only ones authorized to emit bills. Up to December 31, 1908, the banks had the sum of 17,245,479 bolivianos in circulation. To cover this emission they had on hand a metallic existence of 6,922,695.21 bolivianos in sealed gold and silver.

20. Actual currency of the country: The general circulation in 1908 was the following:

	Bolivianos.
In gold, £507,845, which, at 19½d. represents	6,348,062.50
In silver	1,302,286.76
In bank bills	17,245,479.00
In nickel	262,877.27
Total circulation	25,158,705.93

21. Premium on gold: Gold is quoted legally at 12.50 bolivianos per pound sterling, or, say, 19½d., which rose up to 15 bolivianos during the year 1908. During 1909 it has been quoted invariably at 12.80.

22. The gold-standard law was promulgated on the 31st of December, 1908, the English pound sterling being adopted as the monetary unit at the rate of 19½d.

23. Memoir of the minister of finance and industry is inclosed herewith.

Gold Standard.

[Translation.]

Ismael Montes, President of the Republic.

Whereas the National Congress has sanctioned the following law:

The National Congress decrees—

Article 1. The English pounds sterling and the Peruvian pounds shall have free circulation in the Republic, with an equivalent value of 12 bolivianos 50 centavos; and the half pounds, 6 bolivianos 25 centavos. These coins shall be the only ones with unlimited cancellatory value in all kinds of operations.

Art. 2. The executive power has ordered to be coined and issued, according to the necessities of the circulation, silver and nickel coins, the first up to an amount of 4,000,000 bolivianos and the second up to 1,000,000 bolivianos.

ART. 3. The silver coins shall be of two kinds, 20 centavos with the weight of 4 grams and 50 centavos with the weight of 10 grams, at the standard in both cases, of 0.833⅓ fineness, having a tolerance of 3 milligrams in weight and three one-thousandths in fineness.

ART. 4. The nickel coins shall be of 5 and 10 centavos, with the weight of 2 grams 50 centigrams, and 5 grams, respectively, and with the fineness (standard) of three-fourths copper and one-fourth nickel.

ART. 5. The silver coins, as well as those of nickel, that the present law refers to shall be lawful money, and their acceptance shall not be obligatory only up to the value of 12 bolivianos 50 centavos for the first and 1 boliviano for the second.

The State shall exchange the copper coins which shall be presented for such purpose for pounds sterling with the equivalent determined in the law of November 30, 1904.

ART. 6. The silver coin in present circulation shall be exchanged by the State with the same equivalence.

Registered and communicated to the executive power for constitutional purposes.

Hall of Sessions of the National Congress, La Paz, November 5, 1908.

BENEDICTO GOTTIA.
ISAAC ARANÍBAR.
JOSE CARRASCO,
Senate Secretary.
JOSE A. MORALEZ,
Deputy Secretary.
JULIO A. GUTIERREZ,
Deputy Secretary.

Therefore it has been published and approved as a law of the Republic.

Palace of the supreme governor in La Paz, December 31, 1908.

ISSUE OF LEGAL COINS.

Ismael Montes, President of the Republic.

Considering that the law of December 31, just passed, has fixed new conditions for weight, fineness, and tolerance of the silver coins; in consequence it has been made necessary to dictate regulations for their coinage, as well as for the nickel coins authorized by the same law, decrees:

ARTICLE 1. The silver coins, as well as those of nickel referred to in said law, shall be lawful money, and their acceptance shall not be obligatory only up to the value of 12 bolivianos 50 centavos for the first and 1 boliviano for the second.

ART. 2. The silver coins with the weight of 20 grams per boliviano and the fineness of 0.833⅓ shall be of two kinds, 20 centavos with the weight of 4 grams and 50 centavos with that of 10 grams.

ART. 3. The tolerance shall be of 3 milligrams in weight and 0.003 in fineness.

ART. 4. The design and form of the new coin shall be like those in present use, conformable to the law of November 24, 1872.

ART. 5. The nickel coins are to be issued in pieces of 5 and 10 centavos, with the weight of 2 grams 50 centigrams and 5 grams, respectively, and the fineness of 0.750 of copper to 0.250 of nickel.

ART. 6. The design of these pieces shall bear on the obverse the national shield with the inscription "Republica de Bolivia" and on the reverse the value of the coin in letters and numbers and the year of issue.

The 5-centavo pieces shall have a diameter of 20 millimeters and those of 10 centavos 25 millimeters.

ART. 7. The national mint shall commence to issue the silver coins conformable to the above-established conditions, suspending the coinage of the old designs.

ART. 8. The governor is to commission to Europe the coinage of the nickel coin necessary for the small transactions, within the limits authorized by the law of December 31 last.

The honorable minister of finance and industry remains in charge of the execution and discharge of the present decree.

Given in the palace of the governor of La Paz, January 9, 1909.

ISMAEL MONTES.
ANGEL DIEZ DE MEDINA,
Minister of Finance and Industry.

Is complied with.

CASTRO ROJAS,
Chief Official of the Treasury.

NICKEL COIN.

The minister has requested by cable to Paris the issue of 1,000,000 bolivianos in nickel coins, conformable to the law of the gold standard.

The cost of the coinage of this coin in the two last issues was the following for every 100 kilograms:

Denomination.	Issue of 1907.	Issue of 1908.
	Francs.	*Francs.*
10-centavo pieces	516.05	476.05
5-centavo pieces	576.05	536.05

EXPORTATION FIRST THREE MONTHS OF 1907–8.

Classification.	1907.	1908.
	Kilograms.	*Kilograms.*
Silver	532,976	1,173,676
Gold	.....	22.07

MAKING THE EXPORTATION OF GOLD FREE.

Ismael Montes, President of the Republic.

Inasmuch as the National Congress has sanctioned the following law, the National Congress decrees:

ARTICLE 1. The President is authorized to charge a duty on the exportation of gold coin varying between 3 per cent and 20 per cent.

ART. 2. He is likewise authorized to temporarily suspend such duty when the necessities of the market require it.

To be communicated to the President for constitutional purposes.

Hall of Sessions of the National Congress, La Paz, December 9, 1908.

MACARIO PINILLA.
ADOLFO ORTEGA.
AD. TRIGO ACHÁ,
Senate Secretary.
ZENON C. ORIAS,
Deputy Secretary.
GABINO PEREIRA,
Deputy Secretary.

Therefore it is published and approved as a law of the Republic.

Palace of the supreme governor in La Paz, December 15, 1908.

ISMAEL MONTES.
A. DIEZ DE MEDINA,
Minister of Finance and Industry.

Is conformed to.

CASTRO ROJAS,
Chief Official of the Treasury.

Ismael Montes, President of the Republic.

In consideration, that the President is authorized by the law of December 15, either to impose a charge or to declare free the exportation of gold coin, according to

the necessities of the market; that the contraction of a loan and the establishment of a new monetary standard imposes the adoption of liberating measures to maintain the establishment of exchange upon London, decrees:

ARTICLE 1. After January 1, 1909, and upon a new ordering, the exportation of gold coin is declared free.

ART. 2. The exporters shall show in the customs returns the amount of gold coin which is taken out of the country, purely for statistical purposes.

The honorable minister of finance is charged with the execution of this decree.

Given in the palace of the governor, of La Paz, December 31, 1908.

SUSPENSION OF THE ADDITIONAL CUSTOMS DUTY.

Ismael Montes, President of the Republic.

In consideration, that the law of December 31, last, which gave unlimited cancellatory value to the pound sterling, converting the silver into auxiliary coin, has left article 2 of the law of November 30, 1904, referring to the payment of 50 per cent of the customs duties in gold, with the additional charge of 5 per cent in case of making said payment in other specie, without any object, decrees:

SOLE ARTICLE. The additional charge of 5 per cent over the customs duties remains without effect, leaving those paid in gold in the proportion fixed by the law of December 31, 1908, at the rate of 12.50 bolivianos per pound sterling, or Peruvian pound.

The honorable minister of finance and industry is charged with the execution and fulfilling of this decree.

Given in the palace of the governor, in La Paz, January 5, 1908.

FRACTIONAL NOTES.

Ismael Montes, President of the Republic.

In consideration that article 3 of the law of November 21, 1893, modifying that of October 22, 1892, prescribed in a general way that to each fractional bank note there must be a 5-centavo stamp attached; that the decree of January 17, 1902, which restricted the previously cited arrangement, reducing the imposition of attaching stamps to the new malicious fractional notes only, were submissive to transitory necessities which do not now exist; that it is necessary to avoid the circulation of notes in bad condition, which serve to represent in greater part, once divided, a value inferior to the smallest type of issue authorized to the banks, with that which is prejudicial to the circulation of the lawful coin issued by the state, decrees:

ARTICLE 1. In execution of the law of October 22, 1892, modified by that of November 21, 1893, the term of thirty days after the publication of this decree was assigned for the retirement of the fractional notes in circulation.

ART. 2. At the expiration of the time above cited they would have to attach a 5-centavo stamp to each fraction of a note without any distinction whatsoever.

The honorable minister of the state in the office of the treasury and industry is charged with the execution and fulfilling of this decree.

Given in the palace of the governor, in La Paz, December 22, 1908.

ISMAEL MONTES.
ANGEL DIEZ DE MEDINA,
Minister of Finance and Industry.

Adoption of the Gold Standard.

[From Bulletin of the International Bureau of the American Republics, March, 1909.]

The Republic of Bolivia has adopted the gold standard, in accordance with an act of Congress, promulgated by President Ismael Montes on December 31, 1908. English and Peruvian pounds, valued at 12.50 bolivianos each, and half pounds, valued at 6.25 bolivianos each, will circulate in Bolivia and are unlimited legal tender in transactions of all kinds.

The President of the Republic will have coined and issued, as the needs of the nation may require, silver coin to the value of 4,000,000 bolivianos and nickel coin to that of 1,000,000 bolivianos. The silver coin will be in denominations of 50 and 20 cent pieces, the former weighing 10 grams and the latter 4 grams, both ten-twelfths fine, with a variation of 3 milligrams in weight and three-thousandths in fineness. The nickel coins are to be of the denominations of 5 and 10 cent pieces, of a weight of 2 and 5 grams, respectively, made of an alloy of three-fourths copper and one-fourth nickel. Both the silver and nickel denominations are subsidiary coins, the first being a legal tender up to 12.50 bolivianos and the second up to 1 boliviano.

The Government will exchange English pounds for this subsidiary coin at the rate provided for in the law of November 30, 1904, and the silver coin now in circulation will be taken in exchange at the same rate.

Redemption of mutilated bank notes.

An executive decree of the President of Bolivia issued under date of December 22, 1908, provides that the bank notes torn in halves, now in circulation, shall be redeemed within a period of thirty days from that date in order to avoid the affixing of a 5-cent stamp on each half of the bank notes that continue to circulate. Formerly, owing to the lack of small change in some localities of the Republic, a custom grew up of dividing bank notes into two parts, and especially was this true of bank notes of the denomination of 1 boliviano. These half bank notes tended to take the place of subsidiary coin. In order to remedy this difficulty and to prevent the circulation of parts of bank notes or bank notes in bad condition, the Government decided to require that a stamp be affixed to all bank notes in circulation divided into halves after the date referred to. To facilitate the withdrawal of these mutilated bank notes from circulation the Government has supplied a nickel coinage sufficient to meet the demands for small denominations of money required for use in retail transactions.

Finance and Commerce of Bolivia in 1908.

[From Bulletin of the International Union of the American Republics, July, 1909.]

* * * * * * *

Bolivia has in effect adopted the pound sterling as the monetary basis, the boliviano being valued at 19½d. Since the year 1905 the pound sterling has been current at this rate, now fixed by law. Monetary reform made further progress in 1908 through another act of Congress which declared silver currency simply an adjunct of gold, reserved to the Government the right to coin silver for circulation to the extent of 4,000,000 bolivianos. The Government secured a loan of $2,500,000, the proceeds of which were used in the payment of the internal debt, the installation of machinery in the mint, and the erection of public buildings. A special sinking fund, amounting to

603,300 bolivianos annually, was created to meet the interest and amortization of the bonds. Under decree of the Government the exportation of gold coins free of duty was permitted and a further decree fixed the proportion of customs duties payable in gold, assessing the value of the Peruvian pound when tendered in settlement of these duties at 12.50 bolivianos.

On December 31, 1908, the five principal banks of Bolivia had silver coin on hand to the value of $516,600.

BRAZIL.

AMERICAN EMBASSY,
Petropolis, June 1, 1909.

Answers to interrogatories, 1908.

1. Gold coined during 1908:

Denomination.	Number of pieces.	Weight.	Value.
		Grams.	*Reis.*
20 milreis	6,001	107,628	120,020,000
10 milreis	689	6,170	6,890,000
Total	6,690	113,807	126,910,000

There was no recoinage.

2. Silver coined during 1908:

Denomination.	Number of pieces.	Weight.	Value.
		Grams.	*Reis.*
2 milreis	1,707,000	34,144.625	3,414,000,000
1 milreis	1,624,000	16,247.505	1,624,000,000
500 reis	498,000	2,489.810	249,000,000
Total	3,829,000	52,881.940	5,287,000,000

No silver recoined. No coinage executed at foreign mints.

3. There was no coinage executed in Brazil for foreign governments.

4 and 5. Amount of gold and silver, new and old, used in industrial arts during 1908: No statistics.

6 and 7. Imports and exports of gold and silver during 1908:

Description.	Imports.	Exports.
Gold:	*Paper milreis.*	*Paper milreis.*
Leaf for gilding and dentistry	55,939	
Bullion		7,213,809
Old gold		13,777
Total	55,939	7,227,586
Silver:		
Bullion	2,368,972	
Leaf for dentistry	590	
Old silver		2,720
Total	2,369,562	2,720

NOTE.—Manufactured articles of gold and silver exported, 74,000 milreis, paper.

Official statistics do not give separately from paper currency the amount of specie, gold and silver, imported into Brazil.

8 and 9. Importation of United States currency is given without specifying the character of same. There were no coins of the United States recoined by or deposited in the Brazilian mint.

10 and 11. About 4,157,367 grams of gold were produced by the mines of the country. Silver, nothing.

12 and 13. No refineries in Brazil.

14 and 15. Approximate stock of gold and silver, coin and bullion, in the country at the close of the calendar year 1908: No statistics.

16 and 17. Government notes outstanding at the end of 1908:

(*a*) Notes of the caixa de conversao (conversion office) outstanding, December 31, 1908, amounted to Rs. 89,386,850. Each of these notes is covered by an equivalent amount of gold deposited in the caixa at the rate of 16,000 reis for £1, and is redeemable upon presentation.

(*b*) Notes of the caixa de amortizacao (amortization office) in circulation on December 31, 1908, amounted to 638,564,427 reis, there having been a decrease, therefore, during the year of 104,881,575 reis. This is inconvertible money, but on the 1st of May, 1909, it was declared in the President's message that the fund for the redemption of the paper money amounted to 5,861,348.834 reis.

18 and 19. There are no bank notes outstanding.

20. The actual currency of the country was paper money of the convertible and nonconvertible types above mentioned. Silver was used to a somewhat greater extent than during the previous year. As already stated, the convertible money is redeemable at sight in gold, but is not to be found in very general circluation.

21. Premium on gold: The fixed legal value placed upon the gold milreis is 27d., and as the caixa de conversao has determined that 16 paper milreis will be given for every pound sterling, the paper milreis is valued at 15d. The convertible and inconvertible milreis notes circulate on a basis of equality of values. The gold premium over paper is therefore represented by the difference and is given officially as 1.793.

The President's message referred to the exchange on ninety days sight drafts, during 1908, in the following terms:

"During the past year, as during a larger period of the preceding year, the absolute fixity of the rates of exchange was maintained—15 3/16d. in the Banco do Brazil and 15 1/8d. in the foreign banks—giving as a resultant average 15 5/32, registered by the board of trade."

The following table of official origin, may be of interest as showing the advance Brazil has made during the past ten years in attaining complete stability of currency values through the fixity of exchange upon ninety days sight drafts upon London:

1898	5 1/8 to 8 1/8
1899	6 1/8 to 8 1/8
1900	6 3/8 to 14 1/8
1901	9 7/8 to 13 1/8
1902	11 1/8 to 12 1/8
1903	11 1/8 to 12 1/32
1904	11 1/16 to 13 7/32
1905	13 1/32 to 15 1/8
1906	14 1/8 to 17 1/8
1907	15 7/8 to 15 15/16
1908	15 1/8 to 15 7/32

22. Laws passed during 1908 affecting the currency: According to article 2, XV of law No. 2035, of December 29, 1908, the silver coins of the old dies are to be withdrawn from circulation.

23. The mint issues no reports.

[Translation.]

DIRECTORY OF THE MINT OF BRAZIL,
Rio de Janeiro, August 29, 1909.

I send your excellency herewith a copy of articles 30 and 31 of the law No. 1453, of December 30, 1905, establishing the value, weight, fineness, and diameter of the new silver coins of 2,000 reis, 1,000 reis, and 500 reis. (SANDAÇÕES).

Signed by the director of the mint of Brazil.

The Hon. DIRECTOR OF THE MINT, *Washington.*

[Translation.]

LAW NO. 1453, OF DECEMBER 30, 1905.

ART. 30. The silver coins now coined in this country are of the following value, weight, fineness, and diameter:

Denomination.	Weight.	Fineness.	Diameter.
	Grammes.	*Thousandths.*	*Millimeters.*
2,000 reis	20.000	900	33
1,000 reis	10.000	900	28
500 reis	5.000	900	22

SEC. 1. A tolerance of more or less in the weight of these coins is, for the 2,000 reis 1 decigram, for the 1,000 reis 5 centigrams, and for the 500 reis 25 milligrams; the variation in the fineness, 2-thousandths.

SEC. 2. The coins designated in section 1 bear on the obverse the arms of the Republic surmounted by a Phrygian cap, the year of coinage encircled by the inscription "Republic dos Estados Unidos do Brazil;" and on the reverse, the weight of each coin in Roman figures, their respective values and the inscription "Ordem e Progreso."

SEC. 3. The amount of silver coins to be received or paid out at the public cash offices, or accepted in transactions between individuals shall be 20,000 reis (20 milreis), except where especially requested (decree No. 625 of July 28, 1840, article 2), in coins of 2,000, 1,000, and 500 reis.

SEC. 4. Coins of the fineness of 0.917 are to be demonetized and recoined, in accordance with the dispensations of article 6, section 1.

The regulations as to the coinage of the silver coins shall be according to article 4 of law No. 1083 of August 22, 1860, indicating the amount of seigniorage to the government, conforming to the rate of exchange and the price of silver.

ART. 31. The Government is authorized to proceed with the coinage of silver from the amount on hand in the mint and can use the product of this coinage through the medium of credit operations to acquire more silver to continue the coinage, or substitute for silver coin the Treasury notes of 2,000, 1,000, and 500 reis.

(Signed by the director of the mint of Brazil.)

BRITISH GUIANA.

AMERICAN CONSULAR SERVICE,
Georgetown, March 5, 1909.

Answers to interrogatories, 1908.

1 and 2. No gold or silver was coined or recoined during the year, and no record of coins melted.

3. No coinage executed for other governments.

4 and 5. There is no record kept of the weight of fine gold and fine silver used in the industrial arts; the amount, however, is supposed to be very small.

6. Imports of gold coin aggregated $4,800, and were from the United Kingdom. Imports of bullion (raw gold) were 581 ounces, valued at $10,192, from French Guiana, and were reexported. There were no imports of gold ore.

No gold coin was exported. The export of bullion (raw gold) was 73,085 ounces, valued at $1,289,946, and was made to the United Kingdom. There were no exports of gold ore.

7. Imports of silver coin were as follows:

United Kingdom	$207,600
United States	9,259
Total	216,859

Imports of silver bullion:

Countries.	Amount.	Value.
	Ounces.	
United Kingdom	6,642	$4,631
United States	4,516	2,493
Total	11,158	7,124

No silver ore was imported.

The exports of silver coin were $187,200, and were made to the United Kingdom. No silver ore was exported.

8. There were no imports of gold coin from the United States.

9. United States gold coin deposited at mint and melted: None.

10 and 11. Gold produced from mines of the country was 73,639 ounces, equal to 2,290 kilograms, valued at $1,251,863 (average fineness, 920 to 930). No silver was produced.

12 and 13. There are no refineries in British Guiana.

14. Approximate stock of gold coin in the country at the close of the calendar year 1908: About $10,000 in gold coin and Bank of England notes was the amount in hand at end of 1908 in the two local banks. None in the treasury, and probably less than $2,000 in circulation.

15. Approximate stock of silver coin in the country at the close of the calendar year 1908: About $400,000 in silver in local banks. None in the treasury, and amount in circulation unknown.

16 and 17. The government does not issue notes.

18 and 19. Bank notes outstanding at the end of 1908 were $619,548. The note issue of the banks is covered to the extent of 25 per cent by means of securities lodged with the government.

20. Actual currency of the country: Silver and paper.

21. Gold is at a premium of 2 per cent. Very little is used.

22. No laws were passed during 1908 affecting the coinage, issue, or legal tender character of the metallic or paper currency.

23. There is no mint in British Guiana. A copy of the report of the department of lands and mines for the year 1907–8 will be forwarded when issued.

Order in Council Approving Proclamation Directing that the Doubloon shall Cease to be Legal Tender in the West India Colonies and British Guiana.

[From thirty-ninth annual report of the deputy master and comptroller of the mint, London, 1908.]

At the court at Buckingham Palace, the 4th day of June, 1908.

Present: The King's Most Excellent Majesty in council.

The following draft proclamation was this day read at the board and approved:

A. W. FitzRoy.

BY THE KING.

A proclamation, directing that the doubloon shall cease to be legal tender in the West India colonies.

Whereas by virtue of a proclamation of Her Late Majesty Queen Victoria, dated the 3d day of February, 1898, certain parts of the coinage act, 1870, as amended by section two of the coinage act, 1891, were applied with the modifications specified in the proclamation to our West India colonies (including our colony of British Guiana):

And whereas it is provided by the said proclamation that any coins coined in a foreign country, which, at the date of the promulgation of the said proclamation, were by law current and a legal tender in any colony or possession to which the said proclamation extended should, until by proclamation otherwise directed, continue to be so current and a legal tender at the same rate and up to the same amount as heretofore;

And whereas under the provisions so applied we may by proclamation regulate any matters relative to the coinage and the mint within the present prerogative of the Crown which are not provided for by the coinage act, 1870, and may revoke or alter any proclamation previously made;

And whereas by virtue of a proclamation of Her Late Majesty Queen Victoria, dated the 14th day of September, 1838, it was provided that throughout the whole of our West India colonies (including our colony of British Guiana) the doubloon should circulate and be received in payment as being of the full value of 64 shillings sterling, current money of the United Kingdom;

And whereas the doubloon has ceased to be legal tender in certain of our West India colonies, namely, in our colony of Bermuda by virtue of an act of that colony entitled the legal tender act, 1882, in the island of Jamaica by virtue of our proclamation dated the 30th day of January, 1901, and in our colony of Trinidad and Tobago by virtue of our proclamation dated the 1st day of June, 1907;

And whereas it is expedient that the doubloon should no longer be legal tender in any of our West India colonies;

Now, therefore, we do hereby in pursuance of the said recited provisions and of all other powers enabling us in this behalf by and with the advice of our privy council, proclaim, direct, and ordain that the doubloon shall, as from the 1st day of August, 1908, cease to be current or legal tender in any of our West India colonies (including our colony of British Guiana) in which immediately before that date it is so current or legal tender.

Given at our court at Buckingham Palace, this 4th day of June, in the year of our Lord, 1908, and in the 8th year of our reign.

God save the King.

The Straits Settlements (Coinage) Order, 1908.

[From thirty-ninth annual report of the deputy master and comptroller of the mint, London, 1908.]

At the court at Goodwood House, the 1st day of August, 1908.

Present: The King's Most Excellent Majesty in council.

Whereas under the Straits Settlements act, 1866, and other powers enabling him in that behalf, His Majesty has power to make laws for the peace, order, and good government of the colony of the Straits Settlements (in this order referred to as the colony);

And whereas Straits Settlements dollars issued on or before the 4th day of March, 1907, are of the weight and fineness specified in the schedule to the Straits Settlements (coinage) order, 1903 (in this order referred to as the order of 1903), subject to the remedy therein specified, and Straits Settlements dollars issued after that date are of the weight and fineness specified in the first schedule to the Straits Settlements (coinage) order 1907 (in this order referred to as the order of 1907), subject to the remedy therein specified;

And whereas Straits Settlements 50-cent pieces, or half dollars, issued on or before the said date are of the weight and fineness specified in the third schedule to the Straits Settlements coinage order, 1895 (in this order referred to as the order of 1895), subject to the remedy specified in article 3 of that order, and Straits Settlements 50-cent pieces, or half dollars, issued after the said date are of the weight and fineness specified in the second schedule to the order of 1907, subject to the remedy therein specified;

And whereas Straits Settlements dollars and Straits Settlements 50-cent pieces, or half dollars, whether issued before or after the said date, are, by virtue of the above-mentioned orders and of the Straits Settlements (coinage) order 1906 (in this order referred to as the order of 1906), legal tender in the colony, and it is expedient that such dollars and 50-cent pieces, or half dollars, issued on or before the said date should no longer be legal tender in the colony;

Now, therefore, His Majesty, by virtue of all powers vested in him in that behalf, is pleased, by and with the advice of his privy council, to order, and it is hereby ordered, as follows:

1. The Straits Settlements dollars and Straits Settlements 50-cent cent pieces, or half dollars, issued on or before the 4th day of March, 1907, shall as from the 1st day of January, 1909, cease to be current or legal tender in the colony.

2. This order shall be read as one with the order of 1895, the order of 1903, the order of 1906, and the order of 1907, and may be cited as the Straits Settlements (coinage) order, 1908.

And the lords commissioners of His Majesty's treasury and the Right Honorable the Earl of Crewe, K. G., one of His Majesty's principal secretaries of state, are to give the requisite directions therein accordingly.

A. W. FitzRoy.

The Nigeria Coinage Order, 1908.

[From thirty-ninth annual report of the deputy master and comptroller of the mint, London, 1908.]

At the court at Buckingham Palace, the 19th day of October, 1908.

Present: The King's Most Excellent Majesty in council.

Whereas His Majesty, by and with the advice of His privy council, by order dated the 28th day of July, 1906 (in this order referred to as the order of 1906), made provision

respecting the currency of coins in His Majesty's colony of southern Nigeria, and in His Majesty's protectorates of northern Nigeria and southern Nigeria, and by order dated the 9th day of September, 1907 (in this order referred to as the order of 1907), made certain amendments in the order of 1906;

And whereas it appears to His Majesty to be desirable further to amend the order of 1906:

Now, therefore, His Majesty, in pursuance, so far as relates to the said colony, of the powers reserved to him by the letters patent referred to in the principal order, and in pursuance, so far as relates to the said protectorates, of the powers vested in him by the foreign jurisdiction act, 1890, and in either case, in pursuance of any powers otherwise vested in him, is pleased, by and with the advise of His privy council, to order, and it is hereby ordered, as follows:

1. The standard weight of the subsidiary coins of one-tenth of a penny to be coined in pursuance of the order of 1906 shall, instead of being the weight specified in the first schedule of that order, be 30 grains, or 1.944 grams, and the order of 1906 shall have effect as though that weight were specified in that schedule as the standard weight of the coin of one-tenth of a penny.

2. (1) This order may be cited as the Nigeria coinage order, 1908; (2) this order shall be read as part of the order of 1906, as amended by the order of 1907, and shall come into operation on the 19th day of October, 1908.

And the lords commissioners of His Majesty's treasury and the Right Honourable the Earl of Crewe, K. G., one of His Majesty's principal secretaries of state, are to give the requisite directions herein accordingly.

A. W. FITZROY.

LOCAL PROCLAMATIONS ISSUED UNDER THE EAST AFRICA AND UGANDA ORDER IN COUNCIL, 1905.

[From thirty-ninth annual report of the deputy master and comptroller of the mint, London, 1908.]

1. EAST AFRICA PROTECTORATE.

Proclamation.

In pursuance of the powers conferred upon me by the East Africa and Uganda (currency) order in council, 1905, I, James Hayes Sadler, governor of the East Africa protectorate, do hereby, with the approval of the treasury and His Majesty's secretary of state for the colonies, by this my proclamation direct that the schedule hereto shall on and after the 15th day of April, 1909, be added to the third schedule to the aforesaid order in council.

J. HAYES SADLER,
Governor.

NAIROBI, *April 8, 1909.*

SCHEDULE.

Subsidiary coins of East Africa.

Portion of rupee for which tender.	Coin.	Standard weight.		Remedy allowance.
		Grains.	Grams.	
	Nickel-bronze or other metal or mixed metal:			
0.05	Five-cent piece	100.0	6.480	A weight not exceeding the weight of one piece in every 40 pieces.
.01	One-cent piece	45.0	2.916	
.005	Half-cent piece	30.0	1.944	

J. HAYES SADLER,
Governor.

NAIROBI.
Dated this 8th day of April, 1909.

2. Uganda Protectorate.

Proclamation.

In pursuance of the powers conferred upon me by the East Africa and Uganda (currency), order in council, 1905, I, Henry Hesketh Bell, governor of the Uganda protectorate, do hereby with the approval of the treasury and His Majesty's secretary of state for the colonies, by this my proclamation direct that the schedule hereto shall on and after the 15th day of April, 1909, be added to the third schedule to the aforesaid order in council.

H. Hesketh Bell,
Governor.

Entebbe.
Dated this 7th day of April, 1909.

Schedule.

Subsidiary coins of the Uganda protectorate.

Portion of rupee for which tender.	Coin.	Standard weight.		Remedy allowance.
		Grains.	Grams.	
	Nickel-bronze or other metal or mixed metal:			
0.05	Five-cent piece	100.0	6.480	A weight not exceeding the weight of one piece in every 40 pieces.
.01	One-cent piece	45.0	2.916	
.005	Half-cent piece	30.0	1.944	

Entebbe.

H. Hesketh Bell,
Governor.

Dated this 7th day of April, 1909.

CHILE.

[From the Statist, London, June 5, 1909.]

According to the telegrams, there appears to be an agitation springing up in Chile against the resumption of specie payments, which the President in his recent message once more declared he would carry out. It will be in the recollection of our readers that there is a law on the Chilean statute book requiring resumption to be carried out at the rate of 1s. 6d. of our money to the dollar, and that the Chilean Government has been accumulating gold for the purpose of carrying the law into effect. The present President while a candidate pledged himself, amongst other things, to resumption, and since he came into office he has frequently repeated the pledges made while he was a candidate. There seems to be little doubt that resumption might have been effected if the Chilean people had been really in favor of it, but during the wild speculative fever which raged in Chile for some years before the crash of 1907 so strong a demand sprang up for further currency that the Government felt itself compelled to give way and there was more than one issue of inconvertible paper. Partly owing to overissues of paper, partly to the breakdown of the wild speculation in 1907 and the great depression that has ruled ever since, and partly to the failure to renew the nitrate combination the paper money has greatly depreciated. It has recovered somewhat from the worst, but even yet the paper dollar is only worth about 10½d. of our money. As the par of exchange is 1s. 6d., it will be seen that the paper money has depreciated 41.7 per cent. That being so, it is not surprising that there should be strong opposition to an attempt to resume at 1s. 6d. to the dollar. Of course it could be done if a large proportion of the outstanding paper money were called in and canceled. That would gradually contract the circulation and would lower prices. The fear that prices would be greatly reduced naturally excites strong opposition. Therefore we are by no means surprised to hear that the prospect of resuming at 1s. 6d. to the dollar is exceedingly slight.

We are told at the same time that probably the majority of the Chilean people would consent to resumption at about 1s.; in other words, while the legal par is 1s. 6d., resumption at 1s. would be only two-thirds of the legal par. In favor of this proposal

it is to be borne in mind that even now the exchange is only about 10½d., which is considerably under 1s. Whether anything will be done under these circumstances remains to be seen. There is a large amount of gold accumulated and resumption at 1s. no doubt could be carried out, but whether the people will consent to that remains to be seen. Resumption would be ineffectual unless some safeguards were set up against further issues of paper and sufficient gold were held in reserve to cash all paper offered at all times. Meanwhile the landed classes, whether agricultural or pastoral, are quite satisfied with the existing state of things. They have been doing well even during the depression, for their crops have been good, their flocks and herds have prospered, and they have sold at profitable prices. On the other hand, their lands, speaking generally, are mortgaged, and they are able to pay off the mortgages in depreciated paper. At the present moment, for example, a man can pay off a mortgage in paper nominally worth 1s. 6d., but really worth only 10½d. Consequently the landed classes are opposed to change. On the other hand, those engaged in the nitrate industry would probably welcome some arrangement that would promise a permanent fixture of the value of the dollar. They are suffering at the present time not only because of the fluctuations in exchange, but because also of the breakdown of the negotiations for continuing the combination in nitrate. The best opinion is that circumstances will compel the various companies to renew the combination; but for the present the companies seem not inclined to arrange their differences, and as a result the industry is disorganized.

Currency of Chile.

[From the Rand-McNally Bankers' Monthly, December, 1909.]

In transmitting the following translation of a law just published concerning the conversion of the paper currency of Chile into gold or its equivalent, making the paper peso worth 36.5 cents instead of 20 cents, its present value, Consul Alfred A. Winslow, of Valparaiso, reports that it is yet too soon to judge the effect of the law on general business:

Whereas the National Congress has given its approval to the following project of law:

"Article 1 postpones the time for the conversion of the paper money from December 29, 1904, to January 1, 1915; but should the Chile peso reach the value of 17d. (34 cents) and maintain this rate for a period of six months the President will have the right to order the conversion to take effect within six months therefrom. The other dates fixed by the same law are hereby postponed for a term of five years.

"The fund for the conversion, which, by virtue of the law in force, is devoted solely to the redemption of the fiscal paper, shall go on increasing. Said receipts shall come from the following sources: Five hundred thousand pesos of 18d., which the secretary of the treasury shall deposit monthly at the mint, taken from the customs receipts and beginning January 10, 1910. The President may deposit these funds in Europe or in the United States, according to the conditions of the law of December 29, 1904. The fund shall be further augmented from the receipts of the sale of saltpeter lands and the sale of lands in the region of the Magellan Straits, which shall take place according to the law, before January 1, 1915.

"During the first semester (six months) of 1914, or before, of the conversion of the fiscal paper is decreed as per this law the President of the Republic must transmit to Chile the funds destined for the conversion.

"Article 15 of the law of August 27, 1907, authorizing negotiations for a loan to the amount of £4,500,000 (about $22,500,000), destined to complete the conversion fund, is hereby set aside."

COLOMBIA.

Banks, Banking, and Financial Conditions in the Republic of Colombia.

[From Bulletin of the International Bureau of the American Republics, August, 1909.]

Consul-General Jay White, of Bogota, furnishes the following information concerning the monetary conditions in Colombia and the means taken to increase American trade there:

Paper money, first issued in 1881, has displaced gold and silver in Colombia, except small quantities of the latter, which are in circulation in certain districts remote from the capital. Although reliable data have not been obtained, it may be concluded that the present outstanding issue of paper money is over 700,000,000 pesos, equal to

$7,000,000 gold; but some authorities place the amount as high as 1,000,000,000 pesos, equal to $10,000,000 gold.

The government mint, from August, 1906, to June 30, 1908, coined silver to the amount of $1,017,580, all in 30-cent pieces, 0.835 fine. Some nickel coins in 1, 2, and 5 cent pieces have also been put into circulation during the past two years. There is some old silver coins in circulation, but the bankers do not consider the quantity large, and say that it is impossible to give even an estimate of the amount.

No gold has been coined in Colombia in recent years, and yet the territory now comprising the Republic has coined during the last century over $100,000,000 gold and more than $10,000,000 silver. Some foreign gold is held by Colombian banks, and a limited amount thereof is in circulation, as well as foreign silver and bills.

CURRENCY AND ITS FLUCTUATIONS.

Many business men consider the existing currency insufficient for the needs of the country. Owing to the lack of means of rapid communication and the fact that the credit system is not well developed, a considerable quantity of the currency of the country is constantly being carried from one point to another by messengers on muleback, and these sums are not available for the ordinary purposes of local trade.

Exchange has steadily advanced from par—that is, 1 peso equal to 96.50 cents gold, in 1874, to 189 pesos equal to $1 gold, in October, 1902. Since January, 1907, exchange has varied from 9,850 to 12,900 paper pesos equal to $100 gold, but the greater portion of the time it has remained slightly above the present legal equivalent, 102 pesos equal to $1 gold.

DUTCH GUIANA.

AMERICAN CONSULAR SERVICE,
Surinam, March 27, 1909.

Answers to interrogatories, 1908.

1, 2, and 3. Amount of gold and silver coined: Not applicable to this office.

4 and 5. Weight of fine gold and fine silver used in industrial arts during 1908: No statistics are kept.

6. Imports and exports of gold during calendar year 1908:

Classification and country.	Imports.		Exports.	
	Weight.	Value.	Weight.	Value.
Coin	*Grams.*	$200.00	*Grams.*	$1,920.00
Raw gold				
To Netherlands	205,549.8	115,108.00		
To England			1,175,231	644,026.40
To France			96,663.5	52,971.60
To United States			144,582	79,230.80
			14,083.5	7,718.00
Total	205,549.8	115,108.00	1,430,560	783,946.80

NOTE.—Out of the quantity (exports gold) is included 208,647 grams imported from French Guiana to British Guiana, 208,321 grams imported from French Guiana to Netherlands, and 326 grams imported from French Guiana to France.

7. Imports and exports of silver during calendar year 1908:

Classification.	Imports.	Exports.
Coin	$2,400.40	$67,033.00
Raw silver	132.59	

8 and 9. Total imports of United States gold during the year 1908 was $4,820. No other statistics are kept. There is no mint here.

10 and 11. The gold produced from the mines of the colony during the year 1908 weighed 1,209,781.3 kilograms, having a value of $662,960.15. No silver is produced in this colony.

12 and 13. There are no refineries in this colony.

14 and 15. Approximate stock of gold and silver coin and bullion in the colony at the close of the calendar year 1908: There is no public treasury here; such government funds as are not in the Surinam Bank being held by the colonial paymaster (Betaalmeester) and from whom no statistics are obtainable. The Surinam Bank is the actual repository for the colonial government. The stock of gold and silver in the Surinam Bank at the close of the year was as follows:

Gold coin	$68,637.80
Silver coin	187,202.82
Bullion	None.

16, 17, 18, and 19. The government of this colony does not issue notes. The amount of bank notes outstanding at the end of the year 1908 was $436,950 (issued by the Surinam Bank). The amount of bank notes outstanding at the end of the year 1908 not covered by legal tender gold and silver coin or bullion was $275,888.

20. The currency of this colony is the silver coins of the Netherlands mint and the paper notes issued by the Surinam Bank. The latter are redeemable in specie on demand.

21. Premium on gold: The Surinam Bank pays for American gold 2½ guilders for each dollar, and for British gold 12 guilders ($4.80) per English pound sterling.

22. No laws were passed during 1908, affecting coinage, etc.

23. There is no mint here, nor is there a report of the department of mines issued.

PARAMARIBO, *March 23, 1908.*

ECUADOR.

AMERICAN CONSULAR SERVICE,
Guayaquil, May 1, 1909.

Answers to interrogatories, 1908.

1, 2, and 3. Ecuador has no mint, consequently no gold or silver was coined, and no coinage could be executed for other governments. No coinage was executed at foreign mints.

4. The weight of fine gold used in the industrial arts was estimated to be 500 ounces, of which 200 ounces was old gold and 300 ounces was coin.

5. The weight of silver used in the industrial arts was estimated to be 4,000 ounces, which was all coin.

6 and 7. Import and export of gold and silver during the calendar year 1908:

Classification and country.	Imports.		Exports.	
	Weight.	Value.	Weight.	Value.
	Kilograms.		*Kilograms.*	
Gold coin:				
United States	83.500	$50,000		$1,100,000
Great Britain	990.154	625,000		300,000
France				250
Peru	399.300	256,150		
Total	1,478.954	931,150		1,400,250
Gold bullion:				
United States			386.558	176,724
Gold ore (cyanide precipitates):				
United States				121,273
United States "sweeps"				43,475
Gold dust:				
United States				11,276
Germany				1,400
France				8,255
Total				185,679
Silver coin:				
France				23
Silver bullion:				
France				200
United States				150
Total				410

8 and 9. The total import of United States gold coin was 83.500 kilograms; value $50,000.

10 and 11. The weight of the gold bullion produced by the mines of the country was 386.558 kilograms, valued at:

Gold	$174,281
Silver	2,443
Total	176,724

The weight of the cyanide precipitates produced was 11.839 kilograms, valued at:

Gold	$113,665
Silver	7,608
Total	121,273

"Sweeps" from the Zaruma mines, 1.837 kilograms, valued at:

Gold	$41,475
Silver	2,000
Total	43,475

The value of the gold dust produced by the mines of the country was $20,931.

There are no silver mines in Ecuador that are being worked.

12 and 13. There are no refineries in Ecuador.

14. The stock of gold coin and bullion in the country at the close of 1908 was:

In public treasuries	None.
In banks, about	$1,765,000
In circulation	500,000
Total	2,265,000

15. The stock of silver coin and bullion in the country at the close of 1908 was:

In public treasuries	None.
In banks, about	$55,600
In circulation	200,000
Total	255,600

16 and 17.—No government notes are issued.

18 and 19. The amount of bank notes outstanding at the close of 1908 was estimated to be $3,725,000.

The amount of bank notes outstanding not covered by legal tender gold and silver coin and bullion at the close of 1908 was estimated to be $2,000,000.

20. The actual currency of the country was bank notes, convertible on presentation at the bank. But little gold was in circulation and most of the silver was fractional currency. Gold and silver are both hoarded by many of the inhabitants of the interior.

21. National gold is not at a premium.

22. No laws were passed during the year 1908 affecting the coinage, issue, or legal-tender character of the metallic or paper currency.

23. Ecuador has no mint, and consequently no report is published on the subject. There is no special department of mines.

PERU.

Answers to interrogatories, 1908.

1. Gold coined during the calendar year 1908:

In Peruvian pounds	35,897,000
In Peruvian half pounds	108,808,000
Total	144,705,000

The gold which entered the mint for coinage in 1908 amounted to 1,088.354 kilograms, in the following form:

	Kilograms.
Gold for coinage	837,088.300
Gold in various foreign coins	189,743.000
Gold in old metal	61,522.500

2. Silver coined during the calendar year 1908:

Denomination.	Number of pieces.	Value.
		Soles.
Soles		157,063.40
Half soles	30,111	15,056.00
Fifth soles	560,614	112,002.00
Tenth soles	200,024	20,002.40
Twentieth soles	200,044	10,002.20
Total	990,193	314,126.00

Also 72,673 soles of worn fractional coins have been converted into 25,346 half soles, value 12,673 soles.

The weight of silver bars which entered the mint for coinage in 1908 amounted to 393.001 kilograms.

3. No money coined for other Governments during the year 1908.

* * * * * * *

9. During 1908 there were 91,460.500 kilograms of American coins melted down for the coinage of Peruvian pounds.

* * * * * * *

20. The only money in circulation in 1908 has been gold, silver, and copper.

* * * * * * *

22. No laws affecting the currency have been passed in 1908.

23. No report on operations of the mint has been published during the year.

Finance and Commerce of Peru in 1908.

[From Bulletin of the International Union of the American Republics, July, 1909.]

* * * * * * *

The bank balances on June 30, 1908, showed total assets of 6,920,179 Peruvian pounds as compared with 6,161,597 Peruvian pounds a year previous. During the twelve months 356 bars of gold bullion, valued at 222,285 Peruvian pounds were received at the mint, and gold coins to the value of 214,004 Peruvian pounds issued. From November, 1906, to March 30, 1908, the Government purchased silver bullion valued at 114,157 Peruvian pounds and coined silver to the value of 104,050 Peruvian pounds. Coined gold was imported during 1907 to the amount of 580,013 Peruvian pounds, and stock companies represented a total investment of 2,081,284 Peruvian pounds.

* * * * * * *

URUGUAY.

Nickel Coinage Provided For.

[From Bulletin of the International Union of the American Republics, October, 1909.]

The "Diario Oficial" for July 23, 1909, publishes a law of the Uruguayan Republic providing for the coinage of $500,000 worth of nickel money.

The work is to be effected in a state (official) mint in the following proportions: $250,000 in 5-cent pieces (5,000,000 pieces); $200,000 in 2-cent pieces (10,000,000 pieces), and $50,000 in 1-cent pieces (5,000,000 pieces). Tenders for the work are to be invited.

VENEZUELA.

[Translation.]

United States of Venezuela,
Administration of Public Credit,
Section of Statistics and Public Lands,
Caracas, April 5, 1909.

To the Honorable Minister of Foreign Relations:

In reply to your courteous note of March 31 last passed, given to you in succession for you to communicate to the excellent sir envoy extraordinary and minister pleni-

potentiary of the United States of America, the statistical data pertaining to the interrogatory circular which accompanied your aforesaid note, I have to give notice that the questions which have not been answered refer to affairs which are not under the jurisdiction of the office in my charge, which has not yet been established in the statistical organization of our general administration.

GOLD AND SILVER EXPORTED TO GERMANY, UNITED STATES OF AMERICA, FRANCE, AND ENGLAND.

Classification.	Weight.	Value.
	Kilograms.	*Bolivars.*
Gold in bullion, earth, amalgamated and fused	494.219	1,081,936.85
Gold coin	65.500	192,912.00
Old and broken gold	26.030	30,184.00
Old and broken gold and silver	25.500	31,220.00
Silver bullion	14.460	3,600.00
Silver articles	7.500	650.00
Total	633.209	1,340,502.85

IMPORTATION DURING 1908.

Classification and origin.	Weight.	Value.
	Kilograms.	*Bolivars.*
Gold coin—		
From La Guaira	165.500	467,116
From Maracaibo	113.500	254,900
Total	279.000	722,016

On December 31, 1908, the Bank of Venezuela had in its coffers—

	Bolivars.
Gold coin	1,662,050.88
Silver coin	2,750,547.03
Notes in circulation	2,354,240.00
Notes on deposit in their coffers	95,760.00

On the same date the Bank of Caracas held—

	Bolivars.
Stock of gold	62,313.10
Stock of silver	1,026,738.25
Stock of notes	371,803.00
Notes in circulation	479,200.00

The monetary circulation of Caracas is estimated at 10,000,000 bolivars.

God and the Confederation.

(Signed) J. J. HERRERA TORO.

EUROPE.

AUSTRIA-HUNGARY.

AUSTRIA.

Answers to interrogatories, 1908.

1. In the calendar year 1908 gold coins were struck at the royal and imperial mint at Vienna, as follows:

Denomination.	Pieces.	Value.
		Kronen.
100-kronen pieces	14,718	1,471,800.00
20-kronen pieces	188,346	3,766,920.00
10-kronen pieces	654,022	6,540,220.00
Quadruple ducats	78,423	3,541,582.68
Ducats	394,441	4,453,238.89

For the above coinage were used besides gold bars, etc.: Gold coins of domestic coinage, 2,280.1637 crude kilograms, equivalent to 2,180.1148 kilograms fine; gold coins of foreign coinage, 665.5865 crude kilograms, equivalent to 604.2330 kilograms fine.

2. The coinage of silver at the royal and imperial mint at Vienna for the calendar year 1908 was as follows:

Denomination.	Pieces.	Value.	Kilograms, fine silver.
		Kronen.	
5-kronen pieces	8,089,700	25,448,500	
1-kronen pieces	4,784,992	4,784,992	
Levantine thalers	3,225,100		75,502.029

No value is given for the Levantine dollars, since as trade coins they possess no constant value.

For this silver coinage were employed, besides bar silver: Silver coins of domestic coinage, 139,564.367 crude kilograms, equivalent to 124,862.326 kilograms fine; silver coins of foreign coinage, 499.102 crude kilograms, equivalent to 355.589 kilograms fine.

3. The royal and imperial mint at Vienna in 1908 struck for the Government of Montenegro the following coins:

Denomination.	Pieces.	Weight.
		Kilograms.
Pure nickel:		
20-para pieces	400,000	1,399.276
10-para pieces	250,000	751.895
Bronze:		
2-para pieces	250,000	833.491

4 and 5. The domestic consumption of the precious metals in the industries can be inferred from the gold and silver submitted for stamping, which during 1908 was as follows:

(*a*) GOLD.

Classification.	Gross weight.	Fine weight	Fineness.
	Kilograms.	*Kilograms.*	*Thousandths.*
Domestic gold ware	7,267.171	4,226.151	581.54
Domestic plated ware (the gold is reckoned at 2.5 per cent of the total weight of 182.835 kilograms)		4.571	
Domestic fine gold used for fire-gilded pure 12-carat and 6-carat and for galvano-gilded wire		24.185	
Total		4,255.907	

In regard to other uses of fine gold in the industries in the year 1908 (especially in the galvanic gilding) there are no data at hand. In the last three years the consumption of gold was as follows: 1905, 687.549 kilograms of fine gold; 1906, 583.963 kilograms of fine gold; 1907, 552.998 kilograms of fine gold.

According to the average of the three years, as stated above, the consumption of gold in industries other than before specified would amount to 608.170 kilograms of fine gold in 1908.

(*b*) SILVER.

Classification.	Gross weight.	Fine weight.	Fineness.
	Kilograms.	*Kilograms.*	*Thousandths.*
Domestic silverware	60,146.680	47,937.806	797.015
Silver wire:			
(*a*) Pure		1,789.766	
(*b*) Half pure		18.823	
(*c*) Quarter pure		1.119	
Total		49,747.514	

In relation to the consumption of silver in the industries other than those above mentioned no data are yet at hand. In the last three years the consumption of silver in these industries has been as follows: 1905, 8,815.148 kilograms of fine silver; 1906, 10,688.920 kilograms of fine silver; 1907, 12,647.065 kilograms of fine silver.

According to the average consumption of these three years, that of 1908 should figure up to 10,717.044 kilograms of fine silver. Besides, the silver employed as alloy in gold wares, being on the average 10 per cent of the full weight, would amount to 726.717 kilograms of fine silver, as estimated.

According to past experience in the consumption of the precious metals in the industries, old material formed 27 per cent of the total in gold and 15 per cent in silver.

The results for 1908 may therefore be represented as follows:

Gold:	**Kilograms, fine.**
New material	3,550.557
Old material	1,313.220
The gold thus used consisted of—	**Per cent.**
Coins	63.0
Alloyed gold	23.0
Gold scrap	4.33
Fine gold	9.67
Silver:	**Kilograms fine.**
New material	52,012.584
Old material	9,178.691
The silver thus used consisted of—	**Per cent.**
Coins	0.99
Alloyed silver	13.08
Silver scrap	2.64
Fine silver	83.29

6. The imports and exports of gold into and from Austria-Hungary, by customs departments, for the year 1908 amounted to:

Classification.	Imports.		Exports.	
	Crude kilograms.	Crowns.	Crude kilograms.	Crowns.
Gold coins	12.830	34,786.018	21.486	59,388.645
Gold in crude bars and scrap	12.061	35,103.115	0.117	349.050
Gold ore and gold-bearing quartz			612.600	126.808
Total value		69,889.133		59,864.503

The above total weights are distributed according to the countries of origin and destination, as follows:

Classification and country.	Imports.	Exports.
GOLD.	*Crude kilograms.*	*Crude kilograms.*
Coins:		
German Empire	3,203	5,187
Switzerland	7	592
Italy	450	1,015
France	4,884	869
Great Britain	10	558
Russia	49	94
Roumania	1,004	556

Greece		
Total	96,780	8,670
Silver ore and silver-bearing quartz:		
German Empire		9,600

8. No gold coins were imported from the United States in the year 1908.

9. In the year 1908 the royal and imperial mint at Vienna received and melted 14,881 eagle coins of the United States, of the weight of 248.5086 crude kilograms, equivalent to 223.6529 kilograms fine.

10–13. The production of gold and silver from domestic mines was as follows:

How obtained.	Fine gold.		Fine silver.	
	Weight.	Value.	Weight.	Value.
	Kilograms.	*Crowns.*	*Kilograms.*	*Crowns.*
From washing	55.209	156,211		
From amalgamation	133.941	438,069	65.784	5,542
From leaching	12.416	39,602	6.997	591
From smelting	5.875	18,484	39,784.721	3,396,935
Total	207.501	[a] 652,366	39,857.502	[a] 3,403,068

[a] Besides, there was produced from gold and silver-bearing slimes and copper matte 8.0216 kilograms of fine gold of the value of 30,854 crowns and 3,341.15 kilograms of fine silver of the value of 296,628 crowns.

The gold and silver production of Hungary is not included in the above.

14. The stock of gold in the Bank of Austria-Hungary December 31, 1908, amounted to 1,182,372,278 crowns, 48 heller, in gold coins of the crown standard; and in gold bars, foreign gold coins, and gold trade coins, about 3,278 crowns.

Gold coins in the imperial treasury and offices December 31, 1908, amounted to 2,419,170 crowns, 26 heller.

Therefore, on the basis of the date given, it is shown that the stock on December 31, 1908, exclusive of the stock in the Royal Hungarian treasury, was 1,184,791,448 crowns, 74 heller.

The stock of gold coins and bars in other kingdoms and countries represented by the Reichsrath approximates from 250,000,000 to 300,000,000 crowns.

15. The amount of domestic silver coins—that is, the 1-gulden pieces—is estimated at 288,000,000 crowns for the Austria-Hungarian monarchy. Of this amount there were on hand, December 31, 1908, in the Austria-Hungarian Bank (the main bank at Vienna and Austrian branches), 238,066,010 crowns; in the state treasuries and offices, 503,644 crowns, making a total of 238,569,654 crowns.

The stock of 5-crown pieces (of which 72,204,000 crowns were coined to the end of December, 1908) of Austrian and Hungarian types, on December 31, 1908, was as follows:

	Crowns.
In the Austrian-Hungarian Bank	3,044,420
In the state treasuries and offices	407,740
Total	3,452,160

Up to the end of 1908 a contingent of 140,000,000 crowns in 1-crown pieces were coined, in accordance with the decree of August 2, 1892.

The stock of 1-crown pieces of Austrian-Hungarian type on hand December 31, 1908, was as follows:

	Crowns.
In the Austrian-Hungarian Bank	4,336,241
In the state treasuries and offices	962,100
Total	5,298,341

16 and 17. The redemption of government notes in accordance with the law of August 10, 1901 (Reichs-Gesetz, Buch No. 123), was completed by August 31, 1907. To December 31, 1908, the notes issued by the Austrian-Hungarian Bank amounted to 2,112,907,050 crowns.

18 and 19. The stock of metals in the Austrian-Hungarian Bank on December 31, 1908, was—

	Crowns.
Gold coins and bars	1,182,372,278.48
Notes and bills payable in gold	60,000,000.00
Current silver and fractional coins	293,413,662.19
Total	1,535,785,940.67

The Austrian-Hungarian bank-note issue of 577,121,109.33 crowns, in excess of the value of their stocks of metal, was covered by negotiable securities.

20. The actual currency of the country consists of the 100, 20, and 10 crown gold pieces; the current silver gulden pieces of Austrian standard, and fractional coins of the crown standard: (*a*) The 5-crown and 1-crown pieces of silver; (*b*) the 20-heller and 10-heller pieces of nickel, and (*c*) the bronze 2-heller and 1-heller pieces, and paper money (bank notes) of 10, 20, 50, 100, and 1,000 crowns.

To the end of December, 1908, the Austrian-Hungarian Bank had put into circulation 214,594,400 crowns of domestic gold coins, exclusive of the amount which returned to the bank.

21. The exchange value of sight drafts on London, Berlin, and Paris, at the Vienna Bourse in 1908, was as follows:

Items.	Average. (Crowns).	Maximum.		Minimum.	
		Months.	Crowns.	Months.	Crowns.
London (for 1 pound sterling)	239.921	January 18	241.175	August 24, 25, 26, 28, and 31.	239.200
Berlin (for 100 marks)	117.436	March 26, 27, 28	117.700	November 26	117.025
Paris (for 100 francs)	95.4625	January 7	95.875	August 10, 11, 12, 19, and 20.	96.125

A comparison of the arithmetical means of the foregoing average course of exchange, which is 150.9398 crowns, with the arithmetical means of the parity in coin of the exchange in question, which is 150.987 crowns, shows that the average premium on gold in 1908 was 0.03126098 per cent.

22. Proclamations and decrees relating to coinage in 1908 were as follows:

(1) Proclamation from the finance ministry of April 8, 1908 (Reichs-Gesetz-Blatt, No. 72), in regard to the coinage of legal jubilee gold coins of 10 and 20 crowns for the Austrian Empire.

(2) Proclamation from the finance ministry of June 7, 1908 (Reichs-Gesetz-Blatt, No. 107), in regard to the coinage of a jubilee 5-crown piece for the Austrian Empire.

(3) Proclamation from the finance ministry of August 13, 1908 (Reichs-Gesetz-Blatt, No. 167), in regard to the coinage of a 100-crown piece.

(4) Decree from the finance ministry of August 13, 1908 (Reichs-Gesetz-Blatt, No. 168), in regard to the coinage of a legal jubilee gold coin of 100 crowns of Austrian stamp and also for individual account.

23. No report on the operations of the mint was published for 1908.

HUNGARY.

[Translation.]

Answers to interrogatories, 1908.

1. There were coined (gold) in the year 1908:

Denomination.	Pieces.	Value.
		Crowns.
100-crown	13,856	1,385,600
20-crown	138,484	2,769,680
10-crown	508,981	5,089,810
Total	661,321	9,245,090

There were recoined:

20-crown pieces	190
10-crown pieces	824

For the coinage of gold pieces there were employed:

	Kilograms.
Fine gold remaining over from last year	682.95715
From Hungarian production (refined gold)	2,357.53297
From foreign production	200.00000
15 American 20-dollar gold pieces	0.46875

2. Silver pieces were coined during 1908 as follows: 5-crown pieces to the value of 9,712,200 crowns.

Silver pieces withdrawn from circulation were recoined as follows: 347 5-crown pieces and 3,404 1-crown pieces. No foreign coins were employed in the above-mentioned coinage.

3. No coinage was executed for other governments during 1908.

4 and 5. With regard to gold and silver employed for industrial arts, no exact data are at hand. The following articles were delivered for stamping at the Royal Hungarian bureau for the stamping of metals during the calendar year 1908:

	Kilograms.
A. Domestic goods:	
(1) Gold ware	2,544.719
(2) Silverware	13,794.445
(3) Gold wire	338.570
(4) Silver wire	466.372
B. Foreign goods:	
(1) Diversified gold ware	221.065
(2) Diversified silverware	2,342.464
(3) Gold watches	122.595
(4) Silver watches	1,182.060
(5) Gold wire	1.180

For the striking of medals, 1,618.59 kilograms of fine gold, and 31.1029 kilograms of fine silver were employed.

6, 7, and 8. With regard to the imports and exports of gold and silver during 1908, a special report of the Hungarian central statistical board is as follows:

IMPORTS AND EXPORTS OF GOLD AND SILVER INTO AND FROM HUNGARY DURING THE YEAR 1908.

9. With regard to the remelting of United States gold coins, as has already been stated under No. 1, 15 American 20-dollar gold pieces were melted during 1908, 9 of which were imported into the country during 1908 and 6 during 1907.

10, 11, 12, and 13. There were produced from Hungarian mines during 1908:

	Crowns.
3,288.80385 kilograms of gold, valued at	10,787,276.63
12,517.2912 kilograms of silver, valued at	1,126,556.21

From Hungarian refineries were produced during 1908:

	Crowns.
905.18122 kilograms of gold, valued at	2,968,944.40
10,321.526 kilograms of silver, valued at	928,937.34

The Hungarian refineries worked only upon material derived from Hungarian mines, in consequence of which the gold and silver recovered was contained in the amount of ore produced.

In the estimation of values, a kilogram of fine gold is reckoned at 3,280 crowns and a kilogram of fine silver at 90 crowns.

14 and 15. Approximate stock of gold and silver coin and bullion in the country at the end of the calendar year 1908: At the Royal Hungarian mint at Kormocbbanya there were on hand at the end of the year 1908, 1,514.71384 kilograms of fine gold and 37,900.7511 kilograms of fine silver.

In the state treasury, at the end of the year 1908, there were 1,229,850 crowns in gold coins, and in circulation about 103,886,000 crowns.

The metallic stock in the treasury of the Austria-Hungarian Bank at the end of the year 1908 consisted of 1,182,000,000 crowns in gold coins and 293,000,000 crowns in silver coins. This amount of coins serves as the deposit covering the bank notes in circulation.

16, 17, 18, and 19. The complete withdrawal of government notes was concluded in the course of the year 1907, so that in 1908 no government notes were in circulation.

Of the bank notes issued by the Austria-Hungarian Bank, there were in circulation at the end of the year 1908, 2,112,000,000 crowns. At the end of the year 1908 there were in the treasury of the Austria-Hungarian Bank:

	Crowns.
Gold coin and bullion	1,182,000,000
Notes payable in gold	60,000,000
Silver coins and currency	293,000,000
Total	1,535,000,000

After deducting this amount from the bank notes in circulation, 2,112,000, as stated under No. 17, there remain 577,000,000 crowns which are not covered by a deposit in coin, which are covered by bank securities.

20. The actual currency of the country is the "kroner," which has a gold value. The obligation of the Austria-Hungarian Bank to redeem the bank notes it issues in legal coin is still temporarily suspended, but during the year 1908 the bank redeemed its notes in lawful coin.

21. Gold had a par value according to the average current rates of Berlin, London, and Paris, during the first six months of 1908. Except from the beginning to the end of June, the rate stood at par. There was a premium of 1 per cent at the beginning and end of April and at the beginning and end of May; of 2 per cent at the end of January, beginning and end of February, in March, at the middle of April and middle of May; 3 per cent at the middle of February, and nearly 4 per cent at the beginning and middle of January.

Regarding the movement of gold during the second six months of 1908: There was a small premium, with the exception of the beginning of October and the beginning and middle of July, when the rate stood below par, as also at the end of July, in September, at the end of October and November, and in December, it stood at 1 per cent, and in August, at the beginning and middle of November, 2 per cent below par.

22. During the year 1908 no laws were passed affecting the metallic or paper money.

23. The reports upon the operations of the mint and mining for 1908 are not yet completed; when they are ready we will forward a copy, as formerly, direct to the Director of the Mint of the United States of North America.

The New 2-Crown Pieces.

February 13, 1909.

To-day in Parliament the draft of a bill was distributed, which empowers the Government to conclude an additional agreement with regard to the former agreement upon coinage and fixed value with the Hungarian Government, as to the minting of 2-crown pieces and the additional coinage of 1-crown pieces.

The 2-crown pieces will be made of a mixture of silver and copper in the proportion of 0.835 silver to 0.165 copper. From 1 kilogram of coinage silver, 100 2-crown pieces will be minted. Consequently a 2-crown coin will have the weight of 10 grams.

In the course of the minting the normal weight and the normal standard must be retained. An unvarying accuracy in the case of each single coin not being absolutely possible, a deviation in plus or minus is permitted, which, however, must not exceed the standard of quality more than 0.008 nor the weight more than 0.010.

The diameter of the 2-crown pieces will be 27 millimeters.

Of these coins, the sum total of which at present will be 50,000,000 crowns in both Dominions, 35,000,000 crowns will be coined in the Kingdom and countries represented in the Austrian Parliament and 15,000,000 in Hungary.

The date at which the 2-crown pieces are to be put in circulation will be settled between the Austrian and the Hungarian ministers of finance in prescriptive manner.

For the purpose of striking the quota of 2-crown pieces agreed upon, the two ministers will take over the sum total of 50,000,000 crowns in silver florin pieces from the Austro-Hungarian Bank, after having deposited there a legal equivalent. The Austrian treasury will take over the sum of 35,000,000 crowns and the Hungarian treasury the sum of 15,000,000 crowns.

The silver florin pieces taken over by both ministers of finance will be immediately handed over to the respective mints as mint property.

The following notes have been added to the draft of the bill:

Although ever since the 1st of January, 1900, the crown currency has become the exclusive legal-standard currency of the country in place of the former Austrian currency, the crown currency has, however, not become popular. The circumstances that the Austrian currency, i. e., the 1-florin piece, is still regarded as legal tender, has proved to be one of the principal hindrances to a general popularity of the crown currency. The treasury, in agreement with the Austro-Hungarian Bank, at one time made the attempt to exclude the 1-florin piece from actual currency by keeping back all those that were paid in at government money offices and banks and letting them accumulate in the Austro-Hungarian Bank, where these 1-florin pieces, like the gold currency and the small change of the crown currency, naturally formed a part of the value in metal, that is to say, a part of the cash equivalent of the bank-note circulation. These measures proved successful, but soon reached the limits of possibility since the supply of the 5-crown pieces, which had to replace the 1-florin pieces thus withdrawn, did not suffice to cover the demand for legal tender of this category. Permission had to be given once more for putting the 1-florin pieces into circulation to an amount equivalent to the deficit in 1 and 5 crown pieces at the government money offices and the banks. Therefore the actual retention of the silver florins only appears possible under the presumption that either a larger quota of 1 and 5 crown pieces be put into circulation or else a new species of silver coin in crown currency introduced. In favor of the latter proposal—that is of putting into circulation a new species of silver coin—is the apparent necessity of connecting coin between the 1 and the 5 crown pieces. The most suitable connecting coin would doubtless be a 2-crown piece, for a 3-crown piece would cause a certain amount of arithmetical and manipulative difficulty on account of its not fitting in sufficiently with the decimal system; besides, the dimensions of a 2-crown piece can be made more handy than those of a 3-crown piece.

The proposed dimensions of the 2-crown pieces with regard to their weight, standard quality, and dimensions are, by a natural sequence, always just double the amount of the 1-crown pieces. As to the quantity, that will depend solely on the amount absolutely required, for it coincides better with the whole system of the mint to replace the 1-florin pieces by 1-crown coins.

In consideration of this, the amount of 50,000,000 2-crown pieces has been proposed. The increase in the quantity of 1-crown pieces is imperative, not only because the supply of 200,000,000 1-crown pieces coined up to the present time has run out, but also on account of the limited supply of these particular coins in the banks; and it has also proved necessary in view of the retention of the 1-florin pieces being continued. The proposed increase of 100,000,000 in the supply of 1-crown pieces will presumably cover the requirements of increased trade for a considerable time.

For the same nominal amount in which the 1 and 2 crown pieces are put into circulation, the silver florin, which will be replaced by these coins, will have to be demonstrated.

BELGIUM.

[Translation.]

General Abstract of the Coinage Operations of the Belgian Mint in 1908.

In 1908 the workshops of the mint have been occupied with the coinage of national nickel coins; silver coins for the Republic of Salvador; nickel coins for Siam, the Independent State of the Kongo, and the Grand Duchy of Luxemburg.

These various coinages represent a total in round figures of 34,000,000 pieces of a weight of 198,000 kilograms, and a nominal value at French parity of 11,500,000 francs.

It is to be remarked that the metal for the nickel blanks, as well as those for the silver, are executed in our own factories, contrary to the practice of the majority of other mints, who have recourse to private industry for furnishing them with nickel blanks.

NATIONAL NICKEL COINS STRUCK DURING 1908.

[Composition, 25 per cent nickel, 75 per cent copper.]

Nickel coins authorized by the law of February 3, 1908, have been struck for the nominal value of a little more than 2,000,000 francs.

The design of the pieces is identical to that of the cut of the 5 and 10 centimes. Their weight is 6¼ grams and their diameter is 26 millimeters. They are pierced in the center with a hole of 4½ millimeters diameter.

The supplying of the nickel and copper metals necessary for their manufacture has been made by public contract. The net profit of the coinage, making deduction for the price of the metal and expenses of manufacture, amounted to 1,820,000 francs. That profit has, in conformance with the law, been consigned to the funds for monetary provision.

The coinage has been very regular. The average weight of the pieces was very near the legal weight (6.490 grams), which it is necessary that they do not exceed in order to avoid a loss to the treasury. The various assays of the fineness by the method of electrolysis has given the average of 25.44 per cent of nickel, 74.17 per cent of copper, and 0.39 per cent base (impurities). The law requires a minimum fineness of 25 per cent nickel. The expense resulting from the raising of the fineness above that minimum has been placed to the charge of the director of the coinage. The proportion of wastage by the superintendent of the administration of defects in stamping has been 4 per cent.

FOREIGN COINS STRUCK DURING 1908.

A. *For Republic of Salvador.*

SILVER COINS.

One million six hundred thousand pieces of 1 peso have been struck. These pieces are identical as to diameter, weight and fineness, to the écus of 5 francs. The allowances in the coinage are also the same. The assays of the fineness have been made to the agreement following the regulations laid down by the ministerial instruction of October 10, 1832, for the 5-franc pieces. For each delivery of 20,000 pieces, 2 assayers of the laboratory verify one piece each, separately. If the results differ more than one-half of one-thousandth (0.0005), the chief inspector of the assays operates upon a third piece. If one of the two or three pieces assayed is found, after verification, outside of the allowance of coinage, all of the delivery is condemned, to be remelted.

Thus it is that upon 82 deliveries which they have made of coin, 2 have been turned back completely to the crucible because the fineness of one of the pieces assayed had been found outside of the allowance. The 80 other deliveries have given place to the assay of 199 pieces, which were all within the legal limits. The highest fineness in delivery has been 0.901100 and the lowest 0.899100; the average fineness of the whole coinage has been 0.900045. For each of the deliveries the average weight of the samples has been nearly about the right weight; but individually, numerous pieces have been excluded by the comptroller as defective in weight or stamp, namely: 8,202 as of light weight, 1,070 as of heavy weight, 27,728 as defective in stamping, being a proportion of wastage of 2.26 per cent.

B. *Siam.*

At two different times during the year the mint of Brussels has been charged with the coinage of pure nickel and bronze coins by the Government of Siam. The coinage is continued in 1909.

1. NICKEL.

In 1908 pieces of pure nickel in denominations of 5 and 10 stangs have been struck. (The stang is one one-hundredth part of the silver tical, which has, at French parity, a value of 3 francs.) These new coins are of the diameter of 17½ and 20 millimeters and weigh only 2 and 3½ grams, respectively. They are pierced with a hole in the center.

2. BRONZE.

In 1908, 17,000,000 bronze pieces (composition of French bronze) in denomination of 1 stang have been struck. These coins are of the diameter of 22½ millimeters and the weight of 5 grams. They are perforated. Their engraving (design), identical to that of the nickel pieces, is the work of the engraver of the administration of the mint.

C. *Independent State of the Kongo.*

In virtue of the decree of the Royal Sovereign, of date of May 19, 1908, 2,000,000 pieces of 5 and 10 centimes have been struck, being identical as to composition, diameter, and weight to the Belgian nickel coins, a first small coinage having been previously made in 1906.

D. *Grand Duchy of Luxemburg.*

1. NICKEL.

One million five hundred thousand nickel pieces of 5 centimes have been coined, with a composition identical to that of the Belgian pieces. These pieces, of a new type, have a diameter of 18 millimeters and a weight of 2½ grams. The design has the effigy of the Grand Duke Frederick.

2. BRONZE.

Four hundred thousand bronze pieces of 2½ centimes have been coined, with same composition as the French bronze pieces. These coins have a diameter of 21 millimeters and a weight of 2½ grams. The design of the 2½ centimes was adopted by the Grand Duchy in 1852. The various coinages have been made at the mint of Brussels.

MINT COINAGES.

In 1908. For the Belgian coins, perforated, composed of nickel and copper, one pair of coins has served for an average of 116,628 pieces.

For the coins of the Kongo and the Grand Duchy of Luxemburg, made with the same composition, the averages have been for 93,625 and 188,337 pieces, respectively.

For the coins of Siam, of pure nickel, the average has been for 184,446 pieces. For the coins of Siam, in bronze, the average has been for 169,497 pieces.

For the silver coins of 1 peso for Salvador the average has been for 47,296 pieces.

Nominal value of nickel coins of 25 centimes (perforated type), struck in 1908, 2,004,558.75, with a composition of 25 per cent nickel and 75 per cent copper, diameter of 26 millimeters, and legal weight of 6½ grams.

Circulation of notes of the National Bank of Belgium during 1908:

Denomination of the note.	Value.
	Francs.
1,000 francs	160,267,000
500 francs	72,146,000
100 francs	297,698,000
50 francs	73,608,650
20 francs	149,360,320
Total circulation	753,079,970

Composition of the reserve of the National Bank of Belgium on December 31, 1908:

Description.	Value.
	Francs.
Gold coins having legal currency in Belgium	112,430,850.00
Silver pieces of 5 francs	37,632,500.00
Fractional coins of silver and copper	8,693,875.31
Total	158,163,225.31
Foreign notes in hand	184,324,000.00

Diameter, weight, and fineness of the 1-peso silver pieces coined at the mint of Brussels in 1908 for the Republic of San Salvador:

Description.	Diameter.	Legal weight.	Average fineness.
	Millimeters.	*Grams.*	*Thousandths.*
Silver: 1 peso	37	25	900,045

Diameter, weight, and composition of the nickel and bronze pieces coined at the mint of Brussels in 1908 for Siam:

ROYAL DECREE OF FEBRUARY 17, 1908, REGULATING THE DESIGN OF THE NICKEL COINS AND ARRANGING FOR THE COST OF THEIR MANUFACTURE.

Leopold II, etc.

Upon the proposition of our minister of finances, we have resolved and ordered—

ARTICLE 1. The nickel coins shall be pierced in the center with a hole 3½ millimeters in diameter for the 5-centime pieces; 4 millimeters for the 10-centime pieces, and 4½ millimeters for the 25-centime pieces. They shall bear on their obverse two L's, surmounted by a royal crown and a legend of the words "Royaume de Belgique" or "Koninkrijk Belgie" ("Kingdom of Belgium"), and at the bottom the date; on the reverse, at the left side, a sprig of laurel, and at the right side the indication of the value. The coins shall be struck with a smooth rim.

ART. 2. The weight is fixed for the 5-centime pieces at 2½ grams; for the 10-centime pieces at 4 grams; for the 25-centime pieces at 6¼ grams.

ART. 3. The diameter is fixed for the 5-centime pieces at 19 millimeters; for the 10-centime pieces at 22 millimeters; for the 25-centime pieces at 26 millimeters.

ART. 4. The cost of the manufacture of the planchettes, or blanks, is arranged per cost of a kilogram of coinage metal and transportation in delivery.

ART. 5. The cost of the stamping of the blanks is fixed per cost of a kilogram of coinage metal and transportation in delivery.

ART. 6. The cost of stamping does not include the costs of the dies and verification, which are regulated by ministerial decree.

1907	145,700	8,800	509,000	663,500	7,200	41,100	67,200	115,500

[a] The headings "unwrought metal" ("bullion"), comprise gold and silver in dust, bars, ingots, leaf, wire, thread, and tissues, as well as that which is stamped on shells and vessels, and broken jewelry.

The amounts of coin mentioned in the table above are only those which have been declared in imports and exports. Considerable amounts go out unknown to the custom-house, on account of the facility for secreting and the interest one has for safety in carrying it, not to make declaration. They also consider gold and silver ore and bullion as money.

[Translation.]

Copper Coin for the Belgian Kongo.

[From L'Economiste Européen, Paris, April 2, 1909.]

The Official Bulletin of the Belgian Kongo contains a decree relative to the establishment of copper coin in the Belgian Kongo. That decree declares that the special copper coins for the colony shall be of 1, 2, 5, 10, and 20 centimes. Those of 1 and 2 centimes are to be made of pure copper, while the metal in the others shall be composed of nickel and copper, the alloy to contain an average of 25 per cent nickel. They are to be pierced in the center with a round hole of the diameter of 3.6 millimeters for the 1-centime pieces; 4.6 millimeters for the 2 centimes; 3.5 millimeters for the 5 centimes; 4 millimeters for the 10 centimes; and 4.5 millimeters for the 20 centimes. They will carry on the obverse a double L, surmounted by the royal crown repeated five times around the center of the coin and the legend "Congo belge-Belgisch-Congo;" on the reverse, the five-pointed star and the arms of the colony—the hole in the coin forming the center of the star—with the indication of the value and the fineness.

The copper coins shall be struck with a grooved rim and those of nickel with a smooth rim.

The weight is fixed for the 1 centime at 2 grams; 2 centimes, 4 grams; 5 centimes, 2½ grams; 10 centimes, 4 grams; 20 centimes, 6 grams. The diameter is fixed for the 1-centime pieces at 18 millimeters; 2 centimes, 23 millimeters; 5 centimes, 19 millimeters; 10 centimes, 22 millimeters; 20 centimes, 25 millimeters.

The odd copper and nickel coins established by the decrees of July 27, 1887, and August 27, 1906, shall continue to have provisional currency in the colony. A royal regulation will arrange the date on which these coins shall not have further currency and shall not be received any longer in the cash offices of the State.

[Translation.]

The Silver Coins of the Belgian Kongo.

[From L'Economiste Européen, Paris, May 7, 1909.]

The Official Bulletin of the Belgian Kongo has published the following regulation, dated April 14, and put into execution by law of October 18, 1908:

Article 1. The silver coins of 5 francs, 2 francs, 1 franc, and 50 centimes, coined by the Independent State of the Kongo by virtue of the decree of the reigning King, July 27, 1887, shall cease to have legal currency in the colony from October 1, 1909.

ART. 2. Up to July 1, 1911, these coins shall be exchanged against the coins of account (legal coins) by the colonial treasury at Brussels and by the cash offices of the Kongo, which shall be designated by the minister of the colonies. They shall continue to be received at all the public cash offices of the colony up to the date above mentioned in discharge of taxes, contributions, or for any other payment.

Following after that decree the same bulletin published a regulation by the minister of the colonies designating the cash offices of the colony set apart to the services of finances for the exchange of the above-described coins.

PAPER RELATIVE TO ARTICLE 11 OF THE LAW UPON THE GOVERNMENT OF THE BELGIAN KONGO.

[Extract from the report of the parliamentary commission of the XVII to the session of the Chamber of Representatives of April 3, 1908.]

ARTICLE 9 (of the plan). "Gold and silver coins shall have currency in Belgium and the Kongo under the same conditions.

"A royal decree will arrange the date at which the silver coins struck by the Independent State of the Kongo shall not have further currency and shall not be any more exchanged by the colonial treasury.

"The profit which will result from the coining of Belgian coins necessary for the colony shall be assigned to the colonial budget.

"It is lawful for the King to coin special copper coins for the colony; these coins will not have currency in Belgium."

That arrangement is just as important for Belgium as for the future colony:

For Belgium, by reason of the revulsion that the measure may have upon the monetary situation.

For the colony, where the free introduction of the coin is called to exercise a happy influence upon the native.

Belgium made part of the Latin Union. What will eventually be the effect of the annexation of the immense territories of the Kongo and the necessities of the inhabitants for coin upon the convention of those countries to which Belgium has been a party?

They consider that that question will be the first to occupy the convention.

DENMARK.

AMERICAN LEGATION,
Copenhagen, March 29, 1909.

Answers to interrogatories, 1908.

1 and 2. Gold coined during 1908: In the year 1908 there were coined from bullion 607,517 20-crown pieces of the value of 12,150,340 kroner, and 244,699 10-crown pieces of the value of 2,446,990 kroner. No silver was coined during 1908.

3. No coinage was executed for other governments.

4 and 5. Weight of fine gold and fine silver used in industrial arts during 1908: Impossible to give answer.

6. Import and export of gold during 1908:

	Crowns.
Imports:	
In bullion [a]	6,300,000
In coin	2,700,000
Total	9,000,000
Exports:	
In coin	4,300,000

BY COUNTRIES.

Total	9,000,000	4,300,000

[a] About 2,596 kilograms.

7. Import and export of silver during 1908: Impossible to give answer.
8 and 9. No United States gold has been imported or melted in the year 1908.
10, 11, 12, and 13. No mines or refineries in Denmark or in the colonies.
14. The stock of gold at the close of the year 1908 was:

	Crowns.
In coin	67,000,000
In bullion	5,500,000

15. The stock of silver at the close of the year 1908 was: In coin, about 23,000,000 crowns.
16 and 17. No government notes in Denmark.
18 and 19. The amount of bank notes outstanding at the end of the year 1908 was: About 125,000,000 crowns.
Bank notes not covered by legal-tender gold and silver coin or bullion at the end of the year 1908 was: About 54,000,000 crowns.
20. Actual currency of the country: Gold.
21. There is no premium on gold.
22. No laws were passed during 1908 affecting the currency.
23. Report published on operations of mint: Copy attached.

FRANCE.

AMERICAN EMBASSY,
Paris, June 10, 1909.

Answers to interrogatories, 1908.

1. Amount of gold coined during the calendar year 1908:

A. FRENCH GOLD COINS.

Denomination.	Number of pieces.	Value.
		Francs.
100 francs	23,038	2,303,800
20 francs	6,721,325	134,426,500
10 francs	1,650,337	16,503,370
Total	8,394,700	153,233,670

Coined from bullion and domestic coins melted down, viz:

	Francs.
Bullion	152,871,710
Recoinage	361,960
Total	153,233,670

B. COLONIAL COINS.

TUNIS.

[a] Value not given.

8 and 9. Import of United States gold coin during 1908: The French customs do not class by countries gold coin imported into the country; it is, consequently, impossible to give the number of American gold coins that entered France during the year. No American gold coin was melted down at the mint during the year 1908.

10. Amount of gold produced from mines of the country and colonies of the country during 1908: The evaluation of the amount produced during the year 1908 is not yet to hand. For the year 1907 (from statistics furnished by the minister of public works) the product of the French mines would be 1,257 kilograms; value, 4,330,000 francs.

11. Amount of silver produced from mines of the country and colonies of the country during 1908: Figures for the year 1908 have not yet been obtained; for the year 1907 they are 24,727 kilograms; value, 2,967,000 francs.

12 and 13. Output of gold from refineries of the country during 1908: Output for 1908 not yet known; for 1907 it was 18 kilograms; value, 62,000 francs.

For the colonies:

Colonies.	Kilograms.	Value.
		Francs.
Indo-China	56	165,000
Guiana	4,160	12,232,000
Madagascar	2,940	8,820,000

14. The stock of gold in France at the end of the year 1908 is approximately estimated to be:

	Francs.
20-franc pieces	4,000,000,000
10-franc pieces	650,000,000
Other pieces	150,000,000
Total	4,800,000,000

15. The stock of silver at the end of the year 1908 was estimated to be:

	Francs.
5-franc pieces	1,800,000,000
Fractional coins	330,000,000
Total	2,130,000,000

16 and 17. There are no government notes in France.

18 and 19. The Bank of France alone has the right to issue notes. On December 31, 1908, the amount of notes in circulation was 5,225,519,875 francs. The amount of coin held by the Bank of France on December 31, 1908, being:

	Francs.
Gold	3,488,227,227
Silver	882,870,229
The uncovered notes would amount to	854,422,419
The circulation of notes being	5,225,519,875

20. Actual currency of the country: Gold and silver. Gold and 5-franc pieces have unlimited purchasing power. Fractional currency to the amount of 50 francs is legal tender. Notes of the Bank of France are legal tender to any amount, but are convertible into specie upon demand.

21. Premium on gold: Gold was at par throughout the year 1908.

22 and 23. Report to the minister of finances (administration des monnaies et médailles) for the year 1908 is inclosed.

Bank of France.

[From a statement rendered in the name of the general counsellor of the bank and report of the censors.

Composition of the Reserve on December 31, 1907 and 1908.

Total	2,676,100,000	917,600,000	3,489,200,000	883,300,000

The variations of the circulation of notes during 1908 have been as follows:

	Francs.
Maximum, January 3	5,116,271,400
Minimum, August 24	4,655,684,400
Average for 1908 being	4,853,440,600
The average of the year 1907 having been	4,800,431,700
Increase for 1908	53,008,900

ISSUE OF NOTES.

The issues of notes in 1908 have been as follows:

	Number.	Value.
		Francs.
1,000-franc notes	850,000	850,000,000
500-franc notes	350,000	175,000,000
100-franc notes	6,000,000	600,000,000
50-franc notes	5,275,000	263,750,000
Total	12,475,000	1,888,750,000
In 1907 the issue amounted to 13,200,000 notes, for		1,866,250,000
There is then in 1908 a decrease of 725,000 notes and an increase by the sum of		22,500,000

[Translation.]

LATIN MONETARY UNION.

[From L'Economiste Européen.]

PARIS, *November 6, 1908.*

From the negotiations entered upon nearly two years ago by the Government of the Republic (of France) with the powers making part of the monetary union and which, as every one should know, are Belgium, France, Greece, Italy, and Switzerland, have about come to signing for a convention of substantial importance.

The essential characteristics for one part are the authorization of the five allied powers to remedy the scarcity of fractional silver coins, which is made sensible everywhere, notably in France and Belgium, by the coinage of 50 centime and 1 and 2 franc pieces; for the other part, to expressly order that, in general ruling and save in exceptional necessity, the écus of 5 francs shall be used for the manufacture of new fractional coins.

PARIS, *January 8, 1909.*

In their number of January 1 last, L'Economiste Européen published the principal provisions of the supplemental convention (concluded at Paris November 4, 1908) to the monetary convention of November 6, 1885, between Belgium, France, Greece, Italy, and Switzerland.

The Belgian Government has come to the point of drawing up a plan of a law approving that convention. The statement of the reasons which accompany that plan of law contains some very interesting information upon the subject of Belgium and the Kongo, which we reproduce as follows:

"For the estimate of the quota attributed to France and Belgium the convention has taken into account the population of their colonies. For the African possessions of France, and including Algiers and the Island of Madagascar, that population is, from the monetary view point, estimated at 20,000,000, and for the Belgian colony of the Kongo at 10,000,000. These figures may be modified to agree in common by diplomatic correspondence.

"The population of Belgium being estimated by the convention at 7,300,000 inhabitants, the present Belgian contingent, calculated upon the basis of 16 francs per head, would therefore amount, for Belgium and the Kongo, to 276,800,000 francs. The coinages effected up to to-day, which have been to an amount of 46,800,000 francs, are to be deducted from that sum. At the rate of 0.60 francs per inhabitant, the Government will have power to issue each year an amount of 10,380,000 francs in fractional coins by means of the remelting of Belgian écus of 5 francs.

"The entry of the Kongo into the Latin Union involves the retirement of the special silver coins issued by the independent state; they represent an amount of 1,900,000 francs, of which 990,000 francs are in fractional coins.

"In order to avoid the injury to the colony which would be entailed in consequence of the unconditional retirement of these coins the Government has requested and obtained the insertion of a clause in the convention permitting the use of the Belgian design in the coinages of fractional coins."

PARIS, *April 2, 1909.*

L'Economiste Européen announced, on March 3, the promulgation of the law bearing the approval of the monetary convention signed at Paris November 4, 1908, between France, Belgium, Greece, Italy, and Switzerland.

We understand that that convention especially ordered the retirement from circulation of all Greek fractional coins (2 and 1 franc, 50 and 20 centimes pieces) within four months from the date of its entering into force.

The delay was to commence on April 1 next. But the Italian Government having found it to be an impossibility to have a vote on it and, consequently, of ratifying the convention in due time, by reason of the dissolution of the Italian Parliament, they came to an agreement for prolonging the starting point of the four months delay from April 1 to May 15 for the retirement of the Greek fractional coins. The public will thus have from May 15 a delay of four months for paying in or exchanging the Greek fractional coins in the public cash offices.

FINLAND.

TABLE OF MINT COINAGE IN THE GRAND DUCHY OF FINLAND, 1903–1907.

[From official statistics of Finland for 1907, Helsingfors, 1909.]

Denomination.	1903.	1904.	1905.	1906.	1907.	Total.
			Finnish marks.			
Gold:						
20-mark pieces	2,240,000	3,760,000				6,000,000
10-mark pieces		1,020,000	420,000			1,440,000
Silver:						
3-mark pieces			48,000	452,000	200,000	700,000
1-mark pieces					348,000	348,000

The (British) Mint in 1908.

[From The Economist, London, January 9, 1909.]

We have received from the mint the usual preliminary statements of the year's operations, showing the value of imperial coin issued and withdrawn from circulation. The statement gives also comparative figures for 1907:

GOLD.

Denomination.	Issued.		Withdrawn.	
	1907.	1908.	1907.	1908.
Sovereigns	£18,864,000	£12,600,000	£1,313,000	£1,705,000
Half sovereigns	2,087,000	2,000,000	1,387,000	1,595,000
Total	20,951,000	14,600,000	2,700,000	3,300,000

SILVER.

Destination.	Issued.		Withdrawn.	
	1907.	1908.	1907.	1908.
For England and Wales	£872,339	£302,876	£706,000	£150,300
For Scotland	9,200	48,400	21,390	25,630
For Ireland	7,200	12,000	3,700	64,295
For colonies	1,131,050	392,475	11,687	15,194
Total	2,019,789	815,751	742,777	255,419
BRONZE.				
For United Kingdom	200,235	138,135	.....	5,260
For colonies	27,315	17,445	.....	200
Total	227,550	155,580	.....	5,460

The net increase in the currency during the last three years has been as follows:

Value of Coins Issued Less Value Withdrawn.

Year.	Gold.	Silver.	Bronze.
1906	£9,465,000	£1,038,730	£184,520
1907	18,251,000	1,277,012	227,550
1908	11,300,000	560,332	150,120

In the case of gold these figures are not an exact criterion of the expansion of the internal circulation, owing to the use of coined gold for export purposes. But combined with the changes in the token coinage they indicate a shrinkage in the demand for currency, with the diminishing volume of business. The value of gold coins issued has fallen from £20,951,000 in 1907 to £14,600,000 last year. But, as the deputy master of the mint pointed out in his report for 1907, the mintings for that year were on an exceptional scale even for a year of trade prosperity, the average for the preceding ten years being £7,903,168. Last year's output is still nearly twice the normal annual production prior to 1907. The net increase in the amount issued has to some extent, however, been kept low by the very large withdrawals of light coin, £3,300,000 being withdrawn this year compared with £2,700,000 in 1907. Such large withdrawals are a welcome indication that the mint has been able to use a period of trade depression to keep the coinage in the country up to a high level. The greatest proportionate reduction has taken place in silver, the output being £815,751 against £2,019,789 in 1907. The number of silver coins issued, however, shows a much less proportionate decrease—23,804,187 imperial coins compared with 37,343,094 in the preceding year. It would appear, therefore, that the new coins issued have been, on the whole, of a smaller denomination than usual. There is a withdrawal of £5,460 of bronze coinage for the first time for three years.

GERMANY.

Answers to interrogatories, 1908.

1. In the calendar year 1908 the imperial gold coinage (including recoinage) was:

	Marks.
In double crowns	65,483,640
In crowns	316,650
Total	65,800,290

In the calendar year 1908 the German mints received for recoinage into imperial gold coins:

(*a*) Uncurrent imperial gold coins:

	Marks.
Double crowns	4,704,580
Crowns	4,775,380
Total	9,479,960

Weight of same 3,366.9687 kilograms, fine.

(*b*) Foreign gold coins, 603.3662 kilograms, fine.

2. In the calendar year 1908 the imperial silver coinage was:

	Marks.
In 5-mark pieces	22,327,685.00
In 3-mark pieces[a]	14,691,012.00
In 2-mark pieces	9,107,122.00
In 1-mark pieces	8,003,979.00
In 50-pfennig pieces	3,996,738.50
Total	58,126,536.50

The metal for the silver coinage was derived from thalers and 50-pfennig pieces of old coinage, bar silver 14,173.672 kilograms, fine. The silver thalers used were of 1823–1856, and had a fineness of 0.900.

3. No gold coinage was executed at German mints in 1908 for foreign countries, but silver coins of 1 rupee for German East Africa were coined at the Hamburg mint to the amount of 500,000 rupees.

4 and 5. No official data have been collected on the amount of gold and silver consumed for industrial purposes during the calendar year 1908.

6, 7, 8, and 9. The imports and exports of gold and silver for 1908, according to the countries of origin and destination, are given in the following table:

[a] New coins created by the law of May 19, 1908.

6 and 7. Imports and exports of gold and silver during the calendar year 1908.

Exports—		
Coined silver	21,090	1,414,188
Silver, raw and in bars	303,876	21,871,059
Pagnment (gold and silver scrap):		
Imports	40,692	11,873,304
Exports	10,115	782,000
Exports (gold and silver not specified)	31,254	3,124,294

10, 11, 12, and 13. The German refineries produced gold and silver during 1908 as follows:

Description.	Weight.	Value.
GOLD.		
	Kilograms.	*Marks.*
From domestic gold ores	97.47	
From foreign gold ores	669.23	
From foreign and domestic sweeps	3,991.32	
Total fine gold bars	4,758.02	13,287,000
SILVER.		
From domestic silver ores	154,025.89	
From foreign silver ores	179,437.05	
From foreign lead ores	290.73	
From foreign and domestic sweeps	70,330.12	
Total fine silver bars	407,833.79	26,744,000

The German territorial possessions yielded neither gold nor silver during 1908.

14. The amount of the imperial gold coinage up to the end of December, 1908, exclusive of recoinage, was as follows:

	Marks.
In double crowns	3,757,308,900
In crowns	686,796,100
Total	4,444,105,000

How much this amount has been reduced by export or other causes can not be stated.

The stock of gold coin in the Reichsbank at the end of December, 1908, amounted to 432,422,000 marks.

The stock of gold bars and foreign gold coins in the Reichsbank at the end of December, 1908, amounted to 335,842,000 marks.

15. The amount of the imperial silver coinage up to the end of December, 1908, exclusive of recoinage, was as follows:

	Marks.
In 5-mark pieces	253,072,080.00
In 3-mark pieces	14,690,970.00
In 2-mark pieces	300,846,268.00
In 1-mark pieces	280,251,159.00
In 50-pfennig pieces	90,439,523.50
Total	939,300,000.50

How much of this amount is to be considered as lost to circulation can not be stated.

In the stock of the Reichsbank at the end of December, 1908, there were 211,883,000 marks in imperial silver coins.

16 and 17. Imperial treasury notes issued up to the end of December, 1908, amounted to 120,000,000 marks, an amount that equals the war fund which the Empire has in reserve in gold coin.

18 and 19. The circulation of bank notes which is regulated by the banking law of March 14, 1875 (R. G. Bl., p. 177), amended June 7, 1899 (R. G. Bl., p. 311), and by the law of February 20, 1906 (R. G. Bl., p. 318), relating to the issue of imperial bank notes in denominations of 50 and 20 marks, amounted, at the end of December, 1908, to 2,124,688,000 marks.

The issue of uncovered bank notes (that is, in excess of the cash reserve in the issuing banks) at the end of December, 1908, amounted to 990,230,000 marks. The cash reserve of these banks consists of current German coin, imperial treasury notes, and notes of other German banks, the stock of gold bars and foreign gold coin in fine kilograms being reckoned at 2,784 marks.

20. The only change in the circulating medium of the country during 1908 was the issue of 120,000,000 marks in imperial treasury notes against the gold reserve (as mentioned under Nos. 16 and 17).

21. There is no premium on gold.

22. Laws passed during 1908 affecting the currency: Law of May 19, 1908, effecting modification of the monetary system (copy herewith).

23. No report on operations of mints is published.

Law of May 19, 1908, Effecting Modification of the Monetary System.

We, William, etc.

Article 1. The monetary law of July 9, 1873, is modified as follows:

(1) In article 3 they insert, in paragraph 1, after the words "pieces of 5 mark" the words "pieces of 3 mark."

In paragraph 2, before the words "pieces of 10 pfennig" the words "pieces of 25 pfennig."

Also in paragraph 1, after "20 pieces of 5 mark" they insert "33⅓ pieces of 3 mark."

The wording of paragraph 3 shall be thus expressed: "The other silver pieces, those of nickel and of copper, shall bear the indication of their value, the inscription 'Deutsches Reich,' the date, the imperial eagle, and the mint letter. The prescriptions relative to the distribution of the various emblems upon the obverse and reverse, the decoration and character of the dies, as well as the composition, weight, and diameter of the pieces, shall be determined by the federal council."

(2) In article 13, first paragraph, after the words "The federal council is authorized" they place at No. 1 the words "to put out of currency the retired pieces." The arrangements for putting out of currency and the necessary prescriptions for that operation pertain to the federal council. The delay allowed for putting them out of currency to be up to two years. The notice announcing their putting out of currency

shall be published by the bulletin of the laws of the Empire, as well as by the daily newspapers designed for the insertion of administrative notices of the subordinate administrations.

At No. 2 they insert the words: "To arrange the prescriptions of policy necessary to the maintenance of a well-regulated silver circulation," and in paragraph 2 of the same article they replace the words "of paragraph 1" by "of paragraphs 2 and 3." The old paragraphs 1 and 2 shall be 3 and 4.

ART. 2. In article 4 of the law relative to changes in the monetary system of June 1, 1900, the number "15" to be replaced by "20."

COINS STRUCK IN THE MINTS AT BERLIN, MUNICH, MULDENER, HÜTTE,[a] STUTTGART, KARLSRUHE, AND HAMBURG DURING 1908.

Denomination.	Number of pieces.	Value.
GOLD.		Marks.
Double crown or 20-mark piece	3,274,182	65,483,640.00
Crown or 10-mark piece	31,665	316,650.00
Total gold	3,305,847	65,800,290.00
SILVER.		
5 marks	4,465,537	22,327,685.00
3 marks	4,897,004	14,691,012.00
2 marks	4,553,561	9,107,122.00
1 mark	8,003,979	8,003,979.00
50 pfennigs	7,993,477	3,996,738.50
Total silver	29,913,558	58,126,536.50
NICKEL.		
10 pfennigs	37,565,183	3,756,518.30
5 pfennigs	41,768,953	2,088,447.65
Total nickel	79,334,136	5,844,965.95
COPPER.		
2 pfennigs	10,003,490	200,069.80
1 pfennig	51,306,011	513,060.11
Total copper	61,309,501	713,129.91

[a] Dresden.

The total number of gold, silver, nickel, and copper coins struck on imperial account in the year 1908 was 173,863,042, as compared with 204,079,357 in the preceding year. A novel feature is to be noted in the coining of 4,897,004 3-mark pieces. At Hamburg, 13,317,366 coins were also struck for the German East African colonies in rupees and 1, 5, and 10 hellers.

Other coins struck at Hamburg:

GERMAN EAST AFRICA.

Denomination.	Number of pieces.	Value.
		Marks.
Silver, 1 rupee	500,000	500,000.00
Nickel, 10 hellers	12,000	1,200.00
Bronze:		
5 hellers	600,000	30,000.00
1 heller	12,205,366	122,053.68
Total bronze	12,805,366	152,053.68

The new German rupee has been struck with a view to introducing uniformity of coinage in German East Africa. It contains 100 hellers (or 1½ marks), and has about the same value as the Indian rupee, which is largely circulated now in German East Africa. The nickel 10-heller and bronze 5 and 1 heller pieces will be legal tender to the extent of 2 rupees.

GREECE.

LEGATION OF THE UNITED STATES OF AMERICA,
Athens, March 8, 1909.

Answers to interrogatories, 1908.

1 and 2. Amount of gold and silver coined during 1908: None.
3. Coinage executed for other countries during 1908: No.
4 and 5. Weight of fine gold and fine silver used in industrial arts during 1908: Unknown.
6 and 7. Import and export of gold during 1908: Impossible to ascertain.
8 and 9. Amount of United States gold coin imported and deposited at mint and melted: Unknown.
10 and 11. Amount of gold and silver produced from mines of the country during 1908: None.
12 and 13. Output of gold and silver from refineries of the country during 1908: None.
14 and 15. Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1908: Unknown.
16 and 17. Government notes outstanding at the end of the year 1908: 76,000,000 drachmas. None covered by legal-tender gold and silver coin or bullion.
18 and 19. Bank notes outstanding at the end of the year 1908; 139,000,000 drachmas. None covered by legal-tender gold and silver coin or bullion.
20. Actual currency of the country: Inconvertible paper.
21. Premium on gold during 1908: Highest, 112¼; lowest, 103¼; average, 108.
22. Laws published during 1908 affecting the currency: None.
23. Report published on operations of mint: None.

[Translation.]

RETIREMENT OF GRECIAN FRACTIONAL SILVER COINS.

[From L'Economiste Européen, Paris, October 1, 1909.]

The Journal Officiel of September 26, 1909, has published the following decree relative to the retirement of the Grecian fractional silver coins:

"The President of the French Republic.

"Upon the report of the minister of finances and with the counsel of the minister of commerce and industry and the minister of the colonies;

"In consideration of article 34 of the law of December 17, 1814;

"In consideration of the law of March 22, 1909, which approved the monetary convention agreed to November 4, 1908, between Belgium, France, Greece, Italy, and Switzerland, of which article 13 is as follows:

"'When the public cash offices of France, Belgium, Italy, and Switzerland will not accept any more of the fractional Greek coins, each of these four states shall have the power of prohibiting their importation.'

"Decree:

"ART. 1. The importation of Grecian fractional silver coins is prohibited in France from this day, and in Algeria and the colonies from November 15, 1909.

"ART. 2. The minister of finances, the minister of commerce and industry, and the minister of the colonies are each charged, in that which may concern them, with the execution of this decree, which shall be inserted in the bulletin of laws and published in the Journal Officiel."

Made at Rambouillet, September 24, 1909.

By the President of the Republic. A. FALLIERES.

The minister of finances, GEORGES COCHERY.

The minister of commerce and industry, JEAN DUPUY.

The minister of the colonies, GEORGES TROUILLOT.

[Translation.]

ITALY.

Answers to interrogatories, 1908.

1. No gold was coined during 1908. Of the gold recoined there were:

	Pieces.
80-lire coins	238
40-lire coins	386
5-lire coins	9

All of which were national coins.

2. The silver coinage during 1908 was as follows:

	Lire.
2-lire pieces	4,404,212
1-lire pieces	1,754,702

During 1908 silver was recoined as follows:

	Lire.
2-lire pieces	161,058
1-lire pieces	357,386

All coinage made in 1908 was issued by the mint at Rome.

3. No coinage was executed for foreign countries during 1908.

4 and 5. As there exists no provisions of law in regard to the working of precious metals (the free régime being still in force, by law of May 2, 1872), there is no way of answering these questions.

6, 7, and 8. The statistical data relative to imports and exports of precious metals during the year 1908, classified with regard to the countries of origin or destination, including the United States, is given as follows:

GOLD.

Classification and country.	Imports.	Exports.
Gold coin:	*Kilograms.*	*Kilograms.*

9. Amount of United States gold coin deposited at mint and melted: None.

10. The product of fine gold from the mines of the Government during the year 1908 was 70,153 kilograms, with a commercial value of 241,115 lire. From the reports concerning the gold mines in the colony of Eritrea (exploited by the Società Eritrea per le Miniere d'oro) residing at Asmara, referring to the year ending December 31, 1908, it appears that the production during the months of January, February, and March of said year was 5,845 kilograms, with a value of 18,062.78 Italian lire.

11. The product of fine silver from the mines of the Government during the year 1908 was 23,439 kilograms, with a commercial value of 2,036,615 lire.

12. The weight of the output of gold from the government refineries during the year 1908 was 141,279 kilograms, with a commercial value of 485,576 lire.

13. The weight of the output of silver from the government refineries during the year 1908 was 20,746 kilograms, with a commercial value of 1,802,650 lire.

14 and 15. Approximate stock of gold and silver (coin and bullion) in the country at the close of the year 1908: Herewith is a statement showing the quantity of gold and silver possessed by the treasury and other issuing institutions on December 31, 1908; there is no way of estimating how much gold is lying in the vaults of banks and institutions of credit, etc., how much is in circulation, or how much is in the hands of private citizens:

GOLD.

	Lire.
Gold coins making part of the appropriation fund at the Bank of Italy for the service of the provincial treasury	75,547,838
Gold coins, not being a part of the above appropriation fund	7,900,000

16 and 17. The government bank notes in circulation on the 31st of December, 1908, amounted to 435,671,090 lire. The amount of government notes outstanding which were not covered by legal-tender gold, at the end of 1908, was 258,683,080 lire.

18 and 19. The bank notes in circulation at the end of 1908 were:

	Lire.
For the Bank of Italy	389,144,750
For the Bank of Naples	377,596,500
For the Bank of Sicily	95,816,550
Total	862,557,800

The bank notes in circulation not covered by a coin reserve, or protected by law, at the end of 1908, were:

	Lire.
For the Bank of Italy	313,058,673.56
For the Bank of Naples	119,302,084.77
For the Bank of Sicily	39,344,024.83
Total	471,904,783.16

20. Actual currency of the country: During the year 1908, the legal-tender circulation of the country was composed of gold, silver, nickel, and bronze, as ordinary coins, and government bank notes as paper legal tender. In virtue of the law of July 22, 1894, the conversion into coin of both government and bank notes was suspended. The banks are obliged by law to change them into coin with the only addition of the amount of the rate of exchange on that date. At present this addition is almost unnoticeable on account of the insignificance of the rate of exchange.

21. In the year 1908, the average rate of exchange in Paris was about 100.01 lire for 100 lire, with a maximum of 100.20 lire and a minimum of 99.81 lire.

22. No modification was made to the laws in force regarding the coinage circulation in 1908, except that portion of the additional act of November 4, 1908, of the Latin monetary convention of November 6, 1885, with which was augmented from 7 lire to 16 lire per capita the contingent of divisional coins, and the law of April 5, 1908, No. 161, which, with Article IV, letter "F," authorizes the Government to provide for the monetary systemitization of Benadir.

There were issued, however, the following five royal decrees:

Royal decree No. 14, January 12, 1908, which approves the new type of silver coin.

Royal decree No. 22, of January 15, 1908, which approves the new type of nickel coin (20-centime).

Royal decree No. 629, of October 29, 1908, which approves the new type of copper coin.

Royal decree No. 54, of February 13, 1908, to withdraw from currency the nickel coins of 25 centimes.

Royal decree No. 279, of June 4, 1908, for the transformation of 300,000 lire in 10-centime copper pieces into 200,000 lire in 2-centime copper pieces, and 100,000 lire in 1-centime copper pieces.

For paper currency:

Law No. 388, of July 5, 1908, prohibiting the fabricating, issue, and circulating of printing imitating bank and government notes or other values.

Law No. 723, of December 24, 1908, for the prorogation of the legal currency bank notes and for the approbation of certain agreements between the treasury and the Bank of Italy.

Royal decree No. 100, of March 8, 1908, which substitutes for the 25-lire government notes in circulation for an amount of 2,490,350 lire government notes of 5-lire for the same amount.

23. There are no special reports published about the operations of the royal mint.

MOROCCO.

Answers to interrogatories, 1908.

1, 2, and 3. Amount of gold and silver coined and coinage executed for other governments during calendar year 1908: None.

4 and 5. Amount of fine gold and fine silver used in industrial arts during 1908: None.

6 and 7. Imports and exports of gold and silver during 1908: None, either imported or exported.

8 and 9. Amount of United States gold coin imported and deposited at mint and melted: None.

10 and 11. Gold and silver produced from mines of the country or colonies of the country during 1908: None; no mines of any kind exist in the country.

12 and 13. Output of gold and silver from refineries of the country during 1908: None.

14. Approximate stock of gold coin and bullion in the country at the close of the calendar year 1908: There is no gold in circulation nor in stock as far as known.

15. Approximate stock of silver coin and bullion in the country at the close of the calendar year 1908: Impossible to give an exact amount; approximately 6,000,000 Moorish silver and 1,000,000 Spanish dollars are in circulation in Morocco.

16 and 17. No government notes in existence.

18 and 19. No bank notes exist in Morocco.

20. Answered in No. 15.

21. Premium on gold during 1908: Highest, 164 per cent; lowest, 149 per cent; average, 156½ per cent.

22. No laws except the Koran exist in Morocco, the Sultan being absolute, and no such laws exist (affecting the currency).

23. No mint exists in Morocco.

NETHERLANDS.

AMERICAN LEGATION,
The Hague, June 28, 1909.

Answers to interrogatories, 1908.

1. Amount of gold coined during the calendar year 1908: Gold ducats were coined to a nominal value of 516,914.08 florins ($207,799.46), to wit, 91,066 pieces.

2. Amount of silver coined during the calendar year 1908: Silver pieces were coined to a nominal value of 7,500,000 florins ($3,015,000), to wit:

	Florins.	
Guilders for the Netherlands	3,000,000	$1,206,000
Guilders	1,700,000	683,400
Half guilders	2,000,000	804,000
One-quarter guilders	500,000	201,000
One-tenth guilders	300,000	120,600
Total	[a]4,500,000	1,809,000

The necessary silver being obtained from melting down of large silver coins to the amount of 7,491,202.445 florins ($3,011,463.38).

3. Coinage executed for other governments during 1908: None.

4 and 5. The quantity of gold used in industrial arts may be estimated at 873 kilograms of fine gold; and that of silver at 14,094 kilograms of fine silver. Whether this was obtained from new gold, old gold, or coins can not be stated.

[a] For the Netherlands Indies.

6 and 7. Amount of gold and silver imported and exported during 1908:

Classification.	Imported.[a]		Exported.[a]	
	Florins.		*Florins.*	
Gold coin	11,020,415	$4,434,227	379,515	$152,565
Gold in bars, etc	1,221,949	491,223	7,000	2,814
Gold ore	848,346	241,035	45,845	18,430
Silver coin	1,170,671	470,610	9,058,560	3,641,541
Silver in bars, etc	423,000	170,046	12,932	5,199
Silver ore	1,500	603	1,500	603

[a] These figures are taken from the official statistics, to which, especially as far as exports are concerned, little reliance is to be attached.

8. Import of United States gold coin during 1908: Not known.
9. United States gold coin deposited at mint and melted: None.
10 and 11. The gold production of the colonies is communicated directly to the American legation by the minister of colonies. The silver production is insignificant.
12 and 13. Output of gold and silver from refineries during 1908: None.
14. Approximate stock of gold coin and bullion in the country at the close of the calendar year 1908: It is estimated that there are 47,800,000 florins ($19,215,600) in gold 10-guilder pieces in circulation, of which 31,139,710 florins ($12,518,163) were in the Netherlands Bank on December 31, 1908. At that date there was in that establishment gold coinable material, viz, in bars and foreign gold coins, to the value of 69,960,290 florins ($28,124,037).
15. Approximate stock of silver coin and bullion in the country at the close of the calendar year 1908: It is estimated that of large silver coins there is in circulation 96,050,000 florins ($38,612,100), and of small coins, 11,037,000 florins ($4,436,874). Of these amounts there was 49,003,000 florins ($19,699,206) in the Netherlands Bank in December, 1908.
16 and 17. Government notes outstanding at the end of the year 1908: None.
18 and 19. Bank notes outstanding at the end of the year 1908: On December 31, 1908, the Netherlands Bank notes in circulation represented the sum of 292,985,000 florins ($117,779,970). According to the octroi accorded to the Netherlands Bank, notes must be covered to 40 per cent of their value by coin and coinable material. At the end of the year 1908 there was 150,174,000 florins ($60,369,948) worth of metal in stock against the sum of 292,985,000 florins ($117,779,970) in bank notes in circulation.
20. Actual currency of the country: The Netherlands coinage is gold and silver. Gold is the standard coin. Silver can only be coined at the charge of the State. Large silver coin is legal tender to any amount. There is no unchangeable paper in this country.
21. There is no premium on gold in this country.
22. No laws were passed in 1908 affecting the currency.
23. The report of the mint is sent annually to the Mint Bureau at Washington.

Bank of the Netherlands, 1908–9.

[From Bankers' and Agents' Magazine, London, October, 1909.]

STOCK OF METAL.

I wish to refer to the composition of our stock of metal, which has been gradually and radically altered. Our stock both of gold and of silver amounted to £13,633,711, of which £9,579,694 was gold and £4,054,017 silver, that, is 70¼ per cent gold and 29¾ per cent silver, while at the date when the present charter came into operation, April 1, 1904, the ratio was 45½ per cent gold and 54½ per cent silver.

Since the passing of the coin-reform act of the year 1875 the situation of the Bank of the Netherlands has never been as strong as in the present time, for the compulsory cover in metal is now constantly available in gold, a situation which can not but favorably influence the credit of our State, especially with regard to foreign countries.

GOLD IN BARS AND FOREIGN COIN.

Since the coinage of silver money has been stopped we no longer hold uncoined silver, and we are holding only gold bars and foreign gold coins, which together reached a value of £6,980,794 on March 31, 1909, against £5,121,216 on April 1, 1908; thus an in-

crease of £1,859,578 in the course of the year, of which the following statement of the general movement of bullion shows further particulars:

GENERAL MOVEMENT OF BULLION IN 1908–9.

[Kilograms metal fine; value, say, £137 5s. 10d.]

SPECIE.

The gold and silver money and a small amount of divisional money held at our various offices are, under this heading, added together in the balance sheet in a total figure of £6,652,917. On April 1, 1908, we held a stock of £2,574,514 in gold, which gradually increased to £2,598,900. On the other hand our stock of silver money again decreased not unimportantly.

Formerly we have published in our report a table of the amounts of money held in the bank and at other places, based on the estimates made by the officials of the mint, but after consultation with the controller-general of the mint this table has been left out, because, in default of reliable data as to the quantities of coin lost and used in industry, we can not be certain that its figures are correct. As a matter of course the quantities of coins held in the Netherlands Bank and in the Bank of Java are known exactly, and together show the following figures:

At the beginning of the year—	Dutch silver money and divisional money.	Dutch gold money.
1888	£10,765,000	£2,182,500
1890	9,659,800	2,350,600
1895	9,195,700	2,306,800
1900	8,347,000	2,471,000
1905	8,148,100	2,740,800
1906	2,872,200	2,766,200
1907	7,398,500	2,782,200
1908	6,391,000	2,825,900
1909	6,452,000	2,808,100

NOTES.

The average amount of notes in circulation was this year £386,278 higher than in the previous year, viz, £22,204,628 in 1907–8, against £22,590,906 in 1908–9.

The highest figure was reached on November 3, 1908, viz, £24,534,785; the lowest of the year was £21,009,750 on June 22, 1908; the difference between the minimum and the maximum being nearly £3,525,000—that is, about 16.78 per cent of the lowest figure. During the last ten years, 1899–1900 to 1908–9, this difference has been on an average £3,092,336.

The circulation, month by month, is as follows:

Date.	Denomination.	Amount.
1908.		
April	Bank notes	£22,342,560
May	do	22,713,073
June	do	21,322,000

February	do	22,664,943
March	do	22,193,908
Average 1908–9		22,590,906

NORWAY.

LEGATION OF THE UNITED STATES OF AMERICA,
Christiania, May 15, 1909.

Answers to interrogatories, 1908.

1. No coinage of gold was performed during 1908.

2. Of silver there have been coined 580,000 kroner, whereof 400,000 kroner in 2-krone pieces and 180,000 kroner in 1-krone pieces.

For this purpose Norwegian coins were remelted to a total amount of about 36,700 kroner, whereas no foreign coin was employed. No coinage was executed at foreign mints.

3. No coinage was executed on behalf of foreign governments.

4 and 5. As to the weight and value of any gold and silver employed for industrial purposes information is not available.

6 and 7. According to statistical records gold and silver was imported and exported as follows:

Classification and country.	Imports.	Exports.
GOLD.		
Coins and medals:	*Kroner.*	*Kroner.*

Total	790,747	

8 and 9. No coined gold was during the year imported to the realm from the United States of America.

10. The production of native gold during 1908 is supposed to have been insignificant.

11. The Kongsberg silver mines produced from April 1, 1907, to March 31, 1908, 7,035 kilograms of fine silver. No other mines have, as far as it is known, been under regular exploitation of any significance.

12 and 13. Output of gold and silver from refineries of the country during 1908: No reliable information is available regarding gold output. The produce of the Kongsberg silver mines (under No. 11) brought in by sale 496,375.05 kroner.

14. Approximate stock of gold, coin, and bullion in the country at the close of the calendar year 1908: The only information available on this point is, that at the expiration of 1908 the stock of gold of the "Norges Bank" deposited within the realm amounted to about 29,331,600 kroner. Besides this, the bank had claims to the amount of about 2,388,100 kroner on the Copenhagen National Bank and the "Riksbank" of Sweden, and, moreover, about 16,536,200 kroner in values deposited with agents abroad. The total stock of gold of the "Norges Bank" amounted accordingly, on December 31, 1908, to about 48,255,900 kroner.

At the same date the quantity of coined gold amounted to a total of 17,117,120 kroner, whereof 2,430 kroner had been called in as depreciated by wear and other injury.

15. Approximate stock of silver, coin and bullion, in the country at the close of the calendar year 1908: The only information available on this point is that the value of silver coin in circulation amounted to 11,951,657.70 kroner, whereof, on December 31, 1908, 1,505,170 kroner were in deposit in the head office of the treasury.

16 and 17. The Government does not issue notes.

18 and 19. The notes of "Norges Bank" current on December 31, 1908, represented an amount of about 72,812,900 kroner, whereof about 24,557,000 kroner were in excess of the metallic substratum.

20. Actual currency of the country: Gold is at present the standard currency of the realm.

21. Premium on gold: The monetary unit is 1 krone, corresponding in point of value to a weight of $\frac{2}{5}\frac{5}{4}$, or 0.40323, or 1 gram of fine gold.

22. In 1908 no regulations, etc., were issued respecting the coin and monetary matters of the realm.

23. Copy of Storthing's proposition No. 1, for 1909, in which is contained a report on the working of the state's mint establishment at Kongsberg for the period of April 1, 1907, to March 31, 1908.

PORTUGAL.

AMERICAN LEGATION, *Lisbon, June 2, 1909.*

Answers to interrogatories, 1908.

1. There was no gold coined in 1908.
2. During the year 1908, 2,170,000 milreis were coined in silver coins of 500-reis.
3. Coinage executed for other governments during 1908: None.
4 and 5. Amount of gold and silver used in industrial arts during 1908: No answer obtainable.

6, 7, and 8. Imports and exports of gold and silver during 1908:

9. United States gold coin deposited at mint and melted during 1908: None.

10 and 11. Gold and silver produced from mines of the country during 1908: None.

12 and 13. Output of gold and silver from refineries of the country during 1908: None.

14. Approximate stock of gold coin and bullion in the country at the close of the calendar year 1908: 7,984,002 milreis, besides pounds sterling which have legal tender, but which can not be calculated. The amount of gold coined from July 29, 1854, to 1908, is as follows:

	Milreis.
Coins of 10-milreis	1,831,030
Coins of 5-milreis	4,923,515
Coins of 2-milreis	1,161,400
Coins of 1-milreis	68,057

15. Approximate stock of silver coin and bullion in the country at the close of the calendar year 1908: 34,380,436.400 milreis. The amount of silver coined from July 29, 1854, to 1908, is as follows:

	Milreis.
Coins of 1-milreis	1,800,000.0
Coins of 500-reis	28,487,395.0
Coins of 200-reis	2,972,040.0
Coins of 100-reis	945,270.0
Coins of 50-reis	175,522.2

16 and 17. There are no government notes issued.

18 and 19. Amount of bank notes outstanding at the end of the year 1908: 70,162,028.875 milreis. None covered by legal-tender gold and silver coin and bullion.

20. Actual currency of the country: Silver and inconvertible bank notes.

21. Gold is at a premium of between 22 and 16 per cent, which were the highest and lowest during 1908; the average premium was 18 per cent.

22. No laws were passed during 1908 affecting the currency.

23. No report is published concerning the operations of the mint.

[Translation.]

The New Portuguese Coins.

[From L'Economiste Europeen, November 13, 1908.]

They are now hastening the coinage of the new Portuguese coins, and they think there will be very little delay in putting the new 500-reis pieces in circulation.

The new coin bears upon one side the effigy of King Manuel with the legend "Emanuel II. Portug et Algarb Rex," and upon the other side the royal arms and designation of the value of the piece.

They calculate that the total coinage of the new coins can scarcely be finished under two years. There are to be struck 4,100 contos of reis,[a] in pieces of 50, 100, and 200 reis, divided as follows: 2,500 contos in pieces of 200 reis and 1,000 contos in pieces of 100 reis.

Both denominations are to be of silver of 0.835 fineness; besides 600 contos in nickel pieces of 50 reis.

They also give notice that all the pieces of 200 reis in circulation shall be retired and recoined into pieces of 500 reis; they will also retire the present coin of 20 reis, from which there shall be coined 100 contos, in pieces of 10 reis; and 50 contos, in pieces of 5 reis.

ROUMANIA.

Coins Struck During the Year 1906.

[At the royal mint of Belgium, at Brussels.]

Description and denomination.	Number of pieces.	Nominal value.
A. GOLD.		
(a) Jubilee coin for commemoration of the fortieth year of the reign of His Majesty King Charles I, coined by virtue of the law sanctioned by royal decree No. 5286 of December 19, 1905:		*Lei.*
In 20 lei	15,000	300,000
In 50 lei	8,000	400,000
In 100 lei	3,000	300,000
(b) Coins struck by virtue of the law sanctioned by royal decree No. 2259 of May 31, 1906:		
In 12.50 lei	32,000	400,000
In 25 lei	24,000	600,000
In 50 lei	20,000	1,000,000
Total	102,000	3,000,000
B. SILVER.		
(a) Jubilee coin for the commemoration o the fortieth year of the reign of His Majesty King Charles I:		
In 1 lei	1,000,000	1,000,000
In 5 lei	500,000	2,500,000
Total	1,500,000	3,500,000
C. NICKEL.		
(a) Coin struck in 1906 for the mint of Hamburg by virtue of a law sanctioned in 1905:		
In 20 bani	2,500,000	500,000
In 10 bani	17,500,000	1,750,000
In 5 bani	25,000,000	1,250,000
Total	45,000,000	3,500,000
(b) Coin struck by virtue of the law sanctioned by royal decree No. 791 of December 24, 1905:		
In 20 bani	3,000,000	600,000
In 10 bani	17,000,000	1,700,000
In 5 bani	24,000,000	1,200,000
Total	44,000,000	3,500,000

[a] A conto of reis is 1,000,000 reis, written 1,400$000. The reis is an imaginary coin of reckoning, and the milreis, or 1,000 reis, is usually written thus: 1$000; 1,000 milreis, or 1,000,000 reis, is written thus: 1,000$000.

Coin Retired from Circulation in 1906.

Description and denomination.	Number of pieces.	Nominal value.
A. SILVER.		
Worn silver coin which was used for the coinage of the jubilee coins		Lei. 1,700,000
B. NICKEL.		
Nonperforated coin struck by virtue of the law sanctioned by royal decree No. 1426 of March 21, 1900:		
In 5 bani	20,000,000	1,000,000
In 10 bani	15,000,000	1,500,000
In 20 bani	2,500,000	500,000
Total	37,500,000	3,000,000
C. BRONZE.		
Coins retired from circulation by virtue of the law sanctioned by royal decree No. 2119 of April 8, 1905:		
In 1 bani	7,000,000	70,000
In 2 bani	6,500,000	130,000
Total	13,500,000	200,000
Bronze coins of 5 and 10 bani, totally retired from circulation, which were found to have a value of		1,840,139.50

During the year of 1906 all the bronze coins of 5 and 10 bani, and the nonperforated nickel coins were retired from circulation.

They have introduced new coins of 100, 50, 25, and 12½ lei, the coins of 20 and 10 lei having already been coined in 1881.

[Translation.]

Issue of New Coins.

[From "Moniteur Commercial Roumain," official organ of the administration of manufacture and Commerce.]

The minister of finances has placed before the bureau of the chamber of deputies a plan of a law relative to the issue of new silver coins.

Following is an exhibit of the reasons which pertain to the object of the law:

The fractional silver coins put into circulation up to date amount to 89,436,608 lei, namely:

	Lei.
Five-lei pieces coined in—	
1880	9,000,000
1881	20,000,000
1882	5,500,000
1883	11,500,000
1884	1,500,000
1885	200,000
1900	344,250
1906	1,000,000
Total	49,044,250
Demonetized in 1890, the date on which the gold standard was established, and afterwards, on account of wear	25,383,850
Remaining	23,660,400
Two-lei pieces coined in—	
1873	12,356,510
1881	2,300,000
1894	1,200,000
1900	174,558
Total	16,031,068
Demonetized in 1900 and 1906 on account of wear	179,958
Remaining	15,851,110

	Lei.
One-leu pieces, coined in—	
1870	400,000
1873	9,180,000
1881	1,800,000
1884	1,000,000
1885	400,000
1894	1,500,000
1900	796,800
1906	2,500,000
Total	17,578,800
Demonetized in 1900 and 1906 on account of wear	2,341,800
Remaining	15,237,000
Fifty-bani pieces, coined in—	
1873	3,463,490
1881	500,000
1884	500,000
1885	100,000
1894	300,000
1900	1,919,000
Total	6,782,490
Demonetized on account of wear	2,031,000
Remaining	4,751,490

Of the total of 89,436,608 coins struck, 29,936,608 have been retired; there still remains 59,500,000. This amount represents the value of the coins remaining in circulation.

The wear resulting from the prolonged use of a large number of these coins, both in loss of weight and those on which it is not possible to any longer distinguish either the indication of their value or the arms of the country, in consequence of which the public can be easily deceived and the coining of counterfeit coin rendered easy.

If all this coin could be found in circulation to-day it would not be sufficient for all transactions. That insufficiency is added to by the disappearance, under various circumstances, of a good portion of the coin, as well as by the drifting off of a large amount to foreign countries.

All of these coins are to be retired from circulation and demonetized, but not the 5-lei pieces, which have resisted the wear and may still, according to the condition in which they are found, circulate without inconvenience.

The coins most worn, on account of age, are as follows:

Those of 2 lei, struck in 1873, for a value of 12,500,000 lei; those of 1 leu, struck in 1870, 1873, and 1884, for a value of 11,380,000 lei; and those of 50 bani, struck in 1873, 1881, and 1884, for a value of 4,400,000 lei, a total of about 28,280,000 lei in worn coin, which are to be retired from circulation.

It is very probable that there exists in circulation a great deal of worn silver coin issued later, and on the contrary, also, of pieces coined at times above stated, which are not worn. For those reasons, therefore, they will take into account in the demonetization the degree of wear in preference to the date of issue.

The retirement of these coins will necessitate a new issue, which will, on one hand, replace the value of those demonetized and, on the other hand, cover the expense of the coinage.

The design of the present law has been worked out to that purpose; it authorizes the minister of finances to make a coinage of 2 lei, 1 leu, and 50 bani in silver coin, to a nominal value of 32,000,000 lei, to the end of replacing in the same proportion, the worn coins of 2 lei, 1 leu, and 50 bani, which will be retired from circulation, and the difference in value to cover the expense of coinage.

The new pieces shall have the same fineness, weight, diameter, and tolerance provided in the monetary law of March 12, 1890, and shall conform to the conditions established by the Latin Monetary Union.

The present plan provides, also, that the coinage of new coins shall be made only in proportion to the demonetization or sale of the material in those demonetized.

This arrangement is found justified by the fact that the manufacture must be, for the most part, covered by the price of the material in the coin retired from circulation, and as it is not possible, in anticipation, to state exactly the amount of worn pieces, they can not coin, in the beginning, an amount for which the expense of coinage could not be covered by the value of the coins retired from circulation.

The striking of the new coins, as well as the sale of the old material in those which shall be demonetized, must be agreed to by private contract, in such manner and under conditions which the minister of finances deems suitable, and with the approval of the council of ministers.

The conditions for this coinage, not to be executed entirely, but only in proportion to the exigencies, are for the object of establishing what may be charged for similar work, besides the means by which they may be justified in intrusting it to private contract.

PLAN OF THE LAW.

ARTICLE 1. The minister of finances is authorized to make a coinage of 2 lei, 1 leu, and 50 bani in silver coin, for a nominal value of 32,000,000 lei, namely:

	Lei.
In 2-lei pieces	12,500,000
In 1-leu pieces	14,000,000
In 50-bani pieces	5,500,000

ART. 2. The fineness, weight, diameter, and tolerance of these coins shall conform in all respects to those which are provided by the law of March 12, 1890.

ART. 3. The minister of finances is authorized to retire from circulation and to demonetize worn silver pieces up to an amount of 28,800,000 and, as far as possible, in the following proportions:

	Lei.
In 2-lei pieces up to	12,500,000
In 1-leu pieces up to	11,200,000
In 50-bani pieces up to	4,400,000

ART. 4. The striking of new coins, as well as the sale of the material in those which shall be demonetized, must be made in proportion to the demonetization, by agreement, by private contract, in such manner and under conditions judged most suitable by the minister of finances, and with the approval of the council of ministers.

ART. 5. The expense necessitated by the striking of the coins, likewise that of the retirement from circulation and demonetization of the worn silver coins, shall be covered by the price of the material in the worn coins and the value of the new ones. Any benefits which should result therefrom shall be turned into the treasury as extra revenue.

THE NATIONAL BANK.

We submit the following statement of the general balance of our first financial institution, totaled to December 31, 1908:

The net profits for the last year have been 6,221,757 lei 17 bani, of which 20 per cent upon 5,501,754.17, being 1,100,351.43, have been apportioned to the reserve fund. Upon the remainder of 4,401,405.74 lei the State has taken its part of 20 per cent, being 880,281.14 lei; of the remaining portion, 7 per cent is placed to the council of administration and censorship, being 308,098.40 lei, and 1 per cent to the fund for pensions of the employees of the bank. The dividend for 1908 has been 162 lei, against 165.75 in 1907 and 148.50 in 1906.

The capital of the founding of the bank amounted to 12,000,000 lei; the reserve fund to 26,380,304.79 lei; the notes issued have been for 299,312,580 lei; the accounts current for 50,462,556 lei.

The metallic reserve was of gold 90,394,496 lei, silver 691,629 lei, and gold drafts 53,688,708 lei; bank bills, 40,248,880; Roumanian and foreign bills and acceptances, 59,224,023 lei, and public stocks (bills of exchange), 11,909,924 lei. Advances upon public funds, 12,781,300 lei; sundries, account current, and values on account, 98,109,477 lei; mortgages, 5,970,297 lei.

RUSSIA.

AMERICAN EMBASSY,
St. Petersburg, April 21, 1909.

Answers to interrogatories, 1908.

1. There was no coinage or recoinage of gold money of the Russian monetary system.

N. B. There were struck by special order 150 gold pieces bearing the inscription "25 rubles gold" (these coins contain 50 per cent more gold per ruble than the coins now ordinarily current).

The total value of these coins is 3,750 rubles gold, equal to 5,625 rubles.

There were melted at the mint:

	Rubles.
Russian coins to the value of	1,305.00
Foreign coins to the value of	4.24

2. Amount of silver coined during the calendar year 1908:

	Rubles.
Coins 0.900 fine:	
1-ruble pieces to the value of	130,409.00
50-copeck pieces to the value of	20,004.50
Coins 0.500 fine:	
20-copeck pieces to the value of	1,000,001.80
15-copeck pieces to the value of	4,350,001.35
10-copeck pieces to the value of	821,000.90
5-copeck pieces to the value of	20,000.45

There were melted at the mint Russian silver coins of 0.900 fine to the value of 124,951.10 rubles, and of 0.500 fine to the value of 1,633,391.65 rubles; and silver coins of Bokhara containing silver to the value of 30,024.87 rubles, and gold to the value of 285.91 rubles.

For the coinage mentioned above there was employed, together with other silver, that derived from the melting of Russian silver coins, especially—

	Rubles.
Coins 0.900 fine to the value of	169,652.45
Coins 0.500 fine to the value of	2,133,929.75

With this silver money 0.500 fine was coined to the nominal value of 2,349,799.00 rubles. (This sum is, of course, included in the figures indicating the amount of coinage during 1908.) No Russian money was coined in foreign mints.

3. No money was coined in St. Petersburg for foreign governments.

4. Fine gold used in industrial arts during calendar year 1908:

There were presented for stamping objects of gold of Russian manufacture, weighing 416 poods, 37 pounds, 7 zolotniks; of foreign manufacture, weighing 62 poods 41 zolotniks. Besides, in the manufacture of medals, etc., the St. Petersburg mint used 25 poods, 27 pounds, 46 zolotniks, 54 dolis of fine gold.

5. Fine silver used in industrial arts during calendar year 1908:

There were presented for stamping, objects of silver of Russian manufacture, weighing 7,501 poods, 19 pounds, 29 zolotniks; of foreign manufacture, 277 poods, 1 pound, 7 zolotniks. In the making of medals, etc., the St. Petersburg mint used 54 poods, 24 pounds, 89 zolotniks, 66 dolis of fine silver.

6. Imports and exports of gold during 1908:

Description.	Imports.		Exports.	
	Weight.	Value.	Weight.	Value.
	Poods.	*Rubles.*	*Poods.*	*Rubles.*
Ingots	734.8	15,268,000	710.4	14,967,000
Russian coin	26.0	493,000	0.5	9,000
Foreign coin	8.6	162,000	3.5	65,000

7. Imports and exports of silver during 1908:

Description.	Imports.		Exports.	
	Weight.	Value.	Weight.	Value.
	Poods.	*Rubles.*	*Poods.*	*Rubles.*
Ingots	15,961.7	9,079,000	6,446.9	3,667,000
Russian coin	77.4	40,000	6.1	3,000
Foreign coin	6,214.9	3,182,000	403.4	207,000

8 and 9. According to information given by the customs authorities, there were no imports of American gold coin into Russia. No American gold coins were melted or sent to the St. Petersburg mint for melting.

10 and 11. Amount of gold produced from mines of the country and colonies of the country during 1908:

The following quantities of gold (fine) were presented:

Items.	Poods.	Pounds.
At Government refineries	1,851	22
At private refineries	707	34
At the refinery of Barnaoul and at the mint (gold from His Majesty's domain)	17	6
Total	2,575	62

The information available as to the production of silver is too incomplete to be given; the production is relatively very small.

12 and 13. Output of gold and silver from refineries of the country during 1908:

The quantities of gold treated at the mint yielded 1,788 poods 20 pounds 39 zolotniks 6 dolis, fine.

The quantities of silver treated at the mint yielded 512 poods 19 pounds 83 zolotniks 21 dolis, fine.

14 and 15. Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1908:

On January 1, 1909, the value of the gold in the vaults and safes of the state bank was 1,218,083,008.02½ rubles.

On January 1, 1909, the value of the silver (0.900) in the vaults and safes of the state bank was 42,070,897.95 rubles.

16 and 17. There are no Government notes; the only notes in circulation are issued by the Imperial Bank of Russia, which has the exclusive right of issue of notes.

18 and 19. The amount of bank notes issued by the Imperial Bank of Russia at the end of the year 1908 was equal to 1,087,200,000 rubles, the total of the issue of notes at the same time being 1,200,000,000 rubles, and the reserve of notes 112,800,000 rubles. There are no bank notes outstanding not covered. The gold stock of the Imperial Bank of Russia on the 1st of January, 1909, was equal to 1,218,600,000 rubles, whereas at the same time the amount of outstanding bank notes requiring to be covered (in accordance with the monetary law of the 29th of August, 1897) was equal to 787,200,000 rubles only, this latter figure being the result of subtraction of the amount of bank notes which do not, in accordance with the above-mentioned law, require to be covered (i. e., 300,000,000 rubles), from the total amount of outstanding bank notes. It will be seen from the above that the gold stock exceeded the outstanding notes, as in accord with the acting monetary law, to the amount of 431,400,000 rubles.

20. Actual currency of the country: On January 1 there was in circulation:

	Rubles.
Gold	560,800,000
Silver	110,200,000
Credit notes	1,087,200,000

21. There was no premium on gold in bullion or coin.

22. There were no new monetary laws.

23. The mint publishes no report.

NOTE.—One pood=16.380496 kilograms; 1 pood=40 pounds (36.112808 pounds, avoirdupois); 1 pound=96 zolotniks; 1 zolotnik=96 dolis.

SPAIN.

AMERICAN LEGATION,
Madrid, March 25, 1909.

Answers to interrogatories, 1908.

1, 2, and 3. No gold or silver was coined and no coinage executed for other governments during 1908.

4 and 5. Weight of fine gold and fine silver used in industrial arts during the calendar year 1908: Not known.

6. Imports and exports of gold during 1908:

Classification and country.	Imports.		Exports.	
Gold bullion:	*Grams.*	*Pesetas.*	*Grams.*	*Pesetas.*
France	52,000	187,200	6,600	23,760

Italy	9,770	1,954	40,000	8,000
Morocco	2,401,145	480,229		
Total	17,931,110	3,586,222	11,438,000	2,287,600

8 and 9. Import of United States gold coin, and United States gold coin deposited at mint and melted during 1908: None.

10, 11, 12, and 13. Amount of gold and silver produced from mines of the country and output from refineries of the country during 1908:

No gold was produced in Spain in 1908. The silver produced in Spain in 1908 amounted to 129,881 kilograms; its value at the mines was 12,663,803 pesetas. The production came from the silver mines of Hiendelaencina (Guadalajara), and from argentiferous lead mines.

From the Spanish possessions in Africa no production of silver is reported.

14 and 15. Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1908: Gold does not circulate in the country, owing to the fact that it is at a premium over silver and bank notes. The Bank of Spain keeps in reserve as a guaranty for its notes, 420,127,707.44 pesetas in gold and 52,962,791.17 pesetas belonging to the public treasury. The other banks have this metal only in amounts of trifling importance.

The silver which circulates in the country in money and in bars deposited as guaranty amounts approximately to 920,000,000 pesetas, of which the Bank of Spain keeps in its vaults as a guaranty of the notes it has issued, 609,992,986.28 pesetas.

16, 17, 18, and 19. No paper money has been issued by the Government. Amount of bank notes, 1,645,030,025 pesetas, issued by the Bank of Spain, which alone has authority to issue notes. The amount of bank notes in circulation exceeds by 414,864,331.28 pesetas the metallic reserve (gold and silver), but the securities on deposit more than cover this amount.

20. Actual currency of the country: Over 2,900,000,000 pesetas.

21. Premium on gold: The highest price was 14.80 per cent; the lowest, 10.70 per cent; and the average, 12.75 per cent, during 1908.

22. Laws passed during 1908 affecting the currency: None.

23. No report on the operations of the mint was published.

SWEDEN.

AMERICAN LEGATION,
Stockholm, May 17, 1909.

Answers to interrogatories, 1908.

1. Gold coinage: During the year 1908 no gold was coined at the royal mint. During the year the following amounts of worn and mutilated Swedish gold coin were melted:

Denomination.	Number of pieces.	Value.
		Crowns.
20 crowns	2	40
10 crowns	32	320
5 crowns	8	40
Total	42	400

2. During the same year the following amounts of silver were coined:

Denomination.	Number of pieces.	Value.
		Crowns.
1 crown	325,158	325,158
25 öre	2,008,044	501,261
10 öre	3,663,890	366,589
Total	5,996,092	1,193,008

During the year the following amounts of worn and mutilated Swedish silver coin were melted:

Denomination.	Number of pieces.	Value.
		Crowns.
2 crowns	734	1,468.00
1 crown	6,1287	6,128.00
50 öre	14,420	7,210.00
25 öre	357,677	89,419.25
10 öre	283,622	28,362.20
Total	662,576	132,582.45

No coinage for Sweden at foreign mints.

3. No coinage was executed for foreign governments.

4 and 5. At least 700 kilograms of fine gold and 8,000 kilograms of fine silver was used in Sweden during 1908 for industrial purposes. It is impossible to state how much of this was old gold, gold coin, old silver, or silver coin.

6 and 7. Imports and exports of gold and silver during 1908:

Classification.	Imports.		Exports.	
	Weight.	Value.	Weight.	Value.
GOLD.	Kilograms.	Crowns.	Kilograms.	Crowns.
Gold coin		9,219,326		
Unwrought gold	333			
Scrap gold	3		6	
Wrought gold (wire)	19			
Other wrought gold	145		1	
Total	500	9,219,326	7	
SILVER.				
Silver coin		349,838		
Unwrought silver	16,294			
Scrap silver	73		136	
Wrought silver:				
Plate	244		179	
Wire	298			
Other wrought silver	2,942			
Total	19,851	349,838	315	

In regard to the import and export of gold and silver ore, statistics give no information, since this article is included under the general heading "Minerals, other kinds, not specified."

8 and 9. No import of gold coin from the United States in 1908, and no gold coin from the United States has been deposited at the mint for melting.

10. Gold produced during 1908: 21.829 kilograms of gold was produced from the mines of Sweden in 1908. The value of 1.108 kilograms thereof was not given, but the value of the remaining 20.721 kilograms is 49,970 crowns. Sweden has no colonies.

11. Silver produced during 1908: 1,111.288 kilograms of silver was produced from the mines of Sweden in 1908. The value of 426.030 kilograms thereof was not given, but the value of the remaining 685.258 kilograms is 41,882 crowns.

12 and 13. There are refineries in Partilled (Gothenburg) and Hälsingborg, which refine filings and other waste from goldsmiths and other artisans, but their production is not known.

14. The approximate stock of gold in Sweden at the close of the year 1908:

	Crowns.
Gold coin struck in Sweden since the introduction of the coin reform of 1873	85,383,095.00
Gold (Scandinavian) held by the banks at close of 1908	44,031,495.00
Gold coin in circulation at close of 1908	12,000,000.00
Sum total of all current gold coin in Sweden at close of 1908	56,031,495.00
Foreign gold coin, not current in Sweden, and gold bullion held by the banks at the close of 1908	34,503,007.95
Total	90,534,502.95

which constitutes the approximate value of Sweden's stock of gold, coined or uncoined, at close of 1908.

15. The approximate stock of silver, in coin and bullion, at the close of 1908 was as follows:

	Crowns.
In circulation, about	27,200,000
In the banks and the mint	4,397,100
Silver bullion, etc., in mint (same value as coin)	870,000
Total	32,467,100

16 and 17. The Government issues no notes.

18 and 19. At the close of 1908 the value of the notes of the Swedish Riksbank in circulation was 201,489,727 crowns. Private banks have long ago been deprived of the right to issue notes.

The amount of uncovered bank notes in circulation, that is to say, bank notes over and above the value of the stock of gold in the vaults of the Riksbank amounted, at the close of the year to 123,293,568 crowns. In this amount are included the bank notes which the Riksbank is entitled to issue against balances on running account with foreign banks, and other securities.

20. The standard currency of Sweden is gold. Subsidiary coin of silver, or bronze is legal tender only for very small amounts. All notes issued by the Riksbank are redeemed in gold on demand.

21. There is no premium on gold in Sweden.

22. Law passed in 1908 affecting the currency of Sweden hereunto annexed.

23. The annual official report of the director of the mint is not printed.

SWITZERLAND.

AMERICAN LEGATION,
Berne, March 26, 1909.

Answers to interrogatories, 1908.

1. Amount of gold coined during calendar year 1908:

Coinage.	Pieces.	Francs.
On account of the Confederation:		
20-franc pieces	200,000	4,000,000
On account of the Swiss National Bank:		
20-franc pieces	155,000	3,100,000
Total	355,000	7,100,000

No recoinage of gold pieces.

2. Amount of silver coined during calendar year 1908:

Coinage.	Pieces.	Francs.
2-franc pieces	200,000	400,000
1-franc pieces	1,200,000	1,200,000
50-centime pieces	800,000	400,000
Total	2,200,000	2,000,000

The federal mint at Berne, which has executed the above coinage, has, in 1908, recoined 200,000 5-franc pieces of the old type (Helvetia seated), to the value of 1,000,000 francs.

The old issue of 5-franc pieces with the effigy of Helvetia seated, was of 2,126,000 pieces. To the end of 1908, 1,527,000 of the old ecus had been coined into the new effigy with the legend in relief; there remains, therefore, 599,000 pieces to be remelted.

No minting was done for us in another country.

3. The federal mint did not execute any coinage for a foreign government in 1908.

4. The weight of fine gold used in 1908 by the Swiss industry is valued at about 10,200 kilograms. For lack of information it is impossible to specifiy here the quantity of new gold, old gold, and of gold coins used for industrial purposes. Yet it may be possible that a considerable quantity of new gold coins of full weight have been melted.

5. As regards the fine silver used in 1908 by our industry, its total weight is valued at about 69,000 kilograms. In view of the low value of silver it is to be presumed that silver in bullion or scraps was melted for industrial purposes.

6 and 7. Imports and exports of gold and silver during 1908:

Classification.	Imports.		Exports.	
	Weight.	Value.	Weight.	Francs.
	Kilograms.	*Francs.*	*Kilograms.*	*Francs.*
Gold and silver thread			224	538,698
Gold and silver thread tissue and gold and silver leaves			12	8,305
Scraps, ashes, and clinkers of precious metals without distinction of metal	431,351	895,709	153,961	705,142

Classification.	Imports.		Exports.	
	Weight.	Value.	Weight.	Value.
	Kilograms.	*Francs.*	*Kilograms.*	*Francs.*
Gold coins	6,428	19,930,683	4,174	12,940,571
Silver coins	134,484	26,896,763	42,125	8,424,982
Gold bullion	14,744	50,911,032	2,935	10,093,103
Silver bullion	81,407	9,117,584	23,933	2,232,282
Waste and scrap without distinction of metal	431,351	895,709	153,961	705,142
Gold, silver, and platinum rolled into strips	648	618,733	1,480	2,114,788
Gold and silver wire and thread	405	316,896	224	538,698
Gold and silver tissue and silver beaten into thin leaves	224	179,913	12	8,305
Gold and silver plated ware	44,977	1,005,661	409	21,501
Gold and silver ware	10,771	2,151,507	1,149	301,832
Fine jewelry	6,189	7,255,297	3,265	10,644,785

8 and 9. To our knowledge, no direct importation of gold coins was made to Switzerland. The American gold brought to this country by tourists can not be valued, travelers being submitted to no customs inspection at the frontier as concerns the money in their possession. The federal mint did not melt any American gold coins in 1908.

10 and 11. Switzerland does not possess any gold or silver mines.

12 and 13. Output of gold and silver from refineries of the country during 1908: For lack of information it is impossible to answer these questions.

14 and 15. Approximate stock of gold and silver in the country at the close of the calendar year 1908: The cash in the Swiss banks of emission, including the National Bank, was, on December 31, 1908:

	Francs.
Gold	149,862,283.60
Silver	9,195,600.00

According to a new estimate prepared by a specialist, there exists in Switzerland a stock of 180,000,000 francs in gold and 70,000,000 francs in silver (5-franc pieces and small silver coins).

16 and 17. In ordinary times the Federal Government issues no government notes.

18 and 19. On December 31, 1908, the circulation of bank notes of the National Bank and of the other Swiss banks of emission amounted to 277,709,900 francs. The amount of notes not covered by gold or silver was, on December 31, 1908, 107,024,317 francs.

different with the thaler, which is subject to perpetual fluctuations, as one can judge by the following table:

Value of the thaler in the Oman in 1907-8.

September 1, 1907	170 rupees for 100 thalers
November 1, 1907	154 rupees for 100 thalers
December 1, 1907	149 rupees for 100 thalers
January 1, 1908	150 rupees for 100 thalers
February 1, 1908	143 rupees for 100 thalers
March 1, 1908	136 rupees for 100 thalers
April 1, 1908	136 rupees for 100 thalers

As may be seen, since September, 1907, up to April, 1908, there has been a considerable decline in the thaler. They are held on to by the Hindoo merchants ("banians"), who, in the absence of a governing bank regulation, are veritable masters of the market, speculating according to the opportunity upon the value of the silver. Their course, therefore, is extremely variable and transactions with European merchants are thereby rendered much more difficult.

What is said of the thaler applies with stronger reason to the fractional coin of the Oman, the "bessa," a copper coin with the image of the Sultan Seyyid Feysal-ben-Turki, the value of which is one-fourth anna. Their variations oscillate between 150 and 200 bessas to the rupee and are, so to say, daily.

CHINA.

AMERICAN CONSULATE,
Foochow, January 29, 1909.

Answers to interrogatories, 1908.

1 and 2. Amount of gold and silver coined during 1908: None.

3. Coinage executed by other governments during 1908:

COPPER COINED.

Denomination.	Number of pieces.	Weight.	Value.
		Catties.	*Haikwan taels.*
1 cash	10,308,500	17,717	6,311
2 cash	1,685,000	4,212	2,063
10 cash	134,400,000	1,680,000	822,773
Total	146,393,500	1,701,929	831,147

Amount of recoinage: None.

NOTE.—One and one-third pounds=1 catty=16 taels=160 mace=1,600 candareens. One 1-cash piece weighs 2¼ candareens; one 2-cash piece weighs 4 candareens; one 10-cash piece weighs 2 mace; one haikwan tael=1,633.5 cash; 1 haikwan tael=0.415 and 1.5384=$0.64 United States gold.

4. Weight of fine gold used in industrial arts during 1908:

	Catties.
New gold	78
Old gold	312
Total	390

Amount of coins: None.

NOTE.—In Foochow there are 6 goldsmith establishments, in each of which an average amount of 65 catties of gold is used a year.

5. Weight of fine silver used in industrial arts during 1908:

	Catties.
New silver	200
Old silver	1,925
Total	2,125

Amount of coins: None.

NOTE.—There are about 300 silversmith shops, each using 6½ catties, on average, a year, and 20 jewelry stores, each using 62½ catties, on average, a year.

Copper used during 1908.

	Piculs.
New copper	1,800
Old copper	4,800
Total	6,600

Amount of coins: None.

Total	418,455

16, 17, 18, and 19. Amount of government and bank notes outstanding at the end of the year 1908:

Amount of bank notes of each foreign bank—i. e., the Hongkong and Shanghai banking corporation, the Russo-Chinese Bank, etc., in each city, issued and outstanding in your consular district:

The Bank of Taiwan, a Japanese institution, has issued a small amount of Japanese dollar (or yen) notes and some local dollar notes (7 mace a dollar). As native business men have boycotted the Japanese bank notes, there is but a very small amount of such notes outstanding, perhaps no more than $10,000 yen notes and $6,000 local "7 mace" notes. Other foreign banks do not issue any bank notes in Foochow. About 1 per cent of the currency in circulation is composed of foreign bank notes.

NOTE.—No report has ever been published on the government finances nor on the native banking business. The above information was obtained from some reliable and experienced native bankers.

There is no such rule in China as legal tender to cover the notes.

Among about 47 native banks, there are only seven on the Heishang street that keep silver dollars on hand to meet the cashing of their notes. The rest simply keep the notes issued by these seven banks instead of silver dollars.

20. Assuming the United States gold dollar as a standard, give a record, by months, of the fluctuations in the actual value of the Mexican silver dollar, the tael, subsidiary silver and copper coins for the calendar year 1908:

One United States dollar is equal to amount designated opposite a given month.

Month.	Mexican silver dollars ("chopped").	Haikwan taels.	Subsidiary silver coins in 10-cent pieces.	Copper coins in 10-cash pieces.
1908.

December	2.5113	1.6323	26.2431	284.3211

22. Laws passed during 1908 affecting the currency: On April 5, 1908, the Foochow local authorities issues a proclamation compelling the public (bankers, traders, etc.), to accept "chopped" or defaced small silver coins at their face value, as well as clean ones. (Copy of the proclamation herewith, also translation of its main points.)

23. No report is published on the operations of the mint.

Translation of a prescript issued by the Foochow local authorities regarding the defaced subsidiary silver coins:

Ch'ên, Hsai-pu magistrate, acting Foochow subprefect; Yüan, an expectant "military" prefect, acting Min. magistrate of Foochow; and Ch'ên, holding the fourth official rank and acting Hou Xuan magistrate of Foochow, all wearing the decoration of peacock feather, issued the following prescript:

Some time ago it came to our knowledge that attempts were being made at the market to refuse certain subsidiary silver coins or take them only at discount. Thereupon we issued a joint prescript against such practice, declaring that all subsidiary silver coins, defaced as well as clean, be accepted at their face value.

This order as reported has been observed by all establishments doing banking business, except a certain money-exchange shop styled "Tung-i," which has in defiance to this order continued to charge such discount. We have summoned Lin Chin-wang, an employee of the said shop, to court for punishment, so as to set up a warning to others.

We are now in receipt of a petition from T'sai Chên-ching, a committee, and Ch'êng Wen-pin, chairman of the banking association, saying that these defaced subsidiary silver coins are brought to Foochow from Shanghai and other places and distributed among the business men by the great banks on the Hsia Hang street; that the little scratch or cut on the small coins is really of no importance, but shopkeepers follow each other's example in refusing such defaced coins, thus causing much impediment to the circulation of such coins; and the money-exchange shops are willing to comply with the order, but they fear that the pawn shops, great banks, and other business houses will not accept such coins, and for this reason they beg that another proclamation be issued to enforce the order.

Besides giving them a reply and commanding constables and tipao to promulgate this order, we deem it necessary to issue this prescript for general information, that pawn shops, bankers, business houses, soldiers, and other classes of people obey this order and accept all subsidiary silver coins, defaced as well as clean, provided that they are genuine, and never charge any discount therefor. Violators, when found, will be arrested for punishment and their property attached.

Let all respect this order.

Issued on the fifth day of the third moon, thirty-fourth year of Kwang-hsu (April 5, 1908).

AMERICAN CONSULATE-GENERAL,
Tientsin, September 2, 1908.

SIR:

* * * * * * *

I have the honor to inclose monthly averages for the first eight months of the year 1908 for the haikwan tael and for the first seven months for bar silver and bank bills.

I have the honor to be, sir, your obedient servant,

E. T. WILLIAMS,
Consul-General.

The SECRETARY OF THE TREASURY,
Washington.

The monthly average value of the haikwan tael in United States money for the first eight months of the present year has been as follows:

January	$0.65¾
February	.67¼
March	.67¼
April	.67¼
May	.67¼
June	.64¾
July	.65-⅛
August	.65¼
	.64.1

Messrs. Doney & Co., brokers of this port, published the following report on exchange on August 8, 1908:

EXCHANGE.

The silver market has declined during the period under review (July) and the metal is to-day quoted 24 1/16d., as against 24 1/16d. on July 10. Exchange has followed

silver, and it would appear as if a further decline may be expected. T. T. (Tientsin tael) is quoted $\frac{5}{16}$–$\frac{3}{8}$ current to China New Year, and four months' credits are negotiable at $\frac{7}{16}$–$\frac{1}{2}$, August–September, and $\frac{1}{16}$d. up per month until end of year. Tientsin tael on Japan is quoted 83½, with thirty days' paper 82½.

The banks drawing rate on Shanghai continue steady at 104.1. The market rate is quoted 104.35. Rates are to-day $\frac{1}{16}$d. per tael below the laying-down cost of silver. We append our usual monthly averages:

Month.	Bar silver.	Bank bills.	
		On demand.	Four months' credit.
1908.	*Pence.*	*Pence.*	*Pence.*
January	25⅛	25/16–25/16	25/16–25/16
February	25⅛	25/16–25/16	25/16–25/16
March	25⅜	25/16–25/16	25/16–25/16
April	25⅜	25/16–25/16	25/16–25/16
May	24⅞	25/16–25/16	25/16–25/16
June	24⅝	25/16–25/16	25/16–25/16
July	24⅞	25/16–25/16	25/16–25/16

Attention is called to the rate given for the Hongping tael in the customs tables, i. e., 107 Hongping taels for 100 haikwan. The Hongping is the business man's standard, known otherwise as the "Tientsin tael." The rate up to March 1, 1908, has for many years been 105 Hongping to 100 haikwan. On February 15 last the customs authorities announced that, owing to the deterioration in the quality of silver sycee (i. e., bullion), the so-called "Hua Pao sycee" nominally 0.992 fine, such sycee would no longer be received at its nominal value; but that after March 1 duties would be required to be paid in the equivalent of 0.992 silver, and on March 5 a second notification fixed a general rate of 107 Hongping Hua Pao sycee to 100 haikwan. Foreign merchants have protested against the payment as being a real increase of 2 per cent in the duties, and hold that they ought not to be made to pay a deficit which is due to careless supervision upon the part of the authorities, and which the latter could easily recover from the issuing shops. The matter is still under consideration. In explanation, it should be said that the term "Hongping" merely indicates the scale on which the silver is weighed, and that the terms "Hua Pao," "Pai Pao," etc., indicate the fineness. Silver sycee is not issued by the Government, but by private melting hongs, but at most ports the issue is supervised by the Government, which maintains an assay office whose stamp must be on the sycee before it can obtain circulation. The name of the issuing hong is also stamped on the bullion and its fineness indicated. Since 1900 there has been no supervision of the issues of sycee here apparently, but even before that date there was no public assay office. The result has been a gradual debasement of the sycee, which forms the bulk of the currency at this port. The foreign merchants have been urging the Taot'ai to establish a public assay office, so as to prevent further debasement, but, although the Taot'ai has promised to do so, six months have now passed without anything being done in that direction, and the melting hongs are not even licensed, so that there is no guaranty that the silver will not become still more debased and a further discount become necessary.

It should also be mentioned that the Mexican dollar has almost entirely disappeared from the market here and been replaced by the local Chinese dollar. The change is due to the fact that, while the new dollar is nominally of the same weight and fineness as the Mexican, as a matter of fact it has also progressively deteriorated and has therefore driven the better coin elsewhere.

AMERICAN CONSULATE-GENERAL,
Tientsin, December 9, 1908.

SIR:

* * * * * * *

In my report, sent October 10, I inclosed a copy of a notification issued on September 28 by the commissioner of customs rescinding the notices issued in February and March last by which the rate at which the Hua Pao sycee could be received in payment of duty was fixed at 1.07 Hongping taels for 1 haikwan tael and restoring on and after October 1 the old rate of 1.05:1.

Shortly after the notification of September 28 the customs Taot'ai sent a note to the consular body, promising to establish an assay office to superintend the issue of the sycee. This was done, the office being opened on October 3. It was placed, however, under the direction of the Chinese chamber of commerce, and 14 native bankers were appointed to superintend the assaying in turn. The Tientsin tael, it was agreed, should remain as heretofore, 0.992 in fineness, and shoes of silver were to be issued of this standard. I inclose a copy of the regulations adopted.

It appears from the Taot'ai dispatch that previous to 1900 there were over 40 hongs engaged in melting sycee, but owing to losses during the Boxer troubles more than 30 have been compelled to close. Originally, these melting hongs were required to obtain a license from the Taot'ai, but since 1900 the regulation has not been enforced, and this has given occasion for the debasement of the sycee and the consequent discount of Tientsin currency.

It was hoped that the restoration of the normal rate of exchange and the establishment of a public assay office would relieve the situation, but the foreign banks hold a large amount of the sycee alleged to be debased. Although said to be debased, much of this silver has the stamp of the melting hongs and is marked 0.992, and the foreign banks think the local government ought to receive it at its face value, since it is the duty of the Taot'ai to supervise the issue of silver, but the Customs Bank refuses to accept anything except sycee bearing the stamp of the assay office. The melting hongs are issuing very little silver, and the native banks, who have possession of most of that which has passed the assay office, will not part with it except at a premium of one-half per cent. The result is that foreign merchants are still unable to pay customs dues at the old rate of 1.05:1, but pay really 1.055, and the foreign banks can not get rid of the old sycee in their vaults, except at the value of the pure silver in it. The amount of this sycee is estimated at about 1,500,000 taels, nominal value. What its real value is is unknown.

A deadlock exists at present, therefore, but the bankers, the merchants, the Chinese authorities, and the consular body are working at the problem, and it is hoped that by a compromise a satisfactory solution may be reached. Once the old silver is remelted and passed by the assay office, the Tientsin tael will be restored to its old-time standing.

In my report of October 10 last I called attention to the inferiority of the local dollar as compared with the Mexican. It still remains, as then, at a discount of about 2 per cent. The Mexican, indeed, is no longer to be had.

I have the honor to inclose a copy of a table showing the result of an assay made of two lots of these local dollars by the Labaratoire de la Monnaie, in Paris. The second lot was first tested by Mr. Loup here. The pieces marked "Tai Ching Ti Kuo" are the new dollars issued by the imperial mint as distinguished from the provincial dollars.

The subsidiary silver of the denominations 5 cents, 10 cents, and 20 cents do not have their exchange value guaranteed, consequently it requires $1.10 in small silver to buy a silver dollar.

The copper cents are also token coins, and have become depreciated through overissue, so that it requires $1.25 in 1-cent pieces to purchase a silver dollar.

I have the honor to be, sir, your obedient servant,

E. T. WILLIAMS,
American Consul-General.

The SECRETARY OF THE TREASURY,
Washington, D. C.

NATIVE CURRENCY.

I have the honor to make known to you the results in weight and fineness obtained by the laboratory of the mint, the assays having been made by the wet process, and the weights determined by the Curie balance.

Copy of the thirteen concise provisional regulations drawn up by the Tientsin Chamber of Commerce.

(1) The object of the assay office is to regulate the market (silver market), and its sole duty is the assaying of silver.

(2) In accordance with the instructions of the customs taot'ai, the assay office is to be tried for a period of three months, after which a report is to be made to that official.

(3) The standard for assaying is to be 0.992. If the fineness of the silver is greater than this it is to be so indicated (on the sycee); if less, the difference must be made up.

(4) Assayed silver is to be taken at the standard indicated by the mark of fineness stamped upon it, and after this fineness has thus been determined, the silver will pass among Chinese and foreign officials and merchants alike.

(5) Small pieces of silver (remnants), after being assayed, should be sent to the melting hongs to be melted into sycee, in order to prevent fraudulent charges.

(6) The chamber of commerce has taken the lead in this matter of an assay office, and the president and vice-president of that body should have charge of the assaying.

(7) The bankers shall choose from among their own number fourteen men who shall have charge of the assaying in turn. These men must attend to the work in person, and must not shirk their duty, but must give their whole attention to their task.

(8) Silver that has been assayed incorrectly can not be used, and the assayer must make up the difference. If any one protests the valuation of the assayer, he must request the chamber of commerce to watch the melting of the silver, and if it has been assayed correctly he must pay a fine.

(9) In the matter of the seal and the estimate of value of the assay office, the greatest caution must be exercised. If either seal or estimate is counterfeited, or if one of the assayers attempts to practice jobbery, upon discovery the chamber of commerce must be requested to hand the offender over to the officials for examination and punishment.

(10) For every shoe of sycee melted a tax of two copper cents must be collected to cover the expenses of the assaying.

(11) All the people employed in the assay office, both managers and assistants, must be recommended by the merchants at large, and must be required to furnish satisfactory guarantors as a measure of precaution.

(12) For the time being, the assay office is to be opened in the front courtyard of the chamber of commerce, and after a suitable place has been selected the matter of a transfer can be considered.

(13) These regulations are drawn up for the purpose of establishing an assay office. If they are found to be incomplete they can be revised and the approval of the customs taot'ai sought for the revision.

AMERICAN CONSULAR SERVICE,
Mukden, March 13, 1909.

Answers to interrogatories, 1908.

1, 2, and 3. No gold or silver was coined, or coinage executed for other governments during 1908.

4. The weight of fine gold used in the industrial arts in Mukden during 1908 was 3,887.33 ounces troy. This was all, as far as known, new gold, no old gold or coins being thus employed.

5. The weight of fine silver used in the industrial arts during 1908 was 169,746 ounces troy. This was all, as far as is known, new silver, no coins being used.

6. The amount of gold bullion imported during 1908 was 6,705 ounces troy, valued at 220,800 haikwan taels. There was no importation of gold coins or ore reported. There was no exportation of gold reported.

7. The value of silver coins and bullion (sycee) imported during 1908 was 11,000,000 haikwan taels. There was, in addition, an importation of 3,000,000 taels in the form of commercial remittances. No silver ore was imported. The export of silver coins and bullion for the year 1908 amounted to 3,000,000 haikwan taels in aid of revenues of the provinces of Kirin and Heilungchiang, and 1,000,000 taels in the form of commercial remittances. No silver ore was exported.

8 and 9. No importation of United States gold coins during 1908 were reported, and no United States gold coin was deposited at the mints and melted.

10 and 11. There is no available data as to the amount of gold produced from the mines of this region during 1908. Thus far there has been no organization of the mining industry of this district, and whatever mining there is is done by individuals over whom and over whose product the Government exercises little or no control. The Government knows nothing as to the output of gold from year to year.

14 and 15. Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1908: By deducting the amount of gold consumed in the industrial arts from the amount imported, there would appear to be a balance of 2,817.67 ounces troy on hand at the close of 1908. By the same process there was 10,000,000 haikwan taels' worth of silver in the district at the end of 1908.

NOTE.—It is obvious that the figures in the replies to 14 and 15 do not accurately represent the actual amounts of these metals in the district, but only the balance of the metal brought into the district during 1908 and remaining on hand at the close of the year. These figures take no account of the amounts of gold and silver on hand at the beginning of 1908.

16, 17, 18, and 19. The amounts of government notes, by denominations, issued in Mukden during the four years 1905, 1906, 1907, and 1908 were as follows:

Denomination.	1905.	1906.	1907.	1908.	Total
10 dollars	$1,500,000			$800,000	$2,300,000
5 dollars	1,000,000			700,000	1,700,000
1 dollar	1,000,000	$750,000	$450,000	1,000,000	3,200,000
50 cents	1,000,000	350,000	95,000	300,000	1,745,000
20 cents	300,000	150,000	55,000	300,000	805,000
10 cents	200,000	75,000	25,000	150,000	450,000
Total	5,000,000	1,325,000	625,000	3,250,000	10,200,000

As shown by the above table, the government bank of Mukden has issued during the four years of its existence $10,200,000 worth of notes. These are silver "small coin" dollars—i. e., $1 equals 100 cents of subsidiary silver coins.

There has been no attempt to redeem, nor has there been any considerable amount of these notes withdrawn from circulation, so that the amount of outstanding Mukden government notes at the close of 1908 was approximately $10,200,000 (small coin), which, at the average rate of $1 equals 40 cents United States gold, is equivalent to $4,080,000 United States gold.

During the year 1908, also, the provincial government's mint at Mukden coined 27,000,000 copper 10-cash pieces, the value of which was 150,000 haikwan taels, and 15,000,000 20-cash pieces of the value of 166,666 haikwan taels. No coins, either domestic or foreign, were melted, and no coinage was executed at foreign mints.

In addition to the above the government bank of Kirin Province issued approximately 80,000,000 of "tiao" notes, all of which were in circulation at the close of 1908. The "tiao" represents 500 "copper cash," and when these notes were first put into circulation the rate of exchange was 5 tiao per small-coin dollar (a small-coin dollar at that time being worth approximately 42 cents United States gold).

The total amount of government notes in the district and outstanding at the close of 1908, expressed in United States currency, was, therefore, approximately $10,480,000.

The amount of government bank notes outstanding and not covered by legal tender during the year 1908 is impossible to determine. The bank officials claim that their various note issues are fully covered by legal tender, either in the form of silver bullion (sycee) or copper coins, but it is evident that such is not the case. The paid-up capital of the provincial government's bank of Mukden at the end of 1908 was 4,324,324 haikwan taels. In addition to this amount of paid-up capital, the bank claims to have a special reserve of 358,558 haikwan taels. Granting that these two accounts, totaling 4,682,882 haikwan taels, are in such form as to act as security against the bank's outstanding notes, there are still 1,885,918 haikwan taels' worth of unsecured bank notes

Classification and country.	Imports.		Exports.	
	Weight.	Value in United States currency.	Weight.	Value in United States currency.
Silver bullion:	*Pounds.*		*Pounds.*	
Europe	389,976	$2,659,510	156,220	$1,065,377
America	254,820	1,737,788	3,205	21,858
Batoum			4,150	28,354
India			75,770	516,721
Straits Settlements	90	606	32,780	224,222
Hongkong	59,230	403,926	1,640	11,213
Japan	4,905	33,448	23,520	160,413
Korea			323	2,203
Vladivostok			16,995	115,897
Total	709,021	4,835,278	314,603	2,146,258

8 and 9. The statistics show that no United States gold coins were imported into Shanghai in course of trade. The only coins coming here were brought by tourists and it is not possible to secure any figures as to their value. There was no United States gold coin deposited at the mints and melted.

10 and 11. There was no gold or silver produced in this consular district.

12 and 13. There was no output of gold or silver from refineries in this consular district.

14 and 15. Unable to secure statistics regarding the approximate stocks of gold and silver in the country.

16 and 17. There were no government notes in circulation during 1908, but quasi official banks circulated paper money in Shanghai to the value of about 800,000 haikwan taels ($542,590 United States currency). Unable to secure statistics as to denominations. None of the notes of the quasi official banks in circulation have reserves held against them.

18 and 19. As far as ascertainable, private Chinese banking institutions circulated paper money in Shanghai to the value of about 575,000 haikwan taels ($377,049 United States currency), which, added to the circulation of the quasi-official banks, makes a circulation of native bank notes of 1,375,000 haikwan taels ($901,639 United States currency). Unable to secure statistics as to denominations. None of the notes of private banking institutions have reserves held against them.

20. Actual currency of the country: There are no statistics compiled on this point. The principal circulating media are silver (Mexican) dollars and subsidiary coins of silver and copper minted in native mints. There are notes also in circulation issued by the several foreign banks located here and the private and quasi official Chinese banking institutions.

21. Premium on gold. The following table shows the relative value during 1908 between a United States gold dollar and the several metal coins in circulation:

Months.	Mexican silver dollars.	Haikwan taels.	Subsidiary silver coins in 10-cent pieces.	Number of copper 10-cash pieces.
1908.				
January	2.23	1.44	2.43	267.30
February	2.22	1.44	2.44	268.40
March	2.25	1.46	2.47	271.70
April	2.27	1.47	2.50	275.00
May	2.36	1.54	2.60	286.00
June	2.32	1.51	2.55	280.50
July	2.33	1.51	2.56	281.60
August	2.37	1.54	2.60	286.00
September	2.38	1.56	2.62	288.20
October	2.38	1.56	2.63	289.30
November	2.45	1.61	2.70	297.00
December	2.50	1.65	2.75	302.50

22. Laws passed during 1908 affecting the currency: During the month of September, 1908, His Excellency Ts'ai Nai Huang, customs taotai at Shanghai, acting under instructions from His Excellency Tuan-Fang, viceroy of Liangkiang, issued a

proclamation instructing all banks to apply for registration at the board of finance in compliance with the requirements of the banking regulations drafted by that board.

23. As far as can be learned the mints in China have published no report of their operations.

Chinese Currency.

[From the Australasian Insurance and Banking Record, Melbourne and Sydney, January, 1909.]

In view of the importance attaching to the attempts that are being made to reform the currency of China, we reproduce below the imperial decree recently issued by the Chinese Government:

DECREE.

[Peking Gazette, October 5, 1908.]

"An imperial decree in response to a memorial of Prince Ching and other ministers of the government council and of Prince P'u-lun and other members of the senate, who, in obedience to our commands, have deliberated upon the subject of a uniform national currency.

"A standard currency is the fundamental principle of public finance, and various countries have adopted a gold coin as their unit of value, with the subsidiary currency of silver and copper tokens. Under well-framed regulations such currencies have been found convenient and profitable. But it requires years of preparation to be ready for such a measure, which can by no means be attained at one step. The finances of China are in confusion, and the standardizing of the currency is an urgent necessity. If actual gold coin were to be taken as the standard unit, it would be difficult to raise the necessary amount; while if gold were merely taken nominally as the standard unit, grave dangers would be incurred. It is evident, therefore, that we should first standardize and render uniform the silver currency, and then carefully proceed to take measures for a further advance, with a view to assuring the adoption of a gold standard in the future.

"The memorialists have pointed out that the use of the tael and its fractions has been so long established that it would be difficult to substitute any other denomination in its place. The committee of finance in a previous memorial also recommended the determination of the tael as the silver coin to be used.

"We therefore command that a large silver coin shall be struck weighing 1 k'up'ing tael, and that large quantities of silver coins weighing 0.5 of a k'up'ing tael shall also be minted for general convenience in use. Also there shall be small pieces of 1 mace and of 5 candareens of less pure silver, which will serve as subsidiary currency. The two silver coins aforesaid shall be 0.980 fine, while the two small silver pieces will be 0.880 fine.

"This silver currency, except in so far as calculations under treaties and agreements with the foreign powers will require to be made as before, shall be uniformly used by all yamens, great or small, in Peking or the Provinces in all their treasury transactions, and all allowances for differences of weight or touch, or meltage fees, etc., shall henceforth be perpetually forbidden.

"Let the governors-general and governors of Provinces examine the conditions in their jurisdictions and devise means in conjunction with the board of finance for determining afresh, either by increasing or decreasing, as the case may be, the allowances and rice money of territorial authorities and tax collectors while on duty, together with the expenditure for traveling on the public service, and let the rates be published openly by proclamation, so that the speculation of clerks and yamen runners may be abolished forever.

"As regards the diversity of silver currency in the various Provinces and the differences of touch, which give dishonest traders and market dealers the opportunity for demanding discounts and profits off each transaction, grievous injury is inflicted thereby on all classes, and the board of finance is now commanded to issue stringent regulations forbidding such practices in the future, with the view that in a given number of years the national silver currency may become completely uniform.

"Until the new coinage has been minted in sufficient quantities the dollar and subsidiary silver pieces in use in the Provinces, as well as the sycee, may be used as before for the time being on the market, and treasury payments may still be made in sycee for the present, but must year by year be diminished by the substitution of the new silver coinage. On these questions let the board of finance carefully consider the circumstances and take satisfactory steps for the execution of this measure.

"Let this decree be generally circulated in all parts."

Memorial of the government council (Hui I Cheng Wu Ch'u) on the question of a uniform national currency.

Uniform Chinese Coinage

IMPERIAL EDICT MAKING SILVER SOLE LEGAL TENDER

[From Monthly Consular and Trade Reports, February, 1909.]

Minister William W. Rockhill transmits from Peking a translation of an imperial Chinese edict, issued on October 5, ordering the coining of a uniform silver coinage for the whole of the Empire and directing the board of revenue to draw up regulations concerning the same and to fix a date by which this silver coinage shall become the sole legal tender in the Empire. The decree raises the fineness of the coins and changes their denominations, but says nothing about the copper currency. It reads:

"Prince Ch'ing and others of the constitutional commission, and Prince P'u Lun and others of the bureau of constitutional affairs, have jointly memorialized concerning the establishment of a uniform coinage.

"The regulation of the coinage is the most important thing in government finance. All the nations make gold the standard, with silver and copper as subsidiary. The regulations for the coinage are complicated, but when there is uniformity it is very convenient. Many years are necessary, however, to make the complete arrangements. The goal can not be reached at one step. Chinese finances are now in confusion. It is of the utmost importance to adopt a monetary standard. If actual gold be made the standard, the accumulation of the reserves will be difficult. If fictitious gold be made the standard, it would be dangerous and would cause anxiety. It is necessary first to adopt a uniform silver currency and thereafter the next step forward may be taken with care and after mature deliberation, and it is to be hoped that the gold standard may be established firmly and without resulting evils. The princes and ministers now state that as the tael, mace, and candareen have been long used in China, the mode of reckoning can not be easily changed. The finance commission has already memorialized fixing the tael as the standard for reckoning.

"It is now determined that the large standard silver coin shall be of the weight of the k'u-p'ing tael and that a large number of half-tael coins shall be minted for general use; also small coins of 1 mace and 5 candareens each shall be minted as subsidiary coins. The two larger coins shall be of 98 parts fineness and the two smaller coins of 88 parts fineness. After these coins have been minted, with the exception of the foreign obligations fixed by treaty, which shall be met as before, all public offices, great and small, and the imperial treasury, in all its receipts and disbursements, shall conform to a uniform practice. Never thereafter shall the terms 'allowances for weight or fineness' or 'deductions for smelting and refining' be employed. Whatever allowances territorial officials have previously had for official expenses, food, money, or traveling shall be carefully considered by the viceroys and governors according to the conditions in each province, and they shall report to the board of revenue, which will make careful estimates and announce what increases or deductions are to be made, prohibiting forever the irregularities and illicit gains of all officials.

"In all the provinces the silver used in trade is not of clearly defined quality, and dishonest traders and brokers use this fact in discounting and swindling, to the loss of all the people. The board of revenue is ordered to draw up strict regulations and to fix a definite period within which perfect uniformity may be secured in the use of the standard silver coin throughout the Empire. There must be no irregularity whatever. As long as the standard coins have not been minted in sufficient quantity, all the various coins now current in the different provinces, as well as the uncoined silver, may be used in trade as before. Payments to the imperial treasury will also continue to be made, as before, in silver bullion as a temporary expedient. Year by year the standard coins will be issued in greater quantities, and the use of silver bullion will be correspondingly diminished. The board of revenue will carefully consider this matter and determine on the best method of procedure in view of all the circumstances.

"This edict is issued as a general notification."

[Translation.]

The Monetary Situation in China

[From L'Economiste Européen, Paris, April 16, 1909.]

A recent report of the French consul at Tientsin contains interesting information upon the monetary condition in China, from which we make the following extract:

For nearly a year the monetary condition of Tientsin, which, as in the case of all the other ports of China, was bad enough, is rendered still worse by reason of the deterioration in value of the silver ingots called "sycee," which are used as the basis

for commercial transactions. These ingots, put in circulation by a syndicate of "hongs" or smelting houses invested with a semigovernmental privilege, are stamped with a fineness of 0.992, while their real value is but little more than 0.965 or 0.967. The provincial government, in the month of March, 1908, put forth a pretense of not accepting these ingots at their exterior valuation in payment for customs duties, and attached all the payments in that money with an overcharge of 2 per cent. They refused, in fine, to accept the same metal which they had put in circulation themselves. The commercial community objected very forcibly, and the consulary body (corps) made the vice-roi listen to energetic complaints.

In October, 1908, the measure taken was reported and a bureau of official assay called "kong kou" was instituted. Some time afterwards the vice-roi consented to cause the ingots held by the cash offices and foreign banks to return to their fiduciary valuation.

The present situation is nevertheless far from satisfactory and may be described as follows:

Different kinds of moneys having currency in Tientsin:

First. The sycee of the fineness of 0.992, known under the name of "houa-pao," which, however, is difficult to obtain at the present time, although this sycee during a number of years has been the current money of the port.

Second. They have a great many debased sycee, which were passing as houa-pao up to the proclamation of the customs departments of February last, but these ingots have been practically demonetized by the Chinese authorities, who refused to receive all sycee not bearing the mark of the "bureau of public assay," which was not established until October 3 last.

Third. There are also a great many sycee (pai pao) with the nominal fineness of 1000, but which do not answer all the requirements of the commercial transactions for which the contracts are regulated in Tientsin taels.

Fourth. There also exists here numerous dollars struck by the imperial and provincial mints.

An examination made of these dollars of the provinces by the bureau of coins of Paris showed a steady deterioration in the quality of the pieces. These dollars, nominally of the fineness of 0.900 and weight of 27 grams are, in reality, a little lighter and of a fineness varying between 0.850 and 0.900; they have driven all the Mexican dollars from the market.

Fifth. The money of the lower class is the copper piece of 10 sapeques, nominally of the value of a Mexican cent, but in reality of four-fifths of a cent; the dollar valued at from 125 to 127 cents. There has been an improvement in the condition of last year, owing to the action of the vice-roi who stopped the issuing of copper cents and prevented their importation from other provinces.

There are besides the small silver pieces, which have a variable rate of exchange, either with the dollar or with the copper cent, and finally there should be added:

Seventh. The new sapeques, little disks of copper, much smaller than the old sapeques, which have entirely disappeared.

If any one changes a dollar, he receives 10 "dimes" (silver pieces valued at about 10 cents) and 7 copper cents, and sometimes up to 11 "dimes." If any one buys merchandise for a dollar and pays in small money, he has to give 10 "dimes" and 7 copper cents, and it is necessary to pay 1½ sapeques to buy a stamp worth a cent. To buy a stamp worth 10 cents, one must pay a 10-cent piece, a copper cent, and 4 sapeques. The cent is to supply the lack of silver in the "dime" and the sapeques to cover the lack of copper in the cent.

Affairs have not been improved by the issues of paper money, although the increasing of coin would without any doubt have eased the market.

Aside from the notes issued by the foreign banks we have those of the Ta Ching Bank of the imperial bureau of revenue and those issued by the Chinese private banks and the Chinese commercial houses. Some of these notes have been counterfeited.

To all this they must add the difficulty of bringing in sycee from other ports when it is necessary to supply a deficiency at Tientsin, a difficulty due to the difference in fineness between the different ports, to the expense of recoinage, to the cost of exchange, etc.

The question of taking back the debased sycees in possession of the foreign banks it seems ought to be decided in a short time, but the existing monetary confusion is a much more important question and of serious interest to commerce.

On the whole, they can say that the monetary condition of China is less favorable at present than it has been for ten years and seems to be rendered worse every day. The moneys in use are damaging for them to introduce new means of exchange by which the relation between them or with them which already exists gives place to constant variations and great injury to business.

[Translation.]

Commerce of the Precious Metals in China.

[From L'Economiste Européen, Paris, October 1, 1909.]

From the report of the general inspector of imperial Chinese customs, the importation of precious metals into China during 1908 have amounted to 68,367,000 francs, of which 4,839,800 francs were gold and 63,527,200 francs were silver. The exportations attained to 145,275,600 francs, of which 41,648,400 francs were gold and 103,627,200 francs were silver.

The following table shows the countries of origin and destination:

Movement of Coin in 1908.

Countries of origin and destination.	Importation.		Exportation.	
	Gold.	Silver.	Gold.	Silver.
	Francs.	*Francs.*	*Francs.*	*Francs.*
Europe		13,091,200	35,987,700	6,277,000
America	116,800	8,611,000	13,200	192,000
Batoum				138,000
Asiatic Indies (including Burma, etc.)			7,600	3,217,100
Netherlands Indies				38,900
Straits Settlements		16,900	80,300	1,099,200
Saigon and Tonkin		22,600		11,100
Siam				1,611,900
Hongkong and Macao	451,600	40,206,600	1,197,700	84,567,500
Manila		800	1,261,400	
Japan (including Formosa)	4,236,000	1,341,800	3,017,300	4,304,800
Kores	55,400	266,300	68,200	1,397,600
Vladivostok				575,100
Total	4,839,800	63,527,200	41,648,400	103,627,200

Hongkong is found to rank first in the importation and exportation of silver. Japan is at the head as an exporter of gold; their exportations of gold were nearly all to Europe.

Currency of China.

Fluctuating Mediums of Exchange—New Native Coins.

[From Daily Consular and Trade Reports.]

Vice-Consul-General W. R. Dorsey, of Shanghai, explains the currency situation in China briefly, as follows:

Business transactions between Chinese merchants and foreign firms are usually in taels. The tael is not a coin, but a Chinese ounce of silver. It varies in different places both as to weight and "touch" (or fineness), and the exchange between the tael and the dollar, or between the former and the copper coinage, is constantly fluctuating.

The only coin in use until recently was the copper cash (of which there are about 1,200 to the Mexican dollar, or 2,850 to the American dollar), but these are fast disappearing except in the more or less remote interior. A new coin, or "10-cash piece," has been made at the provincial mints, and it is rapidly displacing the old copper cash.

The relative value between these and silver dollars, or taels, is constantly fluctuating. At first they were supposed to represent one-hundredth of a Mexican dollar, or about one two-hundred-and-fortieth of a dollar, but the exchange is now (October 1) from 130 to 135 for the Mexican dollar, or from 307 to 319 for the gold dollar.

For many years the Mexican dollar was current at and in the vicinity of the coast and river ports, but now Chinese dollars are coined at the provincial mints at Tientsin, Nanking, Wuchang, Hankow, Canton, and elsewhere, but the mintage of one province is only accepted at a discount in another province.

Subsidiary silver coins, 10-cent and 20-cent pieces, are also made at the provincial mints, but these are never worth their face value. They are discounted about 15 per cent when exchanged for dollars.

BRITISH INDIA.

Answers to interogatories, 1907.

CALCUTTA, *October 29, 1908.*

1. No gold coins have been minted in India since 1891–92. The gold mohur and its sub-multiples have practically disappeared from circulation. Sovereigns and half sovereigns minted either in England or Australia are recognized as legal tender to an unlimited amount at the rate of 1 sovereign to 15 rupees, provided they have not been called in or lost weight beyond the limit prescribed as the lowest current weight, viz, 122.5 grains for the half sovereign, the full legal weight being 123.27447 and 61.63723 grains, respectively.

2. Amount of silver coined during the calendar year 1907: The number of pieces coined in 1907–8 was 210,975,187, as follows:

Denomination.	Number of pieces.	Value.
Rupees	173,269,893	$57,756,297+
Half rupees	4,641,294	773,549
Quarter rupees	11,464,000	955,333
Eighth rupees	21,600,000	900,000+
Total	210,975,187	60,385,179

The amount of recoinage was: British rupees valued in sterling at £1,616,062, or in dollars, roughly, $8,080,310, and other coins valued in sterling at £229, or $1,145.

3. In addition to the coinage of silver for circulation in India, the India mints also coined British dollars for circulation in Hongkong and Straits Settlements. The coinage for 1907–8 for these colonies was as follows: Number of dollars, 1,945,726 to Hongkong, and 1,940,968 to the Straits Settlements. The value in sterling was £190,336, or $951,680. The British dollar is 416 grains, troy in weight, 0.900 millesimal fineness, and the Straits dollar is of the same weight and fineness.

4 and 5. Amount of gold and silver used in industrial arts during 1907: I have not been able to obtain data on which to base intelligent answers to these questions. The only answer supplied by the government is, "There are no data from which to make an estimate, except that it may be said that all the uncoined gold imported is manufactured into plate and ornaments. All gold produced in the Indian mines is exported to London for assay." The imports of uncoined gold in 1907–8 amounted in value to about $35,796,235.

So it may be said that that much gold was used in the industrial arts, or is held in stock for that purpose. There is no way of telling how much of gold coins were melted and thus used.

The quantity of silver in sterling value employed in industry is officially stated to be about $23,000,000. Silver for rupee coinage is imported direct by the government. No silver is produced from mines in India.

6, 7, and 8. Imports and exports of gold and silver during 1907:

Classification and country.	Gold.			
	Imports.		Exports.	
	Weight.	Value.	Weight.	Value.
COINED GOLD.	*Ounces.*		*Ounces.*	
United Kingdom	114,727		216	.....
Australia	907,448			.....
China	52,640		21	.....
Ceylon	3,931			.....
Straits Settlements	7,797		1,585	.....
Other countries	618,170		12,585	.....
Total	1,704,715	£6,675,847	14,407	£56,135
UNCOINED GOLD.				
United Kingdom	1,371,508	.....	384,641	.....
Australia	276,769	.....		.....
China	109,138	.....		.....
Straits Settlements	17,335	.....		.....
Other countries	850	.....	17	.....
Total	1,675,600	7,139,247	384,658	2,200,473

In 1907–8 the imports of sovereigns numbered 5,500,000.

No gold coin or bullion was imported from the United States during the year, and there was no export of gold on government account during 1906–7 and 1907–8.

The annual value of coined silver imported into India, 1907–8, was £2,719,306, and the exports, £1,331,139.

The imports of uncoined silver during the same period was £11,635,265, and the exports amounted to £44,586.

The coin consists almost wholly of rupees of the government of India, which circulate in Ceylon, Mauritius, Aden, Somaliland, Zanzibar, the East African Coast, and the ports of the Persian Gulf.

The principal imports of silver are from Australia and China.

The imports of silver from the Straits Settlements for coinage into the dollar amounted to £414,298, and from Australia, £524,725.

8. Amount of United States gold coin deposited at the mints and melted during 1907: None.

10 and 11. Gold and silver produced from mines of the country and colonies of the country during 1907: The weight and value of gold produced in the Indian mines in 1907 was, standard gold in kilograms, 17,307, the gross market value being £2,133,691. No colonies. There are no silver mines in India.

12 and 13. Output of gold and silver from refineries of the country during the year: Standard gold in kilograms, 14,307, valued at £2,133,691. All gold produced in India is sent to England for assay. No silver is produced in India.

14. Approximate stock of gold coin and bullion in the country at the close of the calendar year 1907: The British India government says: "It is impossible to make any accurate estimate of the stock of gold coin and bullion now in the country. The hoarding of the precious metals has always been a striking characteristic of the people of India. The registration of the imports by quantities began in 1887–88, and from that year to 1907–8 the net imports have been 16,073,543 ounces. No gold ore is imported. The rupee value of the net imports since 1835–36, converted at the average rate of exchange in each year, is calculated to be £194,453,364. The quantity of gold retained in India is, however, greater than this by the amount produced in the Indian mines, for although this is all exported, the value of the net imports has been calculated by deducting from the imports of foreign gold the exports of both foreign and Indian gold. The quantity produced since 1885 was 7,385,897 ounces, valued at £28,001,107. On the 21st of April, 1908, the balances in the reserve treasuries of the government of India were as follows:

Calcutta	$13,221,978
Madras	4,525,704
Bombay	4,552,097

15. Approximate stock of silver coin and bullion in the country at the close of the calendar year 1907: The stock of silver coin and bullion now in India, national and foreign, amounts to $830,000,000.

No foreign coins circulate in India, and no silver ore is imported. There is practically no stock of silver bullion in the country except the stocks awaiting sale in the hands of importers and dealers and such quantities as may be buried in hoards. Until the closure of the mints in June, 1893, most of the silver bullion imported was passed through the mints, and since then the bullion imported is largely manufactured into ornaments, a small portion finding its way into the mints of the native states, which coined for their own benefit in 1907 the sum of $1,334,575. The imports of silver in 1906–7 was 118,198,857 ounces, valued at 194,682,696 rupees ($64,894,232).

16 and 18. Amount of government notes outstanding at the end of the year 1907: Total value of notes in circulation March 31, 1908, was £31,256,690. This was made up thus:

5-rupee notes	1,397,355
10-rupee notes	9,141,173
20-rupee notes	487,502
50-rupee notes	209,668
100-rupee notes	1,241,364
500-rupee notes	60,484
1,000-rupee notes	72,130
10,000-rupee notes	11,821

The reserve fund covering the government notes outstanding consists of coin and bullion, thus:

Securities:	£19,353,694
In India	3,705,000
In England	6,666,673
Coin:	1,333,333
In India	
In England	
Total	£31,256,690

17 and 19. Amount of bank notes outstanding at the end of the year 1907: None. No bank in India has a note issue.

20. Actual currency of the country: Gold, silver, and paper; copper, nickel, bronze; all interchangeable.

21. There is no premium on gold.

22. No legislative measures were adopted during the year 1907–8 with reference to the currency.

23. The report "Statistics of British India, Part IV (*a*), Finance, including statistics relating to paper currency, coinage, public debt, etc.," a copy of which goes forward in this week's mail direct to the Director of the Mint.

In addition to the above, I may say that the native states of India have their own mints. During the year 1907 these mints received 5,534,724 tolahs of silver (a tolah equals 180 grains, troy), of which 4,003,724 tolahs were new silver and 1,630,696 consisted of old coins.

WORKING OF THE MINTS AT CALCUTTA AND BOMBAY DURING THE YEAR 1907–8.

GOVERNMENT OF INDIA,
FINANCE DEPARTMENT,
Calcutta, February 22, 1909.

RECEIPTS OF GOLD.

The tenders of gold by the public at the mints exceeded in value those of the preceding twelve months by over 2 crores of rupees.

The following statement compares the value and nature of the tenders with those of past years:

CALCUTTA MINT.

Year.	Value of sovereigns and half sovereigns of current weight.	Value of light and uncurrent sovereigns and half sovereigns.	Value of bullion.	Total.
	Rupees.	*Rupees.*	*Rupees.*	*Rupees.*
1905–6	30,572,790	108,555	164,485	30,785,830
1906–7	49,638,547	779,963	.....	50,418,510
1907–8	29,137,155	105,105	.....	29,242,260

BOMBAY MINT.

Year.	Value of sovereigns and half sovereigns of current weight.	Value of light and uncurrent sovereigns and half sovereigns.	Value of bullion.	Total.	Total value of gold tendered.
	Rupees.	*Rupees.*	*Rupees.*	*Rupees.*	*Rupees.*
1905–6	14,381,790	240,628	639,424	15,281,242	46,067,072
1906–7	14,320,000	5,840	187,422	14,713,262	65,131,772
1907–8	54,584,760	2,123,695	.....	56,708,455	85,950,715

The value of gold coins which were so reduced in weight as to be taken at bullion value was only 272 rupees.

No gold bullion was tendered during the year, its receipt having been stopped with effect from April 1, 1907.

COINAGE OF SILVER.

The silver coinage was as follows:

Denomination.	Value.		
	Calcutta.	Bombay.	Total.
	Rupees.	*Rupees.*	*Rupees.*
Rupees	65,342,000	107,927,893	173,269,893
Half rupees	1,392,803	927,843	2,320,646
Quarter rupees	2,866,000	.....	2,866,000
One-eighth rupees	2,700,000	.....	2,700,000
Total	72,300,803	108,855,736	181,156,539

NOTE.—A lakh of rupees is 100,000 rupees and a crore is 100 lakhs, or 10,000,000 rupees.

The outturn of rupees during the year 1907–8 was less than that of the previous year by over 8 crores. A portion of the coinage represented the recoinage of 1835 and 1840 rupees and uncurrent coin, but by far the greater number of rupees coined were struck from bullion purchased, for the most part, by the secretary of state in England, but partly also through local banks.

DOLLAR COINAGE.

During the year 1,945,726 British dollars of the nominal value of 4,415,021 rupees were coined at the Bombay mint.

NICKEL COINAGE.

Nickel 1-anna pieces were struck for the first time in 1907–8, the initial issue to the public being made on August 1, 1907. The total outturn was 37,256,000 pieces of the value of 2,328,500 rupees. The net gain on the nickel coinage which passed into circulation amounted to 1,771,726 rupees.

BRONZE AND COPPER COINAGE.

The bronze coinage of the year consisted of pice, half pice, and pie pieces, of the aggregate value of 3,839,171 rupees. Out of this, single pice of the nominal value of one lakh of rupees were supplied to the Bikanir Durbar at a price representing the actual cost of manufacture.

The copper coinage comprised Straits Settlements cents and Ceylon cents and half cents of the value of 30,045 rupees.

The net gain on bronze coinage which passed into circulation during the year under review amounted to 1,736,390 rupees as compared with 1,244,311 rupees, which was the gain on copper and bronze coinage in the preceding year.

WORKING OF THE ASSAY OFFICES AT CALCUTTA AND BOMBAY DURING THE YEAR 1907–8.

MELTING FOR STANDARD COINAGE.

The average fineness per mille of silver meltings for coinage during the year was as follows:

Denomination.	Calcutta.	Bombay.
Rupees	916.000	915.888
Half rupees	915.972	915.000
Quarter rupees	915.796	.....
One-eight rupees	915.633	.....
British dollars	.....	889.035

PARTING ASSAYS OF SILVER COINS.

The average proportion of gold found in the silver pyx coins of the Calcutta mintage was 0.185 per mille for rupees, 0.200 for half rupees, and 0.239 and 0.244 for quarter and one-eighth rupees, respectively. The silver coinage of the Calcutta mint is computed to have contained 5,108 troy ounces of gold of the value of £21,658. In the Bombay mint the proportion was 0.195 per mille for rupees, 0.137 for half rupees, and 0.114 for British dollars.

The Journal of the Royal Statistical Society for September, 1909, contains an article by Fred. J. Atkinson, accountant-general, United Provinces of India, upon the rupee prices in India from 1870 to 1908, from which the following extracts were made:

"In addition to the rupee circulation the circulation of small silver coin is an important item in India, since wages are so low, and the circulation of the poorest classes is as much in small coin as it is in rupees.

"Since 1889 sovereigns have been legal tender, and have been in circulation, and must therefore be included in the active circulation of the country in considering its effect on prices.

"Table IV gives the estimated active monetary circulation of India for each year from 1835–36. Table V gives the details of the working of the estimated rupee circulation from 1893–94, the year in which the mints were closed, and Table VI gives the estimate of the sovereign circulation, subject to the remarks made in section 11 of this paper."

Table IV—Active Monetary Circulation.

Year.	Active circulation, in crores of rupees.	Year.	Active circulation, in crores of rupees.	Year.	Active circulation, in crores of rupees.
1835-36	24	1860-61	56	1885-86	126
1836-37	23	1861-62	56	1886-87	128
1837-38	23	1862-63	63	1887-88	131
1838-39	24	1863-64	73	1888-89	133
1839-40	26	1864-65	86	1889-90	135
1840-41	26	1865-66	99	1890-91	139

8. The estimate of rupees melted into ornaments.

Of the various items which have to be included in calculating the rupee circulation, the statistics furnish a guide to make a sufficiently accurate estimate of all heads with the exception of rupees melted into ornaments and rupees hoarded. It is proposed to show how these heads have been arrived at before considering the course of the circulation and its effect on prices.

Previous to September, 1835, the only rupees of legal tender in India were the Bombay, Madras, Farrukhabad, Sonat, and Sicca rupees. Act XVII, which took

effect from September 1, 1835, directed the coinage of the company's rupee weighing 180 grains and a standard fineness of eleven-twelfths, or 165 grains of fine silver, and declared it equivalent to the Bombay, Madras, Farrukhabad, and Sonat rupees, and to fifteen-sixteenths of the Sicca rupee. Act XIII of 1836 discontinued the Sicca rupee as legal tender. In May, 1838, the Bombay, Madras, Farrukhabad, and Sonat rupees were declared to be still legal tender, but were receivable at the mint for recoinage without seigniorage. These coins were declared to be no longer legal tender from June 1, 1878. In 1896 the silver coins of 1835 (coined between 1835 and 1840) were called in, and in 1901 those of 1840, representing the coinage from 1840 to 1861, were similarly called in.

The coinage of rupees between the years 1800 and 1835 is recorded at 65½ crores, and it may be assumed that the bulk of the coinage previous to 1800 had by 1835 either been returned to the mint for recoinage or had otherwise been disposed of. Of this coinage about 23 crores is recorded as having been tendered to the mint between 1835 and 1876, and a certain amount of the coinage must have found its way to the mints before 1835, of which there is no record. Some must have been exported, and a small amount was possibly lost during the mutiny, and some possibly still remains hoarded. Altogether it may be estimated that under 28 crores out of 65½ crores of this coinage, or 40 per cent, was melted down for ornaments during the seventy-six years life of the coin, probably nearly the whole before 1840, allowing the new coin five years to circulate into the interior.

The 1835 coinage amounted to Rs. 16,39 lakhs of rupees, and the 1840 to Rs. 10,782 lakhs, making a total of Rs. 12,421 lakhs. It may be assumed that very little coin coined after 1861 was received at the mints for recoinage for the next twenty years. The total number of rupees and small silver (the statistics do not separate the two) received at the mints between 1835 and 1881 was Rs. 25,87 lakhs, of which about Rs. 24,50 lakhs may be estimated to have been rupees, and of this about Rs. 23,00 lakhs ante 1835 rupees, leaving Rs. 1½ crores of 1835 and 1840 rupees. From 1882–83 to 1895–96, the year in which the 1835 rupee was called in, rupees of all years sent to the mint for recoinage amounted to about Rs. 3¼ crores, and not less than three-fourths of this, or Rs. 280 lakhs, must have been 1835 and 1840 rupees. From 1896-97 to 1901–2, the year in which the 1840 rupee was recalled, about half a crore of 1840 rupees was received. Since the recall of the rupees, Rs. 3½ crores of 1835 rupees and Rs. 25¾ crores of 1840 rupees have been received at the mints. This altogether accounts for Rs. 34 crores, and it may be estimated that another Rs. 10 crores will eventually be received, making a total of Rs. 44 crores in all.

The total amount of silver exported by sea between 1835 and 1862, the year during which this coinage proceeded, amounted to nearly Rs. 23 crores. The statistics show that the gross imports of silver bullion up to 1857–58 went to the mints for coinage, and the export of silver up to that date, amounting to Rs. 17½ crores, must have been entirely in rupees. During the mutiny years there was apparently a net import of coined rupees, but the net export up to 1863 was about Rs. 18 crores. To this must be added the export inland across the frontier, which may be estimated at Rs. 3 crores, making an aggregate export of Rs. 21 crores.

It has already been stated that the entire import of silver bullion up to 1857–58 went to the British mints, the coinage in the native mints during this period must therefore have been entirely from coined British rupees. The coinage at the native mints before 1891 is not recorded, but some indication of the amount can be obtained from the amount recalled since that date. The old coin so recalled and received amounted to Rs. 16½ crores, and a quantity of the old coin must still be outstanding, and after making all allowances, melting into ornaments, etc., it seems probable that the native mintage up to 1891 amounted to about Rs. 50 crores, of which, say one-fifth, or Rs. 10 crores, may be estimated to represent 1835 and 1840 rupees melted down.

The 1835 (five years) and 1840 (twenty-two years) coinages thus work out as follows:

Items.	Rupees.	Rupees.
Coined		1,24,00,00,000
1835 and 1840 coin returned to mint, 1835-1881	1,50,00,000	
1835 and 1840 coin returned to mint, 1883-1895	2,80,00,000	
1840 coin returned to mint, 1896-1901	50,00,000	
1835 coin returned to mint, 1896, 1908	3,50,00,000	
1840 coin returned to mint, 1901-1908	25,70,00,000	
Estimated further expected receipts	10,00,00,000	
Exported sea and inland	21,00,00,000	
Estimated melted in native mints	10,00,00,000	
Lost in mutiny or otherwise unaccounted for	6,00,00,000	81,00,00,000
Balance unaccounted		43,00,00,000

From these estimates it would appear that Rs. 43 crores, equal to about 34½ per cent of the 1835 and 1840 coinages, were melted down into ornaments. This at first sight appears excessive, as in addition to about Rs. 18 crores of bullion apparently used for the purpose between 1858 and 1866, allowing five years for the circulation of the new coin, it means an average of nearly Rs. 2 crores a year, an apparently improbable figure when the extent of the population and poverty of the land are considered. On the other hand it is possible that at this period natives may have thought it wiser to turn their rupees into ornaments rather than to hoard them, and it is also possible that a considerable amount of this coinage, which had the appearance of looking larger than the succeeding issues of the rupee, may have been melted into ornaments and hoarded for many years after 1862, instead of the new coinage.

This latter suggestion is strengthened by the fact that the 1835 and 1840 rupees recently received at the mints, amounting to Rs. 29¾ crores plus the additions that may be expected for several years to come, are popularly believed to have been taken out of hoards, and the inference is that all such rupees in hoards must have been placed there during the issue of the coinage, as natives ordinarily prefer to hoard new coin to old. This would imply that some 40 crores of rupees were hoarded up to, say, 1863, and if this had actually been the case a reference to the estimate of the rupee circulation during the period, after allowing Rs. 12 crores already estimated as hoarded up to 1863, will show the circulation reduced too low in certain years to enable the trade of the Empire to have been carried on. The probabilities appear to be that this coinage remained in circulation, and was both hoarded and melted into ornaments for many years after 1862.

As regards the coin melted into ornaments from the coinages since 1862, the coinage from that year to 1892, the year before the mints were closed (thirty-one years), amounted to Rs. 203½ crores. If the number of those rupees melted down for ornaments was in the same proportion to the coinage, as appears to have been the case for the issues between 1835 and 1861—namely, 34 per cent—the coin melted down would amount to over Rs. 81 crores, or an average of over Rs. 2½ crores a year, and with the bullion that must have been used for the purpose, about Rs. 60 crores, or an average of over Rs. 4½ crores a year. This estimate is clearly excessive. If Rs. 81 crores were taken for this period it would mean, with the previous figures, that Rs. 124 crores coined silver money and about Rs. 76 crores in silver bullion, making Rs. 200 crores in all, had been utilized between 1833 and 1892 for ornaments, representing about Rs. 9 s. worth of silver ornaments to the hands of every man, woman, and child in British India in 1892, or nearly Rs. 19 s. per head for every female, including children. This is in addition to £30,000,000 in gold (Rs. 45 crores), the bulk of which must also have been utilized in ornaments. It may therefore be assumed, after allowing for the use of a considerable number of the 1840 coin for ornaments during the period, that the rupee consumption of the 1862–1892 coin for ornaments did not exceed Rs. 40 crores, which, with the bullion used for the purpose, makes an annual average of nearly Rs. 3 crores.

As regards the period 1893 to date, after the mints were closed, the rupee became of higher value than the bullion it contained, and the practice of making ornaments out of coined rupees must very soon have ceased.

9. *The estimate of rupees hoarded.*

On the question of rupees hoarded, taking the coinage previous to 1835, which was called in in 1838, we find that about Rs. 23 crores of the coinage found its way to the mints by 1878, when it ceased to be legal tender. This, however, is no guide to the amount hoarded previous to 1835, as much of the coin was necessarily in circulation and gradually found its way to the mints without going into hoards, especially as the bulk was received between 1835 and 1854.

The 1835 coinage, amounting to nearly Rs. 16½ crores, was the coin hoarded between 1835 and 1840. This coinage was called in in 1896, and it may be assumed that the great bulk of what was tendered at the mints after that date represented rupees taken out of hoards and replaced by bullion or new rupees. The amount received up to the end of 1908–9 was Rs. 3½ crores, representing 21 per cent of the coinage, and suggests hoarding at an average of Rs. 70 lakhs a year. The 1840 coinage amounted to Rs. 10,782 lakhs, and was called in in 1901, and up to March, 1909, Rs. 25¾ crores had been received, equal to about 24 per cent of the coinage, or an annual average of Rs. 117 lakhs a year for the twenty-two years during which the coin was being issued. In the case of both these coins, however, it has already been suggested that it would have been impossible to hoard during the period 1835–1862 all the coin of that coinage received at the mints since 1896 and believed to have

come out of hoards. In both cases, especially in that of the 1840 rupee, the probabilities are that this coinage was put into hoards for many years after 1861. Next taking the period 1862 to 1892, the coinage amounted to Rs. 2,03,50 lakhs, and if we take 24 per cent as hoarded, the amount hoarded was nearly Rs. 49 crores, equal to Rs. 157 lakhs a year. This estimate appears possible, if the prosperity of the country during the period is considered. The amount hoarded, of course, increased annually as the population and wealth of India increased, and it may be estimated that, commencing with Rs. 70 lakhs in 1862, the amount hoarded gradually reached 2 crores by 1892.

10. The circulation of small silver coins.

The small silver coins of India consist of the half rupee, which is legal tender for any amount, one-quarter rupee, and one-eighth rupee. The circumstances of India are such, wages being comparatively so low, that the circulation of small silver coin might at any time, if issued in too large or too small quantities, assist in inflating or contracting the currency, and consequently in estimating the total active monetary circulation, the circulation of small silver coins should be included.

The small silver coinage from 1835–36 to 1892–93 amounted to Rs. 16½ crores, but it is not possible to say how much of this was returned to the mint for recoinage, as no statistics were kept, nor how much was lost or used for other purposes. It may, however, be estimated that about one-half was either returned to the mint, lost, utilized in ornaments, or otherwise disposed of.

From 1893–94 to 1908–9 the coinage amounted to Rs. 685 lakhs, and the face value received at the Calcutta mint for recoinage was Rs. 53 lakhs, whilst that received at the Bombay mint was Rs. 27 lakhs from 1900–1901, no statistics having been previously kept. The circulation of this coinage, given as item No. 23 in Table V, has accordingly been estimated on these figures, after making allowances for loss, etc.

11. The circulation of sovereigns.

By notification No. 3287, dated October 28, 1868, sovereigns and half sovereigns, English and Australian, of current weight, were made receivable at government treasuries in payment of sums due to government as the equivalent of 10 rupees 4 annas and 5 rupees 2 annas, respectively. The fall in the gold value of the rupee prevented this notification from ever being put into force.

By notification No. 2663, dated June 26, 1893, sovereigns and half sovereigns were declared receivable at government treasuries in payment of sums due to Government at the rate of Rs. 15 and Rs. 7½, respectively, and by act 22 of 1899, passed on September 15, 1899, sovereigns and half sovereigns were declared to be legal tender at the same rates. The effect of this measure was that sovereigns began to be presented at the treasuries from September, 1899, and from that date the importation of sovereigns commenced to increase.

The net import of gold, sovereigns and bullion, plus the production in the country during the ten years 1899–1900 to 1908–9 amounted to about Rs. 111 crores (at £1=Rs. 15), and of this Rs. 47, 37 lakhs=£31,579,000, was in sovereigns and half sovereigns. This heavy import, if it has all been added to the circulation of the country, would have made a very material difference in the question of the inflation of the currency, and it is necessary, therefore, to ascertain from such information as may be available how much of this import went into circulation, and this has been worked out in Table VI.

All the factors in the estimate are known except item No. 10, "Sovereigns melted and hoarded," but this factor is of great importance in framing an estimate of the gold circulation. The only way to form a rough estimate is to take the amount of gold net imported during a previous period and to treat that as a basis of gold requirements in India for purposes other than currency.

The net import of gold during the ten years 1882 to 1891, before the closing of the mints, was £32,320,000 in value, equivalent to 16d. to the rupee to Rs. 48½ crores. To this must be added the production in India. The production before 1891 is not recorded. In 1891 it amounted to £475,000, but as gold was produced throughout the period, it may be estimated that the total production during the ten years approximated £3,400,000, equal to Rs. 5 crores, making the net import, plus production, £35,730,000, equal to Rs. 53½ crores. This constituted an annual requirement of Rs. 535 lakhs for purposes other than currency. In the ten years immediately before the declaration of legal tender of sovereigns, 1890 to 1899, the net import amounted only to £26,775,000=Rs. 40 crores, or an annual requirement of Rs. 4 crores. But

this period includes the years preceding and succeeding the currency legislation, when the economic conditions were in a state of transition, the price of silver in its relation to gold was falling, and actually fell to 12½d. to the rupee in 1894, and gold, which had to be paid for in silver, became an expensive luxury for even the richest in India, and during the three years 1892–93 to 1894–95 the net export of gold was over Rs. 6 crores. It is necessary, therefore, to take the period 1882–1891, when conditions were normal, and gold requirements in India for purposes other than currency were on an average Rs. 535 lakhs a year. Between 1882 and 1891 and 1889 to 1908 there was, however, a considerable difference in the condition of the country. The revenue returns show that it had grown richer, and though famine or scarcity were not uncommon during the period, trade increased enormously, and whatever may have been the fate of the poorer classes, the wealthy, the buyers of gold, unquestionably had grown richer and must have required more gold, and to add to this, the fact that the metal could be purchased at most treasuries throughout a great portion of the period was a distinct incentive to purchase it by those who would not otherwise have done so. It may therefore be estimated that the average annual requirements during this period amounted to Rs. 600 lakhs at first, and subsequently reached Rs. 700 lakhs, and possibly the purchases were considerably higher during the last few years.

The figures worked out on this basis show that there was no circulation of sovereigns up to the year 1902–3. Gold was received in and paid from the treasuries during the three previous years, but the circulation was temporary only, and was practically absorbed as soon as the gold left the treasury. From 1902–3 the sovereign circulation rapidly increased to Rs. 39¼ crores=£26,000,000 by the end of 1908–9. As a matter of fact, however, sovereigns are practically out of circulation in the present year (1909) and a premium is asked for them in Calcutta and Bombay and in the principal towns of India. Sovereigns can still be obtained in small quantities in places, which indicates that there are still some in circulation, but the total can not exceed Rs. 2 crores as an outside limit, and half a crore is probably nearer the mark. There must therefore be something very erroneous in the statement, though it is not possible to say where the error lies, as all the figures are recorded figures, excepting hoarded and melted, and high figures have been estimated for that head. It would seem that the circulation could not have increased at the rate shown by the figures in Table VI during the years 1902–3 to 1908–9, and that either the gold was melted down or hoarded in larger quantities than estimated, or that sovereigns took the place of rupees in hoards. In any circumstances it was very remarkable with what rapidity sovereigns were withdrawn from the treasuries in 1908 and disappeared from circulation, and indicates that the actual circulation at the time was not so great as the figures suggested. In this view the circulation of sovereigns for the purposes of the total circulation in Tables IV and V have been taken as 1, 3, 5, 7, 9, and 5 crores of rupees for the six years 1903–4 to 1908–9, respectively, and even these figures appear too high for the last two years.

12. The course of the active monetary circulation.

About Rs. 23 crores of the ante-1835 rupee were presented at the mint for recoinage after 1835. A total of Rs. 35 crores may therefore be estimated as the actual circulation, including the treasury cash balances in 1835. The figures given in Table IV as the active circulation include rupees, small coin, and sovereigns, but exclude the treasury cash balances.

The estimates show that the actual circulation remained practically the same from 1835 to 1848, varying from 23 to 28 crores of rupees. During this period there was a severe famine in 1838, and war with China from 1839 to 1841. In 1845 the first Sikh war took place, and the second in 1848, followed by the annexation of the Punjab in 1849. The wars appear to have depleted the country of money, and sufficient fresh stocks were not brought in, with the result that the circulation fell to Rs. 19 crores in 1851. Food prices were very low at this period, index number 71 in 1843 and again 71 in 1853, with intervening variations, a rise to 80 and 89 in 1845 and 1846 having been due to scarcity conditions, and the fall in the circulation does not appear to have affected prices to any appreciable extent. From 1852 to 1856 the circulation rose from 19 to 32 crores of rupees, but prices fell to 63 in 1855. In 1857 the circulation rose 8 crores, and in 1858 another 10 crores, to 50. From 1858 to 1862 there was a further increase of 13 crores to 63, a rise of 73 crores in 1863, to 86 in 1864, to 99 in 1865, and 105 in 1866. Altogether the circulation rose from Rs. 32 crores in 1856 to Rs. 105 crores in 1866, an increase of Rs. 73 crores in ten years. From 1866 to 1876 the circulation ranged at practically the same amount, standing at Rs. 104 crores in the latter year.

The great rise in the circulation which commenced in 1857 did not affect prices in that or the following year, and the average of prices from 1843 to 1858, sixteen years,

was 72, but a rise commenced in 1859, reaching 109 in 1865, and 130 in 1866. The high prices in 1866 and subsequent years were due to famine conditions and their results. From 1870 to 1876 prices remained practically the same at about 100.

The rapid increase of the circulation between the years 1856 and 1866 had, however, the effect of raising the level of prices from 72 (1843–1858) to 100 (1868–1876), the rise occurring between the years 1859 and 1865, and the new level of 100 may be regarded as having commenced in 1865. During this period, from 1857 to 1876, the mutiny broke out in 1857, and continued through 1858, and coin was required to meet the heavy expenses connected with the payment of troops, etc., and to do this the British Government made a loan of 6¼ million pounds sterling to India, resulting in heavy coinages in 1857, 1858, and 1859, and in addition rupees were found to import. This caused a rapid increase in the circulation. With the suppression of the mutiny and the transfer of the administration to the crown there commenced an era of commercial and industrial activity, and the country was rapidly developed by the construction of roads and railways and extension of canals. The American war of secession lasting from 1861 to 1865 gave a great impetus to the cultivation of cotton in India, high prices ruled, and large profits were derived. All these conditions required a large active circulation of the rupee, which led to heavy imports of silver and high coinages in 1863, 1864, and 1865, and when on return of normal conditions prices should legitimately have fallen again, a higher level was retained in consequence of the inflation of the currency relatively to its needs at lower prices. Thus high prices were not caused by excess of currency in the first instance, but the permanency of high prices, after the cause of them had disappeared, was the necessary corollary of the then inflated currency.

From 1877 the circulation again commenced to increase, and reached Rs. 131 crores in 1887, an increase of Rs. 27 crores in eleven years. Prices in 1877, 1878, and 1879 were abnormally high on account of famine conditions, but returned to 103 by 1887. From this it appears that the level of prices remained at 100 up to this year, and that the increase in the circulation between 1877 and 1887 was necessitated by the increase in the wealth and prosperity of the country, and did not constitute any inflation of the currency.

From 1888 the circulation rapidly increased to Rs. 149 crores in 1892, the year before the mints were closed, an increase of Rs. 18 crores in five years, and during this period food prices rose from 103 to 138. During this period the rainfall was normal or in excess in 1888, 1889, and 1890, slightly deficient in 1891, but in excess in 1892, and scarcity conditions had therefore little or nothing to do with the rise in prices. During these five years Rs. 57 crores of silver were net imported into India, and nearly 45 crores of rupees were coined. The years were prosperous, trade was good, and all the circumstances indicated that some increase in the circulation was necessary to meet the increase in population and wealth, but open mints and their expected closure to the free coinage of silver led to silver bullion being imported in excess of necessary requirements, and this was taken to the mints, with the result that more coin was coined and issued than necessary, the currency became inflated, and prices rose.

The mints were closed to free coinage in 1893, and in that year the circulation contracted by Rs. 6 crores, but rose again to Rs. 150 crores in 1895. No increase in the circulation for three years, assisted by bumper rainfalls and excellent crops in 1893 and 1894, caused prices to fall to 113.

It has been stated that prices commenced to rise in 1888, and with good rainfalls and crops they rose under normal conditions from 103 in 1887 to 118 in 1890. There was a slight deficiency in rain in 1891, the effects of which were felt in the following year, but out of all proportion to the extent of the deficiency, as food prices rose to 123 in 1891, to 138 in 1892, and fell only to 131 in 1893 in a bumper year succeeding another nearly as good. The year 1894 had another excellent rainfall and prices fell to 121, and in 1895, with a year slightly deficient in rain, they reached 113. Thus after a series of years of splendid rain and plentiful supplies prices were not reduced to their former level. The rise in the level was apparently due to prosperity, and good trade, requiring an extended currency, which came at a time when India's open mints attracted silver, then rapidly depreciating in the European market, in excess of actual requirements, and thus inflated the currency, and when the mints were closed and the economic conditions had resumed normality the currency was still inflated in relation to the former conditions, and, other forces coming into play, as will be suggested in the later section of the paper, the result was the establishment of a higher level of prices. The level reached during the period 1888 and 1895 may be fixed at the average of those years, after eliminating famine conditions, approximately at 118.

The years 1896 and 1897 were affected by famine conditions, and the effects were still felt in 1898, though to a considerably greater degree than they apparently should have been. The years 1897 and 1898 had practically normal rainfalls, and prices fell during 1899 to the new level of 118 till the end of the year, when the serious deficiency in the rainfall of the year was realized and prices rapidly rose, making the average of the year 122, followed by 152 and 148 in the two succeeding years. The level of prices may therefore be said to have remained at 118 up to 1899, and up to that year, from 1895 to 1898, the circulation remained practically the same.

The year 1900 had normal rain, 1901 and 1902 were deficient, 1903 normal, and 1904 slightly deficient. Food prices rose from 122 in 1899 to 152 in 1900, and 148 in 1901, due to famine conditions, but fell to 118 in 1904. The circulation rose from Rs. 150 crores in 1898 to Rs. 171 crores in 1900, partly by the deposit of gold in the paper currency department, and release of rupees, and partly by a reduction in the cash balances, additional circulation being necessary to meet the famine conditions, the increase being Rs. 20 crores in two years. It fell to Rs. 170 crores in 1901, and rose to Rs. 175 crores in 1902, Rs. 188 crores in 1903, and Rs. 200 crores in 1904, an increase of Rs. 30 crores in three years. When normal, or nearly normal, conditions again returned, it would seem that this large increase inflated the currency, and although prices fell to 118 in 1904–5, it is probable that a higher level had then actually been reached. Looking at all the factors in the case, it would seem that the level from 1900 to 1905 reached 125.

The year 1905 had a deficiency of 16 points in the rainfall, 1906 was normal, 1907 deficient, and 1908 normal. Food prices rose from 118 in 1904 to 139 in 1905, to 167 in 1906, to 178 in 1907, and to 202 in 1908. The circulation rose from Rs. 200 crores in 1904, to Rs. 215 crores in 1905, to Rs. 241 crores in 1906, and Rs. 242 crores in 1907, an increase of Rs. 42 crores in three years.

During this period the agricultural returns show that, crop deficiencies in certain years in certain areas notwithstanding, the country was in a prosperous condition, and this is further borne out by the fact that both internal and external trade was brisk throughout, the export of merchandise increasing from Rs. 98 crores in 1897–98 to Rs. 177 crores in 1907–8, and government revenue came in in increased quantities. The great increase in trade and prosperity clearly required an extended currency, but the rise in the circulation was so rapid and so great that it must have been out of all proportion to the necessities of the case; the currency consequently became inflated, and the food prices of 1905–6 to 1908–9 rose considerably higher than the area sown and yield of crops conditions of those years justified, and were apparently affected by the inflation of the currency.

During 1908, by the cessation of the rupee coinage, the absorption of Rs. 9¼ crores into the gold standard reserve, the return of Rs. 7¼ crores into the paper currency for the gold previously held in the currency of England and in India, and the disappearance of the bulk of the gold circulation, partly counterbalanced by the reduction of Rs. 3¼ crores in the cash balances, contracted the currency at the end of 1908–9 by about Rs. 19 crores, making it Rs. 223 crores, which represents an increase of Rs. 73 crores in excess of the circulation of 1898–99, an excess which can still further bear a substantial reduction, though further reduction should necessarily be carried out with circumspection in order not to interfere with the free flow of trade. When prices reach a high level in times of prosperity, and not for reasons connected with short crops, it becomes a very difficult matter to reduce them, because by doing so the various economic conditions attending a change in prices under normal conditions have to be modified, and this must necessarily temporarily interfere with the progress of the trade. It is not possible to accurately estimate to what level prices have now reached, but it seems that the present level is now higher than 125, the assumed level of 1900 to 1904. Food prices rose further to 202 in 1908, though the conditions of the country certainly did not warrant this rise, but during 1909 there appears to have been some fall, and up to the present time (June, 1909) it appears to be about 15 per cent, which makes them 172. This, however, is no guide as to the actual level to which they should fall, but as a result of an examination of all the conditions it would seem that the present natural level has now reached 135, even if it is not still higher.

The levels of prices that have obtained at different periods may therefore be shown as follows:

	Index number food prices.
From 1843 to 1858	72
From 1865 to 1887	100
From 1889 to 1898	118
From 1900 to 1904	125
From 1905 to date	* 135

* Or higher.

Thus we find that the rises in the level of prices from 72 to 100, from 118 to 125, and from 125 to 135, were in the first instance in consequence of a rise in price due to some special cause, war or famine, which in itself necessitated an increase in the currency, and being followed by prosperous years, the circulation increased more rapidly than circumstances necessitated, and resulted in the inflation of the currency, and when normal conditions returned prices did not revert to their normal level, due to causes which will be presently discussed, but which were assisted by the highly inflated condition of the currency.

The rise in the level of prices from 100 to 118 was due to a period of prosperity at the time that silver was becoming rapidly depreciated, which resulted in the metal being imported into India and coined, in excess of the needs of the country, and prices did not subsequently revert to their former level for the same reasons that governed the other increases in the level of prices.

COLONY OF HONGKONG (BRITISH).

[Population, 400,000.]

AMERICAN CONSULAR SERVICE,
April 1, 1909.

Answers to interrogatories, 1908.

1. No gold coined for colony here or elsewhere. No mint.

2. Amount of silver coined during the calendar year 1908: The only coinage was some British dollars "executed at foreign mints" (Bombay). The Hongkong and Shanghai Bank (by far the largest of the banking institutions), did none of this. The Chartered Bank of India, Australia, and China (the second in size), confidentially reports £20,000 thus coined at Bombay; International Banking Corporation, $890,000 (Hongkong). An estimate of other like coinage from this source (Hongkong banks) is £120,000.

3. Coinage executed for other governments during 1908: None. No mint.

4. Weight of fine gold used in industrial arts during the calendar year 1908: Very small amount by individual Chinese jewelers, worked into ornaments. Quite an amount of Japanese gold yen coins were worked into gold leaf by the Chinese.

5. Weight of fine silver used in industrial arts during the calendar year 1908: Some Chinese jewelry and plate; estimated, $100,000 (Hongkong).

6. Import and export of gold during the calendar year 1908:

GOLD.

Country of origin and destination.	Imports.	Exports.
	Hongkong dollars.	*Hongkong dollars.*
Straits Settlements	645,100	648,300
Shanghai	135,500	24,300
India	223,100	3,522,300
Japan	1,107,300	.....
London	20,500	592,000
San Francisco	28,400	.....
Manila	12,000	.....
Australia	3,783,000	33,500
Saigon	.....	101,800
Siam	.....	1,702,000

The import from San Francisco carried some dust, but chiefly coin. Hongkong is a free-trade port, and there are no official returns. (This data as to imports and exports of gold and silver were compiled by the Hongkong and Shanghai Bank.)

NOTE.—It should be noted that the above and all values unless otherwise described are in Hongkong dollars. The average exchange rate of these dollars for 1908 (demand on London) was 1s. 9.6727. (Average value for 1908 of Hongkong dollar (about) 43 cents United States currency.)

7. Import and export of silver during the calendar year 1908:

SILVER.

Country of origin and destination.	Imports.	Exports.
	Hongkong dollars.	*Hongkong dollars.*
Straits Settlements	219,100	6,853,900
Shanghai	12,247,600	2,150,500
India	3,534,500	4,573,000
Coast ports	46,409,400	5,409,700
Haiphong and south ports	753,200	1,346,700
Japan	87,000	210,000
London	610,200	435,900
San Francisco	9,207,700	51,400
Manila	177,200	286,000
Batavia	7,300	52,000
Saigon	600	860,200
Australia	226,500	106,700
Siam		727,300

NOTE.—The imports of silver from San Francisco were chiefly in bars.

In addition to these data as to silver, it should be noted that the Chinese import and export to an extent of which it is impossible in this port to obtain returns.

8. Total import of United States gold coin during the calendar year 1908: $28,400 (Hongkong). (See above.) Of this, some small part was gold dust.

9. Amount of United States gold coin deposited at mint and melted during 1908: No mint.

10 and 11. Gold and silver produced from mines of the colony during 1908: No mines.

12 and 13. Output of gold and silver from refineries of the country during 1908: None; no refineries. Production of gold leaf by Chinese from Japanese yen and sovereigns for 1908, estimated at about 200,000 taels, Canton weight (1 tael Canton weight equal to 1.208 ounces); approximate value $5,074,000 United States currency.

14 and 15. Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1908: This colony being on a silver basis, no gold in the colonial treasury, and practically no gold coins in circulation. The Hongkong and Shanghai Bank report $52,600. The "Chartered Bank" (second largest) reports: "Do not stock gold at this bank, as it is not legal tender here. We import or export only for exchange purposes." Other banks to the same effect.

SILVER.

	Hongkong dollar.
Hongkong and Shanghai Bank	19,700,000
Chartered Bank	4,386,000
International Bank	160,000
Mercantile Bank	3,400
Other banks (estimated)	900,000
In circulation (estimated)	300,000

No silver in colonial treasury.

16 and 17. Government notes outstanding at the end of the year 1908: None; no such issue.

18 and 19. Bank notes outstanding at the end of the year 1908: Only 3 banks issue (see following table):

RETURNS OF THE AVERAGE AMOUNT OF BANK NOTES IN CIRCULATION AND OF SPECIE IN RESERVE IN HONGKONG, DURING THE MONTH ENDED DECEMBER 31, 1908, AS CERTIFIED BY THE MANAGERS OF THE RESPECTIVE BANKS:

Banks.	Average amount.	Specie in reserve.
Chartered Bank of India, Australia, and China	$3,735,318	$2,800,000
Hongkong and Shanghai Banking Corporation	16,776,932	13,000,000
National Bank of China (Limited)	73,056	Nil.
Total	20,585,326	15,800,000

AMOUNT OF PAPER CURRENCY IN CIRCULATION.

The notes of the Chartered Bank of India, Australia, and China, the Hongkong and Shanghai Banking Corporation, and the National Bank of China (Limited), in circulation during the year ended December 31, 1908, were in amount as follows:

Month.	Chartered Bank of India, Australia, and China.	Hongkong and Shanghai Banking Corporation.	National Bank of China (Limited).
1908.			
January	$4,124,868	$16,444,055	$349,059
February	4,021,672	16,391,309	344,641
March	3,666,781	15,064,604	305,610
April	3,698,885	14,893,807	259,560
May	3,683,358	14,470,281	204,635
June	3,661,452	13,959,440	156,522
July	3,668,772	15,023,636	126,914
August	3,765,479	14,594,184	108,230
September	3,935,775	15,319,673	96,221
October	3,729,743	15,246,894	86,114
November	3,632,097	15,915,287	79,134
December	3,735,318	16,776,952	73,056

ACCOUNTS KEPT IN.

The accounts of the colonial government were formerly kept in sterling, but from July 1, 1862, they have been kept in dollars, in accordance with instructions from Her Majesty's secretary of state for the colonies.

The accounts of the mercantile establishments are and have been always kept in dollars.

20. Actual currency of the country: Practically no gold. Silver coins, copper or bronze coins the only legal tender. No government paper money; bank paper issues not legal tender, but abundant. The actual currency is thus silver coins, pennies, cash, and bank-paper issues. (See inclosed "Law affecting currency.")

21. Premium on gold: The actual currency of the country being silver, gold can not be said to be at a premium or a discount, as compared thereto. Gold is bought or sold at exchange quotations.

22. Laws passed during the year 1908 affecting the currency: None.

23. Report published on operations of mint: No mint; no mines.

LAW AFFECTING CURRENCY.

4. Order in council of February 2, 1895, published in Government Gazette Extraordinary of March 30, 1895, declares that Mexican dollars, Hongkong dollars, and British dollars, or other silver dollars of equivalent value duly authorized by the governor of Hongkong, shall be the only legal tender, and provides that silver coins representing some multiple of the cent or one-hundredth part of the said dollars shall be a legal tender for any sum not exceeding $2, and that copper or bronze coins representing the cent or one-hundredth part, or the mill or cash representing one-thousandth part of the dollar, shall be a legal tender for any sum not exceeding $1.

The above currency consists of the following coins, viz:

(1) The silver dollar of Mexico.

(2) The Hongkong dollar and half dollar issued from Her Majesty's mint at Hongkong.

(3) The British dollar.

(4) Silver coins issued from His Majesty's mint, representing (*a*) one-half of the said dollar, commonly called 50-cent piece; (*b*) one-fifth part of the said dollar, commonly called 20-cent piece; (*c*) one-tenth part of the said dollar, commonly called 10-cent piece; (*d*) one-twentieth part of the said dollar, commonly called 5-cent piece.

(5) Copper or bronze coins, also issued from His Majesty's mint, representing (*a*) one-hundredth part of said dollar, and commonly called 1 cent, and (*b*) one-thousandth part of said dollar, and commonly called mill or cash.

The army rate of exchange for issue of silver dollars to His Majesty's troops is now fixed quarterly by the imperial treasury.

The rate for first quarter of 1908 was 2/2, for second quarter 1/10, for third quarter 1/10, and for fourth quarter 1/9 per dollar.

Amount of Coin in Circulation.

Approximate amount of Hongkong dollars and half dollars struck at the Hongkong mint	$1,421,487
Approximate amount of Hongkong silver and copper subsidiary coins (50, 20, 10, and 5 cent pieces; and 1 cent and mill pieces) put into circulation up to December 31, 1908	43,999,830
Amount withdrawn from circulation and sold as bullion, 1908	535,978

JAPAN.

American Embassy, *Tokyo, June 14, 1909.*

Answers to interrogatories, 1908.

1. Amount of gold coined and melted during the calendar year 1908:

Gold coined:	Yen.
20-yen pieces	9,180,000
10-yen pieces	11,630,000
Total	20,810,000
Gold coin melted:	
Domestic ancient gold coin	3,560
Domestic new gold coin	45
Foreign gold coin	4,886,912
Total	4,890,517

Total weight of domestic ancient gold coin and foreign gold coin amounting to 978 kwan, 103 momme, 4 fun pure gold is calculated at the rate of 5 yen per momme.

2. Amount of silver coined, recoined, and melted during the calendar year 1908:

Silver coined:	Yen.
50-sen pieces	12,744,107
20-sen pieces	3,001,802
10-sen pieces	1,228,000
Total	16,973,909
Silver recoined:	
50-sen pieces	4,619,209
20-sen pieces	1,928,694
10-sen pieces	1,228,000
Total	7,775,903
Silver coin melted:	
Domestic ancient silver coin	100
Domestic new silver coin	7,913,950
Total	7,914,050

Total weight of old silver coin melted amounting to 41,989 kwan, 876 momme, 2 fun is calculated at the revised rate of June, 1906, of 1 yen per 5.4 momme.

3. Coinage executed for other governments (Korea) during the calendar year 1908:

Gold:	Yen.
20-yen pieces	800,000
5-yen pieces	50,000
Total	850,000
Silver:	
50-sen pieces	700,000
20-sen pieces	546,212
10-sen pieces	629,934
Total	1,876,146
Bronze:	
1-sen pieces	77,488
½-sen pieces	100,992
Total	178,480

4 and 5. The weight of fine gold and fine silver used in industrial arts during the calendar year 1908 is unknown.

6. Gold imported and exported during the calendar year 1908:

Imported:	Yen.
Japanese gold coin	1,330,570
British gold coin (£1,033,484)	10,089,900
Russian gold coin (15,725 rubles)	16,238
United States gold coin ($1,155)	2,316
Other foreign gold coin	894
Gold bullion (153,817 ounces)	5,460,231
Total	16,900,049

Exported:	Yen.
Japanese gold coin	3,074,500
Russian gold coin (700 rubles)	722
United States gold coin ($200,250)	401,702
Gold bullion (4,654 ounces)	176,533
Total	3,653,457

7. Silver imported and exported during the calendar year 1908:

Imported:	Yen.
Japanese subsidiary coin	209,301
Russian silver coin (150 rubles)	155
United States silver coin ($15)	30
Mexican States silver coin ($13,000)	12,528
Other foreign silver coin	20
Silver bullion (358,432 ounces)	422,408
Total	644,437

Exported:	
Japanese subsidiary coin	5,189
Indian silver coin (7,074 rupees)	4,785
Russian silver coin (438 rubles)	451
United States silver coin ($34,773)	69,754
Mexican States silver coin ($18,566)	17,073
Other foreign silver coin	14,633
Silver bullion (5,582 ounces)	7,160
Total	119,045

GOLD AND SILVER IMPORTS AND EXPORTS OF FORMOSA DURING THE CALENDAR YEAR 1908.

Denomination.	Number of pieces.	Value.
IMPORTS.		Yen.
Japanese gold coin		3,630
Japanese 1-yen silver coin	2,032,020	1,775,477
Japanese 1-yen silver coin (stamped)	14,596	12,816
Mexican dollars	639	589
Hongkong dollars	863,639	811,332
Other foreign silver coin	34	31
Silver bullion	a 24,727	24,315
Total		2,628,190
EXPORTS.		
Japanese gold coin		12,000
Japanese 1-yen silver coin	16,299	13,732
Mexican dollars	2,068	1,896
Hongkong dollars	35,012	31,669
Subsidiary silver coin		3,502
Silver bullion	a 5,656	5,302
Total		68,101

a Ounces.

	Yen.
Convertible bank notes imported	6,186
Bank of Formosa notes imported	17,608

8. Gold coin of the United States of America imported during the calendar year 1908: $1,155, equal to 2,316 yen.

9. There were no gold coins of the United States of America melted at the Japanese mint during the calendar year 1908.

10. Gold produced from mines in Japan during the calendar year 1908: 829,497 momme: value, 4,147,485 yen.

11. Silver produced from mines in Japan during the calendar year 1908: 31,529.833 momme; value, 4,265,717 yen. Japan has no colonies.

12 and 13. Output of gold and silver from refineries of the country during the calendar year 1908 is unknown.

14. Gold coin and bullion in the country at the close of the calendar year 1908:

	Yen.
Gold coin in Bank of Japan as reserve for convertible notes	49,320,409
Gold coin in circulation	27,051,427
Total gold coin	76,371,836
Gold bullion in Bank of Japan as reserve for convertible notes	120,184,105

15. Silver coin and bullion in the country at the close of the calendar year 1908:

	Yen.
Silver coin in national treasury	13,824,038
Silver coin in circulation	105,373,501
Total silver coin	119,197,539
Silver bullion in national treasury	1,879,265
Silver bullion in Bank of Japan	385,461
Total silver bullion	2,264,726

16 and 17. There were no government notes in circulation at the end of the calendar year 1908.

18 and 19. Bank notes in circulation at the close of the calendar year 1908:

	Yen.
Convertible notes of the Bank of Japan covered by a specie reserve	169,504,514
Convertible notes of the Bank of Japan covered by guaranty reserve	183,229,758

20. Actual currency of the country: Gold standard; gold coins and notes convertible into gold; subsidiary silver and copper coin.

21. Gold is not at a premium as compared with the actual currency of the country.

22. There was no new legislation in regard to currency during the calendar year 1908.

23. Copy of the report of the imperial mint, for 1908, is inclosed; also copy of the statistical report of the department of agriculture and commerce for 1907, containing the statistics for the bureau of mines.

[Translation.]

Monetary Circulation in Formosa.

[From L'Economiste Européen, Paris, October 1, 1909.]

When Formosa came into Japanese possession, in addition to the considerably complicated old money which already existed, there came the bank notes of Japan, the silver yen, and fractional coins to such a degree that the monetary system of the island is found in the greatest confusion. Since the adoption of the gold standard in Japan, in 1897, the Government decided to authorize the circulation of silver coins in Formosa for a certain time, at a rate fixed by gold exchange, and to establish, when the opportunity offered, the same monetary system as that of Japan.

Thus, the monetary system of Formosa is that of gold monometallism, but with the use of silver coin as subsidiary. The frequent changes in the rate of the silver yen, added to the already large variety of paper money in circulation, render calculations in commercial transactions very complicated, and have a tendency to promote a spirit of speculation. Bad became worse, and in 1903 they considered a reform as absolutely urgent.

By way of a temporary measure designed to remedy this situation, an ordinance was promulgated in June, 1904, authorizing the issue by the Bank of Taiwan, of notes convertible into gold. This decree was put in force the following month.

In 1906, the project of revision of the law upon the Bank of Taiwan came before the diet assembly in their twenty-second session, was voted for, and the promulgation of the law reorganizing the monetary system of Formosa took place in February of the same year.

Since the issue of notes convertible into gold, their circulation has continued without incident.

The old custom which the islanders had of hoarding the gold and silver in their houses has gradually disappeared in proportion to the increase of deposits in the banks.

The notes convertible into silver have, little by little, been retired from circulation in proportion to the increase of the notes convertible into gold, so that the amount of silver notes at present in circulation does not exceed 20,000 yens (51,660 francs).

According to the revision of the law upon coinage, in April, 1906, and March, 1908, the standard fineness of the subsidiary coins has been modified.

In October, 1908, an ordinance was passed prohibiting the importation of silver coin, either from foreign countries or from the metropolis, and at the same time to suppress the permission to employ the silver yen in payment for taxes and imports.

Up to April, 1908, the Government exchanged the silver yen against gold; and from December, 1909, they have definitively prohibited the bank notes convertible into silver that may then remain in circulation, and replace them by the silver yen.

KOREA.

Monetary Legislation.

[From the Report of the Minister of Finances, Paris, 1907.]

IMPERIAL ORDINANCE REGULATING THE MONETARY SYSTEM OF KOREA.

(Issued February 12, 1901; amended January 20, 1905; and put into force June 1, 1905.)

Article 1. The right of manufacturing and issuing coin belongs to the Government.

Art. 2. A weight of 2 fun of fine gold shall be the gold monetary unit; they will bear the name of won (kwan or yen). Fifty chon (sen) shall be called a half won, and 100 chon, 1 won.

Art. 3. The denominations of the coins are as follows:

Gold coins	20 won; 10 won; 5 won.
Silver coins	½ won; 20 chon; 10 chon.
Nickel coins	5 chon.
Bronze coins	1 chon; ½ chon.

Art. 4. The diameter, weight, and composition of the pieces are regulated as follows:

Coins of Unlimited Liberty Power.

GOLD.

Denomination.	Diameter.	Weight.		Composition.
		Momme.	Grams.	
	Sun,[a]			
20 won	0.95	4.4444	16.6666	Gold 900; copper 100.
10 won	.70	2.2222	8.3333	
5 won	.56	1.1111	4.1666	

SILVER.

½ won	1.02	3.5942	13.4783	Silver 800; copper 200.
20 chon	.74	1.4377	5.3914	
10 chon	.58	.7188	2.6955	

NICKEL.

5 chon	0.68	1.2441	4.6654	Copper 750; nickel 250.

BRONZE.

1 chon	0.92	1.9008	7.1280	Copper 950; tin 40; zinc 10.
½ chon	.72	.9504	3.5640	

[a] 1 sun = 1.193 inches.

Art. 5. The limit of the legal current weight of the gold coins shall be—

	Momme.
For the 20-won pieces	4.42
For the 10-won pieces	2.21
For the 5-won pieces	1.105

They shall have the tolerance of weight accorded in the manufacture of coins.

Art. 6. The gold coins shall have unlimited circulating power. The silver coins shall have legal-tender power up to the amount of 10 won. The nickel and bronze coins shall have circulating liberty power up to the amount of 1 won. These arrangements can be modified by agreement of the parties.

ART. 7. The gold coins which shall have fallen below the limit of legal current weight by consequence of wear; the silver, nickel, and bronze coins which shall have been used excessively in circulation; or the coins which may have been put in circulation improperly, shall be exchanged at their nominal value, according to regulations arranged by the minister of finances.

ART. 8. The coins on which the design is no longer visible, or which shall have been manufactured by individuals, shall not have lawful currency.

ART. 9. If an individual brings gold bars and requests their transformation into coins, the Government must accede to their request.

ART. 10. The silver coins of 1 liang, the nickel coins of one-quarter liang, and the copper coins of 5 fun, issued up to the present time, shall continue to have lawful currency as before.

ART. 11. Regulations for issuing new gold and silver coins, for exchange of the 5-liang and 1-won silver coins, and of the 5 and 1 fun (gold), issued up to the present time, as well as the bringing in and coinage of gold, shall be determined by the minister of finances.

PERSIA.

LEGATION OF THE UNITED STATES OF AMERICA,
Teheran, February 22, 1909.

Answers to interrogatories, 1908.

1. Amount of gold coined during 1908: Some gold coins of 2, 1, half, and fifth tomans were struck, but it is not possible to ascertain the exact number. The metal was probably obtained by melting down English and Turkish coins.

2. Amount of silver coined during 1908: About 6,000,000 tomans, but accurate information is not obtainable. Bullion was used for the most part, and it is said that old domestic coins were melted and recoined. No foreign coins were used. No coin was minted abroad for this country.

3. No coinage was executed for other governments during 1908.

4. Weight of fine gold used in industrial arts during 1908: Probably English and Turkish gold coins.

5. Weight of fine silver used in industrial arts during 1908: No reply.

6 and 7. Import and export of gold and silver during 1908: Impossible to obtain statistics.

8 and 9. Import of United States gold coin and United States gold coin deposited at mint and melted during 1908: Probably none.

10 and 11. Amount of gold and silver produced from mines of the country during 1908: No mines are worked here, but if any surface gold was obtained the amount would be infinitesimal. No silver mines have been discovered here.

12 and 13. Output of gold and silver from refineries of the country during 1908: See 10 and 11.

14 and 15. Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1908: Impossible to obtain information.

16 and 17. Amount of government notes outstanding at the end of the year 1908: The Government has no issue, but of customs' acceptances in anticipation of receipts there must have been a considerable sum.

18 and 19. Amount of bank notes outstanding at the end of the year 1908: About 2,500,000 tomans. Amount not covered by legal-tender silver coin or bullion not obtainable.

20 and 21. Actual currency of the country and premium on gold: No information obtainable.

22. No laws were passed during 1908 affecting the currency.

23. No report of the mint is published.

SIAM.

AMERICAN LEGATION,
Bangkok, April 29, 1909.

Answers to interrogatories, 1908.

1. Amount of gold coined during the calendar year 1908: None.

2. Amount of silver coined during the calendar year 1908: 273,709 salungs, value 68,427.25 ticals; 478,697 fuangs, value 59,837.12½ ticals. None of this was recoinage. No gold or silver coinage was executed at foreign mints.

3. Coinage executed for other governments during 1908: None.

4 and 5. Weight of fine gold and fine silver used in industrial arts during 1908: No statistics.

6 and 7. Import and export of gold and silver during the calendar year 1908:

Classification.	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
	Ticals.a	*Ticals.a*	*Ticals.a*	*Ticals.a*
Leaf	5,482,038		5,608,605	752,385
Coin	27,192	52		

a Tical at 0.37 gold.

8 and 9. United States gold coin imported or deposited at mint and melted during 1908: None.

10. Gold produced from mines of the country during 1908: 493 kilograms.

11. Silver produced from mines of the country during 1908: None.

12 and 13. Output of gold and silver from refineries of the country during 1908: None.

14. Approximate stock of gold coin and bullion in the country at the close of the calendar year 1908: No information available as to stock of gold coin and bullion in the country. The public treasuries held bullion of the approximate value of 274,000 ticals on December 31, 1908.

15. Approximate stock of silver coin and bullion in the country at the close of the calendar year 1908: It is estimated that there is a stock of about 100,000,000,000 ticals' worth of silver in the country. The public treasuries held 16,161,151 ticals in silver coins on December 31, 1908.

16 and 17. Government notes outstanding at the end of the calendar year 1908: The amount of notes in circulation on December 31, 1908, was 16,468,875 ticals, and covered by 10,676,308 ticals in silver, the balance being guaranteed by investments, the particulars of which are unknown to us.

18 and 19. Bank notes outstanding at the end of the year 1908: As a conclusion of arrangement made three years ago, the foreign banks have stopped the issue of notes.

20. Actual currency of the country: Silver, on a gold basis. Under the new gold-standard law, issued in November, 1908, both gold and silver are full legal tender, but the minting of gold coins has not yet been commenced.

21. Premium on gold: Not applicable.

22. Laws passed during 1908 affecting the currency: English translation of gold-standard law of 1908 forwarded herewith.

23. No report is published on the operations of the mint. No report of mines is issued.

THE GOLD STANDARD ACT, R. S. 127, 1908.

Whereas the effect of the silver standard of currency, which was formerly in force in Siam, was such as to lead to constant fluctuations in the prices of commodities exchanged with countries where gold was the standard of value, His Majesty the King deemed it expedient, in order that greater stability might be secured, to change the silver standard of the country to a gold standard, and was graciously pleased in the year R. S. 121 to command that the desired change be inaugurated by closing the royal mint to the free coinage of silver, which command was carried out by means of an act repealing a certain section of the royal mint act of the year R. S. 112.

And whereas, in the year R. S. 122, His Majesty was pleased to direct that the "coinage act of 122" be promulgated in order to regularize the metallic currency of the Kingdom, and carry the adoption of the gold standard a step further:

Now therefore, with a view to the completion of the policy instituted in the year R. S. 121, His Majesty is pleased to command that the gold standard act, R. S. 127, be enacted as follows:

CHAPTER I.—*Preliminary.*

SECTION 1. This law shall be called "the gold standard act, R. S. 127," and it shall supersede all previous decrees and enactments relating to the coinage of money in Siam which may be contrary to the provisions of this act.

SEC. 2. In this act the expression "the mint" shall mean the royal mint in Bangkok.

The term "gold bullion" shall mean gold which has not been coined by the Government as a measure of value.

The term "silver bullion" shall mean silver which has not been coined by the Government as a measure of value.

The term "money" shall mean any substance which is regarded as a measure of value.

The term "coin" shall mean a piece of metal which any government has issued for use as money.

The term "subsidiary coin" shall mean coin of a value less than 1 tical.

The term "remedy" shall mean the variation from the standard fineness or weight of the coins, as specified in sections 5 and 7 of this act.

SEC. 3. The theoretical unit of the Siamese monetary system shall be the tical of 55.8 centigrams of pure gold.

The silver tical containing 13.5 grams of pure silver shall under this act have a value equal to the aforesaid 55.8 centigrams of pure gold.

The tical shall be divided into 100 satang.

CHAPTER II.—*The coins.*

SEC. 4. The following shall be the coins to be minted under this act:

Gold	Dos, or 10-tical piece.
Silver	Tical; 2-salung piece; Salung.
Nickel	10-satang piece; 5-satang piece.
Bronze	Satang.

SEC. 5. The standard fineness of the coins shall be as follows:

(1) The dos shall contain 900 parts of pure gold and 100 parts of copper.

(2) The tical shall contain 900 parts of pure silver and 100 parts of copper.

(3) The subsidiary silver coin shall contain 800 parts of pure silver and 200 parts of copper.

(4) The nickel coins shall be composed of commercially pure nickel.

(5) The bronze satang shall contain 95 parts of commercially pure copper, 4 parts of tin, and 1 part of zinc.

SEC. 6. The sanctioned remedy in fineness shall not exceed the following limits:

Dos	0.001
Tical	.003
Subsidiary silver coins	.004

SEC. 7. The standard weight of the coins shall be as follows:

	Grams.
Gold:	
Dos	6.20
Silver:	
Tical	15
2-salung piece	7.5
Salung	3.75
Nickel:	
10-satang piece	3.5
5-satang piece	2
Bronze:	
Satang	5

SEC. 8. The sanctioned remedy in weight shall not exceed the following limits:

Gold:		
Dos	centigrams	2
1,000 dos	grams	2.5
Silver:		
Tical	centigrams	9
1,000 ticals	grams	12
2-salung piece	centigrams	8
1,000 2-salung pieces	grams	12
Salung	centigrams	5.5
1,000 salungs	grams	6
Nickel:		
10-satang piece	centigrams	20
5-satang piece	do	15
Bronze:		
Satang	do	25

SEC. 9. The coins minted under this act shall be of such sizes, forms, and designs, and bear such inscriptions and other particulars as the minister of finances may, by command of His Majesty, notify in the Government Gazette.

CHAPTER III.—*The minting and circulation of the coins.*

SEC. 10. The right of minting and issuing belongs exclusively to the Government and will be exercised in conformity with the provisions of this act.

SEC. 11. Any person may, under this act, tender gold bullion to the ministry of finance for coinage. The gold so tendered shall be of such quality and fineness and be tendered in such minimum quantities as may be notified by the minister of finance.

If the person by whom the gold is tendered demands gold coins in exchange, the ministry of finance shall pay him such gold coins at the rate of 2,680 ticals for every 100 ticals weight (1,500 grams) of pure gold tendered, provided that there shall be no obligation to pay the coins immediately on the receipt of the gold, but only after the lapse of such reasonable time as may be sufficient for the coinage of the gold tendered.

SEC. 12. If the person by whom gold is tendered, as mentioned in section 11, is prepared to accept in exchange any money which is legal tender under Chapter IV of this act, without specifying any particular denomination, the ministry of finance shall so pay him, at its convenience, immediately after the gold has been assayed, at the rate of 2,680 ticals for every 100 ticals weight (1,500 grams) of pure gold tendered.

SEC. 13. The gold received for coinage under sections 11 and 12 shall, at the discretion of the Government, be used either for the purpose of minting gold coins, or for the purchase of silver bullion in such quantities as may be required for the mintage of silver coins, or for any other object not contrary to the purposes of this act.

SEC. 14. Whenever the value of the silver contained in the 1-tical piece is, in Bangkok, greater than the value of 55.8 centigrams of pure gold, the ministry of finance is prohibited from issuing 1-tical pieces in exchange for gold.

SEC. 15. The exchange of gold coins and 1-tical pieces for subsidiary silver coins, or of subsidiary silver coins for gold coins and 1-tical pieces, may be effected at the royal treasury in Bangkok in even hundreds of ticals. The minister of finance may determine and notify the other government offices at which, and the conditions under which the exchanges in question may also be made.

CHAPTER IV.—*Legal tender.*

SEC. 16. Gold coins and 1-tical pieces shall be legal tender without limit as to amount.

Subsidiary silver coins shall be legal tender only up to the value of 5 ticals, and nickel and bronze coins only up to the value of 1 tical.

SEC. 17. Foreign coins shall not be legal tender except in cases expressly provided for by law or by treaty with a foreign power.

CHAPTER V.—*Worn and deteriorated coins.*

SEC. 18. Gold coins and 1-tical pieces shall be withdrawn by the ministry of finance for recoinage when, through reasonable usage, their designs and inscriptions shall be effaced, or their weights diminished below the following limits—that is to say, in the case of gold coins, below the standard weight prescribed in section 7, by an amount equal to two and a half times the remedy authorized in section 8, and in that of 1-tical pieces, below the standard weight prescribed in section 7, by an amount equal to five times the remedy authorized in section 8.

Subsidiary coins shall be withdrawn when, through long usage, their designs and inscriptions are effaced.

All such worn coins as described in this section shall, if presented at any state treasury, be accepted at their full nominal value, but shall not be reissued.

SEC. 19. When worn and deteriorated coins are withdrawn for remintage, as mentioned in section 18, the cost of melting down and reminting shall be charged in full to the general expenditure budget of the Government.

SEC. 20. Coins which have been reduced in weight otherwise than by reasonable wearing, or which have been mutilated, or which bear any stamp in addition to the national one, shall cease to be legal tender under Chapter IV of this act, and shall not be accepted or exchanged by the officer in charge of any state treasury or by any official receiving or collecting state dues.

SEC. 21. Whenever any such short weight or mutilated coins as described in section 20 are presented to any public officer so empowered by the minister of finance under this act, he shall destroy them in such manner as may be laid down in the rules issued by the minister of finance for the destruction of short weight and mutilated coins.

CHAPTER VI.—*Illegal tokens.*

SEC. 22. No person shall make, use, or put into circulation any piece of metal, or mixed metal, or any object whatsoever, as a token for money, except by the authority of the Government.

Whoever acts in contravention of this section of the act shall be deemed guilty of a petty offense, Class D, under the penal code, but the offense described in this section shall be without prejudice to any punishment prescribed for the counterfeiting of money.

CHAPTER VII.—*Special reserve fund.*

SEC. 23. The ministry of finance shall establish a fund for the purpose of maintaining the stability of the rate of exchange between Siam and foreign countries.

The fund shall be a separate one, unconnected with other funds in the royal treasury, and shall be composed of the following resources:

1. Of the sum of 12,000,000 ticals, which, to commence with, shall be transferred from the treasury reserve or other source allocated by the Government for the purpose. If the minister of finance deems it expedient, this sum may be increased with the sanction of His Majesty.

2. Of the profit resulting from the coinage operations without any deduction for expenses.

3. Of any other sources of income or profit which may be held to emanate from the said fund.

SEC. 24. The expenses and losses arising out of the operations effected in connection with the purposes for which the fund is created shall be charged to the said fund, but all disbursements of the mint, such as salaries of employees, cost of mintage, etc., shall be charged to the appropriate head in the expenditure budget of the Government.

SEC. 25. Any portion of the fund which it may be found necessary to remit and retain abroad shall be deposited in such banks or invested in such foreign government securities of first-class standing as the minister of finance may select.

The portion of the fund to be kept in Siam shall consist of gold coins and 1-tical pieces or of gold and silver bullion intended for mintage.

Silver ticals included in the fund, under this section, shall only be withdrawn in exchange for gold at the rate prescribed in section 12, or for the purchase of silver bullion for the minting of coins, or, finally, for the purchase of transfers payable to the Government in gold abroad.

SEC. 26. The particulars of all receipts and payments arising out of the fund under the operation of this act shall be incorporated by the comptroller-general of accounts and audit in a special account in the form prescribed by the minister of finance.

The comptroller-general of accounts and audit shall make up the account yearly, in time to be included in the general annual accounts of the Kingdom.

SEC. 27. The minister of finance shall be charged with the execution of this act and shall be authorized to issue such rules and regulations as may be found necessary for the purpose of carrying out its provisions. All rules and regulations so issued by the minister of finance shall be published in the Government Gazette and shall have effect from the date of such publication.

Proclaimed on the 11th day of November, R. S. 127, being the 14610th day of the present reign.

NOTIFICATION PRESCRIBING SIZES, FORMS, DESIGNS, AND INSCRIPTIONS OF COINS.

Whereas in section 9 of the gold standard act, R. S. 127, it is provided that the coins minted under that act shall be of such sizes, forms, and designs, and bear such inscriptions and other particulars as the minister of finances may, by command of His Majesty, notify in the Government Gazette.

Now, therefore, His Majesty is pleased to command that the coins in question shall be in the form of a disk and shall have such diameters and bear such designs and inscriptions as are mentioned below:

GOLD COIN.

(Dos, or 10-tical piece, diameter 20 millimeters.)

Design and inscriptions.—Obverse, the likeness of His Majesty, with the inscription "Chulalongkorn Parama Rajadhiraj." Reverse, the figure of the Garuda, bearing a shield with the design of the Chakra and Trident, and the inscription "Dos Nung," "Siama Rath," and the year of coinage.

SILVER COINS.

Design and inscriptions.—Obverse, the likeness of His Majesty the King, with the inscription "Chulalongkorn Siamindr." Reverse, the three-headed elephant, with

the inscription "Siama Rath," the year of coinage, and the name of each denomination of coin.

Diameters.—Tical, 30 millimeters; 2-salung piece, 25 millimeters; salung, 20 millimeters.

NICKEL AND BRONZE COINS.

Design and inscriptions.—Obverse, the "Unalom," with the words "Siama Rath" and the value of the coin. Reverse, the Chakra, with the year of coinage.

Diameters.—Ten-satang piece, 20 millimeters; 5-satang piece, 17.5 millimeters; 1-satang piece, 22.5 millimeters.

These three coins shall be pierced with holes in the centers as follows: Ten-satang piece, 5 millimeters; 5-satang piece, 4 millimeters; 1-satang piece, 6 millimeters.

Proclaimed on the 11th day of November, R. S. 127 (1908).

(Signed) KITIYAKARA,
Minister of Finance.

NOTIFICATION SUSPENDING THE OPERATION OF CERTAIN SECTIONS OF THE GOLD-STANDARD ACT, R. S. 127.

The minister of finance is commanded by His Majesty to proclaim that whereas it is inexpedient to bring into immediate operation certain sections of the gold-standard act, R. S. 127, by reason of the inconvenience which would thereby be caused to the inhabitants of the realm, His Majesty is pleased to direct that their operation be temporarily suspended in the manner set forth below:

I. Whereas in section 9 of the gold-standard act, R. S. 127, it is provided that the coins shall be of such sizes, forms, and designs and bear such inscriptions and other particulars as the minister of finance may notify, by command of His Majesty, and whereas the existing coins of all denominations, viz, the tical, the salung, the fuang, the bronze sik, sio, att, and solot, and the nickel 20-satang, 10-satang, 5-satang, and 2½-satang pieces are coins of which the particulars do not correspond with those notified under the present act, but nevertheless it would be inexpedient to entirely demonetize them all at the present time.

Now, therefore, His Majesty is pleased to command as follows:

1. The tical and the salung, minted under former acts, shall continue in general use, as heretofore.

2. The fuang and the bronze sik, sio, att, and solot shall continue in use for the time being, pending their exchange by the public for the new coins

3. The nickel 20-satang, 10-satang, 5-satang, and 2½-satang pieces which were issued under notification dated the 21st day of August, 117 (1898), shall be demonetized, but the officials in charge of the state treasuries shall issue the new satang pieces in exchange for the old ones until such time as it may be notified that the exchange shall cease.

The exchange of the fuangs, the old bronze coins, and the old satang pieces mentioned in clauses 2 and 3 above, shall be made at the following rates, viz, bronze coins, 1 tical's worth for 100 satang; and fuangs, 8 fuangs for 1 tical; the old and new satang pieces shall have equivalent values.

The exchange of the coins above referred to may be made at the royal treasury in Bangkok and at such other government offices as the minister of finance may designate.

II. Whereas in sections 11 and 12 of the gold standard act, R. S. 127, it is provided that any person may tender gold bullion to the ministry of finance for coinage, and that the ministry of finance shall, if demanded, pay him gold coins in exchange, or if no such demand is made, in any money which is legal tender under Chapter IV of the gold standard act, R. S. 127, the rate of such payment being 2,680 ticals for every 100 ticals weight (1,500 grams) of pure gold tendered;

And whereas it is not at present expedient to receive gold in Bangkok;

And whereas it is not at present commanded by his majesty that sections 11 and 12 of the said act, as aforementioned, shall be temporarily suspended, and that for the present the ministry of finance shall continue to receive gold abroad, as heretofore, and shall issue in Bangkok legal currency in exchange at the rate of 2,662 ticals for every 100 ticals weight (1,500 grams) of pure gold received, or 13 ticals for £1 sterling.

Now, therefore, it is hereby commanded by his majesty that sections 11 and 12 of the said act, as aforementioned, shall be temporarily suspended, and that for the present the ministry of finance shall continue to receive gold abroad, as heretofore, and shall issue in Bangkok legal currency in exchange at the rate of 2,662 ticals for every 100 ticals weight (1,500 grams) of pure gold received, or 13 ticals for £1 sterling.

III. Whereas in section 20 of the gold standard act, R. S. 127, it is provided that coins which have been reduced in weight otherwise than by reasonable wearing, or which have been mutilated, or which bear any stamp in addition to the national one, shall cease to be legal tender and shall not be accepted or exchanged by any state treasury or official receiving or collecting government dues;

And whereas there are at present in circulation considerable numbers of bent salungs and fuangs, the immediate refusal to accept which would cause inconvenience to the public,

Now, therefore, it is hereby commanded by his majesty that all state treasuries and all officials receiving or collecting state dues shall, for a period of one year from the date of this proclamation, be authorized to accept, at their full nominal value, all bent salungs and fuangs which may be tendered to them in payment or in exchange.

Proclaimed on the 11th day of November, R. S. 127 (1908).

(Signed.) KITTYAKARA,
Minister of Finance.

STRAITS SETTLEMENTS.

AMERICAN CONSULAR SERVICE,
Singapore, April 19, 1909.

Answers to interrogatories, 1908.

1. No gold coined during the year 1908.

2. Total amount of silver coined during the year 1908, $6,929,500 (Straits currency) as follows: In dollars, $3,930,000; in 50-cent pieces, $2,999,500. All recoinage, and coined at the English mint, London.

3. Coinage executed for other governments: No mint in the Straits Settlements.

4 and 5. Gold and silver used in industrial arts during 1908: No information available; statistics do not show.

6. There was imported: Gold bullion to the amount of $3,697,159; gold coin to the amount of $2,127,274. Exports: Gold bullion to the amount of $2,456,324; gold coin to the amount of $2,721,959. Weight of bullion not obtainable. A large amount of the gold given as bullion was gold leaf, and the majority of it was imported from Hongkong and India.

7. There was imported: Silver bullion to the amount of $10,415; silver coin to the amount of $14,859,200. Exports: Silver coin to the amount of $7,150,926. No silver bullion exported. The imports and exports in silver coin were largely in connection with the recoinage. That for trade purposes between the following countries: India, Hongkong, Java, British North Borneo, Dutch Borneo, Sumatra, and Siam.

8 and 9. No gold imported from the United States, and none deposited and melted.

10 and 11. The federated Malay States produced 13,580.5 fine ounces, 1000 fineness, equivalent to 422.4 kilograms fine, valued at £57,686. No silver mined in the colony.

12 and 13. No refineries in the colony.

14. Approximate stock of gold in the country at the close of the calendar year 1908: £4,740 in public treasuries. Amount in banks unknown, and practically none in circulation.

15. The approximate stock of silver (practically all coin) in the country on December 31, 1908, was $37,485,571; in public treasuries, $21,074,021; in banks, $2,148,652; in circulation, $14,262,898.

16 and 17. Amount of government notes outstanding at the end of the year 1908: $25,670,505. Amount not covered by legal-tender gold or silver coin or bullion, $8,072,060.14. This amount is covered by securities.

18 and 19. Amount of bank notes outstanding at the end of the year 1908, $999,255. Covered by deposit of gold in London equivalent to the amount of note issue.

20. Actual currency of the country, silver. Value of Straits silver dollar fixed by the Government at 2s. 4d. on January 29, 1908, which has since been maintained.

21. Premium on gold during 1908. Demand rate on London has been subject to slight fluctuations—highest, 2-4d.; lowest, 2-3$\frac{1}{2}$d.; average, 2-3$\frac{7}{8}$d.

22. No laws have been passed during the year 1908 affecting the coinage, issue, or legal-tender character of the metallic or paper currency.

23. Report on operations of mint: No mint in the colony.

AFRICA.

[Translation.]

BRITISH WEST AFRICA.

MONETARY EMPLOYMENT AND TRANSACTIONS IN GAMBIA.

[From L'Economiste Européen, Paris, October 8, 1909.]

A report from the consular agent of France at Sainte-Marie-de-Bathurst, published in the Moniteur Officiel du Commerce, contains some interesting information upon the monetary employment and transactions in British Gambia.

The current coin of the country is the English fractional coin. The 2-florin piece, however, is not used. It is represented by the French écu, which is taken in trade at the parity of 4s., and by public cash offices at that parity less an exchange of 3 per cent.

That admission of the French écu into the monetary circulation is decidedly clever. They permit the coming of the French natives of the interior during the winter season, planting upon English territory, that is to say, in the vicinity of the river, and afterwards selling the crop there in exchange for French silver, of which they have need in their country of origin to pay for their imports and for their personal expenses.

The English gold and fiduciary money does not circulate in Gambia. Only one establishment of credit exists in the country. It is a branch of the Bank of British West Africa (Limited), of which the seat is in Liverpool. The facilities which that bank accords to the merchants of Bathurst permits them to meet all the purchases of crops without accepting moneys from European houses, the British West Africa annually importing 2,000,000 francs in French écus, and 1,250,000 francs in English fractional coin. The bank operates with the five largest exporting houses, by successive credits against remittance of contracts drawn on the houses of Europe, credits renewable in proportion to the payment of the contracts by the mother houses.

The conditions of contract are as follows: They do not receive, except without interest, paper at three days' sight and payable at London in sterling.

They previously deduct a commission of 1 per cent if the customer demands of the trader payment in French écus, and of 11/20 per cent if he demands it in English money. To those expenses there are to be added for the trader the exchange on London necessitated by the payment in sterling for the agreements drawn upon the mother houses (course of exchange varying between 25,15 and 25,25) and contingently, according to the conditions which bind the house with their financial correspondents, a commission of one-eighth per cent. The dealer by way of compensation profits by the interest on the silver utilized on the day of its delivery to the Bank of British West Africa up to the time of payment for their export, a period which may extend from fifteen to twenty-eight days.

In short, the cash cost to the merchants of Gambia is about 1¼ per cent when they employ the French écu, and about 2 per cent when they employ the English fractional money.

EGYPT.

American Diplomatic Agency and Consulate-General.

Answers to interrogatories, 1908.

1 and 2. No issue of gold coins took place in 1908. There were minted, however, for private persons who wished to use them in ornaments 117 pieces of £E. 5 (5 Egyptian pounds), 5,000 pieces of 10 tariff piasters, and 7,750 pieces of 5 tariff piasters each. No silver coins were minted.

3. Coinage executed for other governments: None.

4 and 5. The Government has no statistics as to the weight or value of the silver or the gold employed in Egyptian industries.

6 and 7. The imports and exports of gold and silver in 1908 were as follows:

Classification and country.	Gold.		Silver.	
	Imported.	Exported.	Imported.	Exported.
	a £E.	a £E.	a £E.	a £E.
Coins:				
England	1,867,389	3,136,118		98
English possessions in Asia	663,059	72,296		726
Turkey	704,655	421,082	20,217	323
France	717,236	1,017,448	240	224
Austria	152,281	4,944	5,523	43
Italy	32,446	8,775		
Greece	25,835		56	
Other countries	10,274	1,959	1,872	2,170
Total	4,171,175	4,662,622	33,908	b 3,584

a "£E." (Egyptian pound) equals $5 United States gold.
b The silver coin exported was foreign money.

Classification and country.	Imported.		Exported.	
	Weight.	Value.	Weight.	Value.
	Kilograms.	*a £ E.*	*Kilograms.*	*a £ E.*
Gold ingots, Turkey	0.52051	7,047	0.27119	.....
Silver ingots:				
England	23,008.00000	89,525	.....	.....
Austria	331.00000	1,576	50.00000	175
France	4,161.00000	13,538	.....	.....
Turkey	29.00000	98	14.00000	58
Total	27,529.00000	104,737	64.00000	233

a "£E." (Egyptian pound) equals $5 United States gold.

8 and 9. United States gold coin imported or melted during 1908: None.

10, 11, 12, and 13. Output of gold and silver from mines of the country and refineries during 1908: None.

14. Approximate stock of gold, coin and bullion, in the country at the close of the calendar year 1908: Gold coins in government depositories at the end of 1908 amounted to about £ E. 194,816. The stock in banks or in circulation is unknown.

15. Approximate stock of silver, coin and bullion, in the country at the close of the calendar year 1908: Total of silver coin in government depositories (in Egypt and the Sudan) at the end of 1908 was £ E. 656,620; in hands of the public, £ E. 2,555,723; total circulation, therefore, £ E. 3,212,343.

16 and 17. No issue of notes has ever been made by the government of Egypt.

18 and 19. Amount of bank notes outstanding at the end of the calendar year 1908: The National Bank of Egypt is the only institution issuing bank notes. The total of these in circulation at the end of 1908 was £ E. 1,824,456. Amount of bank notes not covered by legal tender gold and silver coin and bullion, £ E. 558,519.

20. Actual currency of the country: Gold, silver, nickel, and bank notes of the National Bank of Egypt referred to above.

21. Gold coins are never at a premium.

22. Laws passed during 1908 affecting the currency: None.

23. Report published on operations of mint: None.

The Egyptian Currency.

By W. H. Cook.

[From The Bankers' Magazine, London, February, 1909.]

* * * * * * *

In 1834 Mehemet Ali inaugurated the system of currency which, with slight modifications, exists at present.

When the Arabs made their great conquests money became a necessity for their trading, and a new currency was introduced and carried on by their Moslem inheritors. They adopted imitations of the Byzantine gold coins, while their silver money was a copy of the Persian currency. The gold dinars were called heracla, after Heraclius, and had been in use in Constantinople during his reign from 610 to 641 (this dinar weighed 66 grains and a fraction). The Copts, the descendants of the primitive stock of Egyptians, were, on the fall of Babylon, mulcted in a poll tax of two golden dinars on every adult male.

Two kinds of token coins were introduced, a black and a white dirhem, but these had no legal standing and were not extensively used until five centuries later. The dirhem of silver, a revival of the Greek drachm, weighed at most 45 grains. The copper piece was the fels, taking its name from the "phollis" of the Greek Empire.

The first monetary reform known took place in 696, when El Hedjaj, governor of Irak, struck some dirhems in a specially constructed mint. This work was supervised by a Jew named Somair, who gave the name of somairis to the coins.

For the first five centuries of their issue all the coins are remarkable for being uniform in fabric and general appearance, but the striking of dirhems of silver ceased in 1384, when the governors and other officials discovered that copper coins gave them considerably greater profits than were yielded by the minting of silver money. This debased copper currency drove the genuine coins out of the country. The jewelers eagerly bought up all the silver coins for melting purposes to such an extent that they

ceased to circulate. The gold coins shortly followed in this general confusion, and within a few years also became very rare. The natural result was that in the year 1398, owing to the want of a good currency, the general misery of the country was increased by the cessation of all trade. The only relief which the authorities were able to give was minting copper coins of heavier weight than the old denomination, which did not in any way afford the benefit of a standard money.

The influence of the commercial states of Italy had been felt in Egypt as early as 1260, when, for want of a good exchangeable currency, the later Mameluke sultans authorized the use of the gold florins which had first been minted in 1252 at Florence. The ducats and sequins of Venice also found their way into the Moslem coinage a few years later. It is significant that these sultans found it convenient, or necessary from their position between Europe and India, to adopt European coins as a means of exchange when their currency had become so debased as to be useless in commercial transactions.

After the discovery of the route to India by the Cape of Good Hope the trade of Egypt and the Mediterranean in general rapidly dwindled away. Left to their own devices the rulers of Egypt continued using whatever gold coins came into their country, and made no attempt to remedy the bad state of their own currency.

The discovery of the silver mines of America by the Spaniards brought about a much needed revolution in the currencies of the civilized states, and many of the newly minted silver coins of Europe found their way to Egypt. The ghourouch or groat and the thalers of the German states were used in 1515–1520 as a means of exchange, and only gave way in favor to the Dutch thaler, which, a century or two later, actually became legal tender in Egypt and Turkey.

The smaller silver coins of Europe, such as the solidus or German shilling, the mark, and others never found their way east in any quantity on account of their small size and value.

Gradually those silver coins which had been introduced into Egypt as a necessity underwent that same depreciation and debasement which they were suffering elsewhere.

The Spanish dollar, the famous piece of eight (8 reales), which played such a prominent part in the trade of the world during the sixteenth and seventeenth centuries, was introduced into the Ottoman Empire, where it was known as the "piastra d'Argento." It was chiefly used by merchants trading with Europe, circulating at a face value of about 5s. The rulers of Egypt, holding the old doctrine that wealth consisted of money, and conscious of the inconvenience of insufficient coinage in circulation for the purpose of trade, were naturally anxious, as these coins came into more general use, to retain and not export them. Imitating, therefore, the practices so familiar to their forefathers, dishonest persons traded by circulating clipped money at full value. Heavy and light pieces passed promiscuously, and, as always happens, a bad currency drove away the good. Heavy pieces were shipped to Europe in payments of goods, while the light ones remained at home. This practice of reducing the weight of the coins was condoned by the authorities when it was found that light money was more apt to stay in the country than the heavy pieces. Clipping by the subject was the counterpart of the debasement of coins by the Sultan or his governors. Hence it came about that clipping was rampant, and light Spanish dollars became, so to speak, the silver coin of the Ottoman Empire.

At the beginning of the eighteenth century the dollars of Spain were known as "colonatos," owing to these coins bearing on the obverse the columns of Hercules. They continued in use throughout the Mediterranean and the East for two centuries and are still circulated in small quantities in parts of the Sudan. This remarkable coin figured in most of the British colonies as late as 1845, and only disappeared from Egyptian currencies in 1885. Although the use of this coin had supplanted the Egyptian currency in the commercial centers, the natives were still using the worthless coins of old.

The akcheh, a minute copper coin which had been in use many years in Turkey, was transferred, when it became useless, to Egypt, where it was used from 1635–1655. It was replaced by the medin, or para, a slightly larger coin, which in 1700 possessed a nominal value of 0.035 franc, and intrinsically had not the value of our present farthing. In spite of the poverty of oriental nations at that period the "medin" was decidedly of too small a value for the requirements of the country. It continued in use until the arrival of the French under Bonaparte in 1798, when a French officer described these coins, which represented the chief native currency, as being "so small that a thousand could be wrapped up in the corner of a handkerchief, thinner than a sheet of paper, and so light that the slightest puff of wind scattered them from the palm of the hand." Turkey had done nothing to remodel the currency of Egypt, although it had tried to reform its own. The old piaster of Spain in 1700 was taken

as the model for the piaster of Turkey, with a face value of 4s. 1d. In 1744 the value was only 1s. 8d.

While the value of the coin was decreasing, owing to its progressive debasements, the profit in the minting was increasing. In 1703 7 per cent was the recognized profit; in 1798 the profit was 40 per cent. The weight of the medin in 1730 was officially given as 0.500 gram, but in 1798 the weight was only 0.250 gram, and the value depreciated by 63 per cent.

The number of good Spanish dollars in the country was rapidly decreasing, and a fresh silver coin had to be procured. The Maria Theresa dollar, first minted in 1742, of lesser value than the Spanish coin, was eagerly imported. This coin in 1774 could be bought for 90 medins,but in 1798 the value was 150 medins. The actual value of the dollar had not altered, but the value of the medin had depreciated by 40 per cent.

When Bonaparte arrived he found the trade of the country carried on by means of foreign countries, while the natives had lost all knowledge of the value of coins. The French soldiers, in purchasing from the natives, offered in payment the brass buttons of their uniforms, which were gladly received.

Assisted by a staff of professors, Bonaparte early decided upon reforming the monetary system of the country and copied the European groschen under the name of ghourouch, and, in order to utilize the small coins in use, decided that 40 medins should form 1 piaster. Owing to the large number of foreign silver pieces which were in circulation, he published a tariff, as follows:

	Medins.	Francs.
Gold coins:		
Quadruple of Spain	2,352 =	82.81
French Louis	672 =	23.66
Sequin of Venice	340 =	11.97
Silver coins:		
Ecu de 6 livres, France	168 =	5.91
Ecu de Rome	140 =	4.92
Ecu de Malta	67 =	2.35
Maria Theresa dollar	150 =	5.28
Medin	1 =	0.035

As this "tariff" is the first authentic valuation of the various foreign coins which circulated in Egypt, the term "Piasters au tariff" and its present-day abbreviation "P. T." owes its origin to this first quotation list.

It would seem to be the fate of the dominant coins of Europe to find, when discarded or superseded at home, a last resting place among oriental people.

Whatever may have been the good intentions of Bonaparte for reforming the Egyptian currency, they were not carried into effect beyond framing the above tariff, and, after the departure of the French troops and the subsequent evacuation of the country by the English, the former state of chaos reappeared. The old system was reverted to, and, to complicate matters, the revolutionary wars in Europe prevented the importation of silver coins for trading purposes, and the difficulties of the country soon became acute.

Egypt was governed thereafter under the Turks upon a system of getting the maximum of revenue from a peasantry which was allowed the minimum of sustenance. No one prospered but the tax collectors. For a time the peasantry obtained some consolation from the depreciated currency, inasmuch as the tribute of Turkey was ordered to be paid in piasters. But when the governors realized that the very coins which they had so debased did not yield the full value of the tribute, they increased taxes in all directions. This form of government went on until 1834, when Mehemet Ali became the undisputed master of Egypt. In that year a tariff for the exchange of foreign coins was issued, but only dealt with the three principal coins.

The sovereign which had recently been in use was given its present value of P. T. 97½; the 20-franc piece, P. T. 77$\frac{19}{20}$; the colonnate (or colonato), the old Spanish dollar, P. T. 20$\frac{5}{8}$. On April 16, 1836, to this tariff was added:

	P. T.
The Venetian sequin	46.13
German thaler	20.00
Dutch ducat	45.26

whilst five years later the 5-franc piece was added with a quotation of P. T. 19.10.

The tariffs, however, did not stop the debasement of the Egyptian currency, neither was any attempt made for checking the evil. The old Turkish coins called "bechliks,"[1] valued at 5 piasters, passed for only half their value. Most of these coins, if not all, differed much in purity as well as weight. Another money called "corrente" was principally used for inland transactions; it was a deteriorated currency of the tariff piaster, and stood at a considerable discount. The accounts were kept in piasters of 40 medini, each medino being subdivided into 8 borbi or 6 forli or 3 aspres. Besides these, there existed the ducatells reckoned at 10 medini, the griscis or abuquelp at 30 medini, and the zenzerli, which was valued at 107 medini. Further, a purse contained 25,000 medini or 75,000 aspres, about £5.

This absurd currency was remodeled by Mehemet Ali, who in 1844 ordered a fresh issue of Egyptian coins. An imperial decree prohibited the circulation of the old moneys and moneys of foreign countries. It further required these foreign coins to be delivered to the treasury at the following rates:

	P. T.
Pound sterling	108.5
20-franc piece	85.00
A sound Spanish dollar	22.33
A Maria Theresa dollar	21.36
A 5-franc piece	21.10

It will be at once seen that the Egyptian government gave a handsome premium for these foreign coins with a view to a speedy extinction. But the silver coins actually minted by the government never satisfied the commercial requirements of Egypt. During the period 1830 to 1883, £540,754 worth was minted at Cairo and £457,373 in Paris, making about £1,000,000 worth of silver coins minted during fifty-three years, which had to satisfy a population of more than 6,800,000 souls.

In spite of the prohibition large quantities of foreign silver coins were every year imported into Egypt, whilst owing to the general prosperity of the latter part of the nineteenth century considerable quantities of gold coins were in constant use.

In 1884 the British administration appointed a commission to inquire into the defects of the currency and remodel it. This inquiry, which was conducted in a most careful way, brought to light many of the grievances of an insufficient currency. The chief complaint was the want of silver, a condition which most injuriously affects the poorest classes. Keen Israelites during the summer months collected silver coins, paying for them P. T. 8.40 to P. T. 8.50 for the coins of P. T. 10, called "Parisis" (owing to their having been minted in Paris), retailing them at full value during the cotton season when silver coins were in demand, although these very coins were only officially tariffed at P. T. 8.75.

The English sovereign in Alexandria had the fictitious value of P. T. 98 instead of P. T. 97½, whilst in the interior it passed for the full value of the Egyptian pound (100 piasters). The colonnate dollar ranked in value with the parissi dollar, both being above their tariff value.

From careful inquiries the commission ascertained that out of a total of £. E. 360,000 of silver coins at the banks, money changers and provincial treasuries in Lower Egypt, 52.71 per cent of this total was accounted for in foreign silver coins.

It was therefore expedient to rearrange the monetary system of the country in order to protect the public against the loss and inconvenience arising from a deficient supply of media of circulation, and to send back to Europe the various silver coins then in use, so as to restore to the Egyptian government its prerogative of coinage, as well as the control over the metallic circulation of the country.

The principal reasons for a revision were: Absence of a good divisible money; abundance of silver piasters, badly struck; absence of multiples of these piasters (4, 5, 10, 20); abundance of foreign silver. The first consideration was the question of the best unit.

The piaster, a coin with a value of 2½d., formed a very small and most inconvenient unit, giving unwieldy figures to represent comparatively small amounts. To explain the inconvenience in question the sum of £. E. 10,000 appears in piasters as 1,000,000, and a mental operation is necessary for reducing the number of piasters into other than their numerical groups. The para, on the other hand, was infinitesimal and a practically useless unit, not even represented by a coin, and would have complicated the accounts without any compensating advantage.

There remained only the Egyptian pound. But the question at once arose: What is the Egyptian pound? A coin thus named was minted up to May, 1853, weighing 44.4 kirats (=3.009 grains) equivalent to 8.556 grams. The next coin was minted at 43⅛ kirats, or 8.428 grams, and was not issued after November, 1854. The latest Egyptian pound, first struck on January 31, 1855, weighed 8½ grams, and was coined at 0.875 fine, and consequently contained 7.4375 grams of pure gold, which, at 2.73135s. per gram, is valued at 20.314s., making the £1 equivalent to 98.45 piasters. The commission decided to adopt this coin as the unit for the new monetary system and discard the old piaster unit. The decision to make the basis a gold standard was arrived at more easily, inasmuch as the gold standard had already existed in practice for all important transactions. The quantity of Egyptian gold pieces not being sufficient for the requirements, the English sovereign, the French 5-franc piece, and the Turkish pound had been in use for many years.

The choice of the Egyptian pound as the base of the monetary system was not a happy one, on account of the high rating of the coin in comparison to the gold coins of other nations. It was a serious disadvantage to a relatively poor country, as the coins of France, England, and Turkey, being of less value, flooded Egypt and replaced the national coin. Again, the fractions of these coins, such as the shilling, could buy

the same article as 5 piasters in small dealings, and the franc had a purchasing value of 4 piasters.

The commission, in adopting the Egyptian pound, decided, in view of the standard not being a pure one, not to mint gold coins, but to make legal tender those gold coins which had become familiar. It was necessary to give them a fixed tariff in order to insure the public against any loss, and the following values were adopted:

	Piasters.
£1 sterling	97.50
20-franc piece	77.15
Turkish pound	87.75

On examining this present tariff value of the coins against their mint value, it is noticed that the differentiation against the sovereign is less than 1 per cent, the differentiation of the other two being greater. Since these coins are all legal tender, and the legal tariff rates discriminate in favor of our sovereign, it follows that the gold currency of Egypt consists almost exclusively of British sovereigns.

To show how favorably the British sovereign compares with the 20-franc piece under the Egyptian legal tariff, the value of the sovereign in Paris has first to be ascertained. The French mint par value of the pound sterling is 25.2214 francs, but the legal tariff in Egypt is 25.2754 francs. Hence, a person desiring to purchase a sovereign could only purchase it in Egypt at a premium of 0.054 franc.

No correct explanation can be given for the difference in the tariffs of the three legal gold coins, and especially for the favor shown to the sovereigns. There were, however, many points in favor of making it relatively cheaper than the others, the foremost one being its very extensive use in Egypt at the time of the revision, the natives having become so accustomed to the old quotation of P. T. 97½ as to make any alteration a serious hindrance to commerce. French coins had at different times been introduced in large numbers, but their unpopularity with the natives had resulted in their reshipment to France. On the other hand, the French coins could be brought from Marseille at half the cost of shipment and in half the time in comparison with shipment of coins from London; but whilst gold is obtainable from the Bank of England at any time in any quantities, the export of gold from the Bank of France is hindered by numberless state restrictions. The sovereign might very well have been accepted as the gold standard, but the commission feared to wound national susceptibilities by putting an end to a system which, however imperfect, had already existed more than fifty years.

Having settled upon the unit, the commission divided the Egyptian pound into 100 piasters and the piaster into 10 paras.

A considerable time was devoted to the silver currency, and it was decided to abolish the old coins and have a completely fresh issue. The silver coins were to be in denominations of 20, 10, 5, 2, 1, half, quarter piasters; the nickel pieces of 5, 2, and 1 ochr el guerche; and bronze pieces of half and quarter ochr el guerche. A fresh design was approved and the minting intrusted to the Berlin mint. (Some gold pieces of 20, 10, and 5 piasters were struck; they were not intended for general circulation, but simply for gifts and ornaments, like the English maundy money.) In order to prevent any depreciation of this issue, it was decreed that the total issue of silver coins should not exceed 40 piasters per head of population, whilst the nickel and bronze coins were limited to 8 piasters. The provision of this limit at the time of the commission would have given an average of about 10s. per head of population, viz, 8s. 4d. in silver, 1s. 8d. in nickel. These sums appear moderate compared with the average of other States, more particularly in view of the partiality of oriental people for silver coins.

The government decreed that all foreign silver coins should cease to be accepted, and actually offered some small premium for a while to induce natives to exchange their foreign silver for the new coins. In a very short time foreign silver gave way to the new currency and the control which had been for so many centuries in the hands of all the nations of Europe was restored to the Egyptian government.

Although the monetary reform of 1885 prohibited the circulation of foreign silver coins, the government reserved itself the right to introduce foreign silver in order to provide for the trade requirements of the Soudan and Red Sea regions. In these districts a metallic currency has to circulate among the most diverse classes of society, and must be suited to the wants and even to the prejudices of the population using it. The traders of the Soudan dealing with Abyssinia have to provide large quantities of Maria Theresa dollars in order to pay for the goods purchased. The Abyssinians for many years have used these coins, and the prejudice against any other is so great that if the introduction of these coins was forbidden the trade between Abyssinia and the Soudan would for a long time be conducted with the greatest difficulty.

Sir Samuel Baker, speaking of Abyssinia, says: "The Austrian dollar of Maria Theresa is the only large coin current in the country; the effigy of the Empress with

a very low dress and a profusion of bust, is, I believe, the charm that suits the Arab taste. So particular are these people that they reject the coin, after careful examination, unless they can distinctly count seven dots that form the star upon the coronet. No clean money will pass current in this country; all coins must be dirty and gummy, otherwise they are rejected."

During the period, 1858 to 1891, over 41,000,000 of these dollars have been minted, and since they have no currency value in Egypt except in the regions mentioned, it is presumed that large quantities must have found their way to the most remote trading centers of central Africa. Previous to the introduction of this dollar, salt was the unit of exchange, and was used in this capacity up to quite recent times, in spite of the circulation of the silver coins.

The Maria Theresa dollar, known on the East Coast of Africa as "Januaris," was first coined in 1780, and has for over a century ceased to circulate in Austria. When there is a demand for these coins, they are procured from Vienna, where they are struck, the mint charging 3 kronen for coining 1 kilo of silver; each dollar contains 23.389 grams of pure silver. When the Egyptian government require these coins they invite bankers to tender, the price having to include all costs of shipment, insurance, etc. According to the price of silver, the quotations vary, the price being about 2s. 1d. per dollar.

Of recent years an Abyssinian silver coin, known as the "Menelik dollar," has been introduced in Abyssinia, but has not met with much favor, the natives preferring the old Austrian coin for the general purposes of trade with Egypt and the interior.

In the remote stations of the Soudan the lonely British officer, the emblem of security, has frequently a most difficult task in the settlement of exchanges. Coins are seldom seen, and he has to regulate the currency value of beads and wire, whilst for more complicated bargains, quite substantial disks of sundry metals of all shapes and weight have to be submitted to his final arbitration. This peculiar rating of exchange must cause considerable anxiety to the banking authority when he finds either too much wire in circulation or an attempt to make a corner in beads, and he must be hard put to, to explain if required, the par of exchange of an inconvertible currency.

It is not within the province of this article to deal with the introduction of bank notes, as they are not at present a state issue. The expansion in the note circulation will probably be a factor in reducing the future gold shipments from London, but in view of the distrust of the native population and the oriental greed for gold, it may be safely surmised that notes will never be popular in Egypt.

In conclusion, the remark of Viscount Milner, made some years ago, may be aptly applied to the Egyptian currency. He says: "This genius for eccentricity is something that no change can exorcise. Paradox seems rooted in the soil." The very unit of the monetary system is a gold coin which is not minted and has ceased to circulate. A foreign gold coin circulates with a fictitious value, increasing the complexities of a banker who has to be constantly dealing in two different pounds. Two other gold coins are legal tender, yet are seldom used. The use of foreign silver is forbidden, yet the Government has to have recourse to a dissued and antiquated coin for certain regions.

The prosperity of Egypt may rightly be ascribed to the policy of the British occupation, but that prosperity could not have been achieved without the revision of the monetary system. If the "material prosperity of Egypt now rests on a basis of some what exceptional solidity" (Cromer's report, 1906), it is in no small measure due to the monetary reform of 1885, brought about by sound British principles, and last, but not least, the unbounded trust of the natives in the sound British sovereign.

IMPORTATION AND EXPORTATION OF COIN IN EGYPT FROM 1879–1908, INCLUSIVE.

[From Bulletin de Statistique, Paris, August, 1909.]

Period.	Imports.	Exports.	Period.	Imports.	Exports.
	£E.	£E.		£E.	£E.
1879–1883 (average)	3,119,929	788,333	1898	2,730,116	1,891,513
1884	2,172,696	389,768	1899	4,515,917	1,502,485
1885	3,914,767	1,293,660	1900	4,114,612	2,602,790
1890	2,971,461	2,085,455	1901	3,085,678	2,432,172
1891	2,824,861	1,523,950	1902	4,779,266	1,834,457
1892	3,826,393	2,048,474	1903	6,431,569	1,785,933
1893	2,946,674	3,517,152	1904	7,606,864	2,730,890

1896	3,720,425	1,826,160	1907	7,768,190	4,736,189
1897	2,921,722	2,369,479	1908	4,205,083	4,671,205

The Fiduciary Money.

Bank notes have existed since 1898. That is the year the National Bank of Egypt was established and upon which was conferred by a khedivial decree the "privilege of issuing notes to bearer payable at sight under the conditions stipulated in the statutes," and the said privilege was "not to be accorded to any other establishment during the continuation of that association."

The privilege of the national bank consisted simply as follows: An Egyptian stock association can not exist except by virtue of a khedivial decree which approves its statutes and authorizes its establishment. Now, upon the terms of the decree by which the constitution of a stock association is authorized designed for the organization of a bank called "national," the Egyptian Government is prohibited from authorizing the constitution of any other association of that nature of which the statute presages the issue of bank notes. But an Egyptian association previously organized, likewise a foreign association, could, as we believe, lawfully issue without restriction notes to the bearer which represent all the characteristics of real bank notes. We hasten to add that the monopoly of the national bank has never been threatened, perhaps because the bank notes of that institution have not legal currency; they are accepted with difficulty by the public at large, although they would be received by the public cash offices at their nominal value. (By the terms of the circulars from the ministry of finances, which have accompanied the invoices to the accountants and cashiers of the Government, the specimens of new notes are issued. These notes are to be of 50, 100, 500, 1,000, 5,000, and 10,000 tariff piasters.) Their reimbursement is assured by guaranties as strong as possible, resulting, upon one hand, in the organization of the bank and the control to which it is subject, and, upon the other hand, in a reserve equal to their nominal value.

By the terms of article 5 of the statutes "the service of issuing the bank notes constitutes a separate service and is absolutely independent of the general transactions of the bank. They will be held to a distinct accountability and a special reserve for all the operations of the issue or retirement of the bank notes. The amount of the notes to bearer at sight in circulation must always be represented: First, by one-half or less of their amount in gold; second, for the other half by fiduciary securities, calculated at par, properly pertaining to the bank, and of which the choice and designation belongs by right solely to the Government without the exercise of the right that may in any case and at any time be made to incur to the latter any responsibility whatsoever. In default of all or a portion of those fiduciary securities, the reserves in gold or the special funds for the service of the issue of the bank notes must be raised proportionally, in such manner that the amount of the notes in circulation may always be fully represented. The reserve exacted by this article that in gold or in securities constitutes the special guaranty to the bearers of the bank notes and, in case of the liquidation of the National Bank of Egypt, the said reserve must serve exclusively to insure the retirement of the notes."

In 1899, the year following the establishment of the bank, the amount of bank notes in circulation was an average of 59,998 Egyptian pounds; the following year (1890) that amount decreased to 53,374. Their immediate recovery and not ceasing to increase is shown by the following table:

	Egyptian pounds.		Egyptian pounds.
1899	59,998	1904	454,320
1900	53,374	1905	913,216
1901	73,023	1906	1,894,334
1902	116,182	1907	2,280,126
1903	217,916		

In 1899, the year following the foundation of the bank, the amount of bank notes in circulation was an average of 59,998 Egyptian pounds; the following year (1890) the amount decreased to 53,441. Their immediate recovery and not ceasing to increase since is shown by the following table:

Average Circulation of Bank Notes in Egypt.

Year.	In banks.	In circulation.	Year.	In banks.	In circulation.
	£. E.	£. E.		£. E.	£. E.
1899	31,127	59,998	1904	145,035	454,067
1900	41,923	53,441	1905	300,211	911,186
1901	37,464	72,878	1906	391,948	1,966,700
1902	42,288	115,909	1907	438,601	2,283,543
1903	60,789	217,449			

LIBERIA.

AMERICAN LEGATION,
Monrovia, March 15, 1909.

SIR: I have the honor to transmit to you, as instructed by the Honorable Secretary of State, January 21 last, information on the subject of "Production, coinage, and industrial consumption of gold and silver in foreign countries," and in relation to which I beg to say that the Republic of Liberia does not maintain a mint for coinage purposes. In the monthly statements of "Value of foreign coins" she is erroneously represented as having a gold standard. She has a silver specie of her own in denominations of 10, 25, and 50 cents. These were coined in England and represent an amount of $20,000. The coin is very much depreciated.

By an arrangement growing out of the loan of 1906, English gold and silver became the principal standard of the country, since customs duties must be paid in these.

The questions, therefore, contained in the circular of the Treasury Department of January 26, 1909, do not cover any part of my consular district.

I have the honor to be, sir, your obedient servant,

ERNEST LYON,
Minister Resident.

THE DIRECTOR OF THE MINT.
Washington.

MADAGASCAR.

AMERICAN CONSULAR SERVICE,
Tamatave, May 26, 1909.

Answers to interrogatories, 1908.

1, 2, and 3. There was no gold or silver coined in the French colony of Madagascar during the calendar year 1908.

4 and 5. There were 14.18726 kilograms (31¼ pounds) of fine gold used in industrial arts in Madagascar during the calendar year 1908; 12.84526 kilograms (28¼ pounds) was of new gold, and 1.34218 kilograms (2 9/16 pounds) was of old gold and coin. There was no silver used in industrial arts in Madagascar during the calendar year 1908.

6. There are no available statistics showing the importation of gold into Madagascar during the calendar year 1908. The gold export (raw gold, dust, and nuggets), amounted to 3,112.62 kilograms (6,847.78 pounds), valued at 8,715,358 francs ($1,682,064).

7. There are no available figures as to the amount of silver imported into Madagascar during the calendar year 1908. There was no production or export of silver during that year.

8 and 9. While there are no available statistics as to the amount of gold coin imported into Madagascar during the calendar year 1908, it is not believed that any United States gold coin was imported, as it is not used in Madagascar. There is no mint in Madagascar.

10 and 11. There were 3,149.334088 kilograms of raw gold produced from the mines of Madagascar during the calendar year 1908, valued at 9,448,002.26 francs ($1,823,464.44). The above figures are official and the value of the gold is estimated at 3 francs ($0.579) the gram, while the uniform value of gold extracted from the soil of Madagascar during the year 1908 was fixed by a governor-general's decree of December 30, 1907, at 2.80 francs ($0.54) the gram.

There was no gold produced in any of the dependencies of Madagascar during that year. There was no silver produced in Madagascar and dependencies during the calendar year 1908.

12 and 13. There are no gold or silver refineries in Madagascar.

14. The approximate stock of gold coin in Madagascar at the close of the calendar year 1908 was 127,260 francs ($24,561.18); in the treasury of the colony, 77,260 francs ($14,911.18); in banks, 50,000 francs ($9,650); in circulation, none. There was no gold bullion in the colony at that time.

15. The approximate stock of silver coin in Madagascar at the close of the calendar year 1908 was 30,473,160.90 francs ($5,881,320.05); in the colony's treasury, 20,473,160.90 francs ($3,951,320.05); in the banks, 6,000,000 francs ($1,158,000); in circulation, 4,000,000 francs ($772,000). There was no silver bullion in the colony at that time.

16 and 17. There are no notes issued by the colony of Madagascar.

18 and 19. There are no banks operating in Madagascar that issue notes of any kind.

20, 21, and 22. Madagascar has no currency of its own, the gold-standard currency of the mother country (France) being used.

23. There is no mint for the colony of Madagascar.

TRANSVAAL.

AMERICAN CONSULAR SERVICE,
Johannesburg, April 30, 1909.

Answers to interrogatories, 1908.

1, 2, and 3. Amount of gold and silver coined and coinage executed for other governments during calendar year 1908, none. The mint has not been worked since the British occupation of the Transvaal.

4 and 5. Amount of fine gold and fine silver used in industrial arts during 1908: It is understood that a certain amount of current coinage has been utilized in the industrial arts in this country, of which there are no returns.

6 and 7. Imports and exports of gold and silver during 1908:

Classification and country.	Imports.		Exports.	
	Weight.	Value.	Weight.	Value.
Gold coin:	Ounces.		Ounces.	
Portuguese East Africa		£305,300		
Cape Colony		301,469		£4,424
Orange River Colony		127,150		17,000
Natal		642,231		24,961
Southern Rhodesia		2,391		13,000
Swaziland		7,500		1,720
Total		[a] 1,430,041		[b] 60,205
Native gold:				
Natal			263,416	894,300
Southern Rhodesia			7,728,679	28,620,489
Total			7,992,095	[c] 29,513,089
Silver coin:				
Portuguese East Africa		3,020		
Cape Colony		27,421		3,450
Orange River Colony		12,775		6,280
Natal		26,516		2,465
Southern Rhodesia		37		2,850
Swaziland		300		
Bamtoland		1,000		
Total		[d] 71,088		[e] 15,045

[a] Equals $6,973,731.4265. [c] Equals $144,321,684.6235. [e] Equals $73,236.4025.
[b] equals $290,279.6205. [d] Equals $345,999.4320.

The countries of origin for specie (coin) are not available, the countries shown being simply the routes by which imported. The weight of specie is not available.

All the native gold with the exception of 457 ounces of fine gold, which went to Germany, and gold concentrates to the value of £6,926, which went to Portuguese East Africa, went to the United Kingdom.

Copper imported and exported:

Classification and country.	Imports.	Exports.	
	Value.	Weight.	Value.
Copper coin:		Tons.	
Cape Colony	£404		
Southern Rhodesia	45	970	£49,839
Total	[a] 449 ($2,185.0585)	970	[b] 49,839 ($243,561.6835.)

[a] Equals $2,185.0585. [b] Equals $243,561.6835.

In this instance all the copper, with the exception of 13 tons which went to Germany, went to the United Kingdom. The ultimate destination of the specie (coin) is not known.

8 and 9. Amount of United States gold coin imported or melted during 1908, none.

10. The total production of gold during the calendar year 1908 was 219,475 kilograms; value, £29,973,214 ($145,669,819.04).

11. No silver was produced direct from silver mines during the calendar year 1908. The total quantity contained in the gold bullion produced by the gold mines was 24,248 kilograms, commercial value, £84,360 ($409,989.60). Other base-metal mines returned an estimated amount of 776 kilograms of fine silver, valued at £2,546 ($12,373.56), contained in their various shipments of base metals.

12 and 13. There are no refineries in the Transvaal colony.

14. The following was the stock of gold coin and bullion, respectively, on December 31, 1908:

	£	s.	d.	
In banks:				
Gold coin	3,209,074	10	0	=$15,615,356.084
Gold bullion	266,043	17	5	=1,301,169.438

No statistics available as to amount in circulation.

15. The following was the stock of silver coin and bullion, respectively, on December 31, 1908:

	£	s.	d.	
In banks, silver coin	131,345	7	3	=$639,126.520

No statistics available as to amount in circulation.

16 and 17. There were no notes of the present Transvaal government in circulation during 1908.

18 and 19. Bank notes outstanding at the end of the year 1908: £589,763 10s. ($2,866,250.58). The law provides that "Every bank which issues, or shall have issued, notes in the Transvaal, shall at all times have in hand at its head office in this colony, or both at its head office and its branch office in this colony, a reserve in legal coin equal to 33⅓ per cent of the total value of all bank notes in circulation at the time, and assets in this colony for the balance."

20. Actual currency of the country: Gold is the standard currency of the country. Silver is legal tender up to 40s.; copper, up to 1s. The published returns of the various banks doing business in the Transvaal show that on December 31, 1908, the banks held:

In gold coin	£3,209,074
In silver coin	131,345

These returns also show that at the same date the notes of the various banks in actual circulation amounted to £589,763, making a total of £3,930,182 ($19,114,265.61). It is not possible to say what amount of gold and silver coin was actually in circulation, but this did not probably exceed £500,000 ($2,430,000).

21. Gold was not at a premium as compared with the actual currency.

22. No laws were passed during 1908 affecting the currency.

[Translation.]

The Ethiopian Monetary System.

[From L'Économiste Européen, Paris, March 26, 1909.]

We have extracted from a recent report of the minister from France to Addis-Abbeba the interesting information which follows upon the Ethiopian monetary system and the effects upon commercial transactions:

"The monetary unit in Abyssinia is the thaler or talari. They have either the effigy of Maria-Theresa or the Emperor Ménélik. Their value varies according to the course of silver and the requirements of the place, the question of proffer and demand playing a preponderant part all the time in fixing the value of the coin.

"The thaler is divided into half thaler, roub or quarter thaler, double piaster (toumoun) or eighth thaler, and piaster or sixth thaler.

"To the different coins is added the 'cartridge,' of which the value varies according to that of the monetary unit, or from 10 to 12 cartridges for 1 thaler.

"To have currency the cartridges have to bear the mark of the French society of ammunitions (S. F. M.).

"The system at first view appears simple, but in practice it is more complicated for the following reasons:

"First. The Ménélik thalers do not have actual currency except in Addis-Abbeba and in the large centers.

"The principal houses everywhere accept them, but the people and the small merchants refuse them, therefore upon the interior market they can not settle their purchases in Ménélik thalers.

"Second. The thaler is of two kinds, that coined in France and that coined in Italy. The first is distinguished from the second in that the lion engraved upon the reverse

of the first is smaller, with a closed mouth, holding the flag (standard) in the left paw, and crowned by the Abyssinian tiara; while upon the second the lion is larger, with an open mouth, holding the standard (flag) in the right paw, with the head surmounted by a royal crown. They make trouble on account of receiving, and often also refuse the second altogether.

"Third. There are also two kinds of roubs, those struck at our mint and those struck at the mint of Addis-Abbeba. The first are a smaller reproduction of the thaler of French coinage. They are current everywhere, but those which proceed from the Ethiopian mint and which are a smaller reproduction of the original Italian thaler, are of difficult currency. What is more extraordinary is that they call the last 'françawi,' because the people consider that a coin upon which the Abyssinian lion is not represented according to the rules of indigenous heraldic science can not be made except by the foreigners (françawi). Recently the difficulties in exchanging the françawi were increased owing to the Emperor having issued and rendered the following decree, which, following the custom, was read at different times in the public place (guébaya):

"'In case of the refusal upon the part of the public to accept the quarter thalers, called "françawi," as lawful, we have decided to advise our people to deliver to justice those who refuse, after this advertisement, to accept them in commercial and daily exchanges. In such cases the quarter thalers shall become the property of the informers.' To-day all is returned to order, but how long will it last?

"Fourth. Four quarters in this country do not make a whole when it is a question of money; it is peculiar, but it is nevertheless so. In all transactions they give you three quarter thalers or roub pieces plus 1 or 2 cartridges, following the currency of that agent, for a thaler, and not 4 roubs.

"On account of the scarcity of the quarter thalers, that they do not coin more at present is because it is an impossibility in Addis-Abbeba, where the imperial money, on account of their stock, is found altogether rudimentary for satisfying the demands of the public.

"In short, the piasters are only accepted by the administrations throughout the Choa.

"By way of compensation, the Maria Theresa thaler, which proceeds from Trieste, where the coining of that money is maintained to be current everywhere, always on the condition that they do not show traces of wear to any extent. One of the indications of wear is the defacing of the clasp placed upon the right shoulder, which holds the raiment of the Empress. That ornamentation is made to stand out, and, naturally, disappears first in the wear. For reasons which are not clearly apparent, this piece is unmercifully refused.

"What people might be surprised at is that peculiar money, the cartridge; but when one knows the country they can easily understand their full value. All the world goes armed, from the poorest to the richest. Therefore it can be said that Abyssinia is truly an armed nation. The cartridge has two uses: They serve either to charge a gun or to pay for what one purchases. It is enough to say that the actual condition of the country has not been modified. They have not arrived at what they may do, to suppress the double part they play, which, according to the necessities of the time, is either that of ammunition or a piece of money.

"At the same time they account for the difficulties which commerce encounters from that point of view, which, in substance, arises from three principal causes—

"1. Variations in exchange.

"2. The considerable weight of the piece.

"3. Refusal of the pieces while they have lawful currency.

"They also prevent the annoyances and expense which the return to silver would cause the merchants who make all or nearly all the exportation in the form of civet, gold, ivory, and even when that kind of traffic affords only a small profit."

AUSTRALIA.

New South Wales Banking Returns, 1908.

NOTES IN CIRCULATION.

The note circulation for the last four quarters is stated as follows:

Quarter ended—	
March, 1908	£1,720,484
June, 1908	1,713,314
September, 1908	1,674,024
December, 1908	1,763,104
Total	6,870,926

The expansion usual toward the close of the year is indicated. But for the whole year only a slight increase appears.

COIN AND BULLION.

The holdings of coin and bullion for the last four quarters are stated as follows:

Quarter ended—	£10,158,256
March, 1908	9,808,392
June, 1908	9,348,227
September, 1908	9,600,447
December, 1908	
Total	38,915,322

The amount is about the same as a year ago.

NEW ZEALAND.

Answers to interrogatories, 1908.

AMERICAN CONSULATE-GENERAL, *March 29, 1909.*

1, 2, and 3. There is no mint in New Zealand.
4 and 5. Fine gold and fine silver used in industrial arts during 1908: Not ascertainable, but insignificant.
6 and 7. Imports and exports of gold and silver during 1908:

Classification and country.	Imports.		Exports.

GOLD EXPORT, 1907.

The quantity of gold entered for exportation through the customs for the year 1907 was as follows:

	Ounces.
Auckland	296,101
Nelson	4,688
West coast	87,069
Otago and Southland	118,352
Total	508,210

valued at £2,027,490, a decrease of £243,414 as compared with the export returns for the previous year (1906).

8 and 9. No gold coin of the United States in New Zealand.

10, 11, 12, and 13. The export figures of gold and silver represent the output.

14 and 15. On December 31, 1908, the banks held gold and silver coin and gold and silver bullion to the value of £4,585,755.

16 and 17. No government notes issued in New Zealand.

18 and 19. Notes of banks of issue outstanding on December 31, 1908, £1,607,222.

20 and 21. Actual currency of the country: Gold (no premium).

22. Laws passed during 1908 affecting the currency: None.

23. Report of mint published: No mint.

QUEENSLAND.

Answers to interrogatories, 1908.

AMERICAN CONSULAR SERVICE,
Brisbane, September 13, 1909.

1, 2, and 3. There is no mint in Queensland.

4 and 5. Amount of fine gold and fine silver used in industrial arts during the calendar year 1908: Not ascertainable.

16. Amount of government notes outstanding at the end of the year 1908: £1,603,314 ($7,802,528).

17. Amount of government notes not covered by legal-tender gold and silver coin and bullion: £961,510 ($4,679,188).

18 and 19. Amount of bank notes outstanding at the end of the year 1908: Nil.

20. Actual currency of the country: Gold, silver, bronze, and treasury notes.

21. Premium on gold: Gold is at par.

22. Laws passed during 1908 affecting the currency: None.

23. Report published on operations of mint: No mint in Queensland.

SOUTH AUSTRALIA.

Answers to interrogatories, 1909.

AMERICAN CONSULAR SERVICE,
Adelaide, June 9, 1909.

1, 2, and 3. Amount of gold and silver coined and coinage executed for other countries, during the calendar year 1908: No mint in South Australia.

4 and 5. Weight of fine gold and fine silver, new and old, used in industrial arts during 1908: No record kept by manufacturers.

6 and 7. Imports and exports of gold and silver during the calendar year 1908:

Classification and country.	Imports.		Exports.

Netherlands			41,608	18,723
Total	701,224	83,978	112,184	45,346

8 and 9. Total import of United States gold coin and amount of United States gold coin deposited at mint and melted: Nil.

10. Weight and value of gold produced from mines of the country during 1908:

Origin.	Fine ounces.	Value.
South Australia	2,898	£12,300
Northern territory	5,644	23,943
Total	8,542	36,243

11. Weight and value of silver produced from mines of the country during 1908: Nil.

12 and 13. Output of gold and silver from refineries of the country during 1908: No refineries.

14 and 15. Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1908: Gold coin and bullion in the State of South Australia on December 31, 1908:

	£ s. d.
In banks	1,878,055 9 9
In public treasury	4,121 17 3
In circulation	Not known.

16 and 17. Government notes outstanding at the end of the year 1908: No government notes issued.

18 and 19. Bank notes outstanding at the end of the year 1908: On December 31, 1908, £495,080. Bank notes are considerably more than covered by legal-tender gold and silver coin and bullion.

20. The actual currency of the country can not be stated. (See answer to No. 14.)

21. Gold was not at a premium during 1908.

22. No laws were passed during 1908 affecting the currency.

23. Report on operations of mint: No mint.

TASMANIA.

Answers to interrogatories, 1908.

AMERICAN CONSULATE,
Hobart, March 18, 1909.

1, 2, and 3. No mint in this State.

4 and 5. Fine gold and fine silver used in industrial arts during 1908: No means of ascertaining quantities; but probably insignificant.

6 and 7. Not any gold or silver was imported except transfers from other States of the Commonwealth.

8 and 9. United States gold coin imported, or melted during 1908: Not any.

10. The secretary of mines for Tasmania gives the quantity of gold mined in Tasmania during the calendar year 1908 as 57,085.124 ounces; value £242,482 ($1,411,-258.30). He notes that this is fine gold contained in blister copper and silver-lead bullion.

11. Silver produced during 1908: 61,046.86 tons of silver-lead ore. Statistics of pure silver not obtainable. Value, £319,549 ($1,555,081.20).

12 and 13. No refineries.

14 and 15. The stock of gold coin and bullion in the country is known only from figures supplied by the bank, and the amount held by them at the close of 1908 was £712,521 ($3,467,473.44). A leading local banker approximately estimates the amount in Tasmania at the close of 1908 as about £850,000 ($4,136,525). The amount of silver coin is included in these figures, and there is no means whatever of ascertaining the separate items of gold and silver.

16, 17, 18, and 19. The note currency is entirely what is issued by the banks. At the close of 1908 the notes in circulation totaled £158,276 ($769,150.15).

20. The actual currency of the country is gold, silver, and bank notes, circulating at a parity with gold. The unit is the pound sterling.

21. There is no premium on gold.

22 and 23. No state laws have been passed affecting the coinage of metallic or paper money. The coinage of metallic money is under regulation now of the Australian Commonwealth.

SILVER COINAGE IN AUSTRALIA.

[From the Hobart Mercury, January 3, 1909.]

The federal government is not considered likely to reverse the Deakin ministry's decision with reference to the proposed silver coinage agreement with the imperial treasury, by which the latter will for a short period of years mint a new issue of Australian silver coins and pay to the Commonwealth the £40,000 profit hitherto pocketed by the British exchequer. The arguments against the establishment of a silver coinage mint at present which weigh with ministers are, first, a desire to avoid capital expenditure on such an establishment until the federal capital is occupied, and, second, the uncertainty that exists as to the practicability of giving effect to the Corbet-McCay mint-arsenal scheme, under which the coinage of silver would be associated with the making of the metal parts of cartridges. However, the issue is still a little in doubt. The two West Australian ministers, Mr. Mahon and Senator Pearce, are keenly interested in the Corbet-McCay scheme, and the prime minister, as treasurer, is anxious to secure the silver coinage profit at as early a date as possible. The solution of immediate problem may be found in the taking over of the existing gold mints at Perth, Sydney, and Melbourne.

VICTORIA.

Answers to interrogatories, 1908.

AMERICAN CONSULAR SERVICE,
Melbourne, April 5, 1909.

1. The amount of gold coined at the Melbourne mint (a branch of the royal mint, at London, England), during the calendar year 1908 was, according to a return furnished by the deputy master, as follows:

Sovereigns	£3,080,148	=$14,989,530.24
Half sovereigns	202,517	= 985,558.98
Total	3,282,665	= 15,975,089.22

The sum of £235,530 ($1,146,256.74), of worn British gold coin withdrawn from circulation, was recoined and included in the above. Foreign coins are sometimes included in gold deposited for coinage, but the amount is too small for a record to be kept of their origin.

2. No silver coinage was executed at the Melbourne mint, but British silver coin of the face value of £42,400 ($206,339.60), and of the denominations enumerated below was issued to the public:

Half crowns (2s. 6d.)	£9,600=$46,718.40
2-shilling pieces	10,400= 50,611.60
1-shilling pieces	9,600= 46,718.40
6-penny pieces	6,400= 31,145.60
3-penny pieces	6,400= 31,145.60
Total	42,400=206,339.60

This silver coin was struck in London and would appear in the London mint returns. British silver coin of a face value of £2,809 ($13,669.99) was withdrawn from circulation and forwarded to the London mint for recoinage.

3. No coinage was executed at the Melbourne mint for any other government.

4 and 5. The weight of gold and silver used in the industrial arts in the State of Victoria during 1908 is not ascertainable.

Total				74,182	34,543	168,103.50

6 and 7. The imports and exports of gold and silver into and from the State of Victoria during the calendar year 1908, by over-sea countries (excluding the other Australian States) have been compiled from a return furnished by the Comptroller-General of Australian customs, and are as follows:

8 and 9. The import of United States gold coin during the calendar year 1908 was small, being brought by members of the Atlantic Squadron, which visited here in August, 1908, and by travelers, and did not exceed $5,000.

10. The secretary of mines of the State of Victoria reports that the State produced in the calendar year 1908 gold amounting to 670,910 ounces, fine, valued at £2,849,838 ($13,868,736.62).

11. The secretary of mines also reports that the production of silver in Victoria during the calendar year 1908 amounted to 23,490 ounces, valued at £2,590 ($12,604.23), and was principally extracted from gold at Melbourne mint. There are no silver mines in Victoria.

12 and 13. The output of gold and silver from refineries in the State is contained in the production of Victoria given in answers to questions Nos. 10 and 11.

14. The stock of gold coin and bullion in the State of Victoria at the close of the calendar year 1908 is authoritatively stated to have been £7,600,325 ($36,986,981.61), and held as follows:

In banks	£6,529,640	$31,776,493.07
	422,104	2,054,169.11
Total banks	6,951,744	33,830,662.18
In circulation	648,581	3,156,319.43
Total	7,600,325	36,986,981.61

No gold is held by the public treasury, as government money is deposited at the banks daily.

15. The stock of silver coin and bullion in the State of Victoria at the close of the calendar year 1908 was as follows:

Coin in banks	£348,265	$1,694,831.62
Coin in circulation	145,902	710,032.08
Total	494,167	2,404,863.70

No silver bullion was held by the banks or by the public. In addition to silver coin there were bronze coins to the value of £10,810 ($52,606.86) in banks and in circulation.

16 and 17. As no government notes are issued, there were none outstanding at the end of 1908.

18 and 19. The average amount of bank notes in circulation in Victoria at the end of 1908 was £841,604 ($4,095,665.86). No bank notes were outstanding at the end of 1908 which were not covered by legal tender gold and silver coin or bullion.

20. The currency of the State of Victoria is the same as England, viz, gold, with subsidiary coinage of silver and bronze.

21. Gold is not at a premium, as it is the currency of the State.

22. No laws were passed during 1908 in any way affecting the coinage, issue, or legal-tender character of the metallic or paper currency of the State.

23. The report of the Melbourne mint is contained in that of the royal mint at London, the former being a branch of the latter.

WESTERN AUSTRALIA.

Answers to interrogatories, 1908.

AMERICAN CONSULAR AGENCY,
Fremantle, June 5, 1909.

1 and 2. Amount of gold and silver coined during the calendar year 1908:

GOLD.

Denomination.	Number of pieces.	Value.
Sovereigns	4,875,617	£4,875,617
Half sovereigns	24,668	12,334
Total	4,900,285	4,887,951

None of the above was recoinage. No silver was coined.

4. Amount of fine gold used in industrial arts during 1908: About £5,000; about 80 per cent of which was coin and the balance old gold, manufactured gold, etc.

5. Amount of fine silver used in industrial arts during 1908: About £500. (The mint sold 1,258.10 ounces of fine silver during the year to local manufacturers.)

6 and 7. Imports and exports of gold and silver during 1908:

Classification and country.	Imports.		Exports.	
	Weight.	Value.	Weight.	Value.
Gold coin:	*Fine ounces.*		*Fine ounces.*	
United Kingdom				£640,730
Ceylon				950,000
Hongkong				50,000
Natal				225,000
Egypt				350,000
Germany				2,370,000
Total				4,585,730
Gold bullion (bar, dust, etc.):[a]				
Victoria			18,752.00	70,864
India			106,683.14	453,160
Germany			14,252.50	60,541
Total			139,687.64	584,565
Gold in matte:				
United Kingdom			338,330.99	1,437,138
Germany			7,226.72	30,697
Total			345,557.71	1,467,835
Gold ores (quartz and concentrates):				
New South Wales (cwt.)			234	1,551
Victoria (cwt.)			172	69
Total			406	1,620
Silver coin: United Kingdom		£4,600		
Silver bullion (bar, ingot, sheet, etc.): United Kingdom	106	17	74,201	8,413
Silver in matte:				
United Kingdom			91,874	10,197
Germany			2,380	267
Total			94,254	10,464
Silver lead ores:				
New South Wales			2,263	579
United Kingdom			4,299	2,607
Belgium			3,800	1,820
Total			10,362	5,006

[a] Product of the State of Western Australia.

8 and 9. Total import of United States gold coin and amount of United States gold coin deposited at mint and melted during 1908: None.

10. Gold produced from mines of the country during 1908: 51,256.95 kilograms; value, £6,999,881 10s. 10½d.

11. Silver produced from mines of the country during 1908: Amount exported, 5,239.66 kilograms; value, £18,877.

12. Western Australian gold refined at the mint produced 1,273,545 ounces of fine gold, of the value of £5,409,672.

13. The silver extracted from gold at the mint during the year amounted to 146,266 ounces.

14 and 15. Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1908:

Coined gold and silver and other coined metals (held by the banks)	£1,517,268
Gold and silver in bullion or bars	618,468
(Silver included in above; no means of giving proportions.)

REPORT

OF THE

DIRECTOR OF THE MINT.

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., December 9, 1908.

SIR: I have the honor to submit herewith the thirty-sixth annual report of the Director of the Mint, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1908, with other interesting statistics relating to coinage and financial matters in this and other countries, which will be found valuable in considering this report.

THE YEAR'S OPERATIONS.

The fiscal year ended June 30, 1908, was remarkable in that there was made at the various mints of the United States $16,530,477.25 in subsidiary coinage, this being the largest amount of subsidiary coinage ever made in the United States mints in one year since 1877, when a little over $3,000,000 more than the above amount was coined in preparation for the resumption of specie payments. The larger part of this coinage was made in the first half of the fiscal year, and was wholly due to the remarkable expansion of trade during that period. The demand for this character of coinage ceased as soon as the effect of the panic of last fall began to be felt, while for several months previous to the 1st of December, 1907, there had been a continuous absorption of the entire output of the mints. During the last half of the year only two mints operated on subsidiary coin, the mint at Philadelphia operating almost exclusively on gold coinage, and the operations of the mint at San Francisco being devoted almost entirely to the coinage work for the government of the Philippine Islands.

NEW DESIGNS FOR THE GOLD COINAGE.

In response to a popular demand for an improvement in the designs used on our coin, the President took steps early in the year 1905 to accomplish this result. It was decided to make the first change on the gold coins, and the eminent sculptor, Mr. Augustus Saint Gaudens, was employed at the request of the President to prepare models for all denominations of the gold coins, and with the purpose in view of securing a much higher relief in design than was ordinarily used in modern coinage several models were made of the

same design but with different heights of relief. But it was found to be impossible to work any of the designs upon the ordinary coining press until a third model was made with a greatly reduced relief. This was somewhat disappointing to those urging a high relief, and therefore some 12,153 pieces of double eagles from the second model were struck on a medal press and sent to such places in the United States where a general distribution of them could be made. Of the new Saint Gaudens double eagle perfected for coinage in the regular way, $105,939,360 were struck by the close of the fiscal year.

The new designs for the eagle were also prepared by Mr. Saint Gaudens, and are regarded by competent critics as artistic. The standing eagle is true to nature, while the feathered head of Liberty is a radical departure from the head heretofore appearing on any of our coins of either gold or silver.

There were coined in eagles during the fiscal year $4,829,060 in the new design.

BIGELOW–PRATT DESIGNS FOR THE HALF EAGLE AND QUARTER EAGLE.

Early in the present year while the President was explaining to Dr. William Sturgis Bigelow the mechanical difficulties met with in the effort to bring to success the double eagle and the eagle of the Saint-Gaudens designs, especially that referring to the commercial desire that the coins should stack or pile to a uniform height, Doctor Bigelow became impressed with the idea that a high or strong relief of design on a coin could be obtained by depressing the design below the face or field of the coin, instead of raising it, as was being done in all coinage operations, thereby the field being flat and uniform in thickness would insure a stacking, and would permit of the pieces being piled to a uniform height.

In all other coins the wear comes on the highest point of the relief. In these, the flat surface takes the wear and protects the relief, which is depressed below it, the shape of the depression following the outline of the relief. This system of countersinking a relief is one of the oldest forms of sculpture in stone. Egypt is full of examples of it. It has been little used in modern times except in Japan, where it finds a restricted application chiefly in wood carving. It has never been applied to coins in modern times. The idea of so applying it was Doctor Bigelow's. Acting upon his own responsibility, he asked Mr. Bela L. Pratt, an artist of St. Botolph Studios, Boston, to make an experimental design to illustrate the principle. This model was submitted to the President, and the practicability of this new idea in coinage appealed so strongly to him it was decided that the experiment of making a coin on this principle should be made. The design of a real Indian head, with war bonnet of feathers, was adopted for the obverse side, and the President selected the design of a real eagle, standing, for the reverse side; and Mr. Pratt was commissioned to prepare models for the engraver of the United States mint at Philadelphia. The model work was done during the summer and the dies made. The results were so satisfactory that the designs were approved by the President and instructions given the mint at Philadelphia for the striking of the coins. This coinage was commenced in November of the present year.

That the artist in producing faithful representations of both the real Indian and the real eagle has reached a remarkable degree of success, persons familiar with those subjects must attest. The engraving work, executed by Mr. Charles E. Barber, engraver of the United States mint at Philadelphia, is remarkably fine and sharp in detail, showing consummate skill and an artistic hand.

THE MEDAL DEPARTMENT OF THE MINT AT PHILADELPHIA.

The medal department of the mint at Philadelphia is now equipped with the most powerful and modern presses and other apparatus for the manufacture of medals of every character. During the last two years there have been made for the War and Navy departments over 100,000 bronze medals, and the necessary bars for mounting the same, at a much less cost than the same could have been procured from private firms. No valid reason exists why all national medals should not be made by the medal department of the mint at Philadelphia.

COST OF COINAGE AS SHOWN BY THE COST REPORTS.

The system of keeping account of the expenditures incidental to the manufacture of coin, which was inaugurated last year, has been improved and perfected so that now the figures shown therein can be deemed reliable as giving a close estimate of the actual cost of coinage of the different denominations. This system is based upon the actual coinage costs only, such as ingot making, alloy, coining department operations, and the cost of administration, but does not take into account the cost of making the coinage dies used. For the first time in the history of mint operations it is thus made possible to make a report on the cost of coinage.

The following statement shows the average cost per thousand pieces for each denomination coined during the fiscal year at all of the mints as shown by the cost reports kept by them:

AVERAGE COST PER THOUSAND PIECES.

Gold:	
Double eagle	$29.51
Eagle	32.75
Half eagle	13.93
Silver:	
Half dollar	9.80
Quarter dollar	5.93
Dime	2.53
Minor:	
5 cent	2.11
1 cent	1.12
Philippine:	
Peso	11.01
50 centavo	8.27
20 centavo	5.25
10 centavo	3.15

LIFE OF COINAGE DIES USED IN THE MINTS OF THE UNITED STATES DURING THE CALENDAR YEAR 1907.

During the calendar year 1907 there were used in the four coinage mints in the coinage of domestic, Philippine, and Mexican coin 3,100 obverse and reverse coinage dies. From these dies 262,018,610 pieces of good coin were struck. The following table shows the highest,

lowest, and average number of pieces of coin struck per die for each denomination coined:

Denomination.	Total number dies.	Highest number pieces single die.	Lowest number pieces single die.	Average number pieces per die.
Double eagle	146	Obv. 337,341	Rev. 6,728	33,101
Eagle	66	Obv. 269,120	Rev. 8,410	40,664
Half eagle	53	Obv. 140,364	Both 6,650	28,509
Quarter eagle	16	Obv. 85,218	Rev. 19,255	21,028
Half dollar	323	Obv. 468,850	Rev. 3,000	36,071
Quarter dollar	259	Rev. 660,352	Rev. 6,780	60,218
Dime	374	Obv. 515,476	Both 2,589	92,345
5 cent nickel	356	Obv. 294,319	Rev. 39,980	110,153
1 cent bronze	545	Obv. 493,211	Rev. 198,218	198,419
Philippine:				
Peso	196	Rev. 481,865	Obv. 1,000	52,438
50 centavo	116	Rev. 266,630	Obv. 600	28,557
20 centavo	140	Rev. 276,500	Both 2,000	31,540

Mexican:				
50 centavo	245	Both 630,925	Both 28	55,678
20 centavo	70			77,638

ELECTROLYTICAL REFINING.

The installation of an electrolytical refinery plant in the mint at San Francisco has been completed. Experience already had as to the cost of the operating of the same is such as to justify the belief that in the near future it will be possible to reduce the charges to depositors of bullion for parting and refining. For the mints the electrolytical processes of refining possess many advantages over the old acid processes. In the first place there is little or no loss of gold or silver in the operations. Then, again, deposits are made containing small and minute particles of platinum that were heretofore lost in parting and refining by the acid process, but are now recovered and inure to the benefit of the Government. The amount contained in any one deposit is so small as to make it impracticable to account to the depositor for the same. If all deposits were treated individually the cost of extracting the platinum would be much greater than its value. By treating the deposits in large quantities with other bullion the platinum is recovered without any additional expense to the Government.

Electrolytical refining plants have already been installed in the mints at Philadelphia and Denver.

ENLARGEMENT OF ASSAY OFFICE AT NEW YORK.

Under the act of June 30, 1906, to increase the limit of cost of certain public buildings, authorizing the purchase of sites therefor, and for the erection and completion of public buildings, and for other purposes, the Secretary of the Treasury was authorized to enter into contract for the remodeling of the United States assay office at New York. Under the authority conferred in the act the old building in which refinery operations were conducted was demolished. Specifications were prepared and proposals invited for the construction of a suitable building in lieu thereof. Upon opening proposals it appeared that the amount appropriated would not permit of an award of contract for the construction of a building in accordance with specifications.

An urgent necessity exists for the erection of this building at an early date. The part of the building formerly used for refinery purposes having been torn down, there are no facilities for parting and refining bullion, making it necessary to transport all crude and unparted bullion to the mint at Philadelphia at the expense of the Government to be parted and refined.

IMPROVEMENT IN MELTING.

In 1899, what was then considered a great improvement in melting-furnace fuel was made by the introduction of gas for melting bullion instead of coal and coke; another improvement is now made by using fuel oil instead of gas. The mints at Denver and San Francisco have demonstrated that oil is not only more effective but very much cheaper than gas. One of the main features in favor of oil-burning apparatus is that oil can be stored at or in the building in sufficient quantities to provide a working supply that will allow the furnaces to be operated for a period of several weeks. With the use of oil the number of melts made per day has been increased greatly. The first cost of installation of furnaces and generating apparatus is greatly reduced and the actual cost of melting cheaper. The fuel oil used at Denver and San Francisco is obtained from the local oil fields of Colorado and California.

THE RESTORATION OF THE MOTTO.

The motto "In God we trust" was first placed upon the bronze 2-cent piece authorized to be coined by the act of September 22, 1864. Section 5 of the act of March 3, 1865, authorizing the coinage of the 3-cent piece, provided for the placing of the motto on such coins as would admit thereof. This provision was enacted under section 18 of the act of February 12, 1873. The motto was first placed on the gold and silver coins (with the exception of the dime, which was too small) January 1, 1866.

Section 3517 of the Revised Statutes of the United States adopted by the act of Congress dated June 22, 1874, did not provide for the placing of the motto on any of the coins. The motto continued to be placed on the coins upon which it had previously appeared until the adoption, in 1907, of the new designs of the double eagle and the eagle, from which it was omitted, the inscriptions and legends being confined to those authorized by section 3517 of the Revised Statutes.

May 18, 1908, an act was passed by Congress restoring the motto "In God we trust" on the coins of the United States, to take effect thirty days after its passage. The motto appears on all gold and silver coins struck since July 1, 1908, with the exception of the dime.

AN ACT Providing for the restoration of the motto "In God we trust" on certain denominations of the gold and silver coins of the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the motto "In God we trust," heretofore inscribed on certain denominations of the gold and silver coins of the United States of America, shall hereafter be inscribed upon all such gold and silver coins of said denominations as heretofore.

SEC. 2. That this Act shall take effect thirty days after its approval by the President.

Approved, May 18, 1908.

ASSAY OFFICE AT SALT LAKE CITY.

The following act was passed by Congress May 30, 1908, providing for the establishment of an assay office at Salt Lake City, Utah:

AN ACT To establish an assay office at Salt Lake City, State of Utah.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is hereby authorized and required to establish an assay office of the United States at Salt Lake City, in the State of Utah; said assay office to be conducted under the provisions of the Act entitled "An Act revising and amending the laws relating to the mints and assay offices and the coinage of the United States," approved February twelfth, eighteen hundred and seventy-three; that the officers of the assay office shall be an assayer in charge, at a salary of two thousand five hundred dollars per annum, who shall also perform the duties of melter; chief clerk, at a salary of one thousand five hundred dollars per annum; and the Secretary of the Treasury is hereby authorized to rent a suitable building for the use of said assay office, and there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of twenty thousand dollars for salary of assayer in charge, chief clerk, and wages of workmen, rent, and contingent expenses.

Approved, May 30, 1908.

It was not practicable to secure an entire building for the use of the assay office, but rooms have been rented at an annual rental of $1,800 for the purpose, and the necessary melting furnaces, appliances, and apparatus are now being installed therein, and it is confidently expected that the office will be open to the receipt of bullion early in January, 1909.

USE OF CUPRIC CHLORIDE IN TOUGHENING BRITTLE INGOT MELTS AT THE MINT, PHILADELPHIA.

Within the last year the melter and refiner of the mint at Philadelphia, David K. Tuttle, Ph. D., makes report on the use of cupric chloride which shows an ingenious and most effective application in toughening brittle melts of standard gold bullion. One great advantage is that a brittle ingot melt for coinage can be treated with the cupric chloride most expeditiously and without danger of destroying the proportion of the alloy to the precious metal. The chlorine when it unites with and carries off the troublesome base responsible for the brittleness, leaves its former associate, copper, in place of the base metal.

UNITED STATES GOLD COIN IN CANADA.

The treasury of the Dominion of Canada held on December 31, 1907, $33,529,889 in United States gold coin, while the amount held by the chartered banks on the same date was $12,244,213, making the total amount of United States gold coin held in the Canadian reserves on December 31, 1907, $45,774,102. In addition to this there were held by agencies of Canadian banks in Cuba and Porto Rico $1,299,811, and in Jamaica $370,217 in United States gold coin.

DEPOSITS OF GOLD BULLION.

The deposits of gold bullion at the mints and assay offices of the United States during the fiscal year 1908, exclusive of redeposits were of the value of $207,415,984, against $176,580,654 reported the previous year.

Redeposits which consisted of bullion transferred from one office of the service to the other, or bars bearing the stamp of one of the offices of the service deposited or sold to another office, amounted to $119,214,058.

The total gold bullion and gold coin received, including redeposits, contained 17,556,365 standard ounces of the value of $326,630,042.

The deposits of domestic bullion amounted to 6,005,804 standard ounces, of which 2,201,114 standard ounces were in crude condition direct from the mines operating in the different States; 668,016 standard ounces of refinery bars (less than 0.992 in fineness) and 3,136,673 standard ounces of refined bullion (0.992 in fineness and over) were received from private refineries, bromide, chlorination, and cyanide works.

UNCURRENT DOMESTIC GOLD COIN FOR RECOINAGE.

Uncurrent and mutilated gold coin received for recoinage contained 214,450.317 standard ounces of the coining value in new coin of $3,989,772.90. Of this amount 71,363.207 standard ounces were received over the counter and 143,087.110 standard ounces were received over transfer orders from the Treasury. The loss on this coinage was $30,895.60.

DEPOSITS OF FOREIGN GOLD BULLION AND GOLD COIN.

Foreign gold bullion containing 3,857,871 standard ounces of the value of $71,774,351, and foreign gold coin containing 735,538 standard ounces of the value of $13,684,426 were received from various countries as follows:

DEPOSITS AND PURCHASES OF SILVER.

Silver is coined in the United States on government account only. Deposits of silver bullion are received by the mints and assay offices to be returned to the depositors in fine or unparted bars with the weight and fineness stamped thereon. These deposits are confined almost exclusively to the assay office at New York, and the bars when returned to the depositors are sold for use in the arts or exported.

The deposits and purchases of silver at the United States mints and assay offices during the fiscal year 1908 were as follows:

Item.	Standard ounces.
Silver purchased	15,806,746.79
Silver parted from gold deposits	3,012,532.35
Uncurrent domestic coin for recoinage	872,651.65
For return in fine bars	3,320,600.83
For Philippine coinage	10,391,605.08
Total	33,404,136.70

Included in silver "for Philippine coinage" is 9,851,801.76 standard ounces Philippine silver coin received for recoinage at a reduced fineness.

UNCURRENT DOMESTIC SILVER COINS FOR RECOINAGE.

Uncurrent and mutilated domestic silver coins received for recoinage contained 873,428.65 standard ounces of the value of $1,086,691.94 in new subsidiary coin. The net loss on this recoinage was $76,290.12.

DEPOSITS OF FOREIGN SILVER BULLION AND SILVER COIN.

Foreign silver bullion containing 3,292,665 standard ounces of the coining value of $3,831,465 and foreign silver coin containing 149,972 standard ounces of the value of $174,512 were received from various countries as follows:

a Includes 461,686 fine ounces Hawaiian coin.
b Includes 148,788 fine ounces Hawaiian coin.
c Includes 6,901 fine ounces Philippine special assay coins.
d Includes 3,647 fine ounces Hawaiian coin.
e Includes 3,456 fine ounces Philippine special assay coins.
f Includes 3,895 fine ounces Hawaiian coin.
g Includes 2,663 fine ounces Philippine special assay coins.
h Includes 4,680,791 fine ounces Philippine coins.
i Includes 3,411 fine ounces Philippine assay coins and 8,866,622 fine ounces Philippine coins for recoinage.

COINAGE OF THE UNITED STATES, FISCAL YEAR 1908.

The domestic coinage was as follows:

Denomination.	Pieces.	Value.
Gold	10,984,878	$197,238,377.50
Silver, subsidiary	69,166,063	16,530,477.25
Nickels, 5-cent pieces	22,686,002	1,134,300.10
Bronze, 1-cent pieces	81,170,812	811,708.12
Total	184,007,755	215,714,862.97

Of the subsidiary coinage made during the year, $832,414 were from uncurrent domestic coin received from the Treasury for recoinage and $15,698,063.25 from silver bullion purchased under the provisions of section 3526 of the Revised Statutes.

RECOINAGE OF STANDARD SILVER DOLLARS.

There were purchased as bullion and melted at the mints and assay offices 1,170 mutilated silver dollars during the fiscal year 1908, which were for use in the manufacture of subsidiary silver coins.

Fiscal year.	Amount.	Fiscal year.	Amount.
1883	$621	1897	$1,898
1884		1898	1,365
1885		1899	1,734
1886	1,850	1900	1,341

	2,034		

RECOINAGE OF UNCURRENT UNITED STATES COIN.

The following table shows the face value of abraded subsidiary coin transferred and purchased for recoinage, the amount of new coin made therefrom, and the loss since 1891:

Fiscal year.	Face value.	Value of new coin produced.	Loss.
1891	$910,046.69	$861,680.41	$48,366.28
1892	7,118,602.78	6,937,886.02	180,716.76
1893	7,618,198.25	7,381,289.58	236,908.67
1894	7,184,472.17	6,924,753.05	259,719.12
1895	4,361,761.36	4,161,820.73	199,940.63
1896	4,627,141.46	4,377,258.40	249,883.06
1897	3,197,998.50	3,048,861.64	149,136.86
1898	6,109,772.32	5,820,159.16	289,613.16
1899	8,584,304.26	8,098,485.18	485,819.08
1900	5,261,070.35	4,950,088.96	310,981.39
1901	3,832,280.69	3,613,021.59	219,259.10
1902	3,333,437.06	3,141,548.04	191,889.02
1903	3,008,747.98	2,829,890.71	178,857.27
1904	2,828,384.90	2,656,104.21	172,280.69
1905	1,964,476.11	1,839,219.24	125,256.87
1906	1,414,963.90	1,322,834.27	92,129.63
1907	1,142,184.00	1,064,826.39	77,357.61
1908	1,162,982.06	1,086,691.94	76,290.12
Total	73,660,824.84	70,116,419.52	3,544,405.32

The loss on the recoinage of $4,020,668.50 in worn and uncurrent gold coins was $30,895.61, and the net loss on the recoinage of $1,162,982.06 in worn and uncurrent silver coins was $76,290.12.

The Treasury was reimbursed $6,404.09 loss on uncurrent gold coin transferred and $76,245.05 loss on uncurrent silver coin transferred for recoinage from the appropriations for this purpose.

COINAGE OF GOLD AND SILVER OF THE UNITED STATES SINCE 1873, BY FISCAL YEARS.

COINAGE FOR PHILIPPINE ISLANDS.

The following coinage was made during the fiscal year 1908 for the Philippine government:

Denomination.	Made at Philadelphia mint.	Made at San Francisco mint.	Total.
	Pieces.	*Pieces.*	*Pieces.*
Silver:			
Pesos	501	16,128,000	16,128,501
50 centavos	501	2,105,000	2,105,501
20 centavos	501	2,735,000	2,735,501
10 centavos	501	4,033,911	4,034,412
Nickel:			
5 centavos	500	.....	500
Bronze:			
1 centavo	500	.....	500
½ centavo	500	.....	500
Total	3,504	25,001,911	25,005,415

The total coinage made for the Philippine government, under authority of the act of March 2, 1903, to June 30, 1908, is as follows:

Denomination.	Made at Philadelphia mint.	Made at San Francisco mint.	Total.
Silver:	*Pieces.*	*Pieces.*	*Pieces.*
Pesos	2,806,859	45,890,000	48,696,859
50 centavos	4,317,644	6,125,000	10,442,644
20 centavos	6,618,840	6,625,000	13,243,840
10 centavos	6,618,839	12,793,911	19,412,750
Nickel:			
5 centavos	10,000,384		10,000,384
Bronze:			
1 centavo	37,845,784		37,845,784
½ centavo	17,753,384		17,753,384
Total	85,961,734	71,433,911	157,395,645

RECOINAGE OF PHILIPPINE COINS.

Under the act of June 23, 1906, which provides for the recoinage of Philippine silver coins of a reduced fineness and weight, there were received at the mints and melted for recoinage up to June 30, 1907, the following:

Denomination.	Pieces.	Standard ounces.
Peso	15,128,000	13,108,334.90
50 centavos	2,850,000	1,233,414.16
20 centavos	2,215,000	382,404.85
10 centavos	3,690,000	318,665.89
Mixed Philippine coins	319	78.15
Total	23,883,319	15,042,897.95

WEIGHT AND FINENESS OF PHILIPPINE COINS.

The weight and fineness of the Philippine silver coins authorized under the act of March 2, 1903, and of the reduced weight and fineness authorized under the act of June 23, 1906, are as follows:

Denomination.	Act of March 2, 1903.		Act of June 23, 1906.	
	Weight in grains.	Fineness.	Weight in grains.	Fineness.
Peso	416.00	900	308.640	800
50 centavos	208.00	900	154.320	750
20 centavos	83.10	900	61.728	750
10 centavos	41.55	900	30.864	750

COINAGE FOR MEXICO.

The mint at Denver coined during the fiscal year 1908, for the Mexican Government 1,397,~~291~~ 239 silver 50-centavo pieces.

RECOINAGE OF HAWAIIAN SILVER COIN.

There were transferred from the Treasury to date for the purpose of recoinage Hawaiian silver coins of the face value of $828,624.50, producing $854,351.75 in domestic subsidiary silver coins on which there was a gain of $25,727.25.

BARS MANUFACTURED.

During the fiscal year 1908 there were manufactured by the mints and assay offices of the United States gold and silver bars of the value as follows:

Description.	Standard ounces.	Value.
Gold bars	8,740,825.920	$162,620,352.65
Silver bars	8,041,326.040	9,357,179.28

WORK OF THE GOVERNMENT REFINERIES.

There were received and operated upon by the refineries connected with the mints at Philadelphia, San Francisco, New Orleans, and Denver, during the fiscal year 1908, gold and silver bullion as shown by the following table:

Institution.	Gold.		Silver.	
	Standard ounces.	Value.	Standard ounces.	Coining value.
Philadelphia	2,465,453.361	$45,868,899.74	3,198,095.55	$3,721,420.27
San Francisco	1,073,491.250	19,971,930.22	237,018.86	275,803.76
New Orleans	35,147.197	653,901.34	81,265.97	94,564.04
Denver[a]	1,387,352.785	25,811,214.60	1,616,422.61	1,880,928.13
New York[b]				
Total	4,961,444.593	92,305,945.90	5,132,802.99	5,972,716.20

SILVER BULLION ON WHICH CHARGES WERE COLLECTED.

In order to show the amount of the above-mentioned silver bullion treated by the government refineries on which charges were received and the amount handled for parting purposes, the following table is presented:

Institution.	Silver bullion on which charges were collected.	Silver bullion owned by the Government retained by the refinery for parting purposes on which there were no charges.	Total.
	Standard oz.	*Standard oz.*	*Standard oz.*
Philadelphia	2,615,278.52	582,817.03	3,198,095.55
San Francisco	227,537.34	9,481.52	237,018.86
New Orleans	21,427.33	59,838.64	81,265.97
Denver[a]	604,339.17	1,006,927.66	1,611,266.83
New York[b]			
Total	3,468,582.36	1,659,064.85	5,127,647.21

[a] For period April 1, 1907, to June 30, 1908.
[b] Refinery operations suspended during reconstruction of building.

PURCHASE OF SILVER.

The table following shows the amount and cost of silver bullion purchased for the subsidiary silver coinage during the fiscal year 1908:

Stock.	Standard ounces.	Cost.
Silver bullion purchased under section 3526, United States Revised Statutes, at the Treasury Department	15,252,297.05	$7,999,855.87
Silver bullion purchased under section 3526, United States Revised Statutes, at mints	525,126.55	273,497.60
Parting charges and fractions purchased	3,012,532.35	1,632,306.82
Melted assay coins purchased	3,819.70	2,241.25
Mutilated coins purchased	2,235.36	1,176.69
Surplus bullion purchased	25,503.49	13,947.77
Total	18,821,514.50	9,923,026.00

QUANTITY AND COST OF SILVER PURCHASED FOR SUBSIDIARY COINAGE AT EACH MINT AND AT THE ASSAY OFFICE AT NEW YORK DURING THE FISCAL YEAR 1908.

Institution.	Standard ounces.	Cost.
Mint at Philadelphia	4,666,213.37	$2,453,580.95
Mint at San Francisco	3,065,315.38	1,612,864.04

BALANCES OF SILVER BULLION.

The balances of silver bullion on hand June 30, 1908, at the mints and assay offices of the United States for the coinage of subsidiary silver coins and also for coinage for the Philippine Islands were as follows:

Item.	Standard ounces.	Cost.
For subsidiary silver coinage	10,597,364.48	$6,278,891.53
Silver bullion for Philippine coinage	2,186,069.56	1,700,108.85
Total	12,783,434.04	7,979,000.38

MARKET PRICE OF SILVER DURING THE FISCAL YEAR 1908.

During the twelve months ending June 30, 1908, the price of silver in the London market varied from 32¼d. per ounce for silver 0.925 fine, equivalent to $0.7069+ per ounce fine, to 24⅛d., equivalent to $0.5274+ per ounce fine. For the first three months of the year the price was comparatively steady, but commencing with October the price declined rapidly. The decline was in a great measure due to the small amount of rain that had fallen in some parts of India, leading to the fear of a failure of the crops and, in consequence thereof, a famine. This led the bazaars of India, who deal very largely in silver, to make heavy sales in the London market. Aside from these forced sales by the India bazaars there was little demand from any quarter for silver.

For the last six months of the fiscal year the London price ranged from 27d. to 24 1/16d. The following table exhibits the monthly fluctuations in the price and the value of a fine ounce of silver for the twelve months ending June 30, 1908:

HIGHEST, LOWEST, AND AVERAGE PRICE OF SILVER BULLION AND VALUE OF A FINE OUNCE, EACH MONTH, DURING THE FISCAL YEAR 1908.

Months.	Highest.	Lowest.	Average price per ounce, British standard, 0.925.	Equivalent value of a fine ounce with exchange at par ($4.8665).	Average monthly price at New York of exchange on London.	Equivalent value of a fine ounce based on average monthly price and average rate of exchange.	Average monthly New York price of fine bar silver.

DISTRIBUTION OF SILVER DOLLARS.

The number of dollars on hand June 30, 1907 and 1908, and the distribution from each mint during the year was as follows:

Items.	Philadelphia.	San Francisco.	New Orleans.	Total.
In mints June 30, 1907	$106,946,188	$61,400,027	$29,582,125	$197,928,340
Transferred		5,000		5,000
Total	106,946,188	61,405,027	29,582,125	197,933,340
In mints June 30, 1908	106,850,900	61,401,432	29,581,825	197,834,157
Distributed from mints during the year	95,288	3,595	300	99,183

SEIGNIORAGE ON SILVER COINAGE.

The balance of profits on the coinage of silver on hand in the mints June 30, 1907, was $253,795.33.

The seigniorage on subsidiary silver coinage during the fiscal year ended June 30, 1908, was $8,713,413.35.

Including the balance on hand at the mints July 1, 1878, the net seigniorage on silver coined from that date to June 30, 1908, aggregated $151,666,237.81.

The amount of seigniorage deposited in the Treasury during the fiscal year was $8,852,842.52, leaving a balance on hand in the mints on June 30, 1908, of $114,366.16.

APPROPRIATIONS AND EXPENDITURES.

The acts approved February 26, 1907, and February 15, 1908, making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year 1908, contained specific appropriations for the support of the mints and assay offices of the United States amounting to $1,199,570.

The earnings of the mints at Philadelphia, San Francisco, and Denver collected from the manufacture of coins for foreign countries, appliances for other institutions, etc., amounting to $235,887.52, were deposited in the Treasury to the credit of the appropriations for wages of workmen and contingent expenses of the above-named institutions.

The acts approved June 6, 1900, March 3, 1903, April 28, 1904, and March 3, 1905, contained the following specific appropriations:

New machinery and appliances, mint at Philadelphia	$440,185
Charges collected and credited to above	4,600
New machinery and appliances, mint at Denver	345,055
Charges collected and credited to the above	560

The expenditures from these appropriations to June 30, 1908, have been:

Mint at Philadelphia	$433,550.44
Mint at Denver	340,419.49

APPROPRIATIONS AND EXPENDITURES FOR THE FISCAL YEAR 1908.

EARNINGS AND EXPENDITURES OF THE REFINERIES OF THE COINAGE MINTS AND ASSAY OFFICE AT NEW YORK, FISCAL YEAR 1908.

The earnings of the refineries, amounting to $357,015.32, were deposited in the Treasury to the credit of the appropriation for "Parting and refining bullion."

The expenditures on account of "Parting and refining bullion" during the fiscal year aggregated $318,183.10, showing a net gain of earnings over expenditures of $38,832.22, as shown by the following table:

EARNINGS AND EXPENDITURES, PARTING AND REFINING BULLION, FISCAL YEAR, 1908.

Institution.	Charges collected.	Surplus bullion.	By-products.	Total earnings.	Expenditures.
Philadelphia	$90,195.11	$3,149.27	$8,302.22	$101,646.60	$72,448.59

APPROPRIATIONS AND EXPENDITURES OF THE OFFICE OF THE DIRECTOR OF THE MINT FOR THE FISCAL YEAR 1908.

Under the acts of February 26, 1907, February 15, 1908, and May 30, 1908, the sum of $39,170 was appropriated for the office of the Director of the Mint to meet the expenses of the fiscal year 1908.

The expenditures from these appropriations for salaries, supervising the annual settlements at the mints and assay offices, for collecting and compiling statistics of the production of gold and silver in the United States, for incidental expenses and the purchase of and subscription to books and pamphlets and contingent expenses for the laboratory, aggregated $35,534.84, leaving an unexpended balance of $3,635.16 to the credit of the appropriations.

In addition to the above appropriations for the office of the Director of the Mint, the acts of February 26, 1907, and February 15, 1908, contained specific appropriations aggregating $125,000 for "Freight on bullion and coin between mints and assay offices." The expenditures from these appropriations for the fiscal year amounted to $94,504.19, leaving an unexpended balance to the credit of said appropriation of $30,495.81.

APPROPRIATION AND EXPENDITURES OF THE OFFICE OF THE DIRECTOR OF THE MINT FOR THE FISCAL YEAR ENDED JUNE 30, 1908.

Appropriations.	Amount appropriated.	Amount expended.	Unexpended balance.
Salaries	$31,020.00	$28,785.83	$2,234.17

Laboratory	750.00	656.56	93.44
Books, pamphlets, etc	400.00	334.40	65.60
Freight on bullion and coin between mints and assay offices	125,000.00	94,504.19	30,495.81
Total	164,170.00	130,039.03	34,130.97

EARNINGS AND EXPENDITURES OF THE MINTS AND ASSAY OFFICES.

In the appendix a table will be found showing in detail the earnings and expenditures for the year.

CONSOLIDATED STATEMENT OF EXPENDITURES FOR SALARIES, WAGES, AND SUPPLIES OF THE MINTS AND ASSAY OFFICES DURING THE FISCAL YEAR 1908.

Items of expenditure.	Ordinary expenses.	Refinery expenses.	Total.
Acids	$3,824.39	$14,708.91	$18,533.30
Adjusting weights and repairing balances	430.80	159.05	589.85
Advertisements for supplies	787.01		787.01
Assayer's balances	1,426.71		1,426.71
Assayer's materials, matrasses, pipettes, dishes, etc	1,475.91	672.97	2,148.88
Barrels and lard tierces	479.00	345.20	824.20
Belting	342.26	130.68	472.94
Bullion boxes	1,544.30	250.00	1,794.30
Carpets, furniture, and fixtures	1,473.97	113.75	1,587.72
Charcoal	1,159.91	1,752.58	2,912.49
Chemicals	2,128.08	911.17	3,039.25
Coal	23,942.55	2,046.31	25,988.86
Coke	1,823.85		1,823.85
Copper	44,023.01	413.59	44,436.60
Crucibles, covers, stirrers, and dippers	12,972.73	9,295.86	22,268.59
Dry goods (cost of materials for mittens, sleeves, coin sacks, toweling, scale covers, etc.)	6,574.38	2,582.19	9,156.57
Electric light and supplies	7,596.41	18,561.50	26,157.91
Electric power	3,804.64	685.53	4,490.17
Ensigns	119.10		119.10
Fire brick	2,307.91	1,435.65	3,743.56
Fluxes	2,731.24	4,919.11	7,650.35
Freight and drayage	2,585.35	418.65	3,004.00
Furnaces and repairs	11,333.23	662.95	11,996.18
Gas	10,100.96	4,539.90	14,640.86
Gloves and gauntlets	5,715.21	747.42	6,462.63
Hardware	3,508.84	383.34	3,892.18
Ice	1,691.00	23.07	1,714.07
Iron and steel	2,258.68	543.95	2,802.63
Labor and repairs (only temporary labor or repair)	2,665.27	1,804.30	4,469.57
Laundering of towels, etc	2,550.56		2,550.56
Lead, sheet, and lead pipe	354.30	2,683.20	3,037.50
Loss on sale of sweeps and leady melts	3,726.85	3,607.96	7,334.81
Lumber	3,549.19	978.35	4,518.54
Machinery and appliances	16,444.20	65,277.80	81,722.00
Metal work and castings	6,041.92	2,932.86	8,974.78
Naphtha	19,279.27	4,827.65	24,106.92
Oils	3,309.51	153.02	3,462.53
Rent of building	1,980.00		1,980.00
Salt	3.53	210.20	213.73
Sewing (making of mittens, sleeves, coin sacks, towels, and scale covers)	6,151.60	225.50	6,377.10
Stationery, printing, and binding	1,733.93	4.80	1,738.73
Steam, supply of	1,931.06	1,287.06	3,218.12
Sundries (only such items as can not readily be classified)	20,105.45	8,843.18	28,948.63
Telegraphing	209.54		209.54
Telephone	2,338.69	5.60	2,344.29
Tools	1,431.47	80.26	1,511.73
Water (sprinkling, heating, and irrigating)	3,263.78	63.90	3,327.68
Wood	156.35		156.35
Zinc	13.08	966.12	979.20
Wastage of operative officers	52,526.20	1,922.57	54,448.77
Well	2,925.00		2,925.00
Total	310,843.18	162,177.66	473,020.84
Salaries	180,614.72		180,614.72
Wages of workmen	1,010,311.98	110,868.83	1,127,180.81
Total	1,501,769.88	273,046.49	1,780,816.37

LABORATORY OF THE BUREAU OF THE MINT.

During the calendar year 1907 there were tested by the assayer of this bureau 362 gold and 696 silver coins, all of which, with one exception, were found within the legal requirements as to weight and fineness.

In the gold coins the greatest deviation in fineness above standard (the legal limit being 0.001 above or below) was 0.0007, while the greatest deviation below was 0.0006.

The greatest deviation of silver coin in fineness above standard (the limit being 0.003 above or below) was 0.0009, while the greatest deviation below was 0.0018, as shown by the following table of assays made at the Bureau of the Mint:

Fineness.	Philadelphia.		San Francisco.		New Orleans.		Denver.		Total.	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
898.2		1								1
898.5		2				1				3
898.7		10				3				13
898.9		18		1		5		2		26
899.1		26		4		10		3		43
899.3		31		6		11		4		52
899.4							3		3	
899.5	1		1						2	
899.6	1	25	3	5		8	7	4	11	42
899.7	9		3				17		29	
899.8	23	25	12	10		12	13	14	48	61
899.9	31		13				18		62	
900.0	37	16	19	17		16	24	7	80	56
900.1	28		7				15		50	
900.2	26	5	2	7		15	11	8	39	35
900.3	16						5		21	
900.4	7	2		2		3		2	7	9
900.5	3						1		4	
900.6	5			1					5	1
900.7	1			1				1	1	2
900.9						3		1		4
Total	188	161	60	54		87	114	46	302	348
Average fineness.	900.051	899.400	899.913	899.826		899.608	899.926	899.824	899.980	899.598

In addition to the above there have been examined 363 Philippine silver coins and 132 Mexican silver coins, all of which, except 4, were within the legal requirements as to weight and fineness.

PROCEEDINGS OF THE ASSAY COMMISSION, 1908.

The following-named gentlemen acted as commissioners to test and examine the weight and fineness of the coins reserved at the several mints during the calendar year 1907 pursuant to the provisions of section 3547 of the Revised Statutes:

Hon. William B. McKinley, House of Representatives; Hon. William A. Ashbrook, House of Representatives; Hon. Charles J. Russell, Burlington, Vt.; Prof. Leverett Mears, Williams College, Massachusetts; Mr. George L. Harrison, jr., Philadelphia, Pa.; Mr. J. W. Campbell, Fort Dodge, Iowa; Mr. L. S. Kerfoot, Seattle, Wash.; Mr. John L. McNeil, Durango, Colo.; Mr. E. W. Harden, Chicago, Ill.; Mr. Thomas P. Burns, San Francisco, Cal.; Mr. Frank Shinn, Columbus, Ohio. (Dr. H. G. Torrey, ex officio member.)

The commission met at the mint in Philadelphia on February 12, 1908, and Hon. William A. Ashbrook was elected chairman.

The following committees were appointed by the chairman, with the approval of the commission:

Committee on counting: Mr Campbell, chairman; Messrs. McNeil and Burns.

Committee on assaying: Professor Mears, chairman; Messrs. Harrison, Russell, and Torrey.

Committee on weighing: Mr. Harden, chairman; Messrs. Kerfoot, Shinn, and McKinley.

The committee on counting reported that the packages containing the pieces reserved by the several mints for the trial of coins were delivered to them, and that they were compared with the transcripts kept by the Director of the Mint and found to be correct. After verification the coins were delivered to the committees on weighing and assaying.

The coins reserved by the mints for the purposes of the assay commission were as follows:

Gold coins from the mint at Philadelphia, 4,280, of the value of $55,597.50.

Silver coins from the mint at Philadelphia, 16,017, of the value of $2,662.90.

Gold coins from the mint at San Francisco, 2,377, of the value of $45,430.

Silver coins from the mint at San Francisco, 2,896, of the value of $641.60.

Silver coins from the mint at New Orleans, 6,783, of the value of $1,809.90.

Gold coins from the mint at Denver, 2,765, of the value of $31,670.

Silver coins from the mint at Denver, 5,210, of the value of $1,478.50.

The coins reserved on account of coinage executed for the Philippine Islands were as follows:

Mint at Philadelphia:	
50 centavos	601
20 centavos	626
10 centavos	751
Mint at San Francisco:	
Pesos	5,139
50 centavos	1,056
20 centavos	1,583
10 centavos	2,465

The committee on assaying reported receiving and making assays of coins reserved from the mints at Philadelphia, San Francisco, Denver, and New Orleans, representing the deliveries made by the coiners to the superintendents during the calendar year 1907.

The highest assay value of the gold coinage (the limit of tolerance being one one-thousandth) was at—

Philadelphia	900.3
San Francisco	900.0
Denver	900.3

The lowest assay value of the gold coinage (the limit of tolerance being one one-thousandth) was at—

Philadelphia	899.6
San Francisco	899.7
Denver	899.8

The highest assay value of the silver coinage (the limit of tolerance being three one-thousandths) was at—

Philadelphia	901.1
San Francisco	901.6
New Orleans	900.9
Denver	901.1

The lowest assay value of the silver coinage (the limit of tolerance being three one-thousandths) was at—

Philadelphia	898.2
San Francisco	899.6
New Orleans	900.2
Denver	900.2

The highest assay value[a] of the Philippine silver coinage was at—

San Francisco (pesos)	800.6
Philadelphia (20 centavos)	751.5

The lowest assay value of the Philippine silver coinage was at—

San Francisco (pesos)	799.8
Philadelphia (50 centavos)	749.7

The committee also tested the quartation silver and found it free from gold, and the lead used in the assay of gold bullion and found it free from gold and silver. The acid used in the humid assay of silver was found to be free from silver and also from chlorine.

The balances used were tested and found to be correct.

The committee reported the assays as entirely trustworthy, and that none of the coins tested differed from the standard of fineness by a greater degree than the amount allowed by law.

The committee on weighing respectfully reported examining sample coins selected at random from those reserved by the several mints. The weighing was made on a balance by Henry Troemner, of Philadelphia. The weights employed were furnished under seal by the Director of the Bureau of Standards, and were accompanied by a certificate stating their variations in mass from the standards fixed by law. The balance was carefully tested and found to be sufficiently accurate without making corrections.

The secondary troy pound of the mint was compared with the standard pound and found to be correct. A pound built up of working weights of the mint was found to be correct within 1 part in 30,000.

The details of the weighings indicated that the deviations from the statutory standard weights of the coins examined were all within the legal tolerance, consequently the committee on weighing pronounced the examination of the weights of the coinage of the several mints during the year 1907 to be satisfactory.

The committee on resolutions submitted the following:

Resolved, That it is the sense of the members of the annual assay commission that the coin collection of the United States in the mint in Philadelphia should be made as complete as possible. The commission desires to express its approval of the recommendation of the commission of 1907, and it recommends that an appropriation of $20,000 be made available for the purchase of these coins and medals, these purchases to be made under the direction of the Director of the Mint, and that an annual appropriation of $5,000 be made to continue the purchases of coins and medals for this collection.

One hundred thousand citizens of the United States, and many foreigners, visit annually the United States mint in Philadelphia; many of these visitors desire to purchase a souvenir of the mint. It is recommended that the Director of the Mint be authorized to have prepared annually a souvenir medal for sale to visitors. In the opinion of the officers of the mint such authorization would net to the mint from $5,000 to $10,000 annually, that representing the sale price above the cost of preparing the dies and striking the medals. The profit to be obtained from the sale of these medals, in the opinion of the members of this commission, should be added to the amount appropriated annually for the purchase of coins and medals. And be it further

Resolved, That the thanks of the members of the assay commission be extended to the Director of the Mint and the officers and employees of the mint in Philadelphia for their courtesy to the members of the commission during the session.

---

[a] By the act of June 23, 1906, the standard fineness of the Philippine peso was reduced to 800 and the subsidiary coins to 750 fine.

MINT OF THE UNITED STATES AT PHILADELPHIA, PA.

The following table shows, by weight and value, the gold and silver deposited during the fiscal year 1908:

Metal.	Deposits.	Redeposits.	Standard ounces.	Coinage value.
Gold	3,338	3,151	5,621,472.076	$104,585,526.98
Silver	920	20	6,637,558.74	7,723,704.71
Total	4,258	3,171		112,309,231.69

ASSAYER'S DEPARTMENT.

The number of assays made in this department was as follows:

Deposits and purchases	39,990
Ingots (gold and silver)	10,113
Refinery	9,812
Special assays	2,407
Sweeps assays	409
Total	62,731

In addition to this 300 ounces of proof gold and 320 ounces of proof silver were made.

Of the 2,341 melts of gold ingots made by the melter and refiner 2,008 were passed, 324, while within the standard fineness required by law, were returned for remelting, and 5 melts were condemned. There were 1,485 melts of silver ingots made, of which 1,474 were passed, 5 returned for remelting, and 1 condemned.

The fineness of gold melts passed was:

12 melts at	899.6
258 melts at	899.7
560 melts at	899.8
521 melts at	899.9
495 melts at	900
128 melts at	900.1
33 melts at	900.2
1 melt at	900.3
2,008	

The fineness of silver melts passed was:

66 melts at	898
90 melts at	898½
366 melts at	898¾
232 melts at	899
456 melts at	899¼
152 melts at	899½
85 melts at	899¾
11 melts at	899¾
16 melts at	900
1,474	

In addition five melts for Philippine coinage were made by the melter and refiner and passed by the assayer.

MELTER AND REFINER'S DEPARTMENT.

During the fiscal year the melter and refiner received from the superintendent gold bullion containing by assay 12,864,633.519 standard ounces, of the value of $239,342,018.95, his legal allowance for wastage being 12,864.633 standard ounces, of the value of $239,342. He also received silver bullion containing by assay 11,699,861.48 standard ounces, of the value of $13,614,384.27, his legal allowance for wastage being 17,549.79 standard ounces, of the value of $20,421.57. He returned to the superintendent 12,863,283.347 standard ounces of gold and 11,705,630.93 standard ounces of silver.

He operated upon bullion as follows:

Items.	Gold.	Silver.
	Standard ozs.	*Standard ozs.*
Ingots	14,426,095.830	5,795,688.86
Refinery	2,465,453.361	3,198,095.55
Merchant bars	331,874.140	917,748.40
Total	17,223,423.331	9,911,532.81

The excess of gold and silver operated upon over the amounts charged during the year is due to duplicate operations.

Upon the settlement of the melter and refiner's accounts, June 30, 1908, there was found an apparent loss upon the gold bullion during the fiscal year of 1,350.172 standard ounces, and in the operations upon the silver bullion an apparent gain of 5,769.45 standard ounces.

The melts made aggregate as follows:

Melts.	Bars.	Ingots.	Anodes.	Deposits.	Special.	Total.
Gold	381	2,341	1,044	4,755	385	8,906
Silver	915	1,485	.....	891	.....	3,291
Total	1,296	3,826	1,044	5,646	385	12,197

During the year five gold melts and one silver melt were condemned.

NUMBER, WEIGHT, AND VALUE OF GOLD AND SILVER BARS FOR INDUSTRIAL USE.

Metal.	Bars.	Standard ounces.	Coinage value.
Gold	3,976	341,257.630	$6,348,979.18
Silver	2,584	1,025,321.40	1,193,101.26
Total	6,560	1,366,579.030	7,542,080.44

During the year 212 barrels of sweeps were gathered, containing by assay 2,913.565 standard ounces of gold, and 5,342.59 standard ounces of silver.

The operations of the refinery were as follows:

Bullion.	Gold.	Silver.
	Standard oz.	*Standard oz.*
Sent to the refinery, 5,524,410.24 gross ounces, containing by assay	2,465,453.361	3,198,095.55
Bullion received from refinery	2,464,032.812	3,196,197.05
Sweeps	1,465.341	3,394.22
Apparent gain	44.792	1,495.72

Silver bullion sent to the refinery upon which refining charges were collected contained by assay 2,615,278.52 standard ounces, and silver owned by the Government and returned to the refinery for parting purposes upon which no parting charges were collected contained by assay 582,817.03 standard ounces.

			Troy ounces.
During the year the melter and refiner received from the superintendent minor coinage metal			17,045,564.31
Delivered prior to settlement:			
Bronze ingots	3,996,998.70		
Nickel ingots	4,501,161.20		
		8,498,159.90	
Delivered in settlement:			
Bronze ingots	1,504,549.22		
Nickel ingots	323,292.70		
Ingot copper	5,579,226.81		
Nickel shot	950,997.33		
Zinc	39,227.69		
Tin	68,638.70		
Alloy, etc	21,067.00		
Wastage	39,804.96		
		8,547,404.41	
			17,045,564.31

COINER'S DEPARTMENT.

During the fiscal year 1908 this department received 12,496,691.010 standard ounces of gold, of which 12,449,944.310 standard ounces, of the value of $231,626,870.88 were operated upon, from which there were produced 6,470,284.041 standard ounces of coin, of the value of $120,377,377.50, all delivered to the superintendent during the fiscal year prior to the settlement, upon which there was a wastage of 285.598 standard ounces, of the value of $5,313.45, being 4.57 per cent of the legal allowance.

The percentage of coin produced from the amount of metal operated upon was 51.97 per cent.

During the same period the coiner also received and operated upon 6,274,260.60 standard ounces of silver, of the value of $7,806,234.02 in subsidiary coin, from which there were produced 3,562,592.34 standard ounces of domestic coin, of the value of $4,432,463.25 in subsidiary silver coin, and 501.11 standard ounces of Philippine coin, of the value of $623.46 in domestic subsidiary silver coin, delivered to the superintendent during the fiscal year prior to settlement, and 22,951.75 standard ounces of domestic coin delivered to the superintendent at settlement, upon which there was a wastage of 520.48 standard ounces, of the value of $284.11, being 8.29 per cent of the legal allowance.

The percentage of coin produced from the amount of metal operated upon was 57.10 per cent.

There were also delivered to the coiner during the same period 5,692,502.34 ounces of nickel ingots and planchets, from which were produced 3,642,183.58 ounces of domestic 5-cent nickel coin, of the face value of $1,134,300.10 and 80.38 ounces of nickel coin for the Philippine government, of the value of $25 in United States nickel coinage, upon which there was a wastage of 17,200.06 ounces.

During the same period the coiner also received 10,310,811.88 ounces of copper-bronze ingots and planchets, from which there were produced 8,126,204.93 ounces of 1-cent coin, of the face value of $811,708.12, and 125 ounces of copper-bronze coin for the Philippine goverment, of the value of $12.50 in United States copper-bronze coinage, upon which there was a wastage of 20,979.27 ounces.

Owing to a considerable amount of experimental coinage in the development of the new design double-eagle and eagle coins, the product of which could not enter into the amount of coin produced, and the receipt of a quantity of defective gold ingots which could not be worked satisfactorily and had to be returned for remelting, the percentage of coin produced from the amount of metal operated upon is lower than it otherwise would have been.

The following table shows the coinage executed during the year:

Denomination.	Pieces.	Value.
GOLD.		
Double eagles	5,744,415	$114,888,300.00
Eagles	272,935	2,729,350.00
Half eagles	551,913	2,759,565.00
Quarter eagles	65	162.50
Total	6,569,328	120,377,377.50
SILVER.		
Half dollars	2,170,545	1,085,272.50
Quarter dollars	5,956,545	1,489,136.25
Dimes	18,580,545	1,858,054.50
Total	26,707,635	4,432,463.25
MINOR.		
5-cent nickel pieces	22,686,002	1,134,300.10
1-cent bronze pieces	81,170,812	811,708.12
Total	103,856,814	1,946,008.22
Grand total	137,133,777	126,755,848.97

ENGRAVER'S DEPARTMENT.

All the dies used in the coinage operations of all the mints of the United States are made in the engraving department at Philadelphia.

The number of dies prepared for United States coinage last year was 2,380. In addition 629 dies were made for Philippine coinage, 10 for Mexican coinage, 56 for medals, and 111 master dies, hubs, and experimental dies for the new gold coinage.

The following table shows the number of proof coins and medals and their nominal value manufactured during the fiscal year:

Article.	Number of pieces.	Nominal value.
Gold medals	183	$4,603.50
Silver medals	2,418	1,132.50
Bronze medals	69,585	18,788.75
Gold proof coins	165	1,222.50
Silver proof coins	2,620	476.84
Minor proof coins	1,774	53.22
Total	76,745	26,297.31

MINOR COINAGE.

The manufacture of the 1-cent bronze and 5-cent nickel coins has heretofore been confined by law to the Philadelphia mint. The Fifty-ninth Congress at its first session authorized the making of these coins at the other mints, but the output so far has been wholly at Philadelphia, and owing to the recent financial troubles was much less than during the fiscal year 1907, as shown below:

Denomination.	1907.	1908.
1-cent bronze	$937,315.68	$811,708.12
5-cent nickel	2,382,137.50	1,134,300.10

Bronze and nickel blanks were purchased from contractors as follows:

Character.	Pounds avoirdupois.	Cost.
Bronze 1-cent blanks	369,000	$138,744.00
Nickel 5-cent blanks	60,000	25,350.00
Total	429,000	164,094.00

The amount of metal purchased for the manufacture of minor coinage other than blanks was 819,419 pounds avoirdupois, at a cost of $166,155.13.

The amount of uncurrent copper, nickel, and bronze coins transferred from the Treasury during the year for conversion into current coins, cost, and seigniorage are shown by the following table:

Old copper cents		$131.46
Nickel 1-cent coins		627.99
Bronze 1-cent coins		21,832.90
Bronze 2-cent coins		244.90
Nickel 3-cent coins		600.00
Nickel 5-cent coins		170,144.00
Total		193,671.25
Cost of nickel added to 1-cent metal to convert into 5-cent alloy for recoinage into nickel 5-cent coin		24.52
Cost of tin and zinc added to old copper-cent metal to convert into bronze 1-cent alloy for recoinage into bronze 1-cent coin		3.58
Cost of metal of same alloy added to nickel 3-cent metal for recoinage into nickel 5-cent coin		11.89
Seigniorage (gain by recoinage)		2,928.87
Total		196,640.11
Coinage executed, nominal value:		
Bronze 1-cent coin	$21,643.67	
Nickel 5-cent coin	164,108.90	
		185,752.57
Loss by recoinage		10,887.54
Total		196,640.11

The seigniorage, or gain, on recoinage of minor coin was $2,928.87, as against a loss of $10,887.54, showing a net loss of $7,958.67.

The seigniorage on the coinage of nickel and bronze coins coined from purchased metal was $1,535,029.42, which, less a net loss of $7,958.67 on the recoinage of minor coin and a wastage of the operative officers in the minor coinage operations of $1,233.82, gives a net seigniorage on minor coin of $1,525,836.93.

The total amount of the several types of minor coin manufactured from 1793, when the first coinage of copper cents was made, until June 30, 1908, aggregated $52,707,463.67. From the records of this mint, at which all this coinage has heretofore been made, it appears that there have been melted for recoinage $4,779,292.69, leaving outstanding June 30, 1908, $47,928,170.98.

The several types and denominations of minor coin issued, manufactured by the mint at Philadelphia since its establishment, the amount remelted, and the amount outstanding June 30, 1908, are set forth in the following table:

MINOR COINS ISSUED, REMELTED, AND OUTSTANDING.

Denomination.	Coined.	Remelted.	Outstanding June 30, 1908.
Copper cents	$1,562,887.44	$380,341.63	$1,182,545.81
Copper half cents	39,926.11		39,926.11
Copper nickel cents	2,007,720.00	802,157.85	1,205,562.15
Bronze cents	16,562,297.05	318,026.56	16,244,270.49
Bronze 2-cent pieces	912,020.00	339,328.92	572,691.08
Nickel 3-cent pieces	905,768.52	282,090.13	623,678.39
Nickel 5-cent pieces	30,716,844.55	2,657,347.60	28,059,496.95
Total	52,707,463.67	4,779,292.69	47,928,170.98

Minor coins to the amount of $2,337,103.04 have been distributed throughout the States and Territories of the United States during the fiscal year 1908—$1,441,538.60 in nickel 5-cent pieces and $895,564.44 in bronze 1-cent pieces.

The expenditure for the distribution of minor coin for the same period was $48,105.86.

ALL SEIGNIORAGE.

The seigniorage on the coinage of purchased metal for the fiscal year was $3,506,350.27, as shown by the following table:

Item.	Coined.	Seigniorage.
Subsidiary silver coins	$3,695,463.25	$1,971,320.85
Minor coins	1,760,255.65	1,535,029.42
Total	5,455,718.90	3,506,350.27

VISITORS.

A large number of visitors from all States of the Union and from foreign countries visited the mint during the year, 113,406 having been shown through by the several guides.

NUMBER OF EMPLOYEES.

The force of employees at the end of this fiscal year shows a reduction of 24 from the number carried on the rolls at the end of the previous fiscal year. The total number on the rolls at the close of the fiscal year was 472, distributed in the several departments as follows:

Department.	Male.	Female.	Total.
General	182	42	224
Assayer's	12		12
Coiner's	92	57	149
Melter and refiner's	68	1	69
Engraver's	17	1	18
Total	371	101	472

MINT OF THE UNITED STATES AT SAN FRANCISCO, CAL.

It was necessary during the fiscal year of 1908 to close this mint for settlement on two unusual occasions, owing to a change of the officers and the consequent filing of new bonds.

In the early part of the year, Frank A. Leach, superintendent of this mint, was offered the position of Director of the Mint, and on September 19, 1907, he resigned the superintendency to take up the duties of his new office. Mr. Leach was succeeded as superintendent by Edward Sweeny. On July 8, 1907, Dan T. Cole resigned, and Aug. E. Muenter assumed the duties of coiner. Mr. Muenter remained in office until the date of Mr. Leach's promotion, when he, too, resigned, and was immediately succeeded by William M. Cutter.

The settlement of January 31, 1908, was occasioned by the necessity for the filing of new bonds by the superintendent and coiner, the former bonds having been filed under a recess appointment.

The weight and value of the gold and silver bullion deposited during the fiscal year was as follows:

Metal.	Deposits.	Redeposits.	Standard ounces.	Value.
Gold	6,126	1,253	2,865,013.444	$53,302,575.69
Silver	9,428		14,678,964.51	18,263,097.36
Total	15,554	1,253		71,565,673.05

Of the above amount of silver bullion 9,851,801.76 standard ounces of Philippine silver coin were received for recoinage for the government of the Philippine Islands.

Assay Department.

During the fiscal year ending June 30, 1908, several improvements in the equipment were made, which have tended in no small degree to increase the efficiency of the department. The purchase of a set of heavy 3-inch rolls, operated by an electric motor, has greatly facilitated the rolling of silver ingot granulations, especially in the case of ingots for Philippine subsidiary coinage, where the proportion of copper alloy has been so large. Individual motors are now being placed on all rolls, the unsightly and cumbersome shafting and belting in use for so many years being dispensed with, and the frequent falling of dirt and grease upon the samples thereby avoided.

Late in the year a fairly complete experimental laboratory with hoods, tables, shelves, etc., of acid-proof stone was fitted up, to enable the carrying on of investigations into the nature of base metal contained in refractory deposits, and to permit the making, not only of qualitative tests of all kinds, but of various quantitative determinations, both volumetric and electrolytic.

The installment of this laboratory resulted almost immediately in the adoption of a method for the determination of the gold contents in Dore bullion, that for accuracy and rapidity is far superior to the ordinary fire assay formerly used. This new method does away altogether with the use of the parting flask or mattress, and in many instances enables us to dispense with the use of the cupel furnace as well.

Briefly speaking, it consists in the parting of a gram of the bullion, either with or without cupellation, according to the amount and nature of the base metal present, in a No. 2 porcelain crucible containing moderately strong nitric acid. Two five-minute boilings are made, the discarded solutions being carefully decanted to avoid distributing the gold residue, which, after being thoroughly washed in hot water, is dried and annealed without having been removed from the crucible in which the parting was made. The results are very accurate, quadruplicate assays agreeing almost exactly.

A greater amount of routine work was achieved in the department than for several years past, there having been a total of 92,124 assays made at an average cost of $0.318 per assay. A considerable proportion of this increase was due to the opening of the new refinery, the assays for which averaged over 1,200 a month during the last quarter.

The appended table shows the operations of the department in detail:

Gold assays made		48,573
Silver assays made		43,263
Sweep assays made		288
Total		92,124
Proof gold made	ounces	250
Proof silver made	ounces	100
Parting silver prepared	ounces	1,500
Cupels made		100,000
Leads cut and rolled		100,000

The reported finenesses of ingot melts are as follows:

UNITED STATES COINAGE.

MELTER AND REFINER'S DEPARTMENT.

The melter and refiner received and operated upon gold and silver bullion during the fiscal year as follows:

	Standard ounces.
Received from the superintendent July 1 to September 19, 1907, bullion containing gold	3,497,601.589
Returned prior to settlement September 19, 1907	2,763,576.218
Returned at settlement September 19, 1907	733,741.616
	3,497,317.834
Wastage in gold	283.755

	Standard ounces.
Received from the superintendent September 20, 1907, to June 30, 1908, bullion containing gold	3,811,252.177
Returned prior to settlement June 30, 1908	1,383,909.496
Returned in settlement June 30, 1908	2,427,129.764
	3,811,039.260
Wastage in gold	212.917
Received from the superintendent July 1 to September 19, 1907, bullion containing silver	3,466,429.57
Returned prior to settlement September 19, 1907	2,155,327.37
Returned at settlement September 19, 1907	1,319,498.37
	3,474,825.74
Surplus in recovered silver	8,396.17
Received from the superintendent September 20, 1907, to June 30, 1908, bullion containing silver	22,869,818.74
Returned prior to settlement June 30, 1908	19,482,741.94
Returned in settlement June 30, 1908	3,391,204.88
	22,873,946.82
Surplus in recovered silver	4,128.08

RECAPITULATION.

Total amount of gold bullion received during fiscal year	7,308,853.766
Total amount of gold bullion delivered during fiscal year	7,308,357.094
Net wastage in gold	496.672
Total amount of silver bullion received during fiscal year	26,336,248.31
Total amount of silver bullion delivered during fiscal year	26,348,772.56
Net surplus in silver	12,524.25

Melts for—	Number.	Condemned.
Gold ingots	1,489	57
Silver ingots	12,871	46
Total	14,360	103

There were manufactured during the fiscal year:

Fine gold bars	74
Fine silver bars	978
Total	1,052

There were gathered in sweeps 288 barrels, containing by assay:

	Standard ounces.
Gold	685.871
Silver	7,370.86

The installation of the new electrolytic plant was completed and refining commenced on March 2, 1908. During the remainder of the fiscal year the plant ran steadily, but the work in the operation of the silver cells was largely experimental in nature, the methods, machinery, and utensils being changed from time to time, and that portion of the plant not yet perfected.

The total refinery operations were as follows:

	Standard ounces.
Gold bullion refined upon which charges were made	314,383.322
Gold bullion refined upon which no charges were made	759,107.928
Net amount of bullion sent to refinery	1,073,491.250
Net amount of bullion received from refinery	1,072,905.626
Wastage in gold	585.624
Silver bullion refined upon which charges were made	227,537.34
Silver bullion refined upon which no charges were made	9,481.52
Net amount of bullion sent to refinery	237,018.86
Net amount of bullion received from refinery	234,919.49
Wastage in silver	2,099.37

Coiner's Department.

The coiner received gold and silver during the fiscal year as follows:

GOLD.

		Standard ounces.
Received from superintendent July 1 to September 19, 1907		2,830,907.980
Returned prior to settlement September 19, 1907	2,533,252.650	
Returned in settlement September 19, 1907	297,622.573	
		2,830,875.223
Wastage in gold		32.757
Received from superintendent September 20, 1907, to January 31, 1908		1,634,505.530
Returned prior to settlement January 31, 1908	1,585,038.180	
Returned at settlement January 31, 1908	49,438.626	
		1,634,476.806
Wastage in gold		28.724
Received from superintendent February 1, 1908, to June 30, 1908		44,707.320
Returned prior to settlement June 30, 1908	71.376	
Returned at settlement June 30, 1908	44,706.948	
		44,778.324
Excess in gold		71.004

SILVER.

Received from superintendent July 1 to September 19, 1907		2,729,817.50
Returned prior to settlement September 19, 1907	1,924,201.55	
Returned at settlement September 19, 1907	804,470.27	
		2,728,671.82
Wastage in silver		1,145.68
Received from superintendent, September 20, 1907, to January 31, 1908		7,783,768.62
Returned prior to settlement, January 31, 1908	$6,912,036.10	
Returned at settlement, January 31, 1908	868,294.36	
		7,780,330.46
Wastage in silver		3,438.16
Received from superintenent, February 1, 1908, to June 30, 1908		12,250,316.47
Returned prior to settlement, June 30, 1908	11,576,665.77	
Returned at settlement, June 30, 1908	667,850.26	
		12,244,516.03
Wastage in silver		5,800.44

RECAPITULATION.

Total amount gold received during fiscal year	4,510,120.830
Total amount of gold returned during fiscal year	4,510,130.353
Net excess in gold	9.523
Total amount of silver bullion during fiscal year	22,763,902.59
Total amount returned during fiscal year	22,753,518.31
Net wastage	10,384.28

During the fiscal year the coiner operated upon 4,167,758.980 standard ounces of gold and 20,401,848.95 standard ounces of silver. He delivered to the superintendent during the same period 2,441,-378.750 standard ounces of gold coin, valued at $45,421,000, and 11,810,282.19 standard ounces of silver coin, valued at $13,742,873.81 in standard dollars, or $14,693,974.72 in subsidiary coin, aggregating 35,504,039 pieces. Of this amount there was delivered for the government of the Philippine Islands 18,130,891.10 pesos in silver coin, weighing 10,291,263.81 standard ounces, valued at $11,975,-288.79 in standard dollars, or $12,804,060.72 in subsidiary silver coin.

The following table exhibits the coiner's deliveries for the fiscal year:

Denomination.	Pieces.	Value.
Gold:		
Double eagles	2,165,800	$43,316,000.00
Eagles	210,500	2,105,000.00
Total	2,376,300	45,421,000.00
Silver:		
Half dollars	2,172,828	1,086,414.00
Quarter dollars	1,388,000	347,000.00
Dimes	4,565,000	456,500.00
Total	8,125,828	1,889,914.00

PHILIPPINE ISLANDS.

Denomination.	Pieces.	Value.
		Pesos.
Pesos	16,128,000	16,128,000.00
50 centavos	2,105,000	1,052,500.00
20 centavos	2,735,000	547,000.00
10 centavos	4,033,911	403,391.10
Total	25,001,911	18,130,891.10

The percentage of coins produced from the amount operated upon was: Gold, 58.58 per cent; silver, 57.76 per cent. This has been a record-breaking year for the coining department of this mint, the total number of pieces coined and delivered exceeding the production of any previous year by 4,231,025 pieces.

NUMBER OF EMPLOYEES.

The total number of employees in this mint at the close of the fiscal year 1908 was 317, distributed as follows:

Department.	Male.	Female.	Total.
General	87	1	88
Assayer's	17	0	17
Melter and refiners	61	0	61
Coiner's	70	81	151
Total	235	82	317

MINT OF THE UNITED STATES AT NEW ORLEANS, LA.

The standard weight and value of gold and silver deposited at this mint during the fiscal year was as follows:

Metal.	Deposits.	Standard ounces.	Coining value.
Gold	780	46,296.675	$861,333.47
Silver	100	4,535,796.480	5,278,017.71
Total	880	4,582,093.155	6,139,351.18

There were purchased over the counter 2,659,268 ounces standard of uncurrent domestic gold coin, of the face value of $49,989.50, producing in new coin $49,474.74, showing a loss in recoinage of $514.76, and 160.49 ounces standard of uncurrent domestic silver coin, of the face value of $201.25, producing in new coin $199.66, showing a loss in recoinage of $1.59.

The treasurer transferred for recoinage uncurrent domestic subsidiary silver coin of the face value of $64,550, containing 48,064.30 ounces standard silver, producing in new coin $59,800.05, showing a loss by wear of $4,749.95.

There were deposited 204.762 ounces standard gold (unrefined) domestic bullion, producing in gold coin $3,809.52.

There were deposited 621.34 ounces standard silver domestic bullion, producing in standard dollars $723.01.

There were deposited 38,519.085 ounces standard gold unrefined foreign bullion, producing in gold coin $716,634.14.

There were deposited 21,450.70 ounces standard silver unrefined foreign bullion, producing in standard dollars $24,960.81.

The following table shows the countries from which the bullion was received:

Country.	Gold.		Silver.	
	Standard ounces.	Value.	Standard ounces.	Coining Value.
Mexico	1,024.938	$19,068.63	125.36	$145.87
Nicaragua	36,140.266	672,377.04	21,056.38	24,501.97
Honduras	290.739	5,376.91	53.59	62.36
Guatemala	907.044	17,805.47	74.35	86.75
Costa Rica	97.077	1,806.09	140.82	163.86
Total	38,519.085	716,634.14	21,450.70	24,960.81

Foreign gold coin containing 1,881.494 standard ounces of the coinage value of $35,004.54, and foreign silver coin containing 66,577.83 standard ounces of the value of $77,472.38 in standard silver dollars were received.

Gold bullion amounting to 3,018.180 standard ounces and coinage value of $56,152.19 and silver bullion 4,978.570 standard ounces and coinage value of $5,793.25 in standard silver dollars was obtained from jewelers' bars, plate, etc.

The number of employees during the fiscal year were as follows, the superintendent and operative officers not included:

Department.	Male.	Female.	Total.
General	29	7	36
Assayer's	3		3
Melter and refiner's	11		11
Coiner's	22	38	60
Total	65	45	110

Assayer's Department.

The following is the assayer's report of the fineness of the silver and gold ingot melts passed during the fiscal year 1908:

SILVER INGOTS.

Fineness.	Number of melts.	Fineness.	Number of melts.
898.4	4	899.7	23
898.6	57	899.8	5
898.8	147	900	7
898.9	2		928
899.1	488	Condemned	3
899.3	93		
899.4	15	Total	931
899.5	87		

GOLD INGOTS.

Fineness.	Number of melts.
899.9	1
900	1
Total	2
Condemned	0

Number of Deposits, Purchases, Ingots, and Bars Received and Assayed during Fiscal Year 1908.

Classification.	Gold.	Silver.	Total.
Deposits	780	100	880
Purchases (fine bars)		3,498	3,498

Total	918	4,577	5,495

Melter and Refiner's Department.

The melter and refiner received and operated upon 111,959.889 standard ounces of gold bullion and returned at the settlement 112,078.779 standard ounces, showing a surplus of 118.890 standard ounces. He also received and operated upon during the same period 8,406,388.43 standard ounces of silver and returned 7,416,073.43 standard ounces, showing a wastage of 1,929.93 standard ounces, being 15.3 per cent of his legal allowance.

From 95 barrels of sweeps there were obtained 97.052 standard ounces of gold and 5,732.42 standard ounces of silver.

The number of gold and silver ingot melts made and the number condemned by the assayer is as follows:

Melts.	Number made.	Number condemned.
Gold ingots	2	
Silver ingots	931	3
Total	933	3

MELTS MADE DURING THE YEAR.

Fine gold	22	Silver deposits	100
Fine silver	11	Grain bars	19
Mass melts	30	Granulations	44
Gold deposits	780	Miscellaneous	30

REFINERY OPERATIONS.

The weight and value of gold and silver operated upon in the refinery were as follows:

Metal.	Standard ounces.	Coining value.
Gold bullion	35,147.197	$653,901.33
Silver bullion	81,265.97	101,108.51
Amount of gold and silver received from refinery:		
Gold	35,147.197	653,901.33
Silver	80,438.95	100,079.56

Silver bullion on which charges were collected contained 21,427.33 standard ounces.

Silver bullion owned by the Government on which there were no charges contained 59,838.64 standard ounces.

The refinery was in operation for only three months.

COINER'S DEPARTMENT.

During the fiscal year 1907 the coiner received and operated upon 7,612,014.20 standard ounces of silver.

He manufactured during the same period 4,185,206.63 standard ounces of silver coin, valued at $5,207,100, aggregating 16,266,600 pieces, as shown by the following table:

No gold coined during this fiscal year.

Denomination.	Pieces.	Value.
SILVER.		
Half dollars	6,354,600	$3,177,300
Quarter dollars	6,924,000	1,731,000
Dimes	2,988,000	298,800
Total	16,266,600	5,207,100

The percentage of coin produced from the amount operated upon was, silver, 54.98.

At the annual settlement of his accounts it was found that there had been a wastage during the year of 3,025.60 standard ounces of silver, being 39.74 per cent of the legal allowance.

MINT OF THE UNITED STATES AT DENVER, COLO.

The receipts of gold and silver during the fiscal year 1908 were as follows:

Metal.	Deposits.	Redeposits.	Standard ounces.	Coining value.
Gold	3,865		760,259.597	$14,144,364.59
Silver	3,758		4,357,843.44	5,070,945.09
Total	7,623		5,118,103.037	19,215,309.68

Domestic bullion, refined, carried 13,867.862 standard ounces gold, of a coinage value of $258,006.74, and 4,006,640.05 ounces of silver, of a coinage value of $4,662,272.06.

The metallurgical plants, manufacturing high-class bars below .990 assay fineness, furnished 254,922.145 standard ounces gold, of a coinage value of $4,742,737.59 and 10,426.69 standard ounces silver, of a coinage value of $12,132.88.

OFFICERS AND EMPLOYEES.

The number of officers and employees in the mint at the close of the fiscal year was as follows:

Department.	Men.	Women.	Total.
General	60	2	62
Assayer's	10		10
Coiner's	32	47	79
Melter and Refiner's	24		24
Total	126	49	175

ASSAY DEPARTMENT.

The operations of this department during the fiscal year 1908 were as follows:

SAMPLES OPERATED UPON.

Items.	Gold.	Silver.	Total.
Deposits	3,833	562	4,395
Exchange bars	32	14	46

MELTER AND REFINER'S DEPARTMENT.

The melter and refiner received from the superintendent during the fiscal year ended June 30, 1908:

GOLD ACCOUNT.

	Standard ounces.	
In bullion		2,747,214.269
Returned prior to settlement	2,477,972.098	
Returned at settlement	269,731.619	
		2,747,703.717
Surplus in gold recovered		489.448

SILVER ACCOUNT.

In bullion		7,518,916.69
Returned prior to settlement	6,665,331.67	
Returned at settlement	865,023.54	
		7,530,355.21
Surplus in silver recovered		11,438.52

The surplus was recovered from unreported fractions of assays, from the difference between standard and actual fineness of ingots delivered, and from fractional gains in weight of deposits.

The following melts were made:

Melts.	Gold.	Silver.	Gold and silver.	Total.
Deposits	4,140	602	.....	4,742
Anodes	449	470	.....	919
Ingots	438	1,776	.....	2,214
Mint bars	211	117	.....	328
Settlement bars	18	31	.....	49
Miscellaneous	.....	.....	728	728
Total	5,256	2,996	728	8,980

Ingot melts condemned: Gold, 5; silver, 1.

One continuous run on silver ingots weighing 3,556,313.56 ounces was made without having a melt condemned or remelted.

During the year there were gathered 1,525 sacks of sweeps, containing, by mint assay, 435.145 standard ounces of gold and 2,872.82 standard ounces of silver.

Refinery operations, covering a period of nearly ten months, were as follows:

GOLD ACCOUNT.

		Standard ounces.
Delivered to the refinery		1,386,919.698
Returned in fine bars	1,303,389.683	
Returned in settlement	83,724.164	
Returned in sweeps	238.938	
		1,387,352.785
Surplus in gold returned		433.087

SILVER ACCOUNT.

Delivered to the refinery		604,339.17
Returned in fine bars	521,192.25	
Returned in settlement	85,909.48	
Returned in sweeps	1,393.22	
		609,494.95
Surplus in silver returned		5,155.78
Earnings of refinery:		
Charges collected		$47,322.53
Surplus bullion recovered		14,952.97
Total		62,275.50

Average fineness of parted metals: Gold, 0.9996; silver, 0.9993.

COINER'S DEPARTMENT.

During the fiscal year 1908 the coiner received from the superintendent 2,696,697.90 standard ounces of gold, making therefrom $31,440,000, on which there was a wastage of 70.936 standard ounces, being 5.26 per cent of the legal allowance. He also received during the same period 6,488,225.60 standard ounces of silver, making

therefrom $5,001,000 in subsidiary coin, on which there was a wastage of 2,147.17 standard ounces, being 33.09 per cent of the legal allowance.

The following table shows the denomination, number of pieces, and value of coin made:

Denomination.	Pieces.	Value.
GOLD.		
Double eagles	1,346,250	$26,925,000
Eagles	210,000	2,100,000
Half eagles	483,000	2,415,000
Total gold	2,039,250	31,440,000
SILVER.		
Half dollars	6,120,000	3,060,000
Quarter dollars	4,976,000	1,244,000
Dimes	6,970,000	697,000
Total silver	18,066,000	5,001,000
Total coinage	20,105,250	36,441,000

During the period from April 1, 1907, to August 1, 1907, he received 4,358,049.09 standard ounces of 50-centavos silver ingots for Mexican coinage, making therefrom 6,199,291 pieces on which there was a wastage of 2,916.12 standard ounces, being 66.91 per cent of the legal allowance.

The per cent of coin produced from amount of ingots operated on was: Gold, 62.93 per cent; subsidiary silver, 61.96; per cent; Mexican 50-centavos, 50.81 per cent.

ASSAY OFFICE OF THE UNITED STATES AT NEW YORK, N. Y.

The report on the business of this office for the fiscal year 1908 is as follows:

Bullion received.	Deposits.	Redeposits.	Standard ounces.	Coinage value.
Gold	10,898	4	7,083,832.191	$131,792,226.75
Silver	2,845	24	5,544,155.42	6,451,380.85
Total	13,743	28		138,243,607.60

The gross weight of the above bullion was 11,821,125.41 ounces, an increase over last year of 3,850,282.97 ounces.

The value of foreign gold bullion and coin deposited was $79,188,392.28, an increase over last year of $45,190,681.17.

The value of domestic gold coin and bullion deposited was $52,603,642.69, an increase over last year of $8,844,830.01.

The sources of domestic gold bullion and coin were as follows:

From new production in the United States and Territories	$5,556,326.20
From private refineries	41,567,044.42
From jewelers' bars, plate, etc	4,691,142.19
From redeposited bullion	3,147.61
From United States gold coin of light weight	785,982.27
Total	52,603,642.69

This statement shows an increase over last year in the amount of gold bullion received from private refineries of $8,486,051.11, and from United States gold coin of light weight of $140,176.97.

Of the fine silver received during the year, $1,996,097.73 standard ounces consisted of purchases.

The redeposits of silver consisted of 85,470.71 standard ounces, contained in fine bars made at this office, and 29.36 standard ounces of unparted bars made at the Denver mint and the Boise assay office.

The unparted bullion received during the year has been transmitted to the Philadelphia mint for treatment, as the parting operations have not been resumed during the year.

The deductions from base silver bullion received from July 1, 1907, to February 28, 1908, inclusive, for the benefit of the melter and refiner's account amounted to 1,935.35 ounces, containing 62.87 ounces fine gold and 1,448.56 ounces fine silver.

The surplus bullion recovered by the melter and refiner in his operations was 1,293.19 ounces fine silver, and he incurred a wastage of 55.165 ounces fine gold.

The amount of bullion delivered to and returned by the melter and refiner to the superintendent during the fiscal year 1908 was as follows:

Items.	Delivered to the melter and refiner.	Returned by the melter and refiner.
	Standard ozs.	*Standard ozs.*
Gold	7,313,458.888	7,313,414.31
Silver	5,675,084.20	5,676,377.39

The grains and fluxes from the deposit melting room yielded $10,466.38; the sweeps (119 barrels), $13,408.93.

There were stamped during the year 50,903 gold bars and 15,451 silver bars; previous year, 73,759 gold bars and 23,041 silver bars.

Gold bars issued to depositors of bullion for domestic use	$3,041,410.62
Gold bars exchanged for gold coin for domestic use	17,152,888.04
Total gold bars issued for use in the arts, etc	20,194,298.66

showing a decrease of $8,722,611.05 compared with last year.

The value of gold bars exchanged for gold coin for export was $40,799,187.96, being an increase over that of last year of $15,628,288.17. The income from the exchange of gold bars for gold coin was $25,014.44.

The force employed in this office at the close of the year comprised 81 men and 3 women, including the superintendent, assayer, melter and refiner, and 81 others, distributed as follows:

General department	31
Melter and refiner's department	41
Assayer's department	12
Total	84

During the year the old refinery building has been taken down, but actual operations in the building of a new one have not been begun.

This report covers the business for one and one-half months, to August 15, 1907, under the incumbency of the previous superintend-

ent, and the remaining ten and one-half months of the year under that of the present superintendent.

Assayer's Department.

There were assayed 10,898 melts of gold deposits and 2,845 melts of silver deposits, a total of 13,743 melts involving 68,715 assays. The fine gold and fine silver melts assayed were about 431 and the fineness was stamped upon 50,903 bars of gold and 14,451 bars of silver, a total of 66,354.

Special assays number 995, being largely articles of jewelry and manufacturers' samples.

Assays were made on 205 barrels of sweeps and on 174 consolidated melts for shipment to the mint, with the usual incidental ones for the melter and refiner, etc.

All proof gold, proof silver, and cupels used were made in this department.

An electric pyrometer has been installed in the laboratory and has proved of great assistance in determining the different heats of the gold, silver, and copper cupellation.

Melter and Refiner's Department.

The business of this department during the fiscal year 1908 is as follows:

Items.	Gross amount.	Standard gold.	Standard silver.
	Ounces.	Ounces.	Ounces.
Settlement metal of June 30, 1907	302,553.16	229,437.005	110,221.97
Gold deposits, July 1 to August 15, 1907	288,870.640	260,400.799	24,492.40
Silver deposits, July 1 to August 15, 1907	357,994.08	5,646.864	330,619.14
Silver purchases, July 1 to August 15, 1907			
Gold deposits, August 16, 1907 to June 30, 1908	6,875,302.91	6,627,330.622	201,570.57
Silver deposits, August 16, 1907, to June 30, 1908	4,549,991.18	80,214.468	4,786,673.42
Silver purchases, August 16, 1907, to June 30, 1908			
Total	12,183,676.279	7,313,638.888	5,473,984.39

The number of gold deposits melted was about	10,898
The number of silver deposits melted was about	2,845
Total	13,743

The number of fine, standard, mint and unparted bars made was: Gold, 50,903; silver, 15,451; mint and unparted, 17,041. Total 83,395, containing 7,218,263.714 ounces of standard gold and 5,533,394.20 ounces of standard silver.

Deductions on base silver bullion were 1,864.80 ounces gross estimated as containing 1,500 ounces of standard silver.

There was refined by fire and fluxes, fine, standard and mint gold, 2,430,443.117 standard ounces; fine, standard and mint silver, 548,067.13 standard ounces. There was returned from melters and delivered to superintendent as unparted mint bars: Gold, 259,392.448 standard ounces; silver, 392,191.66 standard ounces.

Ten and three hundred and eight-thousandths ounces of standard gold (value, $191.78) and 422.48 ounces of standard silver (value, $261.94) were returned in settlement of August 15, 1907, in excess of amounts debited to the melter and refiner, and in the settlement of June 30, 1908, there was a wastage of 55.165 ounces of standard gold (value, $1,026.34) and an excess of 870.71 ounces of standard silver (value, $423.72).

The following statement shows the relation between the expenses of this department for parting and refining and charges collected therefor:

Receipts:		
Charges collected	$119,177.87	
Gold surplus of August 15, 1907	191.78	
Silver surplus of August 15, 1907	261.94	
Silver surplus of June 30, 1908	423.72	
Old iron sold	637.04	
Old lead and antimony sold	1,981.45	
Old copper sold	184.98	
Total		$122,858.78
Expenditures:		
Labor, per pay roll	44,556.06	
Charges of Philadelphia mint	57,806.83	
Fuel and steam	5,061.07	
Fluxes	764.11	
Miscellaneous	16,944.28	
Loss on sale of sweeps	1,684.07	
Gold wastage of June 30, 1908	1,026.34	
Total		127,842.76
Excess of expenditures over receipts		4,983.98

THE MINT OF THE UNITED STATES AT CARSON, NEV.

The value of the deposits at this mint, conducted as an assay office, during the fiscal year 1908 showed an increase of $937,552.31, or nearly 114 per cent over the deposits of 1907. Gold to the value of $1,707,399.16 and silver valued at $53,681.38 were deposited. Four-fifths of this amount originated in Nevada; the balance from California.

The operations required a total of 4,485 assays. This number includes deposits, consolidations, bullion and ore assays for gold, silver, copper, and lead.

The weight of deposits before melting contained 139,366.31 ounces and the weight after melting 136,683.31 ounces, an average loss in melting of 1.92 per cent.

The force of employees consisted of 7 men during the first eight months of the year, and 9 during the last four months.

The following table shows the amount of deposits, earnings, and expenditures, together with the percentage of net expenses to deposits for the fiscal year:

Item.		Amount.
Deposits:		
Gold	$1,707,399.16	
Silver (coining value)	53,681.38	
		$1,761,080.54
Earnings		3,621.63
Expenditures		11,445.10
Percentage of net expenses to deposits, 0.04443.		

ASSAY OFFICE OF THE UNITED STATES AT BOISE, IDAHO.

During the fiscal year 1908 there were received at this office 1,549 deposits of gold bullion, all of domestic production. The States from which deposits were made are Idaho, Oregon, Montana, Washington, and Utah. No silver bullion or coin were received for assay.

The amount of deposits shows a small increase over those of last year.

The weight of bullion received before melting was 70,118.67 ounces and after melting 67,695.90 ounces, the average loss in melting being 3.45 per cent. There was a gain of $635.44 in mass melting.

The office force of this institution consists of 9 men.

The following table shows the amount of deposits, earnings, and expenditures, and the percentage of net expenses to deposits:

Item.		Amount.
Deposits:		
Gold	$851,235.76	
Silver (coining value)	29,161.14	
		$880,396.80
Earnings		2,815.55
Expenditures		13,913.88
Percentage of net expenses to deposits, 1.26060.		

ASSAY OFFICE OF THE UNITED STATES, HELENA, MONT.

During the fiscal year 1908 there were received at this office 880 deposits of gold bullion. Of these deposits 13 were buttons.

The weight of the 867 regular deposits before melting contained 137,372.93 ounces and after melting 131,625.89 ounces, being an average loss in melting of 4.183 per cent. The average fineness of the unparted bars shipped to the Philadelphia mint was: Gold, 634½; silver, 316; the total gold and silver coinage value being $1,779,113.15.

Number of assays, regular deposits	2,810
Special assays, slags, by-products, etc	170
Total	2,980

There are 13 persons employed at this office, 12 men and 1 woman.

The following table shows the amount of deposits, earnings, and expenditures, and percentage of net expenses to deposits.

Item.		Amount.
Deposits:		
Gold	$1,725,366.52	
Silver (coining value)	53,746.82	
		$1,779,113.34
Earnings		3,892.53
Expenditures		23,090.69
Percentage of net expenses to deposits, 1.07908.		

ASSAY OFFICE OF THE UNITED STATES AT CHARLOTTE, N. C.

During the fiscal year 1908 there were received at this office 212 deposits of gold bullion, principally from the Appalachian Range.

In addition to the assay of regular deposits there were made 95 assays of ore.

The weight of bullion before melting contained 13,313 ounces and after melting 13,142.36 ounces, an average loss in melting of 1.28 per cent.

The force of this office consists of 2 officers, 1 clerk, and 2 laborers.

The following statement shows the amount of deposits, earnings, and expenditures, also the percentage of net expenses to deposits during the fiscal year 1908:

Item.		Amount.
Deposits:		
Gold	$220,689.73	
Silver	1,299.33	
		$221,989.06
Earnings		819.77
Expenditures		4,585.99
Percentage of net expenses to deposits, 1.69657.		

ASSAY OFFICE OF THE UNITED STATES AT ST. LOUIS, MO.

The value of deposits of bullion for the fiscal year 1908 at this office aggregated $442,285.23, showing a gain in value of deposits compared with those of 1907 of $182,270.56.

The receipt of domestic gold bullion amounted to 890.705 standard ounces of gold and 115.96 standard ounces of silver; of jeweler's bars, 2,341.716 standard ounces of gold and 670.80 standard ounces of silver; foreign bullion unrefined contained 186.821 standard ounces of gold and 326.25 standard ounces of silver; uncurrent domestic gold coin, 17,319.833 standard ounces of gold.

There were assayed 333 melts of gold deposits. There were 43 special bullion assays for which a charge of $2 each was made, and 28 ore assays were made for gold and silver for which a charge of $3 each was imposed.

The weight of the bullion received was 25,209.13 ounces before melting and after melting 25,067.29 ounces, an average loss in melting being 0.562 per cent.

The working force of this office consists of assayer in charge and one clerk (male).

The following statement shows the amount of deposits, earnings, and expenditures, also percentage of net earnings to deposits during the fiscal year 1908:

Item.		Amount.
Deposits:		
Gold	$440,985.90	
Silver (coinage value)	1,299.33	
		$442,285.23
Earnings		586.62
Expenditures		3,791.62
Percentage of net expenses to deposits, 0.75896.		

ASSAY OFFICE OF THE UNITED STATES AT DEADWOOD, S. DAK.

There were deposited in this office during the fiscal year 1908, 241 deposits of bullion, all from the Black Hills of South Dakota, valued at $1,278,227.12.

There were 4 button assays, 38 ore assays, 7 assays made on mass melts, and 21 assays made for the Forest Service in addition to the 241 assays on bullion deposited.

There were also 6 assays for gold and silver and 4 on base of each of 16 samples of bullion received from the Director of the Mint during the year.

The bullion received contained 138,324.53 ounces before melting and after melting 136,922 ounces, showing an average loss in melting of 1.013 per cent.

The total number of employees in the assay office at the close of the fiscal year was 5 men, all in the general office.

The following statement shows the amount of deposits, earnings, and expenditures, also percentage of net expenses to deposits during the fiscal year 1908:

Item.		Amount.
Deposits:		
Gold	$1,195,692.70	
Silver (mining value)	83,194.42	
		$1,278,227.12
Earnings		2,021.57
Expenditures		8,019.39
Percentage of net expenses to deposits, 0.4915.		

ASSAY OFFICE OF THE UNITED STATES AT SEATTLE, WASH.

There were received at this office during the fiscal year 1908, 2,358 deposits of gold and 1 redeposit.

Number of bullion assays determined	6,469
Number of ore assays determined for Forestry Department	77
Number of special bullion assays received	31
Number of returns bars	10
Number of ounces of proof gold manufactured	None.
Number of ounces of quartation silver manufactured	406.55
Number of cupels manufactured	27,000
Total weight of deposits before melting (ounces)	903,863.51
Total weight of deposits after melting (ounces)	897,300.11
Per cent of average loss in melting	0.739

There were 1,479 bars, each below 300 ounces, massed into 71 larger bars, the total weight of which was 82,133.53 ounces. The gain in weight from massing these bars was 8.39 ounces, showing an average gain of 0.0059 of an ounce on each deposit.

Average cost of handling bullion melted and assayed was $0.0454 per ounce.

A net loss of $346.90 resulted from the operations of the year, the source of same being as follows:

1. A loss of $160.42 in the melting department. This loss is due to the fact that depositors are allowed full weight for the granules or pannings from each deposit, whereas these granules almost invariably run lower in fineness than the bar and also contain more or less slag.

2. A loss of $64.20 in the assay department, the greater part of which undoubtedly arises from the clipping of bars. A removal of the linoleum, etc., from the weighing and clipping rooms will probably net enough bullion to make up most of this loss.

3. A loss of $13.13 in the general department.

4. A loss of $334.74 in shipments to the mint, due entirely to difference in assays.

5. A gain of $225.59 in mass melts. About $125 of this amount should arise from the swing of the needle on each of the 1,479 bars massed during the year.

The deposit melting room grains for the year amounted to $901.16, but none of this amount was taken to reimburse losses, as has been the custom in previous years.

Of the 2,358 deposits received, the entire number were deposits of gold bullion, 2,327 being crude and 31 refined. Only three of the refined bars were of domestic production, the other 28 coming from refineries of British Columbia.

The bullion in the melting room slag was not recovered this year, owing to the fact that the smelting furnace installed for this purpose was not completed in time.

The receipts from the different districts of Alaska are shown in the following table:

Locality.	Gold.		Silver.	
	Standard ounces.	Coining value.	Standard ounces.	Coining value.
Circle	2,443.087	$45,452.78	589.47	$685.93
Cooks Inlet	3,393.626	62,393.04	508.53	591.74
Copper River	6,325.701	117,087.46	718.17	835.69
Eagle	2,969.348	55,243.68	487.10	566.81

Nome, Alaska, United States	$32,884,746.87
Tanana, Alaska, United States	21,959,267.46
Balance of Alaska, United States	7,073,656.29
Total for Alaska, United States	61,917,670.62
British Columbia, Canada	9,920,910.99
Yukon territory	84,849,068.00
Washington, Oregon, and other States, etc	1,921,995.81
Total	158,609,645.42

Attention is again called to the need of a new building. This matter was fully taken up in the report of last year, and it is respectfully recommended that the statements therein be given consideration. Owing to the recent decline in values throughout the country, a building site could probably be obtained far cheaper now than at any future time.

The number of employees at the end of the fiscal year was 30 (all male), but for seven months of the year only 25 were employed.

The following table shows the amount of deposits, earnings, and expenditures, together with the percentage of net expenses to deposits, in the fiscal year 1908:

Item.		Amount.
Deposits:		
Gold	$15,786,092.88	
Silver (coining value)	160,100.16	
		$15,946,193.04
Earnings		22,066.72
Expenditures		44,485.17
Percentage of net expenses to deposits, 0.14050.		

PERCENTAGE OF LOSS IN MELTING.

It will be noticed there is a wide range of difference in the losses in melting by the various institutions. This difference is wholly due to the character of bullion deposited, as is shown in the following figures. These figures are from the record kept at the United States mint at San Francisco. The record for two half years and two years are given to show the remarkable uniformity of the losses in the bullion that could be classified.

Description.	Half year ending December, 1906.	Year ending December, 1906.	Half year ending December, 1907.	Year ending December, 1907.
Bars, kings	0.00096	0.00104	0.00115	0.00116
Dust	.03537	.03493	.03518	.03392
Retort	.04661	.04583	.05352	.05572

Miscellaneous	.04393	.03923	.01478	.01592

SUMMARY OF OPERATIONS, WASTAGE, AND LOSS, FISCAL YEAR 1908.

The institutions of the mint service consist of the coinage mints at Philadelphia, San Francisco, New Orleans, and Denver; the mint at Carson, which at present is conducted as an assay office; the assay office at New York, which, like each of the coinage mints, operates a refinery, and the minor assay offices at Boise, Helena, Charlotte, St. Louis, Deadwood, and Seattle. Bullion is received at the assay offices on the same terms as at the mints, except that an additional charge of one-eighth of 1 per cent is made at the former. Bullion purchased at the assay offices becomes the property of the Government and is shipped to the mints at the expense of the Government.

OPERATIONS.

The quantity of precious metals operated upon in the different departments of the mints and assay office at New York during the fiscal year 1908 aggregated 51,955,190 standard ounces of gold and 103,980,617 standard ounces of silver.

The figures in the table following are the actual figures as obtained at the settlement of the accounts of the officers in charge. The

figures in the article showing the operations of each mint or assay office are for the entire fiscal year up to June 30, except the operations at the Denver mint, in which case the figures cover a period of fifteen months.

INGOTS MADE AND COIN PRODUCED.

The melts of gold and silver made for ingots, number condemned, and the percentage of finished coin produced from ingots operated upon as follows:

Coinage mints.	Gold.			Silver.		
	Melts of gold ingots.		Percentage of finished coin produced from ingots operated upon.	Melts of silver ingots.		Percentage of finished coin produced from ingots operated upon.
	Made.	Condemned.		Made.	Condemned.	
Philadelphia	2,341	5	51.97	1,485	1	57.10
San Francisco	1,489	57	58.58	1,571	2	57.76
New Orleans	2			931	3	54.68
Denver	438	5	62.93	1,701	1	61.96
Total	4,270	67		5,688	7	

WASTAGE AND LOSS ON SALE OF SWEEPS.

The value of the precious metals wasted in the metallurgical and mechanical departments was $54,222.20. A loss of $7,334.81 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same, as follows:

Items.	Mint at—				Assay office at New York.	Total.
	Philadelphia.	San Francisco.	New Orleans.	Denver.		
Melter and refiner's gold wastage	$25,119.48	$9,240.41			$1,026.34	$35,386.23
Melter and refiner's silver wastage			$988.85			988.85
Coiner's gold wastage	5,313.45	1,143.83		$1,319.74		7,777.02
Coiner's silver wastage	284.11	5,647.57	1,550.24	2,588.18		10,070.10
Loss on sale of sweeps	1,135.87	2,678.25	563.27	589.95	2,307.47	7,334.81
Total	31,852.91	18,710.06	3,102.36	4,497.87	3,393.81	61,557.01
Paid as follows:						
From contingent appropriation	30,761.12	18,040.40	3,102.36	4,349.17		56,253.05
From parting and refining appropriation	1,091.79	669.66		148.70	3,393.81	5,303.96
Total	31,852.91	18,710.06	3,102.36	4,497.87	3,393.81	61,557.01

The wastage and losses aggregated $61,557.01. Against these losses there were gains arising from the operations in bullion, as follows:

Character of gains.	Fiscal year 1908.
Surplus bullion returned by operative officers	$29,797.58
Precious metals received in grains and sweeps	31,152.39
Gains on bullion shipped from the minor assay offices to the mints for coinage	5,066.68
Total	66,016.65

Deducting the incidental gains on bullion from the value of the total operative wastage and loss on sale of sweeps, there has been a net gain in the operations of the mints during the fiscal year of $4,459.64.

RECEIPTS AND DISPOSITION OF GOLD BULLION, FISCAL YEAR 1908.

RECEIPTS.

The receipts of gold bullion at the mints and assay offices aggregated $326,630,042.44, as shown by the following table:

Institution.	Deposited.			Redeposited.		Total.
	Deposits.	Uncurrent United States coin transferred for re-coinage.	Surplus bullion recovered.	Receipts from assay offices.	Government bars.	
Philadelphia	$1,813,220.68	$3,725,112.71	[a]$1,093.30	$18,649,399.71	$80,396,700.58	$104,585,526.98
San Francisco	34,222,000.93	60,812.54	[b]2,158.10	19,017,604.01		53,302,575.58
New Orleans	861,075.28		[c]2,479.63			863,554.91
Denver	14,144,364.57		14,991.00			14,159,355.57
New York	131,792,034.97		191.78			131,792,226.75
Carson	1,707,399.16					1,707,399.16
Helena	1,725,131.53		234.99			1,725,366.52
Boise	850,916.92		318.84			851,235.76
Charlotte	220,580.09		109.64			220,689.73
St. Louis	440,931.48		54.42			440,985.90
Deadwood	1,194,797.35		235.35			1,195,032.70
Seattle	15,785,196.28		896.60			15,786,092.88
Total	204,757,649.24	3,785,925.25	22,763.65	37,667,003.72	80,396,700.58	326,630,042.44

[a] Of this amount $223.74 was gain on United States light weight coin melted.
[b] Of this amount $3.28 was gain on United States light weight coin melted.
[c] Of this amount $9.38 was gain on shipments to Philadelphia mint.

DISPOSITION.

The disposition of gold bullion contained in the above table is as follows:

Institution.	Bars paid depositors.	Shipped to the mint for coinage.	Sold in sweeps.	Bars exchanged for coin.	Coinage.	Wastage.	Total.
Philadelphia	$303,367.19		$15,675.98	$6,045,611.99	$120,377,377.50		$126,742,032.66

RECAPITULATION OF GOLD EXPORTS TO EUROPE.

Description.	France.	England.	Germany.
United States coins	$1,055,000	$4,000	$10,850,000
Foreign coins	464,000		
United States assay office bars	25,318,239	3,017,628	12,285,090
Bullion in ore		272	
Total	26,837,239	3,021,900	23,135,090
Grand total of exports to Europe			$52,994,229

During the same period there were shipped to West Indies, Mexico, Central and South America, Cuba, etc., the following:

United States coin	$2,238,420	
Foreign coins	1,275,593	
Total gold exports to other ports		$3,514,013
Grand total of gold exports		56,508,242

The imports during the same period were as follows:

From Europe:		
United States coins	$21,553,058	
Foreign coins	9,340,064	
Bullion	64,604,653	
Bullion in ore	14,713	
Total gold imports to Europe		$95,512,488
From other ports (West Indies, Mexico, Central and South America, and Cuba):		
United States coin	7,640,126	
Foreign coin	1,632,357	
Bullion	5,043,780	
In ore and base bullion	878,523	
Total gold imports from other ports		15,194,786
Grand total of gold imports		110,707,274

During the same period there was exported to England copper matte containing 17.65 ounces fine gold and 52,114 ounces of fine silver.

NET EXPORTS UNITED STATES GOLD COIN.

The net exports of United States gold coin since January 1, 1870, are as follows:

Period.	Imports.	Exports.	Period.	Imports.	Exports.
Jan. 1 to July 1, 1870		$6,384,250	Fiscal year—Cont'd.		
Fiscal year—			1892	$15,432,443	$42,841,963
1871		55,491,719	1893	6,674,886	101,844,087
1872		40,391,357	1894	30,790,892	64,363,840
1873		35,661,863	1895	10,752,673	55,096,639
1874		28,766,943	1896	10,189,614	77,789,892

THE WORLD'S STOCK OF MONEY.

The monetary systems of the different countries of the world, an estimate of the approximate stock of gold, silver, and uncovered paper, with per capita of each at the close of the calendar year 1907, are set forth in the following table, compiled from official information as far as received and, in the absence of such information, from other sources regarded as reliable. In some instances it has been impossible to find any information whatever and recourse in such cases has been had to the estimates of the previous year:

MONETARY SYSTEMS AND APPROXIMATE STOCKS OF MONEY, IN THE AGGREGATE,

	Country.	Monetary standard.	Monetary unit.	Population.	Stock of gold.		
					In banks and public treasuries.	In circulation.	Total.
				Thousands.	*Thousands.*	*Thousands*	*Thousands.*

[c] Includes Straits Settlements, the Malay States, and Johore.
[f] From L'Economiste European, January 1, 1907.
[g] Except Costa Rica and British Honduras (gold-standard countries).

In the foregoing table the total amount of gold in the banks of issue and in the public treasuries exhibits an increase of $220,600,000 over the amount held at the close of the calendar year 1906. The increase of the stock of gold held for monetary purposes is $125,000,000 over that of the previous year. The increases and decreases over the estimates for the calendar year 1906 are shown in the following table:

Country.	Increase.	Decrease.	Country.	Increase.	Decrease.
United States	$19,400,000		Netherlands		$2,200,000
Austria-Hungary		$3,300,000	Norway	$3,600,000	
Belgium		300,000	Roumania		2,000,000
Australasia	34,300,000		Russia		22,100,000
Canada	3,900,000		Servia	2,700,000	
United Kingdom	77,800,000		Siam	100,000	
India		224,100,000	Argentina	37,100,000	
South Africa		12,800,000	Brazil	29,400,000	
Straits Settlements	900,000		Chile	34,500,000	
Denmark		4,200,000	Guiana (Dutch)		200,000
Finland		200,000	Spain		3,100,000
Germany	14,100,000		Sweden		400,000
Greece		5,000,000	Turkey	81,900,000	
Italy	42,700,000		Central America	700,000	
Japan	15,700,000				
Mexico	6,800,000		Total	405,600,000	279,900,000

Net increase, $125,700,000.

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1907.

Among the purveyors of gold and silver bars for use in the industrial arts the United States mint at Philadelphia and the United States assay office at New York hold the foremost places; consequently the larger portion of the material consumed in the arts is brought under government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the government institutions and private refineries during the calendar year 1907:

GOLD AND SILVER BARS ISSUED BY THE GOVERNMENT INSTITUTIONS AND MANUFACTURED BY PRIVATE REFINERIES FOR USE IN THE INDUSTRIAL ARTS DURING THE CALENDAR YEAR 1907.

Material used.	Gold.		Total.	Silver.		Total.
	Government institutions.	Private refineries.		Government institutions.	Private refineries.	
Domestic bullion	$15,262,907.18	$284,017.00	$15,546,924.18	*Fine ozs.* 2,503,061.77	*Fine ozs.* 14,928,029.00	*Fine ozs.* 17,431,090.77
Foreign material	14,501,615.54	955.00	14,502,570.54	1,764,616.75	2,863,591.00	4,628,207.75
United States coin		369,184.00	369,184.00		1,500.00	1,500.00
Old jewelry	4,721,540.98	2,456,034.00	7,177,574.98	608,673.67	1,623,867.00	2,232,540.67
Total	34,486,063.70	3,110,190.00	37,596,253.70	4,876,952.19	19,416,987.00	24,293,939.19

The total amount of gold and silver coin estimated to have been used in the arts during the calendar year was $3,500,000 and $100,000, respectively; changing the above table so that it will include these amounts will make the total industrial consumption for 1907 as follows:

Material used.	Gold.	Silver.
		Fine oz.
Domestic bullion	$15,546,924	17,431,691
Foreign material	14,592,571	4,628,208
United States coin	3,500,000	77,344
Old material	7,177,575	2,232,541
Total	40,727,070	24,369,784

Of the total value of bars ($63,997,087.99) exchanged for coin, $40,771,987.78 were exported and $23,226,100.21 were used in the industrial arts.

THE WORLD'S INDUSTRIAL CONSUMPTION OF THE PRECIOUS METALS IN 1907.

This bureau estimates the world's consumption of the precious metals in the arts during the calendar year 1907 as follows: Gold, of the value of $135,046,500, equivalent to 6,532,874 ounces, fine; and silver, 92,568,300 ounces, fine, of the commercial value of $61,095,078. In these estimates only new material is taken into account.

PRODUCT OF GOLD AND SILVER IN THE UNITED STATES IN 1907.

The detailed statistics of the product of gold and silver in the United States for the calendar year 1907 were presented in a special report to the Secretary of the Treasury.

The distribution of the product among producing States and Territories was as follows:

APPROXIMATE DISTRIBUTION BY PRODUCING STATES AND TERRITORIES OF THE PRODUCT OF GOLD AND SILVER IN THE UNITED STATES FOR THE CALENDAR YEAR 1907.

[As estimated by the Director of the Mint.]

State or Territory.	Gold.		Silver.		Total value (silver at commercial value).
	Fine ounces.	Value.	Fine ounces.	Commercial value.	
Alabama	1,325	$27,400	600	$400	$27,800
Alaska	894,424	18,489,400	179,300	118,300	19,188,600
Arizona	128,871	2,664,000	2,903,100	1,916,000	4,580,000
California	815,288	16,855,300	1,590,000	1,049,400	17,902,900

WORLD'S COINAGE.

In the appendix will be found a table, revised from the latest information received, exhibiting the coinages of the various countries of the world during the calendar years 1905, 1906, and 1907. The following is a summary of the same:

COINAGE OF NATIONS.

Calendar year.	Gold.	Silver.
1905	$245,964,267	$173,333,093
1906	380,326,788	155,590,466
1907	411,803,902	221,651,826

The above figures represent, as nearly as this bureau has been able to ascertain, the total value of the gold and silver coinages executed in the world during the years given.

It must be borne in mind, however, that the total of these coinages does not correctly represent the amount of new gold and new silver made into coins during the year, for the reason that the coinages as reported include the value of domestic and foreign coins melted for recoinage, as well as old material, plate, etc., used in coinage.

In the circular letter of inquiry prepared at this bureau and sent to foreign governments through the Department of State, asking for

information on these subjects, it was especially requested that each country report the amount of such recoinages. This has been done in many instances, but not in all.

COINAGE OF GOLD AND SILVER OF THE MINTS OF THE WORLD BY CALENDAR YEARS SINCE 1873.

Calendar year.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Coining value.
1873	12,462,800	$257,630,802	101,741,421	$131,544,464

FOREIGN COINS MELTED BY VARIOUS COUNTRIES.

The foreign gold and silver coins melted by the various countries of the world during the calendar years 1905, 1906, and 1907, so far as have been reported to this bureau, are exhibited in the following table:

Country.	1905.		1906.		1907.	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
United States	$1,213,959	$5,431,321	$21,753,924	$501,058	$12,330,023	$250,132
Austria-Hungary	136,606	85,604	300,347	12,427	207,274	28,912
Great Britain		34,922		1,260,846		3,162,733
Germany	2,177,456		8,056,407		4,990,384	
India						1,338
Italy					2,146	
Japan	10,307	7,396	9,480,630	1,718		
Mexico	240,556		6,357,208		4,093,714	34,870
Peru					633,418	
Portugal				12,818		
Russia		822,846		15,640	9	
Siam						302,826
Turkey			9,821,065		9,219,795	168,957
Total	3,778,883	6,382,089	55,769,581	1,804,507	31,477,363	3,949,768

UNITED STATES GOLD COINS IMPORTED AND MELTED BY VARIOUS COUNTRIES.

The following table shows the amount of United States gold coin imported by various countries, and the value of the United States gold coin melted at their mints:

Country.	Import of United States gold coin.	Total import of gold from United States.	United States gold coin melted.
Austria-Hungary			$35,120
Germany			1,574,476
Japan			
Mexico	$5,082	$5,082	4,035,792
Turkey			3,400
Total	5,082	5,082	5,648,788

RECOINAGES OF THE WORLD.

The following table, compiled from official sources, exhibits approximately the recoinages of gold and silver in the principal countries of the world for the calendar years 1905, 1906, and 1907, so far as has been reported to this bureau:

Country.	1905.		1906.		1907.	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
United States	$2,572,398	$1,802,865	$850,033	$971,564	$3,072,909	$1,233,298
Australia	3,596		4,482		3,474	
Austria-Hungary	905,599	422,895	923,096	16,787	1,610,137	1,620,440
Chile		238,586				
Colombia				507,203		
Denmark				5,300		
Egypt				62,229		
France	27,187	29,638		120,609		
Germany	137,637	2,646,535		626,801		
Great Britain	1,958,615	16,280,251	53,058	14,716,370	62,496	1,170,529
India (British)	13,139,550	2,190,093	2,003,368	3,242,744	1,786,864	20,216,679
Italy			13,139,550	10,946,690	13,139,550	3,509,414
Japan				1,274,612		10,345,932

VALUES OF FOREIGN COINS.

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
Washington, October 1, 1908.

In pursuance of the provisions of section 25 of the act of August 28, 1894, I hereby proclaim the following estimate by the Director of the Mint of the values of foreign coins to be the values of such coins in terms of the money of account of the United States, to be followed in estimating the value of all foreign merchandise exported to the United States on and after October 1, 1908, expressed in any of such metallic currencies.

GEORGE B. CORTELYOU, *Secretary.*

VALUES OF FOREIGN COINS.

Country.	Standard.	Monetary unit.	Value in terms of U. S. gold dollar.	Coins.
Argentine Republic	Gold	Peso	$0.965	Gold: Argentine ($4.824) and ½ argentine. Silver: Peso and divisions.
Austria-Hungary	do	Crown	.203	Gold: 10 and 20 crowns. Silver: 1 and 5 crowns.
Belgium	do	Franc	.193	Gold: 10 and 20 francs. Silver: 5 francs.
Bolivia	Silver	Boliviano	.382	Silver boliviano and divisions.
Brazil	Gold	Milreis	.546	Gold: 5, 10, and 20 milreis. Silver: ½, 1, and 2 milreis.
British possessions, N. A. (except Newfoundland),	do	Dollar	1.000	
Central American States—				
Costa Rica	do	Colon	.465	Gold: 2, 5, 10, and 20 colons ($9.307). Silver: 5, 10, 25, and 50 centimos.
British Honduras, Guatemala, Honduras, Nicaragua, Salvador	do / Silver	Dollar / Peso	1.000 / .382	Silver: Peso and divisions.
Chile	Gold	do	.365	Gold: Escudo ($1.825), doubloon ($3.650), and condor ($7.300). Silver: Peso and divisions.
China	Silver	Tael. Amoy	.626	
		Canton	.624	
		Cheefoo	.599	
		Chin Kiang	.612	
		Fuchau	.579	
		Haikwan (customs).	.637	
		Hankow	.586	
		Kiaochow	.607	
		Nankin	.620	
		New Chwang	.587	
		Ningpo	.602	
		Peking	.610	
		Shanghai	.572	
		Swatow	.578	
		Takau	.630	
		Tientsin	.607	
		Hongkong	.412	
		Dollar. British	.412	
		Mexican	.415	
Colombia	Gold	Dollar	1.000	Gold: Condor ($9.647) and double-condor. Silver: Peso.
Denmark	do	Crown	.268	Gold: 10 and 20 crowns.
Ecuador	do	Sucre	.487	Gold: 10 sucres ($4.8665). Silver: Sucre and divisions.
Egypt	do	Pound (100 piasters)	4.943	Gold: Pound (100 piasters), 5, 10, 20, and 50 piasters. Silver: 1, 2, 5, 10, and 20 piasters.
Finland	do	Mark	.193	Gold: 20 marks ($3.859), 10 marks ($1.93).

VALUES OF FOREIGN COINS—Continued.

Country.	Standard.	Monetary unit.	Value in terms of U. S. gold dollar.	Coins.
France	Gold	Franc	$0.193	Gold: 5, 10, 20, 50, and 100 francs. Silver: 5 francs.
German Empire	do	Mark	.238	Gold: 5, 10, and 20 marks.
Great Britain	do	Pound sterling	4.866½	Gold: Sovereign (pound sterling) and ½ sovereign.
Greece	do	Drachma	.193	Gold: 5, 10, 20, 50, and 100 drachmas. Silver: 5 drachmas.
Haiti	do	Gourde	.965	Gold: 1, 2, 5, and 10 gourdes. Silver: Gourde and divisions.
India (British)	do	Pound sterling [a]	4.866½	Gold: Sovereign (pound sterling). Silver: Rupee and divisions.
Italy	do	Lira	.193	Gold: 5, 10, 20, 50, and 100 lire. Silver: 5 lire.
Japan	do	Yen	.498	Gold: 5, 10, and 20 yen. Silver: 10, 20, and 50 sen.
Liberia	do	Dollar	1.000	
Mexico	do	Peso [b]	.498	Gold: 5 and 10 pesos. Silver: Dollar [c] or peso and divisions.
Netherlands	do	Florin	.402	Gold: 10 florins. Silver: 2½, 1 florin and divisions.
Newfoundland	do	Dollar	1.014	Gold: 2 dollars ($2.028).
Norway	do	Crown	.268	Gold: 10 and 20 crowns.
Panama	do	Balboa	1.000	Gold: 1, 2½, 5, 10, and 20 balboas. Silver: Peso and divisions.
Persia	Silver	Kran	.070	Gold: ½, 1, and 2 tomans ($3.409). Silver: ¼, ½, 1, 2, and 5 krans.
Peru	Gold	Libra	4.866½	Gold: ½ and 1 libra. Silver: Sol and divisions.
Philippine Islands	do	Peso	.500	Silver peso: 10, 20, and 50 centavos.
Portugal	do	Milreis	1.080	Gold: 1, 2, 5, and 10 milreis.
Russia	do	Ruble	.515	Gold: 5, 7½, 10, and 15 rubles. Silver: 5, 10, 15, 20, 25, 50, and 100 copeks.
Spain	do	Peseta	.193	Gold: 25 pesetas. Silver: 5 pesetas.
Straits Settlements	do	Pound sterling [d]	4.866½	Gold: Sovereign (pound sterling). Silver: Dollar and divisions.
Sweden	do	Crown	.268	Gold: 10 and 20 crowns.
Switzerland	do	Franc	.193	Gold: 5, 10, 20, 50, and 100 francs. Silver: 5 francs.
Turkey	do	Piaster	.044	Gold: 25, 50, 100, 250, and 500 piasters.
Uruguay	do	Peso	1.034	Gold: Peso. Silver: Peso and divisions.
Venezuela	do	Bolivar	.193	Gold: 5, 10, 20, 50, and 100 bolivars. Silver: 5 bolivars.

[a] The sovereign is the standard coin of India, but the rupee ($0.32444) is the current coin, valued at 15 to the sovereign.
[b] Seventy-five centigrams fine gold.
[c] Value in Mexico, $0.498.
[d] The current coin of the Straits Settlements is the silver dollar issued on government account and which has been given a tentative value of $0.567758½.

NOTE.—The coins of silver-standard countries are valued by their pure silver contents at the average market price of silver for the three months preceding the date of this circular.

CHANGES IN THE VALUES OF FOREIGN COINS DURING 1908.

Country.	Monetary unit.	Value, 1908.			
		January 1.	April 1.	July 1.	October 1.
Bolivia	Silver boliviano	$0.429	$0.408	$0.393	$0.382
Central American States	Silver peso	.429	.408	.393	.382
China	Silver tael, Amoy	.704	.668	.644	.626
Do	Silver tael, Canton	.702	.666	.642	.624
Do	Silver tael, Chefoo	.673	.639	.616	.599

MONETARY STATISTICS OF FOREIGN COUNTRIES.

The statistics of the production and coinage of the precious metals, imports and exports of gold and silver, amount of bank and government notes, both covered and uncovered, of the different foreign countries, published annually in the reports of this bureau, are obtained directly from the governments of such countries by the representatives of the United States accredited to them.

A copy of the interrogatories covering the points on which information is sought from the governments of foreign countries is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint. The interrogatories sent are as follows:

1. What was the amount of gold coined during the calendar year 1907 by denominations and values? What amount of this was recoinage? Domestic and foreign coins melted given separately.

2. What was the amount of silver coined during the calendar year 1907 by denominations and values? What amount of this was recoinage? Domestic and foreign coins melted given separately. If any coinage was executed at foreign mints, please give separate statement.

3. Was any coinage executed for other governments during the year 1907? If so, state character and amount of same.

4. What was the weight of fine gold used in the industrial arts during the calendar year 1907? What amount of this was new gold, what amount old gold, and what amount coins?

5. Same questions as to silver.

6. What was the import and export of gold during the calendar year 1907? (Coin, bullion, and ore, as well as their weight and value, should be given separately, if possible.) If practicable, give imports and exports by countries.

7. Same questions as to silver.

8. What was the total import of United States gold coin during the calendar year 1907?

9. What was the amount of United States gold coin deposited at the mints and melted?

10. What was the weight, expressed in kilograms fine, and the value of the gold produced from the mines of the country during the calendar year 1907? Give the product of the colonies of the country, naming them separately.

11. What was the weight, expressed in kilograms fine, of the silver produced from the mines of the country during the calendar 1907? Also give product of the colonies of the country.

12. What was the weight and what the value of the output of gold from the refineries of the country during the year? Give the sources of this output if practicable.

13. Same question as to silver.

14. What, approximately, was the stock of gold coin and bullion in the country at the close of the calendar year 1907? Give stock in public treasuries, and banks, and in circulation separately.

15. Same question as to silver.

16. What was the amount of government notes outstanding at the end of the year 1907?

17. What was the amount of bank notes outstanding at the end of the year 1907?

18. What was the amount of government notes outstanding not covered by legal-tender gold and silver coin or bullion at the end of the year 1907?

19. What was the amount of bank notes outstanding not covered by legal-tender gold and silver coin or bullion at the end of the year 1907?

20. What was the actual currency of the country, gold, silver, or inconvertible paper?

21. Is gold at a premium as compared with the actual currency of the country? And if it is, what was the highest, lowest, and average premium during the year 1907?

22. Were any laws passed during the year 1907 affecting the coinage, issue, or legal-tender character of the metallic or paper currency? If so, please forward copies of the same.

23. Is there a report published on the operations of the mint? If so, please forward a copy of the same; also a report of the department of mines for 1907.

EXPERIMENTS TO ASCERTAIN LOSS IN REFINING GOLD AND SILVER BY AIR BLAST.

A series of interesting experiments were made during the year at the United States assay office at Seattle to ascertain the loss of gold and silver in refining by air blast. Mr. L. S. Kerfoot, who made the experiments, reports:

Bars 2276 and 2239 were used for the experiment. Bar 2276 weighed 15.13 ounces. Four assays with synthetic proofs were carefully made and the finenesses found to be:

Gold	526.1
Silver	400
Base	73.9

The base was lead and copper. This bar was melted with flux in a new pot, and for thirty minutes an air blast was played on the surface of the metal, the metal being continually stirred during the operation. Borax was then added and the bar poured. The flux was very carefully ground, panned, and the granules weighed in with the bar. The actual loss in melting was 0.41 of an ounce. Two assays were made with synthetic proofs, which showed this 0.41 loss to have been made as follows:

	Fine ounce.
Gold	0.132
Silver	.162
Base	.117

In this case more gold was lost than silver, and more silver than base, due undoubtedly to the higher proportion of gold and silver to base.

Deposit No. 2239 was a jewelry bar weighing 21.81 ounces. Six assays with synthetic proofs were made, the finenesses obtained being:

Gold	585½
Silver	165
Base	249½

The base was practically all copper. This bar was melted in a new pot and was exposed for thirty minutes to an air blast played on the surface, the metal being continually stirred during the operation. It was then covered with borax and poured, the borax carefully crushed and panned and the granules obtained therefrom weighed in with the bar. Refining loss was 0.35 of an ounce. Four assays with synthetic proofs shows this loss to have been divided as follows:

	Fine ounce.
Gold	
Silver	0.067
Base	.108
	.215

In both these experiments every precaution was taken to guard against any loss in metal by other means than by volatilization, and the method employed at the Helena assay office was followed as carefully as possible. The pots were carefully scraped after each melt and all beads obtained therefrom weighed in with the bar.

Five assays of dust scraped from the melting room at Helena showed a value of $55 per pound (avoirdupois).

Deposit No. 1912, a refined bar of gold fineness 993½ and silver 6½, was cut into two pieces. Sample A weighed 119.40 ounces, and was melted in a new pot with a borax cover. It was in the fire eight minutes, and lost nothing in the process.

Sample B, weighing 112.83 ounces, was melted in a new pot without a flux. It was in the pot eight minutes and lost 0.04 of an ounce in the operation. Both samples were then placed in a new pot, covered with charcoal, and melted. It was in the fire for fourteen minutes and the melting loss was 0.04 of an ounce.

In each case the pot was covered and great care was used in crushing the flux and panning the granulations therefrom. The fineness of the bar was not appreciably changed by the meltings. As there was no base in the original bar, the melting loss must have been gold and silver.

Deposit No. 2261 was received and melted on the 2d day of June, 1908. It was a fine bar, gold 996¼, silver 3¾. It was melted in the ordinary way with a cover and borax, with a loss of 0.01 of an ounce. On the 20th of June this bar was remelted without a cover of any sort. The loss was 0.17 of an ounce. The bar was then remelted with a covering of charcoal, with a loss of 0.12 of an ounce. The bar was then reassayed and it was found that the fineness had not been changed, the calculations showing a total loss in the two meltings of 0.298 fine ounce of gold.

The same pot was used in all three meltings, great care being taken to remove all particles of metal after each melting. All granules were carefully saved and weighed in with the bar each time. A cover was used on the pot in the original melting, but in the melting with charcoal without flux no cover was used.

These experiments would indicate that a cover of charcoal will prevent volatilization to a slight extent only.

Refined bar No. 2348, gold 996½, silver 3½, was cut into two samples. Sample A weighed 293.15 ounces, and sample B, 275.22. Sample A was melted with borax and was kept in a molten condition at a high temperature for one-half of an hour, the total length of time in the furnace being forty-two and one-half minutes. No cover was

used on the pot. The weight after melting was 293.15 ounces, exactly the same as before melting.

Sample B was melted with a covering of charcoal and was kept in a molten condition for five minutes, the total time in the furnace being twenty-five minutes. No cover was used on the pot. The weight after melting was 275.18, showing a loss of 0.04 of an ounce.

In each case a pot used exclusively for fine gold was used, and great care was taken to scrape all particles of metal from the crucibles, both before and after melting. Also, every possible precaution was taken to guard against the loss of granules. Both the slag and the charcoal cover were carefully panned out and the granules weighed in with their respective bars.

This experiment would indicate that there is no volatilization of metal when a proper covering of borax flux is used. Also, that charcoal does not prevent volatilization.

ADJUSTING SCALES.

A device has been adopted at the San Francisco mint increasing the capacity and accuracy of adjusting balances. The designers, Messrs. W. W. Clark and J. L. Riley, of the device, describe its operations as follows:

The method or device may be called a "limit swing method," and consists of an adjusted "bob" or weight attached to the indicator of the scale at a given point, reducing the sensibility and causing a gravity swing. Also an adjustable index by which we are enabled to save pieces either side of standard at any limit that may be desired.

To explain this method thoroughly, it will be necessary to make a comparison with the one now in use, and always used, in the mint service.

With the method now in use, all pieces are separated at standard, and reweighed for condemneds. We have concluded that separating the work at standard is unnecessary, involving much work and expense, necessitating the handling of each piece twice. With our method, all pieces within a safe limit either side of standard are passed as finished work at the first weighing, thus requiring, from tests made by us, the reweighing of only 20 per cent of the work, which, with the present method, would all have to be reweighed. By our method, the light and heavy pieces reweighed would be of a more uniform weight, and would greatly facilitate the work of the coin weigher in making up his drafts.

In using this method we turn the ordinary weighing balance into a weighing machine under the control of the mind of the operator, whereas the liability of the automatic machine getting out of order without the knowledge of the operator requires constant testing of the work. With our method we supersede the automatic machines in accuracy and in the saving of the adjusting expense.

This description has reference to the handling of the different denominations of silver only. In handling gold, working within a safe limit of standard, and with the aid of the filing machine now used in this mint, the same method could be used.

USE OF CUPRIC CHLORIDE IN TOUGHENING BRITTLE MELTS OF STANDARD GOLD AT THE MINT, PHILADELPHIA.

The following report has been submitted by David K. Tuttle, Ph. D., melter and refiner of the mint of the United States at Philadelphia, on the use of cupric chloride in toughening brittle gold ingot melts:

The uniform success we had in the use of cupric chloride as a flux for brittle gold leads me to report the matter in some detail to you in the hope that it may prove serviceable in sister institutions. When the first ingot cast shows signs of brittleness, either at the topping machine or by its want of true ring on the stamping table, the ingot is returned to the melt and the whole subjected to a brief treatment with the cupric chloride. This is kept on hand in small 2-ounce blocks and, like the ready "after-dinner pill," does its work without any special apparatus or any manipulation beyond submerging the pellet beneath the surface of the molten gold by means of a bell-mouthed gold stirrer, which is already hot and in use. The embrittleing metals have volatile chlorides, and cupric chloride ($Cu. Cl_2+2H_2 O$) was selected by me because of the property it has of giving off one-half its chlorine at high temperatures. Experiment showed that the dehydrated salt does this so quietly as to produce only a slight bubbling in the molten gold. Fumes come off which should be led into a flue. An open-top furnace should not be used. Without submergence in the molten metal the flux would have only a superficial action and have absolutely no value as a practical remedy. The bell-mouthed plumbago stirrer renders this easy; the action begins at once, and in a few minutes a brittle melt is rendered perfectly tough and malleable.

If there be merit in the discovery, it lies in the having found a flux which will do its work effectively when forced to the bottom of a pot of molten metal, while only causing enough commotion to effect a more perfect mixture of the alloy.

It should supplant the tedious toughening process by saltpeter, which cleans only a thin film on the surface and relies on convection to bring fresh impurities to the surface of the molten mass. To say nothing of the saving in time, fuel, and labor, the avoidance of large accumulations of bone ash sweeps should commend the process as an improvement in methods.

We purchase the cupric chloride at 20 cents per pound in 100-pound lots. The water of crystallization is driven off at a gentle heat (200° C. is sufficient), and then the salt is melted at a low heat in a crucible. It is then poured into molds, or on an iron plate, and stored for use in lumps of a few ounces in weight. In our experience, from 2 to 5 ounces will correct a brittle melt of 6,500 ounces of standard gold in from five to fifteen minutes.

MAKING NICKEL INGOT MELTS AND DISPOSING OF THE TROUBLESOME OXIDES AT THE MINT, PHILADELPHIA.

The following report has been made by David K. Tuttle, Ph. D., on the making of nickel ingots:

With fairly pure metals there is little trouble in making good malleable nickel ingots from the first mixture, but when it comes to remelting the clippings with their gossamer-like structure the great surface exposed to oxidation before the melting point is reached causes the result to be a brittle mixture of nickel and copper oxides with the true alloy. As a palliative, it was our practice to add only a modest percentage of clippings to fresh metals already in a molten condition. With proper annealing of strips during the rolling process the ingots were workable, but barely so. Some two years ago experiments were commenced with various deoxidizing materials. Aluminium and magnesium were tried, but failed to give practical results. Finally, "manganese copper" was found to be a perfect "cure-all."

The addition of 10 to 30 ounces of this alloy to a 3,000-ounce melt of refractory nickel causes a remarkable change in the working qualities of the metal. Ingots thus made may be rolled down to the thickness of a dime without annealing. But for this treatment in the melting room the annealing furnaces would to-day be struggling with hard, if not brittle, nickel ingots.

While to us this matter is no longer new, interest in its application was revived by a letter just received from Mr. Nicoll, an operative officer of the Bombay mint. He had written asking for suggestions as to how he could overcome this trouble with brittle nickel ingots. He writes to Mr. Morgan, my assistant, "The very day I

received your letter, the mint master ordered a trial to be made of the addition of manganese-copper alloy to our nickel, and the results have been most gratifying. All our trouble with brittle bars has ended." Only one with experience can appreciate how much this means. Manganese copper is one of the modern products of the electric furnace and is an inexpensive article of commerce. It contains 30 per cent manganese and 70 per cent copper.

ACCURATE METHOD FOR OBTAINING LOW GOLD CONTENTS IN DORÉ BULLION.

In another part of this annual report of the Director of the Mint, dealing with the affairs of the San Francisco mint, mention is made of a method recently adopted by the assayer of that institution in making determinations of low gold contents of Doré bullion.

A number of experiments to test the accuracy and advantages of the method were made at the request of the Director of the Mint on bullion carrying about .0007 gold. The result was so highly satisfactory the method was adopted for bullion of low gold contents and without excessive amount of base. Experiments were continued on bullion carrying from 5 to 20 point gold. The report of Assistant Assayer Merrill Martin, however, was to the effect he would not recommend the process for such bullion. He says:

To go somewhat into detail, I have found that in making the two boilings, the most satisfactory results have been obtained by using acid of about 28° Beaumé for the first stage of the parting process, following with 32° acid for the second. The greatest possible care has to be exercised in decanting the silver solution from the gold residue or small particles of the latter metal will escape. In addition, there are many instances where the gold remains in such finely-divided form that it is next to impossible to get all of it out of the crucible after annealing. This seems to be especially the case when the samples contain bismuth and antimony. It might be supposed that cupellation would remove these metals, but I have detected the presence of bismuth in the cupelled sample upon several occasions.

As stated in my former letter, the system works admirably upon bullion containing from five-tenths to 2 points of gold in the thousand, but this is doubtlessly due to the fact that such bullion has contained but small quantities of base that was not of a refractory nature. I see no reason why bullion containing larger amounts of gold could not be satisfactorily assayed by this method, provided the base contained therein was harmless. It appears, however, that when the gold in Doré bars is comparatively high, the base is also high, or if not high is of a kind that interferes with the parting. This may not hold good in every instance, but it has been the case with all the bars upon which experiments have been made during the past three months. Where the bullion contains a quantity of base metal sufficiently low and harmless to enable the cupellation process to be dispensed with, I should consider the method above referred to as being the most accurate and reliable of any that I have knowledge of. In all other cases of Doré bars, I should be inclined to depend almost entirely upon synthetic assays. The best system of all would seem to be a combination of the two methods, each being applied to the class of bullion it appears to be best suited to.

Respectfully,

FRANK A. LEACH,
Director of the Mint.

Hon. GEORGE B. CORTELYOU,
Secretary of the Treasury.

Total	29,558,578.20	941,349.48	912,020.00

The nickel coins struck in 1907 for the Argentine Government are indicated herewith:

Denomination.	Pieces.	Weight.	Value.
		Grams.	
5 centavos	1,681,679	3,363,358	$84,083.95
10 centavos	2,355,249	7,065,747	235,524.90
20 centavos	3,729,577	14,908,088	745,915.40
Total	7,766,505	25,337,193	1,065,524.25

(6, 7, and 8) Imports and exports of gold and silver during the calendar year 1907. The external transactions in coins by countries of origin and destination and species of metal has been during the year 1907 as follows:

Country.	Importation.			Exportation.		
	Gold.	Silver.	Total.	Gold.	Silver.	Total.
Bolivia	$6,779	$16,982	$23,761	$18,177	$1,466	$19,643
Brazil				246,800		246,800
United States	1,200,000		1,200,000	2,750,000		2,750,000
France	3,502,000		3,502,000			
United Kingdom	18,378,807		18,378,807	112,000		112,000
Uruguay	465,316		465,316	7,969	2,400	10,369
Total	23,552,902	16,982	23,569,884	3,134,946	3,866	3,138,812

(9) No United States gold coins were melted in the mint during the year 1907. On December 31, 1907, there were on deposit in the conversion office, 2,511,1354 eagles of North America, with value of $26,025,408.322 gold argentines (pesos), which were preserved in their original condition as coin.

(10, 11, 12, and 13) Amount of gold and silver produced from mines of the country and output of gold and silver from refineries of the country during 1907: It was only on March 15, 1907, by supreme decree, that the provisions of articles 3 and 4 of the general law for statistics, No. 3180, which had been in charge of this mining section, was ordered by law No. 4159 to be extended to the ministry of agriculture. As these statistics were only commenced to be kept up from the year 1908, this section can not answer questions 10, 11, 12, and 13 for 1907.

(14 and 15) Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1907: On December 31, 1907, there were in the conversion office the following gold coins:

Denomination.	Pieces.	Value in Argentine gold pesos.
Pounds sterling	13,720,426	$69,150,947.040
Eagles of North America	2,511,1355	26,025,408.322
Argentines (pesos)	1,287,466	6,287,350.000
German marks	725,396	3,583,493.770
25 pesetas (alfonsos)	15,694	5,000.000
Total		105,032,199.132

On the same date there was known to exist in the country gold coin of various descriptions, according to data supplied by the banks of the capital, as follows:

Items.	Value in Argentine gold pesos.
In the conversion office	$105,113,878.132
In the banks of the capital of the Republic	39,807,722.320
Total	144,921,600.452

Nickel coins:	
$0.05, 25,653,351 pieces	$1,282,667.55
.10, 36,636,774 pieces	3,663,677.40
.20, 18,767,940 pieces	3,753,588.00
Total	8,699,932.95
Nickel coins for revision	4,150.00
Total	8,704,082.95
Copper coins:	
$0.01, 12,906,150 pieces	129,061.50
.02, 26,636,012 pieces	532,720.24
Total	661,781.74

(16 and 18) On December 31, 1907, the fiduciary circulation charged to the national government amounted to $532,163,414.69. Amount of uncovered government notes, $248,353,676.99.

The distribution by denominations of the amount of notes in circulation is as follows:

Denomination.	Notes.	Value.
$0.50	2,067,370	$1,033,785
1.00	20,256,039	20,256,039
2.00	434,390	868,780
5.00	11,033,596	55,167,980
10.00	10,042,596	100,425,960
20.00	36,750	735,000
50.00	1,588,553	79,427,650
100.00	1,177,548	117,754,800
200.00	50,616	10,123,200
500.00	114,524	57,262,000
1,000.00	79,435	79,435,000
Total		522,490,194

(17 and 19) Bank notes outstanding: None.

(20) Actual currency of the country: The interior monetary circulation of the country is represented almost entirely by the fiduciary circulation in notes, which was on April 30, 1908, for a value of $244,401,422.08.

(21) There is no premium nor any fluctuations of a legal character on gold.

(22) (No reply.)

(23) The report of the conversion office upon the operations of 1907 has not been published.

The report of the division of mines for 1905, 1906, and 1907, for account of the Republic, has not been published.

AUSTRALIA.

Answers to interrogatories, 1907.

(1) The amount of gold coined at the Melbourne mint during 1907 (a branch of the London mint) was, according to a return furnished by the deputy master of that institution, £3,332,691, all in sovereigns, of which the sum of £239 consisted of worn British gold coin withdrawn from circulation. In the gold deposited for coinage small quantities of foreign coin are sometimes included, but the amount is too insignificant to make it worth while to keep a note of their origin.

(2) No silver was coined at the Melbourne mint, but British silver coin of the face value of £108,400 and of the denominations enumerated below was issued to the public:

Half crowns (2s. 6d.)	£30,800
Two-shilling pieces	25,200
One-shilling pieces	26,000
Sixpenny pieces	13,600
Threepenny pieces	12,800
Total	108,400

This coin was struck in London and would appear in the London mint returns. British silver coin of a face value of £3,219 was withdrawn from circulation and forwarded to the London mint for recoinage.

(3) No coinage was executed for other governments.

(4 and 5) The weight of gold and silver used in the industrial arts during the same period is not ascertainable.

(6 and 7) The imports and exports of gold and silver from the State of Victoria during 1907 are shown in the attached tables furnished by the department of trade and customs of Australia.

RETURN SHOWING THE IMPORTS OF GOLD AND SILVER BULLION AND SPECIE INTO THE STATE OF VICTORIA, ALSO THE EXPORTS FROM VICTORIA WITH THE COUNTRIES OF IMPORT AND EXPORT, DURING THE YEAR 1907.

RETURNS SHOWING TRANSFERS OF CERTAIN ITEMS TO OTHER STATES DURING THE YEAR 1907.

Items.	Gold.	Silver.
Bullion (bar, rod, etc.)	£954	£316
Ore (quartz, etc.)	19,999	185
Specie	1,182,342	3,880

NOTE.—It is impossible to supply the particulars desired by you with regard to the weight and country of import for this return, as the value of interstate transfers from Victoria is all that can be furnished.

(8) The import of United States gold coin during 1907 was small, being brought by travelers, and would in all probability not exceed $2,500.

(9) Amount of United States gold coin deposited at mints and melted. (See answer to question No. 1.)

(10) The secretary of mines for the State of Victoria reports that the State named produced in 1907 gold amounting to 695,576 fine ounces, valued at £2,954,617.

(11) The secretary of mines reports the production of silver in Victoria during 1907 as follows:

Silver, 29,460 fine ounces, value £4,050 (extracted from gold at mint).

Silver, 2,221 fine ounces, value £305 (shipped to England in copper matte).

In addition to the above, 8,762 ounces of silver, valued at £1,200, were extracted from gold at the mint, the product of other States.

(12 and 13) The weight and value of the output of gold and silver from the refineries of the State is contained in the total production in answer to questions 10 and 11.

(14 and 15) The stock of gold, silver, and bronze coin in the banks in Victoria, being the average for the quarter ending December 31, 1907, was £7,661,166, and bullion, £382,613; total, £8,043,780.

Separate returns are not made of the gold, silver, and bronze coins, but on the basis of a special return that was obtained in August, 1906, the average amounts held by the banks for the quarter ending December 31, 1907, may be stated approximately as follows:

Gold	£7,778,926
Silver	260,140
Bronze	4,704
Total	8,043,780

The estimated amount of gold in the hands of the public on December 31, 1907, being £631,178, and silver, £141,988.

The silver and bronze consist only of token coins, the laws relating to which are the same as in England. There is no stock of gold or silver in the public treasury of Victoria, all government moneys being lodged with the banks day by day.

(16 and 18) No notes are issued by the government of the State of Victoria.

(17 and 19) The average amount of bank notes in circulation in Victoria at the end of 1907 was £889,357. No bank notes were outstanding at the end of 1907 not covered by legal-tender gold and silver coin and bullion.

(20) The currency of Victoria is the same as in England—gold, with subsidiary coinages of silver and bronze.

(21) Gold is not at a premium as compared with the currency.

(22) No laws were passed during 1907 in any way affecting the coinage, issue, or legal-tender character of the metallic or paper currency.

(23) The report of the Melbourne mint is contained in that of the royal mint at London, the former being a branch of the latter. The report of the department of mines of Victoria is not yet available, but will be forwarded as soon as issued.

AMERICAN CONSUL-GENERAL,
Melbourne, March 24, 1908.

WITHDRAWAL OF LIGHT GOLD IN AUSTRALIA.

[From the Australian Insurance and Banking Record, July 21, 1908.]

The deputy master of the Sydney branch of His Majesty's mint has recently communicated the following memorandum of the withdrawal of light gold now in process:

"An order of her late Majesty in council, dated 16th March, 1892, provides for the withdrawal at their nominal value of light gold coins tendered at the Bank of England, which have not been called in by proclamation, and are below the least current weight. The coinage act, 1870, fixes the least current weight of the sovereign at 122.5 grains, and of the half sovereign at 61.125 grains, and the coinage act of 1891 enacts that 'a gold coin shall be deemed to have been illegally dealt with where the coin has been impaired, diminished, or lightened otherwise than by fair wear and tear, or has been defaced by having any name, word, device, or number stamped thereon.' The act further enacts that in a sovereign or half sovereign loss of weight exceeding 3 grains from the standard weight shall be prima facie evidence that the coin has been illegally dealt with.

"On 19th March, 1908, a further order in council was made extending the operation of the previous order to any branch of the mint which may for the time being be appointed for the purpose by the master of the mint. This order came into operation

on 1st April last, and under it the master of the mint appointed the branches at Sydney and Melbourne to receive gold coin tendered in accordance with the regulations. In Sydney, Mr. Russell French, general manager of the Bank of New South Wales, was communicated with as chairman of the associated banks, and he undertook, on behalf of the Bank of New South Wales, to act as the agent of the Sydney banks in tendering the coin at the mint. In London the examination of the coin is made by the Bank of England, and only the coin accepted as light goes to the mint, but a different procedure is necessary locally. The Sydney mint receives from the bank gold coin in bags of £1,000 each, and this, after washing, is passed over the automatic weighing machines, which divide the coins into three classes, viz:

"(a) Above least current weight;

"(b) Below least current weight, but not more than 3 grains light; and

"(c) More than three grains light.

"Coins in class (a) are returned to the bank as being still current; those in class (b) are melted, and their nominal value paid to the bank, while for coins in class (c) the bank receives the bullion value.

"The master of the mint has fixed the amount to be accepted as light by the Sydney mint up to 31st January next at £250,000, or £25,000 per month. During the quarter now ending (to 30th June, 1908) £62,000 in sovereigns and £76,730 in half sovereigns have been examined. Of the sovereigns, £51,898 were returned as above least current weight, £10,021 were accepted as light, and paid for at their nominal value, and £81 were received at their bullion value.

"The loss on coins accepted as light amounted to £89 11s. 7d. Of the half sovereigns £24,069 were returned, £47,791 accepted as light, and £4,870 received at bullion value, the loss on coins accepted as light being £1,106 7s. 4d."

AUSTRIA-HUNGARY.

AUSTRIA.

[Translation.]

Answers to interrogatories, 1907.

(1) In the calendar year 1907 gold coins were struck at the Royal and Imperial mint at Vienna, as follows:

Denomination.	Pieces.	Kronen.
Quadruple ducats	100,193	4,792,675
Ducats	555,675	6,273,570

For the above coinage were used, besides gold bars, etc.—

	Kilograms.
Gold coins of domestic coinage:	
Unrefined	2,027.5238
Refined	2,420.6189
Gold coins of foreign coinage:	
Unrefined	343.2842
Refined	311.1842

(2) The coinage of silver at the Royal and Imperial mint at Vienna for the calendar year 1907 was as follows:

Denomination.	Pieces.	Kilograms. fine silver.	Kronen.
5-kronen pieces	301,000		1,505,000
2-kronen pieces	240,000		240,000
Kronen pieces	2,470,000	57,782.526	
Levant thaler			

No value is given for the Levant dollars since; as trade coins they possess no constant value.

For this silver coinage were employed, besides bar silver—

	Kilograms.
Silver coins of domestic coinage:	
Unrefined silver	45,363.924
Refined silver	38,977.027
Silver coins of foreign coinage:	
Unrefined silver	1,013.250
Refined silver	695.669

The entire coinage of the year 1907 was executed at the Royal and Imperial mint at Vienna without the assistance of any foreign mint.

(3) The Royal and Imperial mint at Vienna in 1907 struck for the Bulgarian Government 14,000,000 5-stotinki pieces in copper-nickel (25 per cent), of a weight of 42,177.799 kilograms.

(4 and 5) The gold and silver submitted for stamping in 1907 can be inferred from the domestic consumption of the precious metals in the industries which was as follows:

(*a*) GOLD.

Classification.	Weight, unrefined.	Fineness.	Fine weight.
	Kilograms.	*Thousandths.*	*Kilograms.*
Domestic gold ware	7,068.733	581.532	4,110.694
Domestic gilded wares (the gold is reckoned at 2.5 per cent of the total weight of 174.785 kilograms)			4.370
Domestic ware (the consumption of fine gold for fire-gilded, pure, 12-carat and 6-carat, and for galvano-gilded wire)			25.331
Total			4,140.395

In regard to other uses of fine gold in the industries in the year 1907 (especially in fire and galvanic gilding) there are no data at hand. In the last three years the consumption of gold was as follows:

	Kilograms.
1904	386.614
1905	687.549
1906	583.962

According to the average of the three years, as stated above, the consumption of gold in industries other than before specified would amount to 552.708 kilograms in 1907.

(*b*) SILVER.

Classification.	Weight, unrefined.	Average fineness.	Fine weight.
	Kilograms.	*Thousandths.*	*Kilograms.*
Domestic silverware	59,135.195	796.536	47,103.312
Silverware:			
(*a*) Pure	1,828.976	933.3	1,816.722
(*b*) Half pure	55.294	465	25.712
(*c*) Quarter pure	15.360	180	2.765
Total			48,948.511

In relation to the consumption of silver in the industries other than those above mentioned no data are yet at hand. In the last three years the consumption of silver in these industries has been as follows:

	Kilograms.
1904	8,985.807
1905	8,815.148
1906	10,688.920

According, then, to the average consumption of these three years, that of 1907 should figure up to 9,496.625 kilograms.

Besides, the silver employed as alloy in gold wares, being on the average 10 per cent of the full weight, would amount to 706.873 kilograms.

According to past experience in the consumption of the precious metals in the industries, old material formed 27 per cent of the total in gold and 15 per cent in silver.

The results for 1907 may therefore be represented as follows:

Gold:	Kilograms.
New material	3,425.965
Old material	1,267.138
The gold thus used consisted of:	**Per cent.**
Coins	62.50
Alloyed gold	15.44
Gold scrap	4.50
Fine gold	17.56

Silver:	Kilograms.
New material	50,279.208
Old material	8,872.801
The silver thus used consisted of:	Per cent.
Coins	0.26
Alloyed silver	11.34
Silver scrap	4.61
Fine silver	83.79

(6) The imports and exports of gold into and from Austria-Hungary for the year 1907 amounted to—

Description.	Imports.		Exports.	
	Kilograms.	Crowns.	Kilograms.	Crowns.
Coins	10,033	27,132,932	23,282	63,096,752
Bars, virgin gold	2,145	6,005,142		
Bars, crude and scrap			2,013	5,995,320
Gold ore, gold-bearing slich			996,200	283,917
Total		33,138,074		69,375,989

The above total weights are distributed according to the countries of origin and destination as follows:

Classification and country.	Kilograms, unrefined.	
	Imports.	Exports.
Coins:		
German Empire	3,793	15,605
Switzerland	117	207
Italy	538	340
France	3,793	925
Great Britain	63	677
Russia	48	117
Roumania	277	302
Servia	486	1,094
Turkey	453	760
Hamburg		1
Trieste	123	
Belgium	22	
Bulgaria	166	549
Netherlands	121	125
Greece	39	
Montenegro		3
Egypt		1,816
Other countries	14	668
Total	10,033	23,282
Bars, unrefined gold, and scrap:	1,665	13
German Empire	6	7
Italy		4
France	34	
Great Britain	29	
Russia	313	1
Roumania	32	
Servia	15	
Turkey	51	
Bulgaria		1,967
Bremen		21
Other countries		
Total	2,145	2,013
Ore:		
German Empire		9,962

The valuation of the imports and exports as above given is that fixed by the standing imperial commission for commercial values.

(7) The import and export of silver into and from Austria-Hungary in the year 1907 was as follows:

Description.	Imports.		Exports.	
	Kilograms.	Crowns.	Kilograms.	Crowns.
Coins	7,124	921,408	49,822	4,297,924
Bars, crude, and scrap	88,381	9,268,451	7,378	707,616
Silver ore and silver-bearing slich			26,700	112,140
Total		10,189,859		5,117,680

The above gross weights are distributed according to countries of origin and destination as follows:

Classification and country.	Kilograms, unrefined.	
	Imports.	Exports.
Coins:		
German Empire	4,765	7,930
Switzerland	10	242
Italy	801	357
France	494	9,088
Great Britain	83	266
Russia		15
Roumania	218	677
Servia	407	40
Turkey	158	185
Belgium	38	1,104
Bremen		89
Bulgaria	45	
Hamburg		31
Montenegro		82
Netherlands	56	
British India		18,900
Egypt		4,554
Asiatic Turkey		4,639
Other countries, etc	4	1,623
Returned ware	45	
Total	7,124	49,822
Bars, unrefined, and scrap:		
German Empire	57,897	329
Switzerland		4,191
Italy	18	814
France	16,257	
Great Britain	264	3
Russia	4	120
Roumania	103	194
Servia	468	
Turkey		705
Belgium	10,435	
Hamburg	2,935	
Egypt		161
Asiatic Turkey		732
Bulgaria		101
Other countries, etc		28
Total	88,381	7,378
Silver ore and silver bearing slich:		
German Empire		26,700

The valuation of imports and exports as above given is that fixed by the standing imperial commission for commercial values.

The import and export of gold and silver scrap for the year 1907 was as follows: (a) Import, 4,482 kilograms, valued at 61,913 crowns; (b) export, 245,066 kilograms, valued at 2,649,388 crowns.

(8 and 9) No gold coins were imported from the United States in the year 1907.

In the year 1907 the royal and imperial mint at Vienna received and melted 3,503 eagles of the United States of a weight of 58.533 kilograms with alloy and 52.6786 kilograms fine gold.

(4 and 5) In regard to gold and silver used for commercial purposes, no exact data are to hand. At the Royal Hungarian bureau for stamping and melting of metals the following were delivered during the year 1907 for stamping:

	Kilograms.
A. Domestic goods:	
(1) Gold ware	2,461.660
(2) Silverware	11,345.125
(3) Gilded wire	372.870
(4) Silver wire	459.800
B. Foreign goods:	
(1) Different gold ware	437.076
(2) Different silverware	1,670.250
(3) Gold watches	185.654
(4) Silver watches	1,437.610
(5) Gilded wire	3.660
(6) Silver wire	4.670

For the coinage of medals 1.30679 kilograms fine gold and 9.3161 kilograms fine silver were used.

(6, 7, and 8) With regard to the import and export of gold and silver, the special report of the Royal Hungarian statistical central board is given herewith:

IMPORTS AND EXPORTS OF GOLD AND SILVER INTO AND FROM HUNGARY DURING 1907.

Classification and country.	Imports.			Exports.		
	Value per kilogram.	Weight.	Value.	Value per kilogram.	Weight.	Value.

(9) With regard to the recoinage of United States coins, as has already been stated under No. 1, in the year 1907 six 20-dollar gold pieces were melted.

(10, 11, 12, and 13) From Hungarian mines during the year 1907 there were produced:

	Crowns.
3,500 kilograms fine gold, valued at	11,480,000
11,870 kilograms fine silver, valued at	1,242,789

In Hungarian refineries were produced:

	Crowns.
2,831 kilograms fine gold, valued at	9,285,680
11,789 kilograms fine silver, valued at	1,234,308

The Hungarian refineries used only material produced in Hungarian mines, for which reason the amount of gold and silver produced by the refineries is nearly identical with that from the Hungarian mines. (In the estimation of values 1 kilogram of fine gold is reckoned at 3,280 crowns, and 1 kilogram of fine silver, at 104.70 crowns.)

(14 and 15) Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1907:

At the Royal Hungarian mint at Körmöczbánya at the end of the year 1907 there were on hand: 1,159.7226 kilograms fine gold and 5,380.4168 kilograms fine silver.

In the state treasury at the end of the year 1907 there were in gold coins 4,918,010 crowns. In circulation there were about 104,000,000 crowns.

The coins in the treasury of the Austrian-Hungarian Bank at the end of the year 1907 amounted in value to 1,099,000,000 crowns in gold and 281,000,000 in silver. This amount of bullion serves as the deposit covering bank notes in circulation.

and if he entertains any doubt in that behalf he may summon three persons, the decision of a majority of whom shall be final.

(3) Every officer employed in the collection of the revenue in Canada shall cut, break, or deface, or cause to be cut, broken, or defaced, every piece of counterfeit or unlawfully diminished gold or silver coin which is tendered to him in payment of any part of the revenue in Canada.

(4) For the purposes of this section "current gold or silver coin" includes any coin which it is by Part IX of the Criminal Code defined to include. (R. S., c. 167, s. 26.)

CANADA.

Edward the Seventh, by the grace of God, of the United Kingdom of Great Britain and Ireland and of the British dominions beyond the seas King, Defender of the Faith, Emperor of India, to all to whom these presents shall come or whom the same may in any wise concern, greeting:

A PROCLAMATION.

E. L. Newcombe, deputy of the minister of justice, Canada.

Whereas in and by chapter 25 of the Revised Statutes, 1906, intitulated "An act respecting the currency," it is amongst other things in effect enacted that such silver, copper, or bronze coins as are by authority of the Crown struck for circulation in Canada shall pass current and be a legal tender at the rates assigned to them respectively by royal proclamation, such silver coins being of the fineness now fixed by the laws of the United Kingdom of Great Britain and Ireland, and of weights bearing, respectively, the same proportion to the value to be assigned to them which the weights of the silver coins of the said United Kingdom bear to their nominal value;

Now know ye that by and with the advice of our privy council of Canada, we do by these presents proclaim and declare that the rates at which the same shall pass current and be a legal tender in Canada are hereby assigned to silver and bronze coins struck for circulation in Canada either at the royal mint or at the Ottawa branch thereof when the coining of Canadian coins at the said Ottawa branch is duly authorized as follows:

(a) To the following silver coins, which are to be of the fineness now fixed by the laws of the United Kingdom, namely, thirty-seven fortieths of fine silver and three-fortieths of copper, or a millesimal fineness of 0.925, and are to be respectively of the weights hereinafter specified, being weights bearing respectively the same proportion to the value hereby assigned to them which the weights of the silver coins of the United Kingdom now bear to their nominal value, to wit:

Name of coin.	Weight in grains subject to testing provisions and remedy as hereinafter set out.	Rate or value assigned.
Fifty cents	179.3336	50 cents, or one-half of a dollar.
Twenty-five cents	89.6668	25 cents, or one-fourth of a dollar.
Ten cents	35.8667	10 cents, or one tenth of a dollar.
Five cents	17.9334	5 cents, or one-twentieth of a dollar.

Testing provisions and remedy:

The pieces of 50 cents to be weighed separately with a remedy of 1.024 grains.

The pieces of 25 cents to be weighed separately with a remedy of 0.594 grains;

The pieces of 10 cents to be sampled in groups of $1 worth and weighed against the standard dollar weight of 358.6673 grains with a remedy of 2.844 grains;

The pieces of 5 cents to be sampled in groups of $1 worth and weighed against the standard dollar weight of 358.6673 grains, with a remedy of 3.455 grains;

(b) To a bronze coin composed of mixed metal, that is to say, of copper, tin, and zinc in the following proportions: 95 per cent of copper, 4 per cent of tin, 1 per cent of zinc, to wit:

Name of coin.	Weight in grains subject to testing provision and remedy as hereinafter set out.	Rate or value assigned.
One cent	87.5	1 cent, or one-hundredth part of a dollar.

Testing provision and remedy:

The pieces of 1 cent to be sampled in groups of 80 and weighed against a weight of 1 pound avoirdupois, with a remedy of 140 grains.

Of all which our loving subjects and all others whom these presents may concern are hereby required to take notice and to govern themselves accordingly.

In testimony whereof we have caused these our letters to be made patent and the great seal of Canada to be hereunto affixed. Witness, our right trusty and right well-beloved cousin the right honorable Sir Albert Henry George, Earl Grey, Viscount Howick, Baron Grey of Howick, in the county of Northumberland, in the peerage of the United Kingdom, and a baronet; knight grand cross of our most distinguished order of Saint Michael and Saint George, etc., governor-general and commander in chief of our Dominion of Canada.

At our government house, in our city of Ottawa, this 23d day of September, in the year of our Lord 1907, and in the seventh year of our reign.

By command,

J. Pope,
Under Secretary of State.

Grey.

At the Court at Buckingham Palace,
The 2d day of November, 1907.

Present: The King's most excellent majesty in council.

The following draft proclamation was this day read at the board and approved:

A. W. Fitzroy.

By the King, a proclamation.

Whereas under the coinage act, 1870, it is lawful for His Majesty, with the advice of his privy council, from time to time, by proclamation to direct the establishment of any branch of His Majesty's royal mint in England in any British possession, and to impose a charge for the coinage of gold thereat, and determine the application of such charge, and determine the extent to which such branch is to be deemed part of the said mint, and to which coins issued therefrom are to be current and be a legal tender, and to be deemed to be issued from the said mint;

And whereas the government of the Dominion of Canada has applied for the establishment of a branch of the mint at Ottawa, the capital of the Dominion, and provision has been made by the Parliament of the Dominion for an annual expenditure of $75,000 for the expenses of the branch mint;

We therefore, in pursuance of the said act and of all other powers enabling us in that behalf, do hereby, by and with the advice of our privy council, proclaim, direct, and ordain as follows:

1. A branch of our mint (in this proclamation referred to as the Ottawa branch mint) shall be established at or near Ottawa in our Dominion of Canada on such site as the governor-general of the Dominion in council may approve.

2. Gold coins of the same denominations, designs, weights, and fineness as gold coins coined at our mint in England may be coined at the Ottawa branch mint, and any gold coins so coined (in this proclamation referred to as sterling gold coins) shall be subject to the allowance of the same remedy as gold coins coined at our mint in England.

3. The master of our mint shall prepare and transmit such dies as may be required for the sterling gold coins to be coined at the Ottawa branch mint.

4. The sterling gold coins coined in pursuance of this proclamation at the Ottawa branch mint shall be deemed to have been issued from our mint, and shall be current and a legal tender in like manner and to the like extent as if they had been coined and issued in England.

5. (i) If any person brings to the Ottawa branch mint any gold bullion and requires the deputy master of that branch to assay, coin into sterling gold coins, and deliver out the same to him, the deputy master shall comply with the requisition upon payment for every ounce troy of gold of standard fineness of a charge of 3 cents where the amount brought at one time does not exceed 500 ounces, and of 2 cents in any other case: Provided that—

(*a*) Where the gold bullion so brought is such that it can not be brought to the standard fineness of the coin to be coined thereout without refining the whole or some portion of it, the deputy master shall demand for assaying and refining the same such additional charge as the governor-general in council may from time to time fix, and until such charge is paid to him may refuse to receive, assay, or coin such bullion; and

(*b*) Where the bullion brought to the branch mint for coinage is finer than the standard fineness of the coin to be coined thereout, there shall be delivered to the

person bringing the same such additional amount of coin as is proportionate to such superior fineness;

(*c*) No undue preference shall be shown to any person as respects the bullion brought to the branch mint, and every person shall have priority according to the time at which he brought it;

(*d*) The governor-general in council may make regulations for carrying into effect the provisions of this article with respect to gold bullion and the bringing, coining, and delivery out thereof, and in particular for regulating the time and conditions at and under which it is to be so brought, assayed, coined, and delivered out, and the minimum amount which may be so brought.

(ii) The charges under this article for coining, assaying, and refining shall be collected by the deputy master in accordance with the said regulations, either as a payment in advance, or as a deduction from the coin delivered out, or otherwise, and shall be accounted for and paid over in such manner as the governor-general in council directs to the minister of finance and receiver-general of Canada, to be by him paid into the consolidated revenue fund of Canada.

6. Subject to the provisions of this proclamation, the Ottawa branch mint shall be deemed to be part of our mint, and accordingly—

(*a*) The deputy master shall comply with all directions he may receive from the master of our mint, whether as regards the returns to be made, or the transmission of specimen sterling gold coins to England or otherwise; and

(*b*) The said specimen sterling gold coins shall be subject to the trial of the pyx under section 12 of the coinage act, 1870, so, however, that they shall be examined separately from the coins coined in England or at any branch mint other than the one regulated by this proclamation; and

(*c*) The deputy master and other officers and persons for the purpose of carrying on the business of the branch mint may be appointed, promoted, suspended, and removed and their duties assigned and salaries awarded under section 15 of the coinage act, 1870.

7. Subject to any regulations and conditions which may be made by the master of our mint, the deputy master of the Ottawa branch mint shall coin at that branch mint any gold, silver, bronze, or other coin which the governor-general of the Dominion requires to be so coined, and which is for the time being a coin of the Dominion and current and legal tender in the Dominion, but coins coined under this article shall not for the purposes of the coinage act, 1870, be deemed to be coins made at, or issued from our mint.

8. The governor-general in council shall cause the store of bullion and coin at the Ottawa branch mint to be inspected half yearly, and cause the persons inspecting the same to report thereon to the deputy master of the branch mint, stating the exact amount of bullion and coin inspected by them; and copies of such report shall be transmitted by the deputy master to the governor-general and to the master of our mint in London.

9. The master of our mint shall, in the execution of this proclamation, act in accordance with any regulations made or directions given by the lords commissioners of our treasury.

10. In this proclamation—

The expression "mint" means our royal mint in England;

The expression "governor-general" includes the officer for the time being administering the government of the Dominion;

The expression "deputy master of the branch mint" includes any person who lawfully exercises at such branch mint the authority of deputy master.

11. This proclamation may be cited as the Ottawa mint proclamation, 1907.

12. This proclamation shall come into force on the 1st day of January, 1908.

Given at our court at Buckingham Palace, this 2d day of November, in the year of our Lord 1907, and in the seventh year of our reign.

God save the King.

I EDWARD VII.

CHAP. 4.—An act respecting the Ottawa branch of the royal mint. (Assented to 23d May, 1901.)

Whereas it has been deemed expedient to make permanent provision in Canada for maintaining the establishment of the Ottawa branch of the royal mint; therefore His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:

1. This act may be cited as the Ottawa mint act, 1901.

2. There shall be payable to His Majesty in every year, out of the consolidated revenue fund of Canada, a sum or sums not exceeding in the whole in any year $75,000 for defraying the salaries, contingencies, retiring, and other allowances and expenses connected with the maintenance of the Ottawa branch of the royal mint: Provided,

that such yearly payments shall take effect and begin to run on the day upon which a proclamation issued in England by His Majesty is duly published in Canada, directing that a branch of the royal mint be established at or near Ottawa.

3. The said sums of money shall be paid by the minister of finance and receiver-general to such persons, and at such times, and in such manner as the lords commissioners of His Majesty's treasury direct; and the minister of finance and receiver-general shall account to His Majesty for the said sums through the said lords commissioners in such manner and form as His Majesty is pleased to direct.

4. From and after the day on which the aforesaid yearly payments commence, all sums, by way of fees, dues, or charges, lawfully received or collected at the Ottawa branch, shall be from time to time accounted for and paid over by the deputy master, or other proper officer of the said branch, to the said minister of finance and receiver-general, to be by him paid into the consolidated revenue fund of Canada.

AMERICAN CONSULATE,
Cape Town, March 27, 1908.

HUPEI COPPER MINT.

There were imported during the year 5,710 tons of copper, and 113 tons of spelter for use of the mint.

The copper coins struck were as follows: 10-cash, 682,503,000, including 103,000,000 for Hunan; 1,000 of these cash were equal to 63 tael cents; 5-cash, 4,040,000; and 1-cash, 6,170,000. These coins were 95 per cent copper and 5 per cent spelter.

HUPEI SILVER MINT.

Purchases of bullion (United States gold value), $510,000. Struck $1 (silver 91 per cent, copper 9 per cent), pieces, 970,000; 10 and 20 cents (silver 82 per cent, copper 18 per cent); pieces, 447,000.

HUNAN COPPER MINT.

This mint has been closed for some months past, but will open during the present month (April, 1908). The mint is planning to strike 1,000,000 10-cash pieces per day.

HONAN COPPER MINT.

There were struck during the year 10-cash pieces, 132,000,000 (95 per cent copper, 5 per cent spelter).

TABLE OF COINS STRUCK DURING THIRTY-THIRD YEAR OF KUANG HSU (FEBRUARY 13, 1907, TO FEBRUARY 2, 1908), WITH FINENESS AND VALUE IN UNITED STATES GOLD.

Metal.	Name of mint.	Denomination of coins.	Number of pieces.	Value.	Fineness.
Silver	Hupei Silver Mint	Dollars	970,000	$515,310	91 per cent silver, 9 per cent copper.
Do	do	10 and 20 cent pieces.	447,000	23,745	82 per cent silver, 18 per cent copper.
Copper	Hupei Copper Mint	1-cash piece	6,170,000	3,085	(a)
Do	do	5-cash pieces	4,040,000	10,100	(a)
Do	do	10-cash pieces	682,503,000	3,411,515	(a)
Do	Honan Copper Mint	do	132,000,000	660,000	(a)
Total value, United States gold				4,623,755	

a These coins have a fineness of copper 95 per cent, spelter 5 per cent.

NOTE.—The average value of the silver dollar during the year was 0.51; but is now 0.45. The average value of 1,000 cash during the year was 0.48; but is now 0.40. The year's purchases of silver bullion amounted to $510,000 (United States gold).

AMERICAN CONSULATE,
Hankow, China, April 6, 1908.

COMMERCIAL NOTES ON SHANTUNG.

CURRENCY.

One authority on things Chinese says of the common medium of exchange in this province:

"Ch'ien (copper coin or cash), 1,000 of which were originally equal to the tael, or Chinese ounce of silver. Cash * * * seem to have been first coined under the Han dynasty, about 200 B. C. Each cash has a square hole in the middle for convenience in carrying a quantity. Hence the term 'strings' of cash * * *. A mace, or the tenth part of a Chinese ounce."

The distinguished author has done well in avoiding an attempt at fixing a definite value upon this elusive coin, because it varies very much. For instance, I get 1,270 cash in Chefoo for $1 Mexican, while in Weihsien I would get but 900; on the other hand, at Lintsing, in the extreme west of the province, the Mexican dollar is worth 1,800 cash. Those were the relative values a few days ago and, inasmuch as the Chefoo rate has since changed, the probabilities are that it has also changed at the other places. If I should carry the Chefoo cash to some place where it would buy more Mexican dollars, the strong probabilities are that there would not be enough Mexican dollars in the city to effect the exchange. In spite of the fact that the Mexican dollar

is probably as widely used as a silver medium of exchange in small transactions as any in China, it is not current at Tainan-fu, for instance, where the tael only is current. Of course at the treaty ports and the foreign commercial settlement at Tainan-fu the value of the Mexican dollar merely fluctuates with the exchange quotations published daily by the various banking corporations, but each bank has its own rate.

An instance of the fluctuation of exchange may be cited by the fact that when our fleet was here last July they paid 54 cents gold for $1 Mexican, and now we pay 43 cents gold for the same amount. The fluctuation is not usually so great as the above instance, but business men must take this into consideration when investing in China, as well as tourists, who should always also guard against carrying bank notes from port to port unless they are sure that the notes will not be discounted when they arrive at their destination. Either Mexican or Hongkong dollars will generally be accepted at face value at any place visited by foreigners, but many people prefer to pay the discount on the bank notes to carrying a satchel of silver. The careful traveler will not, however, carry discount notes.

EFFECT OF EXCHANGE ON TRADE.

The present rate of exchange is a check to American Asiatic trade so far as exports from the United States are concerned. Commercial agents tell me that they can import nothing. American flour has stopped coming. I am told that many American exports have never been cheaper (to the foreign buyer) than at present and that therefore our exports ought to be increasing; but a comparison of the rate of exchange for last year and now shows that in order to equalize the cost (to the foreign buyer) of $100 (gold) worth of goods, they must now be sold for $80 (gold). Thus it is seen that unless a reduction materially over 20 per cent of last year's price is made, American producers are not able to hold out any competitive financial inducements to their China buyers, as the extra items of freight and insurance, paid in gold, would compel a discount from the last year's price of at least 21 per cent.

AMERICAN CONSULATE,
Chefoo, May 25, 1908.

THE SELLING OF SILVER FROM CHINA.

[From the Economist, London, February 8, 1908.]

For some little time past the London silver market has been in a state of semi-demoralization. This has not arisen from any new discoveries of the metal or increased production from existing sources, which, as a matter of fact, has been almost stationary for years, but can be traced rather, in the first place at any rate, to cessation of demand from quarters that had again become steady absorbers. When the Indian currency act was adopted in 1893 it was supposed that India would no longer import silver on a large scale. During the next ten years the imports certainly were much reduced, but in 1903 the prosperity forced the Government to coin rupees heavily, and silver was again freely poured into our eastern dependency for both government and native account. In 1906 India is thought to have consumed about 4,750,000 sterling of silver. The unfavorable outlook for the new agricultural year, however, checked the demand, and in the absence of any other outlet a decline in price was natural. But there was nothing in this fact alone to warrant either so heavy a fall or such startling fluctuations as have been witnessed, and for the principal cause of these we must look elsewhere. Every now and again there is reported to have been heavy selling from China, sometimes described as bear sales, while a few days later, perhaps, the sellers have been in the market covering their commitments. The thing has been a mystery coming from the land of mysteries and until it is cleared up is bound to continue a source of uneasiness. China is not a silver-producing country except on a very small scale. On the other hand, such reputable currency as it possesses is silver, and if the country were at all prosperous and its legitimate trade increasing, there ought to be, as in India, a steady absorption of that metal. This used to be the case years ago, but the shameful indemnities imposed as the outcome of the Boxer rebellion converted China into a debtor nation, and it has been struggling to meet its liabilities ever since. Gold it has none, but on several occasions it has sought to pay its creditors with silver or the proceeds of it. The supply even of this is limited, and though China has enjoyed a currency for more than two thousand years, and in this respect easily beats any other nation on the face of the earth, it has been so little progressive that as regards volume it stands to-day at the bottom of the list of civilized countries.

Of course an estimate is an exceedingly difficult matter, but the Director of the United States Mint, who goes to so much trouble to acquire information, calculates that the entire stock of the metal in the Empire does not exceed $350,000,000 American currency. It is not national commitments, however, that are responsible for the

present movements, and for these we have to look rather to trade and other conditions. For a good many years there has been an excess in the value of imports over exports, and more recently this has gone apace, so that since 1902 there has been a total excess of upward of 600,000,000 haikwan taels, equivalent at the average price of silver during the period to something like £100,000,000. How China can have met such an obligation—discharged it entirely she certainly has not—is a puzzle that perhaps recent events may help to clear up.

A portion of the amount was no doubt recovered during the Russian occupation of Manchuria and the subsequent war with Japan, both events affording openings for Chinese traders, who supplied the invaders with food stores and material of various kinds. At one time, too, Russia, apparently with the idea of establishing her hold on the province more firmly, flooded it, with the aid of the Russo-Chinese Bank, with ruble paper notes which the astute Chinaman acquired on exceptionally good terms and lodged to his credit with his bankers, they in turn transmitting them to Europe for redemption, a process the issuers never calculated on. This settled a portion of the ever-increasing indebtedness, but that tap is now turned off, and unless the burden ceases to accumulate the period can not be far distant when there must be a serious collapse. Obviously the importing merchants have not gone on delivering goods without receiving compensation, and the greater portion of the indebtedness must rest elsewhere.

The method of settling commercial transactions has rendered the shifting of it easy. Except in the treaty ports there is no civilized currency whatever, since this designation can hardly be applied to the copper cash of the interior, a string of which, worth about half a crown, weighs anything from 5 to 10 pounds avoirdupois. The settlement between the importing merchant and his native customer is thus made in the imaginary tael of the district by means of book entries and transfers from native to foreign banks, without the handling of the silver it represents at all, until eventually the merchant finds himself entitled to a sterling bill on London or a currency one on New York and, as far as he is concerned, the transaction is settled. The ownership of silver has probably passed to the banks granting the draft, though not necessarily actual possession of it, as the sycee, or ingots, averaging in weight about £15 sterling of English silver coinage are not the easiest things to handle, and certainly not as a rule carried about in the trousers pocket.

The situation thus begins to clear itself somewhat. The foreign banks have probably been encouraging this excessive import business, because it proved profitable to themselves. In exchange for the drafts they have been selling they have acquired a hold over the silver of the country, which for several years steadily rose in price, and so added to their profits. They may seldom have taken actual delivery, but re-lent it to native banks and customers on satisfactory terms, and so it is represented in their books by credits, and when we make comparison between the excess of foreign imports alluded to and the quantity of silver supposed to exist, it does not seem by any means unlikely that a great deal of the latter is now owned, nominally at least, by the foreign banks and traders. Nor is it surprising that the fall in the metal should have alarmed them, and that they should have sought to protect themselves by heavy sales in the London market. In a sense they are short sales, and made as a hedge, without the intention to deliver; indeed, it might not be a very easy matter to get together any large quantity of sycee for export, seeing how widely scattered it is throughout the Empire. Even if delivery of a portion were eventually decided upon or enforced, it would scarcely be made in London, but transmitted rather to India, in discharge of purchases effected for that market in London. So the outlook continues one of much uncertainty. A fresh demand for silver for India or elsewhere that brought about an improvement in price would almost certainly be accompanied by a scramble among the China sellers to cover their hedges, while the continued existence of a short interest, legitimate enough in a way, must keep the market in spasms. But the most unsatisfactory position of all is that of China itself, whose metallic currency resources appear to be altogether inadequate.

Augustus Sauerbeck, F. S. S., of London, sends us the following information:

IMPORTS OF GOLD INTO GERMANY FROM CHINA.

Classification.	1906.		1907.	
	Kilograms (fine).	Value.	Kilograms (fine).	Value.
Gold bullion	1,305	Marks. 3,811,000	7,640	Marks. 20,475,000

IMPORTS OF GOLD FROM CHINA AND HONGKONG INTO UNITED KINGDOM IN 1907.

Classification.	Ounces.	Value.
Gold bullion	12,841	£50,000

IMPORTS OF GOLD FROM WEST COAST OF AFRICA INTO UNITED KINGDOM.

Classification.	1906.		1907.	
	Ounces.	Value.	Ounces.	Value.

COLOMBIA.

Answers to interrogatories, 1907.

(1) Amount of gold coined during 1907: None.

(2) Amount of silver coined during 1907: The Government's own mint, from August, 1906, to June 30, 1908, coined silver to the amount of $1,017,580. This coinage was all in 30-cent pieces, 0.835 fine.

(3) Coinage executed for other governments during 1907: None.

(4 and 5) It is not possible to obtain exact information in regard to the amount of gold and silver used in the arts. From inquiries among the jewelers of the larger cities I estimate that such an amount did not exceed $15,000 for the gold. Bar or nugget gold is usually used by the jewelers.

The amount of silver used in the fine arts is probably less than that of gold, and I estimate that it did not exceed $10,000. Silver coins are used for this purpose more than new silver.

(6 and 7) Imports and exports of gold and silver during 1907: There was no import of gold during 1907, except a few coins in the pockets of passengers. The department of statistics, on the 6th of this month, furnished me with a special report as to the exports of gold and silver. According to this report there was exported as follows:

Classification and country.	Weight.	Value.
	Kilograms.	
To United States:		
Gold in bars	2,757.940	$1,209,205.58
Gold in dust and nuggets	872.141	408,833.39
Gold in dust and amalgam	3.365	1,760.00
Bars of unseparated gold and silver	23.660	8,887.18
Gold and platinum unseparated	7.647	2,856.00
Silver in bars	1,456.715	84,162.00
To Great Britain:		
Gold in bars	2,112.640	823,230.55
Gold in dust and nuggets	109.686	47,453.44
Gold in dust and amalgam	71.722	37,605.03
Bars of unseparated gold and silver	2,460.361	294,781.55
Silver in bars	855.554	59,482.64
To France:		
Gold in bars	209.627	78,460.71
Gold in dust and nuggets	180.124	87,083.58
Gold in dust and amalgam	831	421.17
Bars of unseparated gold and silver	77.082	17,370.21
Silver in bars	56.361	6,870.20
To other countries:		
Gold in bars	8.531	3,708.50
Gold in dust and nuggets	44.931	17,083.76

No reports were received by the statistical department from the small port of Tumaco for the months of January and February, 1907, but the amount was small, since the gold exports from said port during the other ten months were only $21,845.

Grave doubt exists as to the completeness and accuracy of the above statistics. Our diligent consul at Cartagena, Mr. I. A. Manning, obtained from the steamship agencies a statement of the export of precious metals from that port. This statement shows grave discrepancies from the report of the statistical department. For example, the latter gives the value of the gold exported from that port to the United States as $1,072,437, while the steamship agencies report $1,117,338. The steamship agencies reported the exports to France, Great Britain, and Germany, respectively, as $31,267, $861,418, and $1,936, while the figures of the statistical department are only $22,017, $295,137, and $0. The steamship agencies report the export of unseparated gold and platinum to the United States from the port of Cartagena as $44,982, while the statistical department reports none.

Summarizing, the statistical department reports total gold exported from Cartagena as $1,393,404, while the steamship agencies reported $2,057,181.

From the other ports I have no statements from the steamship agencies, and the statistical department gives $1,644,802 as their total gold exportations. There is, therefore, reason to believe that exportations amounting to nearly one million and a half dollars are omitted from the figures of the statistical department, or that the Barranquilla shipments were included with those from Cartagena by the steamship agencies who reported to Mr. Manning. But it is impossible to say anything definitely about this discrepancy since on the latter hypothesis the figures do not check up even approximately, and the former is mere guesswork.

It is impossible to give separately the exportations of bullion and ore. I am informed that very little goes out in the latter form. There are no commercial exports of gold coin at all. A good deal of silver coin passes to and fro over the frontier with Venezuela, in the Cucuta region, and the same takes place with Ecuador in the Pasto and Tumaco regions. These parts of Colombia are virtually on a silver basis. It is impossible to give any figures as to this movement.

(8) Total import of United States gold coin during 1907: None.

(10) Gold produced from mines of the country and colonies of the country during 1907: Practically the whole gold mined is exported.

(11) Silver produced from mines of the country and colonies of the country during 1907: Same answer as to silver, with the exception that the small amount lately coined by the Government should be added.

(12 and 13) Output of gold and silver from refineries of the country during 1907: No information.

(14) Approximate stock of gold coin and bullion in the country at the close of the calendar year 1907: Very small.

(15) Approximate stock of silver coin and bullion in the country at the close of the calendar year 1907: Very small, except in the frontier regions above referred to.

(16 and 18) Government notes outstanding at the end of the year 1907: The amount of paper money outstanding is, on account of the fiscal confusion existing during the years of the civil war, not accurately known, but it is estimated at not less than 800,000,000 "pesos" whose legal equivalent is £1,600,000. There are some bank notes outstanding and they and the old government notes must be exchanged for new notes before December 31, 1909. The treasury department reports that up to June 30, 1908, 660,770,322 "pesos" of the old issues had been burned. The burning of old notes was suspended August 15, 1907, on account of complaints of a scarcity of circulating medium. None of the outstanding notes are covered by legal-tender gold or silver coin or bullion.

(17 and 19) Amount of bank notes outstanding at the end of the year 1907: No information.

(20) Actual currency of the country: Inconvertible paper, except in the Cucuta and Pasto regions.

(21) Premium on gold during 1907: During the year 1907 gold sterling drafts remained at par; that is to say, were sold at 500 "pesos" each. The United States gold coin sold at 103 "pesos" for the dollar, that is to say virtually par.

(22) Laws passed during 1907 affecting the currency: I inclose a copy and translation of law 35 of 1907, June 15, which reduces the nominal legal gold standard from $1 American to one-fifth of the British pound sterling.

(23) No reports on the operations of the mint nor of department of mines are published.

AMERICAN LEGATION,
Bogota, August 7, 1908.

LAW NO. 35 OF 1907 (15TH OF JUNE) CONCERNING MONETARY SYSTEM.

The National Constitutional and Legislative Assembly decrees:

ART. 1. The monetary unit and money of account of the Republic is the gold "peso fuerte" divided into 100 cents, equivalent to the fifth part of an English pound sterling in weight, alloy, and tolerance of deficiency in weight; 3 millimeters in diameter, and with unlimited legal-tender qualities.

The other gold coins are the Colombian pound, equivalent to 5 "pesos fuertes," and the half pound, equivalent to 2½ "pesos fuertes." The Colombian pound shall be 22 millimeters in diameter, its alloy shall be 0.916⅔ fine, with a tolerance of 0.002, more or less.

The weight of the pound in grams shall be 7.988, and its limit of weight to be current shall be 793.787. The half pound shall be 19.3 millimeters in diameter; alloy, 0.916⅔; tolerance, 0.002; weight in grams, 3.994; limit of weight to be current, 3.96083.

The tolerance of weight of the Colombian pound and half pound shall be the same as the present ones of the pound and half pound English sterling.

ART. 2. Besides there shall be silver and nickel coins as follows:

The silver coins shall be the "peso fuerte," the "half peso fuerte," the peseta and the real.

The silver "peso fuerte" shall be 37 millimeters in diameter and 0.900 alloy, with a tolerance of 0.003 more or less. It shall weigh 25 grams, shall have 3 milligrams as its limit of weight to be current, and shall be legal-tender as equivalent to the gold "peso fuerte" up to $10 in any single transaction. The "half peso fuerte" shall be 30 millimeters in diameter, 0.835 fine, with a tolerance of 0.003 more or less; shall weigh 12½ grams, with a limit of weight to be current of 3 milligrams, and shall be legal-tender up to $10 in any one transaction. The peseta shall be 25 millimeters in diameter, and 0.666 fine, with a tolerance of 0.003; shall weigh 5 grams; its limit of weight to be current shall be 3 milligrams, and it shall be legal-tender as equivalent to 20 cents of the gold "peso fuerte" up to $10 in any one transaction.

The real shall be 18 millimeters in diameter; 0.666 fine, with 0.003 of tolerance; its weight shall be 2½ grams, and it shall have as the limit of weight to be current 3 milligrams, and legal-tender quality as equivalent to 10 cents of the gold "peso fuerte" up to $10 in any one transaction.

It is understood that in a single payment there shall be no obligation to receive more than 10 "pesos" in silver coins and 2 "pesos" in nickel coins.

ART. 3. The nickel coins shall have a legal-tender quality of $2 in each transaction. They shall be issued in types of 1, 2, and 5 "pesos" in paper, which paper "peso" shall be equivalent to a cent of the gold "peso fuerte," and their weight, size, and alloy shall be the same as that established for the coining of nickel coins in the Executive Decree No. 1263, of 1906, published in the Diario Oficial No. 12775.

ART. 4. Since the principal causes of the fluctuations of paper money have disappeared, the funds destined to amortization or conversion shall continue to be applied to the ordinary expenses of the public service in accordance with the budgets of receipts and expenses for the present and succeeding fiscal years.

In case that new fluctuations in the price of paper money shall appear, the Executive is authorized to cause its amortization or conversion, and to exchange it for metal, applying for this purpose the resources which the law has placed at its disposition.

ART. 5 The Government is authorized to determine the design and engraving for the coins that shall be issued in accordance with the present law.

ART. 6. The silver metal coins that are actually in circulation in certain regions of the country with legal authorization shall continue in circulation under the same conditions as up to the present time.

ART. 7. The Government is authorized to cause the coins provided for by this law to be coined in national or foreign mints as shall be most convenient to the public interests.

ART. 8. The Government is also authorized to establish the definite circulation of metallic coins from the resources of the public treasury when it may deem it opportune.

ART. 9. The right stipulating for national or foreign money shall continue in all its vigor, and consequently every obligation which may be contracted, payable in a certain kind of money, must be fulfilled in the money stipulated or its equivalent in the legal national money at the commercial ratio of exchange in the respective market upon the day of payment.

ART. 10. The Government is authorized to replace by another issue of notes of better quality, or by gold "pesos" in place of paper "pesos," the edition of notes made in England that is now in circulation, whenever the latter shall have become deteriorated. If gold takes the place of paper, reduction shall be made at the ratio of 1 "peso" paper for 1 cent gold.

The notes issued by private banks thereunto authorized shall be included in the provisions of article 9 of this law; that is to say, they shall be exchanged upon their presentation for the metallic money they express on their face or its equivalent at the exchange of the day when they are presented to the respective banks.

ART. 11. Articles 1, 2, 3, 4, 5, 6, 7 of law 59 of 1905, are hereby repealed, and articles 8, 13, 15, 19, 20, 22, 24, and 26 of said law are amended.

Done in Bogota the 12th day of June, 1907.

LUIS CUERVE MÁRQUEZ,
President.

AURELIO RUEDA A.,
Secretary.

Executive Offices, Bogota, June 15, 1907.
Let the above be published and executed.

[L. S.] (Signed) R. REYES.

Minister of Treasury and Finance,
TOBÍAS VALENZUELA.

MINTAGE OF SUBSIDIARY COIN.

By law of the Chilean National Congress, promulgated on December 9, 1907, the President of the Republic has been authorized to order the coinage, to an amount not exceeding 10,000,000 pesos, of silver pieces of 40, 20, 10, and 5 centavos, all of which shall be four-tenths fine. Provision is also made for the coinage of nickel pieces to an amount not exceeding 1,000,000 pesos of 10 and 5 centavos.

The law in reference prohibits the exportation of subsidiary silver coins under penalty of seizure.

COSTA RICA.

Answers to interrogatories, 1907.

(1, 2, and 3) No gold or silver coined or recoined in Costa Rica or at foreign mints.

(4 and 5) Amount of gold and silver used in industrial arts during 1907: No data; amount insignificant.

(6 and 7) Import and export of gold and silver during 1907:

Imports: $320,000 in United States gold; also $90,000 in United States currency. All from United States. No silver was imported.

Exports: Gold bullion, $339,026; old gold, $492; silver bullion, $181,159; old silver, $439; all to United States. Bullion to New York and San Francisco, nearly all to New York.

(8 and 9) Total import of United States gold coin, and amount deposited at mints and melted: Imports, $320,000. (See reply to No. 6.) None deposited at mints.

(10 and 11) Output of gold and silver from mines of the country during 1907: Gold, $339,026 (see reply to No. 6); silver, $181,159 (see reply to No. 7). Weight not reported. Costa Rica has no colonies.

(12 and 13) Gold and silver refined in the country in 1907: None.

(14) Stock of gold coin and bullion in the country at close of 1907: 1,268,870 "colones" of Costa Rica ($590,024.55); foreign gold, $633,303.93, in banks. Practically all foreign gold is American. No data as to bullion, but amount is small.

In circulation: Costa Rica gold (approximately), 1,500,000 "colones" ($697,500). American gold (estimated), $700,000 to $750,000. No data from which to form an exact estimate; a large amount is sent out in small sums by Jamaica negroes on the Atlantic coast, which does not appear on manifests.

(15) Stock of silver coin and bullion in the country at close of 1907:

In banks, 60,508.25 "colones" ($28,136.34); also 684,000 "colones" ($318,060), held to secure government silver certificates.

In circulation, approximately, 150,000 "colones" ($69,750). No data as to unshipped bullion, but amount is very small.

(16 and 18) Government notes outstanding at close of 1907: Old issue, 25,352 "colones" ($11,788.68); issue of 1900, 3,680 "colones" ($1,711.20). The above are redeemable on demand. Silver certificates, 684,000 "colones" ($318,060). (See reply to No. 15.) Amount of government notes not covered by legal-tender gold, gold and silver coin or bullion: None.

(17 and 19) Bank notes outstanding at close of 1907: Total emission, 4,450,000 "colones" ($2,069,250); retired (deteriorated), 20,385 "colones" ($947,902); outstanding, 3,367,480 "colones" ($1,565,878.20). Banks hold gold in excess of legal reserve 50 per cent of issue.

(20) Actual money of the country at close of 1907: Gold, fractional silver, government notes payable on demand in gold, and silver certificates. Silver is legal tender to amount of 50 "colones" ($23.25).

(21) Gold is not at a premium.

(22 and 23) No monetary laws were passed in 1907. There is no mint or department of mines.

AMERICAN CONSULATE,
San Jose, May 5, 1908.

DENMARK.

Answers to interrogatories, 1907.

(1) No gold was coined in Denmark during 1907.

(2) The following is the amount of silver coined during 1907:

Denomination.	Kroner.	Ore.
In 25-ore pieces	502,142	25
In 10-ore pieces	306,772	70

Also for the use of the Danish West Indies:

	Francs.
In 2-franc pieces	50,098
In 1-franc pieces	101,059

None of this was recoinage.

(3) There was no coinage executed for other governments during 1907.

(4 and 5) The figures as to the weight of fine gold and fine silver used in the industrial arts during 1907 are not obtainable.

(6 and 7) Import and export of gold and silver during 1907: During 1907 172,800 kroner in gold coins was imported from the Danish West Indies.

In 1907 gold was exported in coin—

	Kroner.
To Germany	3,667,440
To England	3,008,030
To Danish West Indies	72,000
To Norway	4,000,000
To Sweden	5,025,000
Total	15,772,470

No gold in bullion or ore was exported or imported. There was no import or export of silver during 1907.

(8 and 9) No United States gold coin was imported or deposited at mint and melted during 1907.

(10 and 11) Denmark has no gold or silver mines.

(12 and 13) There are no gold or silver refineries in Denmark.

(14) The approximate stock of gold coin and bullion in the country at the close of 1907 was—

	Kroner.
Gold coins	56,000,000
Gold bullion	12,500,000

The figures as to the distribution of this stock of gold are not available.

(15) The approximate stock of silver coin and bullion in the country at the close of 1907 was 23,000,000 kroner, in coin. The figures as to distribution are not available.

(16 and 18) There were no government notes outstanding during the year 1907.

(17 and 19) At the end of the year 1907 there were outstanding 123,000,000 kroner of notes of the Nationalbanken. There were 54,000,000 kroner of notes of the Nationalbanken outstanding at the close of the year 1907 not covered by legal-tender gold and silver coin and bullion.

(20) The actual currency of the country at the close of 1907 was—

	Kroner.
Gold coins	5,000,000
Silver coins	17,500,000
National bank notes	123,000,000

(21) There is no premium on gold as compared with the actual currency of the country.

(22) Laws passed during 1907 affecting the currency: Copies of the proclamations concerning small coins are inclosed.

(23) Statements as to the operations of the mint are inclosed. There is no Danish department of mines.

AMERICAN LEGATION,
Copenhagen, March 18, 1908.

NOTIFICATION RELATING TO THE COINING OF 20 AND 10 KRONEN GOLD PIECES.

At the finance ministry under Danish representation it has pleased His Royal Majesty, by the supreme resolution of October 17, to approve the coining of 20 and 10 kronen gold pieces in future, with the following design:

On the obverse: His Majesty the King's effigy; on the lower edge of the image the engraver's initials; surrounding the image: "Frederik VIII, Danmarks Konge" ("Frederick VIII, Denmark's King"), with a rosette before it, between and after the words; with a pearl-wreathed border.

On the reverse: The arms of the Danish Empire with canopy and crown; under this the year of coinage and mint value pertaining thereto, "20 kronen" and "10 kronen," together with the mint mark and coiner's initials, surrounded by a pearled border.

Which I hereby make known by public advertisement for all concerned.

Finance Ministry, December 30, 1906.

VILH. LASSEN.

NOTIFICATION RELATING TO THE COINING OF NEW 25-ÖRE (SILVER) PIECES.

At the finance ministry under Danish representation it has pleased His Royal Majesty, by the supreme resolution of April 18, 1907, all graciously to approve the coining of 25-öre pieces, with the following design:

On the obverse: Within a border between two rosettes "Frederik VIII, Danmarks Konge" ("Frederick VIII, Denmark's King"); on the inside His Majesty's effigy; under this the engraver's initials, G. J.

On the reverse: A decorative bordered rim with twelve divisions; in the middle of this the value; to the left the date of the year; toward the right the mint mark and coiner's initials.

Which I hereby make known by public advertisement for all concerned.

Finance Ministry, April 24, 1907.

VILH. LASSEN.

NOTIFICATION RELATING TO THE COINING OF NEW 10-ÖRE (SILVER) PIECES.

At the finance ministry under Danish representation it has pleased His Royal Majesty, by the supreme resolution of May 25, all graciously to approve the coining of 10-öre pieces, with the following design:

On the obverse: Within a border between two rosettes "Frederik VIII, Danmarks Konge" ("Frederick VIII, Denmark's King"); within this His Majesty's effigy, and under this the engraver's initials, G. J.

On the reverse: A wreathed decorative border with twelve divisions; in the middle of this the value; on the left the date of the year; to the right the mint stamp and coiner's initials.

Which I hereby make known by public advertisement for all concerned.

Finance Ministry, May 30, 1907.

VILH. LASSEN.

NOTIFICATION RELATING TO THE COINING OF NEW 5, 2, AND 1 ÖRE (BRONZE) PIECES.

At the finance ministry under Danish representation it has pleased His Royal Majesty, by the supreme resolution of November 13, 1906, all graciously to approve the coining of 5, 2, and 1 öre pieces, with the following design:

On the obverse: A pearl-wreathed border; inside of this a crown; underneath FF (two F's) interlaced over a figure 8; under this to the right the engraver's initials, G. J.

On the reverse: A pearled border surrounding the rim; inside of this a star(*) Kingdom star (*), Denmark, star (*); below this the mint mark, date, and coiner's initials; in the middle the value encircled by a framed rim with four curved divisions linked; outside and around this a pearled border.

Which I hereby make known by public advertisement for all concerned.

Finance Ministry, December 30, 1906.

VILH. LASSEN.

DOMINICAN REPUBLIC.

Answers to interrogatories, 1907.

(1, 2, and 3) Amount of gold and silver coined and coinage executed for other governments during calendar year 1907: None.

(4 and 5) Amount of gold and silver used in industrial arts during 1907: Inappreciable.

(6 and 8) Import of gold during 1907: $150,180 gold currency from the United States. No exports.

(7) Import of silver during 1907: $56,980 silver currency from the United States. No exports.

(9) Amount of United States gold coin deposited at mint and melted during 1907: None.

(10 and 11) Amount of gold and silver produced from mines of the country during 1907: None.

(12 and 13) Output of gold and silver from refineries of the country during 1907: None.

(14 and 15) Approximate stock of gold and silver, coin and bullion, in the country at the close of the calendar year 1907: No official data.

(16, 17, 18, and 19) Same reply as for 1906: "Government and bank notes outstanding at the end of the year 1906 (same as last two years) viz: None, but the Government has assumed responsibility for the bank notes, $192,195.60 in gold value, calculating the first issue at 2 to 1 and the second at 5 to 1. The bank notes have been deprived of legal-tender quality and the issuing bank is no longer in operation, so the notes are not in circulation, but are held by speculators."

(20) Actual currency of the country: United States currency and national coin, which passes at 5 to 1.

(21) There is no premium on gold.

(22) No laws were passed during 1907 affecting the currency of the country.

(23) No report was published on operations of mint during 1907.

AMERICAN LEGATION,
Santo Domingo, March 16, 1908.

EGYPT.

Answers to interrogatories, 1907.

(1 and 2) Amount of gold and silver coined during the calendar year 1907: None at all.

(3) Coinage executed for other governments: None.

(4 and 5) Amount of fine gold and fine silver used in industrial arts during 1907: No means of knowing.

(6, 7, and 8) Imports and exports of gold and silver during 1907: Gold coins imported, £E. 7,275,460; gold coins exported, £E. 4,731,443. Quantity and value of gold ingots imported into Egypt during 1907: Grammes, 395,640; value, £E. 53,866.

Countries imported from or exported to.	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
	Egyptian pounds.	*Egyptian pounds.*	*Egyptian pounds.*	*Egyptian pounds.*
England	4,393,674	2,118,117	471,000	98
France	436,208	360,628	82	1,022
British possessions in the East	500,625	1,725,370		1,458
Austria	381,280	1,283	5,605	858
Italy	46,253			
Turkey	1,431,414	484,120	15,211	1,265
Greece	69,920			
Other countries	14,620	41,925	832	15
Total	7,275,460	4,731,443	492,730	4,746

NOTE.—An Egyptian pound equals $4.94.

Weight and value of silver ingots imported and exported into and from Egypt during 1907: Imported, 18,536 kilograms; value, £E.81,638; exported, 9,491 grams; value, £E.39.

(9) Amount of United States gold coin deposited at mints and melted during 1907: None.

(10, 11, 12, and 13) Gold and silver output from mines of the country and refineries of the country during 1907: None.

(14 and 15) Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1907: Banks refuse to give their cash balance.

(16 and 18) No government notes issued in this country.

(17 and 19) The National Bank of Egypt is the only bank authorized to issue notes, as long as the amount is covered by securities deposited with the Egyptian government.

(20) Actual currency of the country: Gold, silver, nickel, and bank notes. (See answer to 17–19.)

(21) Gold coins are never at a premium in Egypt.

(22) No laws were passed during 1907 affecting the currency.

(23) No report was published on the operations of the mint.

AMERICAN DIPLOMATIC AGENCY AND CONSULATE-GENERAL,
Cairo, March 23, 1908.

GERMANY.

Answers to interrogatories, 1907.

(1) In the calendar year 1907 the imperial gold coinage, including recoinage, was—

	Marks.
Double crowns	51,525,720
Crowns	15,389,860
Total	66,915,610

In the calendar year 1907 the German mints received for recoinage into imperial gold coins:

	Marks.
(a) Uncurrent imperial gold coins:	
Double crowns	3,727,400
Crowns	3,780,430
Total	7,507,830
Weight of same in fine kilograms	2,667.5486
(b) Foreign gold coins (fine kilograms)	7,508.8533

(2) In the calendar year 1907 the imperial silver coinage was:

	Marks.
5-mark pieces	25,693,575
3-mark pieces	30,090,028
2-mark pieces	17,425,807
Mark pieces	11,774,519.50
50-pfennig pieces	84,944,029.50
Total	

The metal for the silver coinage was derived from thalers and 50-pfennig pieces of old coinage.

(3) No gold coinage was executed at German mints in 1907 for foreign countries, but the silver coinage executed by the mint at Hamburg for German East Africa was as follows:

	Rupees.
1-rupee pieces	880,000
One-half rupee pieces	70,000
One-fourth rupee pieces	56,000

(4 and 5) For the calendar year 1907 no official data have been collected on this subject.

(6, 7, and 8) The imports and exports of gold and silver, according to the countries of origin and destination, are given in the following table:

IMPORTS AND EXPORTS OF GOLD AND SILVER IN THE SPECIAL COMMERCE OF THE GERMAN CUSTOM-HOUSE FOR THE CALENDAR YEAR 1907.

RECAPITULATION.

Items.	Fine kilos.	Value in marks.
(a) Gold:		
Imports, coined gold, columns 4 and 6	33,435	84,075,651
Virgin gold and bars, column 1	43,842	117,496,560
Exports, coined gold, columns 5 and 7	67,988	171,329,760
Virgin gold and bars, column 2	18,647	50,533,370
(b) Silver:		
Imports, coined silver, column 13	46,170	3,714,377
Virgin silver and bars, column 11	271,361	24,259,673
Exports, coined silver, column 14	21,576	1,745,498
Virgin silver and bars, column 12	254,580	22,874,013
(c) Gold and silver scrap:		
Imports, columns 10 and 15	54,660	a 21,388,540
Exports, column 9	8,033	2,382,590
(d) Exports of gold and silver not specified	28,106	3,511,479

a Estimated value.

(10, 11, 12, and 13) The German refineries in 1907 produced 4,682.35 fine kilograms of gold, valued at 13,071,166 marks, and derived from the following sources:

	Kilos.
From domestic ores	100.14
From foreign ores	493.05
From domestic and foreign lead	a 38.50
From domestic and foreign refuse	a 4,080.66

The refineries in the same year produced 386,932.54 fine kilograms of silver, valued at 34,655,207 marks, and derived from the following sources:

	Kilos.
From domestic ores	158,260.83
From foreign ores	165,193.143
From foreign and domestic separating lead	a 3,772.40
From domestic and foreign refuse	a 59,706.17

a These two items might be included under the latter heading only.

The German territorial possessions yielded neither gold nor silver in 1907.

(14) The coinage of imperial gold up to the end of December, 1907, exclusive of recoinage, amounted to 3,696,888,220 marks in double crowns, and 691,047,860 marks in crowns, or a total of 4,387,936,080 marks.

It can not be accurately stated how much this amount has been reduced by export or other causes.

The stock of gold in the Reichsbank at the end of December, 1907, amounted to 401,296,000 marks.

The stock of gold bars and foreign gold coins in the Reichsbank at the end of December, 1907, amounted to 96,252,000 marks.

(15) The coinage of imperial silver up to the end of December, 1907, exclusive of recoinage, was as follows:

	Marks.
5-mark pieces	230,757,575.00
2-mark pieces	291,755,074.00
Mark pieces	272,280,109.00
50-pfennig pieces	111,428,136.50
Total	906,220,894.50

How much of this amount is to be considered as lost to circulation can not be established.

In the stock of the Reichsbank at the end of December, 1907, there was 181,180,000 marks of imperial silver coin.

The thaler pieces were withdrawn from circulation by the proclamation of the imperial chancellor dated June 27, 1907, the same going into effect October 1, 1907. The period for the redemption of said thaler pieces expires September 30, 1908. According to the latest estimate these thaler pieces in circulation and in the stock of the Reichsbank amount to 32,900,000 marks.

(16 and 18) Imperial treasury bills issued up to the end of December, 1907, amounted to 120,000,000 marks, an amount that equals the war fund which the Empire has in reserve in gold coin.

(17 and 19) The circulation of bank notes, which is regulated by the banking law of March 14, 1875 (R. G. Bl., p. 177), amended June 7, 1899 (R. G. Bl., p. 311), and by the law of February 20, 1906 (R. G. Bl., p. 318), relating to the issue of imperial bank notes in the denomination of 50 and 20 marks, amounted to 2,026,949,000 marks at the end of December, 1907.

The issue of uncovered bank notes (that is, in excess of the cash reserve in the issuing banks) at the end of December, 1907, amounted to 1,164,284,000 marks. The cash reserve of these banks consists of current German coin, imperial treasury bills, the notes of other German banks, gold in bars, and foreign gold coin, the fine kilogram being reckoned at 2,784 marks.

(20) The only change in the circulating medium of the country was the demonitization of the thaler, as mentioned under No. 15.

(21) No.

(22) No.

(23) No report of the operations of the mint is published.

PROCLAMATION OF JUNE 27, 1907, RELATIVE TO THE WITHDRAWING FROM CIRCULATION OF THE GERMAN THALER (R. G. Bl. p. 401).

In accordance with articles 8 and 15, section 1, paragraph 1, of the monetary law of July 9, 1873 (R. G. Bl. p. 233), the Federal Council has made the following order:

Par. 1. After October 1, 1907, the German thaler pieces are no longer a legal tender. After that date no person is obliged to accept the aforementioned coins in payment except the properly authorized bureau of redemption.

Par. 2. The thalers designated in paragraph 1 of this proclamation will be received in payment or exchange at the rate of 3 marks to the thaler until September 30, 1908, at the imperial treasury.

Par. 3. The obligation to receive and exchange (par. 2) these coins will not apply to holed, light-weight, or counterfeit pieces.

Berlin, June 27, 1907.

Chancellor of the Empire,
Vice, FREIHERR VON STENGEL.

Modifications of the Monetary Régime (Law of May 19, 1908).

[From Bulletin de Statistique, Paris, June, 1908.]

The Reichsanzeigner, in its number of May 26 last, has published the text of a law whose first article modifies the monetary régime of the Empire by creating a new silver piece and a new nickel piece.

The silver piece bears a value of 3 marks, and it is to be coined at the ratio of 33½ per pound of fine silver. (It will not, like the old thalers, have unlimited circulating power.)

The nickel piece bears a value of 25 pfennigs.

The second article of the same law carries the total amount of imperial silver coins from 15 to 20 marks per capita of the population.

Debate in the Prussian House of Delegates, January 21, 1908, on the Subject of Coinage.

Count Kanitz (Conservative) said: In a country having a silver standard, such as France, the crisis has not been felt so acutely. France retained a discount rate of 3½ per cent, whilst in Germany it rose to over 7 per cent. Deputy Crüger is therefore wrong in his assertion that the crisis was most felt in bimetallistic countries. I am quite in accord with those who desire a considerable increase of the silver coinage. Since the interpellation took place in the Reichstag I have received many letters complaining very bitterly of the scarcity of silver coins. The withdrawal from circulation of the thaler (3-mark piece) is regarded throughout the whole country as a false move. There are said to be 25,000,000 thalers still retained in the Imperial Bank. Let these be put into circulation again. I beg the Prussian Government to use its influence in the Bundesrat in order that the present rate of silver coinage of 15 marks per head be increased to 20 marks at least, or even to 25 marks per head.

Finance Minister Baron von Rheinbaben: I do not wish to enter into a debate here on the coinage, for it would certainly never come to an end. Whilst in my opinion our gold coinage should be maintained in full and not disturbed in any manner, the important question before us now is, How the circulation of hard money may be increased. My experience has shown that, for the payment of wages, the agricultural industries are not sufficiently supplied with coin. Therefore, I consider it worthy of consideration; I may say, even advisable, that the rate of silver coinage per head should be increased, but without interfering with the coinage of gold. I doubt whether the rate should be increased to 25 marks, though I consider it advisable to increase it to 20 marks per head.

Furthermore, the coinage of a 25-pfennig piece in nickel is not a question of principle but of practical daily requirement, and the necessity of having such an intermediate coin between the 10-pfennig piece and the 50-pfennig piece appears to me to be very great. According to law, we are fully authorized to coin such a 25-pfennig piece. We shall be obliged to do so because our trade demands it. It would be difficult to make the 5-mark piece of a more convenient size, because if its diameter be decreased its thickness must be increased. I have made several experiments, but have not been able to arrive at a solution of this problem. These experiments are still being carried on.

GREAT BRITAIN.

Answers to interrogatories, 1907.

(1) Gold coined in London during the calendar year 1907:

Sovereigns	£18,464,000
Half-sovereigns	2,087,000
Total	20,551,000

Light gold coin withdrawn from circulation and recoined:

Sovereigns	£1,313,000
Half-sovereigns	1,387,000
Total	2,700,000

No foreign gold coin was melted during the year.

(2) Silver coined in London during 1907:

Half crowns	£461,538
Florins	594,792
Shillings	704,088
Sixpences	218,196
Threepences	60,390
Maundy o	396
Total	2,039,400

Worn silver coin withdrawn from circulation for recoinage, £721,137 4s. 6d.

Two million three hundred and eighty-nine thousand three hundred and forty ounces, standard, of Mexican dollars were melted in connection with the imperial coinage, and 297,416 ounces, standard, in connection with the colonial coinage.

(3) No coinages were executed for foreign governments during 1907.

In addition to the sterling gold, silver, and bronze coinages, the following coinages for British colonies were executed at the royal mint, London, in 1907:

Silver:	
Canada, 50, 25, 10, and 5 cents	$1,194,000
Newfoundland, 50 cents	$50,000
British Honduras, 50 and 25 cents	$24,500
Straits Settlements, dollars and 50 cents	$6,750,000
Ceylon, 25 and 10 cents	Rs. 80,000
Cyprus, 18 and 9 piastres	£3,000
Bronze:	
Canada, cents	$24,000
Newfoundland, cents	$2,000
Nickel bronze:	
Jamaica, 1d., ½d., and ¼d	£1,700
East Africa and Uganda, 10 cents	Rs. 100,000
Nigeria, 1d	£3,000
Aluminum:	
Nigeria, cents	Rs. 67,920

(4 and 5) No information available as to the amount of gold and silver used in industrial arts during 1907.

(6) Imports and exports of gold in 1907:

Description.	Imports.		Exports.	
	Weight.	Value.	Weight.	Value.

Ore		2,244,930		
Total		18,228,822	118,713,758	16,920,849

* Fourpences	£146
Threepences	110
Twopences	82
Pence	58
Total	396

(8) No United States gold coin was imported from the United States of America during 1907.

(9) No United States gold coins were received at the mint for coinage during 1907.

(10 and 11) Output of gold and silver from mines of the country and colonies of the country during 1907: No information as yet available.

(12 and 13) Output of gold and silver from refineries of the country during 1907: No information available.

(14) Approximate stock of gold coin and bullion in the country at the close of the calendar year 1907: The estimate of the volume of the gold currency in banks and in circulation in the United Kingdom is £116,000,000 in sovereigns and half sovereigns. No details are available as to the amount of gold bullion in the country.

(15) Approximate stock of silver coin and bullion in the country at the close of the calendar year 1907: The volume of the silver currency of the United Kingdom is estimated at the nominal value of £24,000,000, but the stock of silver bullion in the country is unknown.

(16 and 18) No notes are issued by the Government.

(17 and 19) Bank notes outstanding at the end of the year 1907: The average weekly circulation for the month ending December 7, 1907, was:

(1) England and Wales:		
Bank of England (month ending December 11)		£29,042,246
Private banks		131,224
Joint stock banks		360,094
Total		29,533,564
(2) Scotland		7,710,525
(3) Ireland		7,540,933
Total for United Kingdom		44,785,022

Bank notes outstanding not covered by legal-tender gold and silver coin or bullion at the end of the year 1907:

Amount of notes in circulation in the United Kingdom		£44,785,022
Deduct for—		
(1) Gold coin and bullion held in the Bank of England against notes in circulation	£10,489,670	
(2) Gold and silver held by Scottish and Irish banks of issue	10,655,402	
		21,145,072
Total		[a] 24,129,630

(20) The currency of the country is gold, with subsidiary coins of silver and bronze, supplemented by a convertible paper currency.

(21) Premium on gold during 1907: The highest price of gold in the London market during 1907 was 78s. ¼d. per ounce, standard, and the lowest, 77s. 9d.

(22) No change in the currency was made in 1907.

(23) A copy of the mint report for 1907 will be forwarded as soon as published.

[a] This amount includes £18,450,000, which the Bank of England is authorized to issue against securities.

Quantities of the Registered Imports of Gold and Silver Coin and Bullion into Great Britain, 1903 to 1907.

THE LATIN UNION—BELGIUM, FRANCE, GREECE, ITALY, AND SWITZERLAND.

BELGIUM.

[Translation.]

INFORMATION CONCERNING WORKINGS OF THE MINT, COINAGE LAWS, ETC., OF BELGIUM DURING THE CALENDAR YEAR 1907.

[From the Eighth Annual Report of the Director of the Mint and Minister of Finances, 1907.]

GENERAL STATEMENT OF MANUFACTURES.

In 1907 the workshops of the mint have been sustained by the manufacture of national coins of silver, nickel, and copper, and by the manufacture of nickel coins for account of Roumania and Colombia.

The various coinages represent, in round figures, a total of 67,000,000 pieces with a weight of 209,000 kilograms, and a nominal value of 6,240,000 francs.

In 1906 the coinage amounted to 59,600,000 pieces with a weight of 181,000 kilograms and a nominal value of 10,000,000 francs.

NATIONAL COINS STRUCK IN 1907.

A. NICKEL COINS.

[Composition, 25 per cent nickel, 75 per cent copper.]

The last nickel pieces demonetized of the Belgian lion type have been converted into perforated coins of 5 centimes of the weight of 2½ grams. They have been coined to a nominal value of 99,549 francs, with the weight of 4,979 kilograms, equal to that of the pieces melted. The percentage of deterioration of the pieces presented in delivery has been of 6.46.

B. COPPER COINS OF 1 CENTIME.

[Pure copper.]

A coinage of 79,335 francs has been made by means of the remelting of 2-centime pieces, of a value of 90,000 francs, and of pieces of 1 centime of a value of 300 francs, these worn coins having lost an average of 12 per cent of their weight. Consequently, their conversion into new coins has caused a nominal loss of 10,964 francs, which it is necessary to add to the expense of remelting, which will amount to 19,663 francs.

C. SILVER COINS OF 50 CENTIMES.

A royal decree of March 13, 1907, has adopted for the 50-centime pieces the type executed previously by M. Th. Vinçotte, statuary, for the silver coins of 1 and 2 francs.

A sum of 545,000 francs in divisionary worn coins have been put into the crucible and converted for an equal sum into 50-centime pieces of the new type.

The coins remelted comprised: 256,000 francs in 50-centime pieces; 208,000 francs in 1-franc pieces; 81,000 francs in 2-franc pieces.

The loss of weight due to wear having been 10.73 per cent for the 50-centime pieces; 6.70 for those of 1 franc, and 3.92 for those of 2 francs.

The loss of fine silver resulting from the diminution in weight and fineness of the worn pieces has been compensated for by the addition to the melting of old worn Belgian ecus to an amount of 42,325 francs. The ecus were charged with a loss in weight of 0.84 per cent.

FOREIGN NICKEL COINS.

[Composition, 25 per cent nickel, 75 per cent copper.]

A. ROUMANIA.

In 1905 and 1906 the workshops of the mint having executed a first coinage of 3,500,000 lei, in perforated nickel pieces, in 1907 a new coinage of the same significance has been executed.

There has been struck 44,000,000 pieces, with a weight of 145,841 kilograms in denominations of 5, 10, and 20 bani. For the most part the metal had been supplied by the remelting of demonetized nickel pieces. They have been proceeding with that remelting at the mint of Brussels in the presence of delegates of the Roumanian Government.

The proportion of waste upon the pieces presented in delivery has been an average of 5.84 per cent.

The pieces of 5 and 10 bani are not different in their engraving from the Belgian pieces of 5 and 10 centimes. That engraving had been modeled by M. A. Michaux, chief coiner of the mint coins of our mint.

Since 1872 eight coinages of silver, gold, and nickel have been made for Roumania.

B. COLOMBIA.

Two coinages, each bearing 6,000,000 pieces, with a weight of 20,000 kilograms, have been successively executed in denominations of 1, 2, and 5 pesos (weights of 2, 3, and 4 grams).

For the first the dies were furnished by the Society of the Founderies and Rolling Mills of the Biache-Saint-Vaast and by the French Company of the Metals. For the second, the dies, like the coinage, have been made in the workshops of the mint.

The proportion of waste upon the pieces presented in delivery has been only 0.70 per cent.

MONETARY CIRCULATION.

A. GOLD COINS.

The National Bank of Belgium had on December 31, 1907, a reserve of 106,708,000 francs in gold coins, besides a portfolio of foreign stocks of the value of 148,000,000 francs, all realizable in gold. In 1907 the receipts and payments in gold have amounted, respectively, to 7,812,000 francs and 4,975,000 francs; at that time the receipts in silver amounted to 498,493,000 francs.

B. ÉÇUS OF 5 FRANCS.

From 1832 to 1876 there had been issued 495,678,210 francs in écus of 5 francs, namely: 145,180,490 francs, struck from 1832 to 1865, with the effigy of Leopold I; 350,497,720 francs, struck from 1867 to 1876, with the effigy of Leopold II.

The remelts made since 1880 up to date have amounted to 13,044,490 francs.

More than three quarts of écus with the effigy of Leopold I have apparently vanished. The total quantities of Belgian écus yet in existence are presumed to be less than 375,000,000.

The circulation of écus of 5 francs was lately valued at 200,000,000; since then the amount has been much reduced by reason of unfavorable exchange upon France, which is a permanent cause of exportation. Actually, the circulation does not appear scarcely above from 100,000,000 to 150,000,000.

The National Bank, which pays in silver, is forced to the periodical reprovisioning from Paris. They have forwarded—

38,000,000	1898	25,000,000	1903
60,000,000	1899	12,000,000	1904
35,500,000	1900	24,000,000	1905
14,500,000	1901	81,500,000	1906
11,000,000	1902	98,500,000	1907

being, since ten years, a total amount of nearly 400,000,000. On December 31, 1907, their reserve in écus was 19,565,000 francs, and included 950,000 francs of Belgian pieces retired from circulation by reason of wear.

The exchange upon Paris has been unfavorable, as in preceding years. The premium amounted to 4 per thousand in January and varied during the greater portion of the year between 2½ and 3½. At the end of December the exchange had reached to par. The effect of the premium is the exportation of écus from our circulation, and likewise of the divisionary coins, especially those of 2 francs. The movement of exportation is attended by realizations to the foreign securities of the bank. These securities varied during the year 1907 between 123,000,000 and 171,000,000.

On December 31, 1907, the amount of bank notes in circulation amounted to 798,121,890 francs.

The rate of discount of the National Bank varied from 4 per cent during the first two months of the year to 4½ per cent in March and 5 from April to October; 5½ in October and November, and to 6 in November and December.

During the last ten years the average rate of discount has been as follows:

	Per cent.		Per cent.
1898	3.04	1903	3.17
1899	3.91	1904	3.00
1900	4.08	1905	3.18
1901	3.28	1906	3.54
1902	3.00	1907	4.95

C. SILVER DIVISIONARY COINS.

The divisionary silver coins issued since 1866 and still in circulation are distributed as follows: 10,156,932 francs in 50-centime pieces; 18,805,314 francs in 1-franc pieces; 17,837,754 francs in 2-francs pieces. Being a total of 46,800,000 francs, representing the contingent assigned to Belgium by the monetary conventions.

The quantities really existing are very inferior to that sum. The larger portion of the Belgian coinages have disappeared, or emigrated either to France or to Switzerland. Our interior circulation is composed for the most part of French pieces.

The Belgian 50-centime pieces, of the first issues of 1866, 1867, and 1868, represent a value of nearly 4,500,000 francs. Since 1900 the National Bank has retired from circulation those which were paid into their coffers. At the end of the year 1907 the sums received amount to only 1,473,000 francs, being less than a third of the old coinage. The worn pieces were remelted in 1901, 1904, and 1907.

Under the influence of unfavorable exchange the scarcity of divisionary coin is accentuated. The reserve of the bank, which amounted at the beginning of the year to nearly 5,800,000 francs, fell in the month of November to less than 1,500,000 francs in current silver coins. They were reprovisioned by a remittance of 2,000,000 francs, made by the Bank of France. During the month of December the reserves of the bank were increased. On January 3, 1908, they amounted to 4,821,000 francs.

In the course of the last years (1901 and 1905-06), more than 3,000,000, in French worn pieces, the most part with the effigy of Napoleon III, have been returned to their native country. Following the impoverishment of our circulation, the retirement of French worn coins are being suspended, which gave room for numerous complaints. The increase of the contingents of divisionary coins, proposed by France, in accord with Belgium, which forms a project of convention at present under deliberation by the States of the Monetary Union, put an end to that situation.

D. NICKEL COINS.

Since the royal decree of June 30, 1906, demonetization of the nickel pieces struck with the type of the Belgian lion, the perforated coins of the new type solely, have legal currency. They represent a nominal value of nearly 10,659,000 francs, namely: 7,927,000 francs in 10-centime pieces, and 2,732,000 francs in 5-centime pieces.

The retirement of old nickel coins had been lawfully terminated December 1, 1906. By tolerance, the pieces continued to be accepted up to February 1, 1907, by cashiers of the National Bank. After the expiration of these delays, the special authorizations of exchange have again been extended further toward the end of the year with individuals who may make demand. These exchanges have carried minimum amounts (in all about 2,000 francs).

On January 3, 1907, the reserves of the National Bank in nickel coins amounted to 2,614,000 francs; on January 3, 1908, they had been reduced to 1,877,000 francs.

In consequence of the privilege given to individuals by the law of exchanging the nickel coins against the coins of lawful payment, the quantities existing in circulation are never superabundant. According to the needs of the public, the reserves of the National Bank increase or diminish.

Meanwhile in the agencies of the bank on the neighboring frontiers the exchange of nickel coins is interdicted, the actual intention being the distributing and maintaining in profusion the nickel coins where the foreign copper coin has a tendency to be planted by reason of the intensity of commercial relations. In spite of the prohibitions of the law and the surveillance exercised by the administration upon their agents, the infiltration of French bronze coins is incessantly springing up and is difficult to combat in the frontier zones.

A nickel piece of 25 centimes is going to be created in place of the 20-centime piece, demonetized in 1906. The change is justified by considerations of a practical order. The piece of 25 centimes will offer better facilities than the 20-centime piece in fractionary payments of the franc. Exclusively national, they can not be, like the silver coin, disposed to be carried out of the country. Previously, in 1903, France had added a nickel coin to the bronze coins and had adopted the denomination of 25 centimes in preference to that of 20 centimes. A first coinage will shortly be made of the value of 1,000,000 francs.

E. COPPER COINS.

The copper pieces of 2 centimes issued since 1832 represent deduction made for remelting, a value of 4,206,455 francs. On January 3, 1908, the reserve of the National Bank was 138,010 francs and comprised the worn pieces. During the year 1907 the absorption by the circulation amounted to 30,000 francs.

Notwithstanding the recoinages effected in 1895 and 1898, which were of nearly 1,000,000 francs, the proportion of worn pieces is still large enough, because the major portion of the issue had an existence of more than thirty years. During ten years the National Bank effected the retirement of the pieces that were most damaged by wear.

During 1907 a first amount of 90,000 francs has been melted and converted into 1 centime pieces. The average loss of weight resulting from wear amounted to 12 per cent. Since that remelt an amount of more than 18,000 francs has again been retired from circulation.

The 1-centime copper pieces issued since 1832 represent a nominal value of 1,226,322 francs. On January 3, 1907, the reserve of the National Bank was 14,120 francs; notwithstanding a coinage of more than 79,000 francs, executed in the course of the year, the reserve on January 3, 1908, is only 78,960 francs.

During twenty years six coinages of an amount of more than 350,000 francs have been made to accommodate the necessities of the circulation. The 1-centime pieces are, generally, but little used. Nearly all those which were old have disappeared naturally, without any necessity for remelting.

The law of July 19, 1895, authorized the Government to extend to the copper coins the principle of the power of exchange appropriated to the nickel coins. The pieces presented for exchange in 1907 represented an amount of 216,290 francs, in 1906 the movement of exchanges having been 238,380 francs and in 1905 197,620 francs.

Nickel Coin of 25 Centimes.

A. Law of February 3, 1908, creating a nickel coin of 25 centimes to replace the nickel coin of 20 centimes. (Le Moniteur Belge, February 7, 1908.)

Leopold II, etc.

Sole article. In the articles 2, 3, and 5, of the law of December 20, 1860, the words "Vingt centimes" (20 centimes) are replaced by the words "Vingt-cinq centimes" (25 centimes).

Published, etc.

B. Statement of the motives of the law presented December 4, 1907, to the Chamber of Representatives.

The law of December 20, 1860, created the nickel coins of 5, 10, and 20 centimes. The type of the die for 20 centimes adopted by virtue of that law has been demonetized by royal decree of June 30, 1906, and has not been replaced up to date.

The design of the law, in conformity with the orders of the King, I have the honor to submit to your deliberations for the purpose of substituting for the die for 20 centimes a die of the nominal value of 25 centimes.

The change is justified by considerations of a practical order. The 25-centime piece offers better facilities than the 20-centime piece for fractionary payments of the franc. They interpolate between the die for the nickel 10 centimes and the die for the silver 50 centimes, and fill, in part, the office of the last piece by being a multiple of the first.

The Government adopted the perforated type for the 25-centime piece, like the 5 and 10 centime nickel pieces. The confusion which has been produced in the past, especially with the 20-centime piece and the divisionary silver coins will then be avoided.

C. Report made upon the design of the law, in the name of the Commission of Representatives, by M. Tibbaut. (Session of December 18, 1907.)

The Government proposes to substitute a nickel piece of the nominal value of 25 centimes of the perforated type, for the 20-centime piece of the lion type, demonetized by royal decree of June 30, 1906.

This is a modification of the monetary law of December 20, 1860, which created the three types for 5, 10, and 20 centimes.

The 25-centime pieces are, like all the pieces of 5 and 10 centimes, an odd coin, of which the faculty is regulated by that law.

By the terms of article 7: "No one is obliged to receive in payment more than 5 francs in nickel coin."

By the terms of article 8: "The nickel coins shall be exchanged against the coins of lawful payment in sums the minimum of which shall be fixed by the Government and in the offices which it designates."

"The public may be permitted to exchange, in the offices and upon the terms decided by the Government, the coins of lawful payment against the odd coins."

Various royal decrees have regulated the exchange which operates in the offices of cashier of the State (National Bank).

D. Report made upon the design of the law, in the name of the commission of the senate, by M. V. Allard. (Session of January 21, 1908.)

The law of December 20, 1860, which created the new nickel money modified advantageously our monetary circulation in Belgium. That law created three different types of pieces: 5, 10, and 20 centimes; since their issue certain changes have been brought about. On the one hand, the primitive pieces which were confounded with our divisionary coins have been recoined and a new perforated type has been issued. On the other hand, the 20-centime piece has been demonetized, and it has not been replaced up to date.

The design of the law which we here submit has for its object the substitution of the 25-centime piece, adopting, as for its subdivisions, the perforated type.

That new issue will have the advantage of responding better to the fractions of the franc, particularly to the piece of 50 centimes. They will alleviate our circulation of divisionary coins, whose insufficiency has been already acknowledged. I believe I can add, besides, that the new 25-centime piece, by its size, will often be preferred to the divisionary coin of 50 centimes for the payment of salaries.

The reception which will be given to the new coinage will determine its importance, and, for a beginning, the Government intends to make a first issue of a nominal amount of 500,000 francs.

Our commission has unanimously agreed to propose the adoption of the design which we have submitted.

II. Royal decree of March 13, 1907, regulating the type of the silver coins of 50 centimes and fixing the cost of their manufacture:

Leopold II, etc.

See article 2 of the monetary law of December 30, 1885.

Review our decree of July 5, 1901.

Agreeing to adopt for the silver coins of 50 centimes the type determined by our decree of June 11, 1904, for the silver coins of 2 and 1 franc.

Upon the proposition of our minister of finances and public works, we have resolved and decreed:

Art. I. The silver coins of 50 centimes shall be stamped with our effigy, the head turned to the left; they shall bear on their obverse the legend: "Leopold II, Roi des Belges," or "Leopold II, Konig der Belgen" ("Leopold II, King of the Belgians"); and on their reverse the indication of their value and the date encircled by a wreath formed by a branch of oak and a branch of ivy. The coins shall be struck with a fluted rim.

Art. II. The type of the 50-centime piece, annexed to the present decree, is approved.

Art. III. The cost of the manufacture is fixed, alloyage included, at 3.25 francs per kilogram of coins of 50 centimes.

Art. IV. The costs of execution of the coinage, of verification of the weights and the stamping of the pieces of 50 centimes, are to be charged to the director of the coinage.

III. Resolution of the minister of finances, of July 25, 1907, regulating the cost of execution of the coinage of the copper coins of 1 centime:

The Minister of Finances: Review the ministerial resolution of January 14, 1895, agreeing to regulate anew the cost of the execution of the coinage of 1-centime pieces.

Upon the proposition of the commissioner of coins:

Resolution:

Art. I. The coinage of 1-centime pieces, subjected to the regular test of the coining press and accepted by the director of the mint, shall be paid for to the chief coiner at the rate of 15 centimes per kilogram of the pieces manufactured.

Art. II. The commissioner of coins is charged with the execution of this resolution.

IV. Ministerial resolution of November 25, 1907, regulating the method of payment of the expenses occasioned by the verification of coins manufactured.

The Minister of Finances: See royal decree of December 30, 1848, organizing the administration of the coins; see royal decrees of March 28, 1870, March 29, 1886, June 11, 1904, June 23, 1904, and March 13, 1907; review the ministerial resolutions of March 30, 1886, and July 1, 1904, agreeing to regulate anew the method of payment of the expenses occasioned by the verification of coins presented for delivery.

Upon the proposition of the commissioner of coins:

Resolution:

Art. I. They shall not any more allow the cost of the verification of coins to the controller of exchange and coinage.

Art. II. The cost of verification of the gold, silver, and divisionary silver, and nickel coins of lawful payment, which are charged to the director of coinage, shall be attributed to the State.

Art. III. The commissioner of coins shall place at the disposal of the controller the number of workings necessary to effect the verification of the coins.

The salaries of the workmen shall be paid by the controller and approved by the commissioner of coins upon the state's arrangement.

Art. IV. An indemnity shall be accorded to the controller for extra labor occasioned by the verification of the coins.

Art. V. The expenses resulting from the verification of the coins shall be imputed to the funds of the monetary provision. This is beneficial, by way of compensation, to the suppression of the costs of verification where they are conferred upon the state.

The reserve of the National Bank of Belgium comprised:

Classification.	Francs.	
	December 31, 1906.	December 31, 1907.
Gold coins	103,871,160.00	106,707,910.00
Silver 5-franc pieces	10,596,675.00	19,565,495.00
Odd coins and copper coins	9,717,292.60	6,988,395.86
Comparative total of the metallic reserve	124,185,127.60	133,261,800.86

Bank notes in circulation in Belgium: The amount of notes in circulation on December 31, 1907, were 798,167,760 francs, and on December 31, 1906, they were 770,423,340 francs.

FRANCE.

Answers to interrogatories, 1907.

(1) Amount of gold coined during calendar year 1907:

A. French Gold Coins.

Denomination.	Number.	Value.
		Francs.
100-franc pieces	20,000	2,000,000
20-franc pieces	17,715,935	354,318,700
10-franc pieces	3,363,875	33,638,750
Total	21,099,810	389,957,450

Coined from bullion and from recoinage of domestic coins:

	Francs.
Bullion	389,633,635
Recoinage	323,815
Total	389,957,450

B. Colonial Coins.

Denomination.	Number.	Value.
		Francs.
20-franc pieces	26	520
10-franc pieces	86	860
Total	112	1,380

(2) Amount of silver coined during calendar year 1907:

A. French Silver Coins.

Denomination.	Number.	Value.
		Francs.
1-franc pieces	2,502,745	2,502,745.00
50-centime pieces	7,332,519	3,665,909.50
Total	9,894,564	6,228,654.50

The 1-franc pieces were obtained from the recoinage of—

	Francs.
Old 1-franc pieces	1,381
5-franc pieces	2,547,089

The 50-centime pieces, the greater part of which were coined to replace worn coins of the same denomination to the amount of 3,518,000 francs, were also obtained from the recoinage of the above.

B. Colonial Coins.

Denomination.	Number.	Value.
		Francs.
Indo-China:		
1-piastre pieces	14,061,745	75,033,423
Tunis:		
2-franc pieces	306	612
1-franc pieces	300,679	300,679
50-centime pieces	201,006	100,503
Total	501,991	401,191

(3) No coinage was executed for other governments during the year 1907.

(4) Amount of gold used in industrial arts during calendar year 1907 may be estimated at 31,800 kilograms, fine gold. The weight of gold objects stamped at the mint and bureau of control was 15,500 kilograms.

(5) Amount of silver used in industrial arts during the calendar year 1907: 302,000 kilograms, fine silver. Objects stamped at mint and other bureaus of control: 143,000 kilograms (0.950 and 0.800 fine).

(6 and 7) Imports and exports of gold and silver during calendar year 1907:

Classification and country.	Imports.		Exports.	
	Weight.	Value.	Weight.	Value.
	Kilograms.	*Francs.*	*Kilograms.*	*Francs.*
Gold bullion:				
England	45,408			
Italy	1,554

Total	498,336	94,684,000	1,196,968	187,086,000
Silver ore (destination not given)	18,179	8,000		
Silver ore, bars, and broken silver:				
England			13,227	
Other countries			114,732	
Total			127,959	15,227,000

(8) The French customs do not class by countries gold coin imported into the country. It is therefore impossible to give the number of American gold coins that entered France during the year.

(9) No American gold coin was melted down at the mints during the year 1907.

(10) Gold produced from mines of the country during 1907: The evaluation for the year 1907 are not yet to hand. For the year 1906, from statistics furnished by the minister of public works, the products of the French mines would be 756 kilograms; value, 2,604,000 francs (at 3,444 francs per kilogram).

(11) Silver produced from mines of the country during 1907: Output for the year 1907 not yet known; for the year 1906 it was 23,378 kilograms; value, 2,685,000 francs (at 120 francs per kilogram).

(12) Output of gold from refineries of the country during 1907: Output for the year 1907 not yet known; for the year 1906 it was 14 kilograms; value, 48,000 francs (at 3.444 francs per kilogram). From colonies: Guiana, 2,797 kilograms; value, 9,636,000 francs (at 3,444.44 francs); Madagascar, 2,000 kilograms; value, 6,902,000 francs (at 3,444.44 francs); Indo-China, forty-four kilograms; value, 149,000 francs (at 3,386 francs).

(13) Output of silver from refineries of the country during 1907: Output for the year 1907 not yet known; for the year 1906 it was 50,058 kilograms, valued at 6,007,000 francs (at 120 francs). From colonies: Algeria, 41 kilograms; value, 10,900 francs (at 120 francs).

From statistics furnished by the minister of public works the above 50,058 kilograms of silver were produced from 18,127,000 kilograms of galenas, of French or Algerian origin, and 64,892,000 kilograms of galenas, etc., of foreign origin.

(14) The stock of gold in France at the end of the year 1907 is still estimated to be—

	Francs.
Pieces of 20 francs	4,000,000,000
Pieces of 10 francs	650,000,000
Other pieces	150,000,000
Total	4,800,000,000

(15) The stock of silver at the end of 1907 was estimated to be—

	Francs.
5-franc pieces	1,800,000,000
Fractional coins	330,000,000
Total	2,130,000,000

(16 and 18) There are no government notes in France.

(17 and 19) The Bank of France alone has the right to issue notes. On January 31, 1908, the amount of notes in circulation was 4,949,549,555 francs.

The amount of coin held by the Bank of France on January 31, 1908 being—

	Francs.
Gold	2,686,448,374
Silver	908,944,002
Total	3,595,392,376

The circulation of notes being 4,949,549,555 francs, the uncovered notes would amount to 1,354,157,179 francs.

(20) The actual currency of the country is gold and silver. Gold and 5-franc pieces have unlimited purchasing power. Fractional currency to the amount of 50 francs is legal tender. Notes of the Bank of France are legal tender to any amount, but are convertible into specie upon demand.

(21) Premium on gold: Gold was at par throughout the year 1907.

(22 and 23) Laws passed during the year 1907 affecting the currency: The report to the minister of finance contains all information concerning monetary circulation during the year 1907. A copy of decree not published at the time of the printing of the report and a copy of the report of the commission for the control of monetary circulation are also inclosed.

[Translation.]

Decree Relative to the Manufacture and Circulating Power of the One One-hundredth of a Piaster Piece for Indo-China.

Ministry of Finances.

The President of the French Republic, by virtue of the decrees of July 8, 1895, and August 29, 1905, relative to the manufacture and circulating power of silver and bronze coins of French Indo-China, upon the report of the minister of finance and the minister of the colonies, decrees:

Article 1. The piece of one one-hundredth of a piaster shall henceforth be manufactured under the conditions of fineness, weight, tolerance, and diameter, regulated as follows:

Metal.	Denomination.	Diameter.	Composition.	Tolerance in fineness above and below.	Legal weight.	Tolerance in weight above and below
			Thousandths.	*Thousandths.*	*Grammes.*	*Thousandths.*
Bronze.	1/100 piaster	26 millimeters	Copper...95 Tin.....4 Zinc.....1	Copper...10 Tin.....5 Zinc.....5	5	10

The pieces of one one-hundredth of a piaster manufactured under the conditions of article 1 shall be legal tender in sums up to 2 piasters in a single payment.

Article 2. The minister of finance and the minister of the colonies are each, in so far as he is concerned, charged with the execution of the present decree, which shall be published in the Journal Officiel, the Bulletin des Lois, and the Bulletin des Colonies.

Done at Paris, June 8, 1907.

(Signed) A. FALLIÈRE,
By the Minister of the Republic.

The Minister of Finance,
(Signed) J. CAILLAUX.
The Minister of the Colonies,
(Signed) MILLIÈS LACROIX.

GREECE.

LEGATION OF THE UNITED STATES OF AMERICA,
Athens, February 14, 1908.

Answers to interrogatories, 1907.

(1, 2, and 3) Amount of gold and silver coined and coinage executed for other governments during calendar year 1907: None.

(4 and 5) Amount of gold and silver used in industrial arts during 1907: Not known.

(6 and 7) Import and export of gold and silver during calendar year 1907: Impossible to ascertain.

(8 and 9) Amount of United States gold coin imported and amount of same deposited at mint and melted during 1907: Not known.

(10) Gold produced from mines of the country and colonies of the country during 1907: None.

(11) Silver produced from mines of the country and colonies of the country during 1907: Unknown.

(12 and 13) Output of gold and silver from refineries of the country during 1907: Not known.

(14) Approximate stock of gold, coin and bullion, in the country at the close of the calendar year 1907: $600,000.

(15) Approximate stock of silver, coin and bullion, in the country at the close of the calendar year 1907: Approximately, $500,000.

(16 and 18) Government notes outstanding at the end of the year 1907: 78,000,000 drachmas. None covered by legal tender gold or silver coin or bullion.

(17 and 19) Bank notes outstanding at the end of the year 1907: 127,000,000 drachmas. None covered by legal tender gold or silver coin or bullion.

(20) Actual currency of the country: Inconvertible paper.

(21) Gold is at a premium. During 1907 the highest premium was drachmas 1.14½ equal to 1 franc gold; the lowest premium was drachmas 1.06½ equal to 1 franc gold; the average premium was drachmas 1.10 equal to 1 franc gold. (1½ drachmas is worth 1 franc gold; 5.95 drachmas are worth 1 dollar.)

(22 and 23) Laws passed during 1907 affecting the currency and report published on operations of the mint during 1907: None.

ITALY.

[Translation.]

Answers to interrogatories, 1907.

(1) In the year 1907 no gold coins were struck. During the year they melted only worn and mutilated coins retired from circulation, namely:

	Lire.
40-lire pieces from Russian 10-rouble coins	11,040
40-lire pieces from French coins	80
Total	11,120

(2 and 3) In the royal mint at Rome there were recoined 8,471,824 lire into national coins of 1 lire, and 2,490,900 into pieces of 2 lire. The first issue was a partial recoinage of worn coin of the same denomination retired from circulation by virtue of the royal decree of March 17, 1907, 2,700,000 lire, and 5,300,000 lire for effect of the royal decree of October 17 of the same year.

Two-lire pieces to the amount of 2,490,000 lire were issued, of which 2,300,000 proceeded from the recoinage authorized by the above-mentioned royal decree of March 17, 1907, and the remaining 190,900 lire were on account of the recoinage authorized by the other aforementioned royal decree of October 17.

In the same year there were retired from circulation silver money of national coin, as follows:

	Lire.
5-lire pieces	8,992,960
2-lire pieces	2,500
1-lire pieces	4,100
0.50-lire pieces	39,400
Total	9,038,960

(4 and 5) The use of precious metals in the arts and manufactures being entirely free by virtue of the law of May 2, 1872, there is no means for answering these questions.

(6 and 7) For answering these questions there is a summary herewith of statistical data relative to the commerce of importation and exportation of precious metals in 1907, arranged according to countries of derivation and destination:

IMPORTS AND EXPORTS OF GOLD AND SILVER DURING 1907, BY COUNTRIES.

NOTE.—The calculation of the value of the kilograms is based on the official statistical valuation fixed by the central commission for 1907.

(8 and 9) There was no direct exchange of the precious metals in 1907 between the United States and Italy, and no United States gold coin was deposited at the royal mint in Rome, the only mint in Italy.

(10) Amount of gold produced from mines of the country during 1907: 60 kilograms, valued at 205,000 lire.

(11) Amount of silver produced from mines of the country during 1907: 22,950 kilograms, valued at 2,547,002 lire.

(12) Output of gold from refineries of the country during 1907: 50,625 kilograms, valued at 174,000 lire.

(13) Output of silver from refineries of the country during 1907: 20,412 kilograms, valued at 2,270,341 lire.

(14) On December 31 the stock of gold in the national treasury was as follows:

	Lire.
In coin	211,051,616
In bars	309,747
Coin in the Bank of Italy to the credit of the national treasury, but the property of the State	91,952,310
Total	303,313,673

(15) On December 31, the stock of silver belonging to the treasury amounted to 71,862,419 lire, namely:

	Lire.
In scudi	1,550,210
In Italian fractional coins, coins of the Latin Union, and Maria Theresa thalers	5,006,689
In bars	792,786
In the Bank of Italy to the credit of the treasury and belonging to the State:	
Scudi	58,949,235
Fractional coin	2,663,685
Funds not apportioned, other than lire	2,899,814
Total	71,862,419

(16 and 18) Amount of government notes in circulation on December 31, 1907:

	Lire.
437,518,410 lire, of which for account of the State, see law of July 22, 1894, first part of article 2, and August 1, 1895, article 20	400,000,000
For account of the Bank of Naples (article 3 of the royal decree of 1897, No. 77)	26,027,760
For account of the State, in effect of article 2 of the law of March 3, 1898	11,250,000
For account of the State, according to the law of July 1, 1905	240,650
Total	437,518,410
Uncovered government notes in circulation	320,240,650
Because the circulation credited to the Bank of Naples is entirely covered by gold coin for	26,027,760
The circulation for account of the State according to the law of March 3, 1898, and completely covered by gold coin, namely	11,250,000
The principal circulation for account of the State, 400,000 000 lire, is covered by one-fifth of the amount in gold coin, namely	80,000,000
In gold coin	117,277,760
Against the whole amount of the circulation	437,518,410
Total uncovered reserve	320,240,650

(17 and 19) The circulation of bank notes on December 31, 1907, 1,851,541,950 lire, of which, for account of—

	Lire.
The Bank of Italy	1,411,587,600
The Bank of Naples	360,319,200
The Bank of Sicily	79,635,150
Total	1,851,541,950

Uncovered bank notes in circulation, 510,892,187.56 lire, divided as follows:

	Lire.
Bank of Italy	361,943,559.92
Bank of Naples	117,057,377.67
Bank of Sicily	31,891,249.97
Total	510,892,187.56

The 40 per cent of the metallic reserve which is to be paid at sight is divided as follows:

	Lire.
Bank of Italy	1,049,644,040.08
Bank of Naples	243,261,822.33
Bank of Sicily	47,743,900.03
Total	1,340,649,762.44
Added to which the uncovered	510,892,187.56
Makes the complete circulation	1,851,541,950.00

The proportional percentage between that portion of the reserve which is free of the 40 per cent to be paid at sight and the total circulation at each institution results as follows:

	Lire
Bank of Italy	74.36
Bank of Naples	67.51
Bank of Sicily	59.95

(20 and 21) Premium on gold: The price of the precious metals not being quoted, nor the exchange for the Kingdom officially listed, we have recourse to the exchange upon France as the standard premium on gold as the best approximation. During the year such exchange was on the average of 99.98 lire per cent of the franc, with a maximum of 100 lire per cent and a minimum of 99.60 lire per cent.

(22 and 23) No changes were introduced in 1907 in the laws regulating the monetary system of Italy. Herewith annexed is a copy of the law of December 29, 1897, which prolonged to December 31, 1908, the legal course of bank notes and of facilitating officially the liquidation of the immobilizations of the institutes of issue.

No separate report is published by the royal mint. Particulars regarding the operations in the striking of coins and medals and other mechanical work are given in the annual report of the treasury.

Royal decree of March 17, 1907, No. 138, authorizing the coinage of fractional silver coin against the demonetization of 5,000,000 lire in scudi, and establishing the new division of the fractional coin. (Published in the Gazzetta Ufficiale del Regno, April 13, 1907, No. 88.)

Vittorio Emanuele III, by the grace of God and the will of the nation, King of Italy.

With regard to the monetary convention agreed to by Italy with France, Belgium, Switzerland, and Greece, approved by law December 30, 1885, No. 3590 (third series), by which the contingent of 202,400,000 lire in fractional silver coin was assigned to Italy;

With regard to the supplementary monetary convention signed at Paris October 29, 1897, approved by law January 2, 1898, No. 1, that increased the contingent of fractional coin which Italy was empowered to issue by 30,000,000 lire, with the privilege of providing for the issue of 3,000,000 lire of the larger contingent by the use of silver bars, and with the obligation to employ for the preparation of the remaining 27,000,000 lire, silver scudi of national coinage, exclusively;

With regard to royal decree of September 4, 1898, No. 415, in which by virtue of the aforesaid privilege the coinage of 3,000,000 lire was authorized according to article 2 of the supplementary convention of October 29, 1897, through the remelting of Eritrean silver pieces already in existence by virtue of royal decrees of August 10, 1890, Nos. 7049 and 7050; January 25, 1891, No. 81, and December 19, 1895, No. 697;

With regard to our decree of October 8, 1906, No. 557, by which the coinage of 10,000,000 pieces has been authorized through the remelting of a corresponding amount in scudi of national coinage;

Recognizing that it is opportune to provide for a last issue of fractional silver with which to meet the demands of the circulation;

Upon the suggestion of our secretary of state for the treasury, with the concurrence of the minister of agriculture, manufactures, and commerce, and with the consent of the council of ministers

We have decreed and do decree:

ARTICLE 1. The royal mint is authorized to provide for the coinage of new silver pieces to a nominal value of 5,000,000 lire through the remelting of silver scudi of 5 lire, of national coinage, as determined by article 2 of the supplementary monetary convention of October 29, 1897, approved by law January 2, 1898, No. 1.

ART. 2. The coinage which has been authorized by article 1 shall be made to a nominal amount of 2,300,000 lire in 2-lire pieces, and to a nominal amount of 2,700,000 lire in 1-lire pieces.

ART. 3. The contingent of fractional silver coin assigned to Italy by the conventions of November 6, 1885, and October 29, 1897, is established by denominations as follows:

	Lire.
2-lire pieces	96,700,000
1-lire pieces	113,700,000
0.50-lire pieces	10,000,000
Total	220,400,000

We ordain that the present decree, furnished with the seal of the State, shall be inserted in the official records of the laws and decrees of the Kingdom of Italy and sent to all whom it may concern, so that they may observe it and cause it to be observed.

Dated at Rome this day, March 17, 1907.

Royal decree of October 17, 1907, No. 703, authorizing the royal mint to provide for the coinage of new silver pieces to a nominal value of 5,000,000 lire through the demonetization of scudi and to recoin another 5,000,000 lire from 50-centessimi pieces into 1 and 2 lire pieces. (Published in the Gazzetta Ufficiale del Regno, November 9, 1907, No. 265.)

Vittorio Emanuele III, by the grace of God and the will of the nation, King of Italy.

Recognizing that it is opportune to provide for a last issue of fractional silver coin with which to meet the needs of the circulation and ever-increasing demand for coin of that description;

With regard to the monetary convention agreed to by Italy with France, Belgium, Switzerland, and Greece, approved by law December 30, 1885, No. 3590 (third series), by which a contingent of 202,400,000 lire in fractional silver coin was assigned to Italy;

With regard to royal decree of January 2, 1887, No. 4269 (third series), concerning the division of the 202,400,000 lire of fractional silver coin;

With regard to the supplementary monetary convention signed at Paris, October 29, 1897, approved by law January 2, 1898, No. 1, that increased the contingent of fractional silver coin which Italy was empowered to issue by 30,000,000 lire, with the privilege of providing for the issue of 3,000,000 lire of the larger contingent by the use of silver bars, with the obligation to employ in the preparation of the remaining 27,000,000 lire silver scudi of national coinage exclusively;

With regard to the decree of September 4, 1898, No. 415, in which, by virtue of the aforesaid privilege, the coinage of 3,000,000 lire was authorized according to article 2 of the supplementary monetary convention of October 29, 1897, through the remelting of Eritrean silver pieces already in existence, by virtue of royal decrees of August 10, 1890, Nos. 7049 and 7050; January 25, 1891, No. 81; and December 19, 1895, No. 697;

With regard to our decree of November 30, 1905, No. 575, concerning the recoining of 5,000,000 lire of 50-centessimi pieces into 1 and 2 lire pieces; recoinage that may be of continued advantage to the circulation of an additional 5,000,000 lire;

With regard to the two other decrees of October 8, 1906, No. 557, and March 17, 1907, No. 138, by which the respective coinage of 10,000,000 and 5,000,000 pieces has been authorized, through the remelting of a corresponding amount of national scudi, and at the same time arranging for their division into denominations;

Upon the suggestion of our secretary of state for the treasury, with the concurrence of the minister of agriculture, manufactures, and commerce, and with the consent of the council of ministers:

We have decreed and do decree:

Article 1. The royal mint, by the terms of article 2 of the supplementary monetary convention of October 29, 1897, approved by law January 2, 1898, No. 1, authorizing provision for the coinage of new fractional silver coin to a nominal value of 5,000,000 lire, through the remelting of the same amount of silver scudi of 5 lire, of national coinage.

Article 2. The royal mint is equally authorized to recoin to a nominal amount of 5,000,000 lire the fractional silver coins of 0.50 (½) lire into proportional pieces of 1 and 2 lire, or more explicitly, 2,400,000 lire in 2-lire pieces and 2,600,000 lire in 1-lire pieces.

Article 3. For effecting the aforesaid operation the contingent of the fractional silver coin assigned to Italy by the conventions of November 6, 1885, and October 29, 1897, remained established by denominations as follows:

	Lire.
2-lire pieces	101,400,000
1-lira pieces	119,000,000
0.50-lira pieces	5,000,000
Total	225,400,000

We ordain that the present decree shall be furnished with the seal of the State and inserted in the official records of the laws and decrees of the Kingdom of Italy and sent to all whom it may concern, so that they may observe it and cause it to be observed.

Law of December 29, 1907, No. 799, extending the period during which bank notes shall be legal tender and also the time to enable the institutions of issue to realize on their fixed assets, to December 31, 1908. (Published in the Gazzetta Ufficiale del Regno, December 31, 1907, No. 303.)

Vittorio Emanuele III, by the grace of God, and the will of the nation, King of Italy.

The Senate and Chamber of Deputies having approved, we have sanctioned and we promulgate the following:

Article 1. The period during which the notes of the Bank of Italy, of the Bank of Naples, and of the Bank of Sicily were made legal tender by article 10 of the law regarding institutions of issue, approved by royal decree of October 9, 1900, No. 373, is extended entirely to December 31, 1908.

Article 2. For the purpose of realizing on the fixed assets of the banks of issue, as provided by articles 13 of the law of August 10, 1893, No. 449, and 36 of the law of August 8, 1895, No. 486, the privilege granted by the laws of August 8, 1895, and of July 2, 1896, No. 265, so far as they have not been changed by articles 59 and 60 of the general law regarding banks of issue, is extended from January 1 up to December 31, 1908.

We ordain that the present decree shall be furnished with the seal of the State and inserted in the official records of the laws and decrees of the Kingdom of Italy and sent to all whom it may concern, so that they may observe it and cause it to be observed.

SWITZERLAND.

Answers to interrogatories, 1907.

(1) Gold coined, 20-franc pieces, 150,000; value, 3,000,000 francs. No recoinage of gold pieces.

(2) Silver coined:

Denomination.	Pieces.	Francs.
2-franc	300,000	600,000
1-franc	800,000	800,000
50-centime	1,200,000	600,000
Total	2,300,000	2,000,000

The federal mint at Berne, which has executed the above coinage, has recoined, in 1907, 277,000 5-franc pieces of the old type (Helvetia, seated) into 5-franc pieces of the new type, 1,385,000 francs. No minting was done for us in another country.

(3) The federal mint did not execute in 1907 any coinage for a foreign government.

(4) The weight of fine gold used for industrial purposes amounted to about 11,000 kilograms. For lack of information it is impossible to specify here the exact quantity of new gold, old gold, and of gold coins used for industrial purposes. Yet it may be possible that a considerable quantity of new gold coins of full weight has been melted.

(5) As regards the fine silver used in 1907 for industrial purposes, its total weight is calculated to be about 69,000 kilograms. In view of the low value of silver it is to be presumed that silver in bullion (no coins) was melted for industrial purposes.

(6 and 7) Imports and exports of gold and silver during 1907:

(8 and 9) To our knowledge no direct importation of gold coins was made from the United States to Switzerland. The American gold brought to this country by tourists can not be valued, travelers being submitted to no customs inspection at the frontier as concerns the money in their possession. The federal mint did not melt any American gold coin in 1907. For the rest, we refer you to what we have said in former years.

(10 and 11) Switzerland does not possess any gold or silver mines, therefore these questions can not be answered.

(12 and 13) Output of gold and silver from refineries of the country during 1907: Can not be replied to because of lack of information.

(14 and 15) Approximate stock of gold and silver coin and bullion in the country at close of the calendar year 1907: The cash in the Swiss banks of emission, including the National Bank, which commenced doing business in the year 1907 was, on December 31, 1907—

	Francs.
Gold	131,995,969.35
Silver	8,793,555.00

According to an estimate prepared by a specialist there exists in Switzerland a stock of 150,000,000 francs in gold and 80,000,000 francs in silver (5 franc pieces and small silver coins; no nickel or copper included).

(16 and 18) The Federal Government issues no government notes.

(17 and 19) Up to December 31, 1907, the circulation of bank notes of the National Bank and of the other Swiss banks of emission amounted to 281,783,250 francs. The amount of notes not covered by gold or silver was, on December 31, 1907, 135,622,025 francs.

(20) Actual currency of the country: We refer to what is said in our former replies on the subject of monetary system in Switzerland, which is still a member of the Latin Union, and on the subject of "The Swiss National Bank," which commenced operation in June, 1907. A copy of the law creating said bank was inclosed with our report of 1906.

(21) From time to time gold is at a premium according to the rate of exchange in Paris; that is to say, as soon as the latter passes par by 20 to 25 centimes, a small premium is asked for payment in gold.

The rate of exchange on Paris at the stock exchange in Zurich, for 1907, by taking the average value in each month, was as follows:

Month.	Maximum.	Minimum.	Average.
	Centimes.	*Centimes.*	*Centimes.*
January	100.17	100.07	100.13
February	100.17	99.82	99.97
March	100.17	99.92	99.98
April	100.15	100.02	100.10
May	100.15	99.95	100.11
June	100.02	99.95	100.00
July	99.97	99.90	99.95
August	100.07	99.92	99.99
September	100.07	100.00	100.03
October	100.23	100.00	100.01
November	100.37	100.22	100.30
December	100.37	100.27	100.31

(22) No laws relating to the monetary system of Switzerland, or to bank notes, have been passed in 1907.

(23) The report of the federal mint on its administration for the year 1907 is included in the report of the department of finance for the same year, a copy of which is inclosed herewith.

AMERICAN LEGATION,
Berne, June 9, 1908.

64472—08——14

Report of the Federal Department of Finances and Customs upon the Administration of 1907.

ADDITIONAL CONVENTION TO THE INTERNATIONAL MONETARY CONVENTION.

During the course of the last year France has proposed the revision of the international monetary convention of November 6, 1885, for the purpose of increasing the contingents of the silver divisionary coins. Upon that occasion, two other States besides having made other propositions, the negotiations have moved along slowly; however, it is now upon the point of being terminated, and we hope they will submit a plan shortly to the Federal Assembly for an additional convention.

GOLD COINS.

The Swiss monetary inquiry of 1905 and other sources of information have proven that a large number of 20-franc pieces coined by Switzerland are no more in circulation, and that in all probability they have been melted by other States or used for industrial purposes. In consequence the department of finances has taken the necessary measures with the Swiss National Bank for retaining, as far as possible, the new gold coins in the country.

SILVER DIVISIONARY COINS.

We have profited by the opportunity which was offered us by the negotiations relative to the conclusion of an additional convention to the international monetary convention to make with France an agreement tending to facilitate the exchange of coins between the two countries, particularly of silver divisionary coins.

To complete that measure, the department of finances has recently published a notice concerning the circulation of silver divisionary coins. That publication has appeared in the Feuille Fédérale and in the Feuille Officielle du Commerce; it has, besides, been sent under the form of a handbill to the federal and cantonal cashiers, to the administrators of railroads and steamships, as well as to the Swiss National Bank and the old banks of issue. Besides an exact enumeration of coins which have currency in the various countries of the Latin Union and the prescriptions concerning their acceptance by the public treasuries, the notice contains also instructions upon the subject of the retirement of deteriorated coins and of those whose wear is so that the effigy and the indications of the individual countries of their issue are no longer recognizable. These last are accepted by the public treasuries at the reduced rate of 50 per cent of their nominal value, and their bearers are authorized, when the case occurs, to free them from this reduction, to send them to the commercial port of the state federal cash office to be subjected to an examination.

NICKEL AND COPPER COINS.

In the last year the body of the Federal Assembly have admitted Switzerland's lack of nickel and copper coins, and they have estimated that it would be advisable to coin a large quantity.

It may be that during the season of strangers these coins are a little rare in certain parts, but they do not operate here like a phenomenal passage or in a sporadic manner where they do not end in a general dearth. The need of small coin is accentuated, it is true, for various causes, notably, in consequence of the creation of large bazaars and numerous lines of tramways; nevertheless, the administration of the finances is always compelled to hold the necessary amounts at the disposition of the public, and the treasurers of he state have constantly, to insure their success, to give satisfaction to the justifiable demands which are addressed to them. The importance, on the other hand, is not to go too far in that direction and to guard against the inundation of the country with pieces of that description, if they would prevent the silver divisionary coins from passing to strangers, experience proving that the money of least value makes its disappearance the easier.

THE SERVICE OF THE COINS.

The service always tends toward calls for more expansion; the demands for exchange of coins increases year by year, and the treasurer of the State makes it possible to give satisfaction in case of a brief delay. Therefore, they are sometimes obliged to carry certain coinages of the year to a large amount; it is not really the nickel and copper

coins only which are demanded in large quantity, but equally the silver divisionary coins. The need of these last coins is felt more particularly since we have commenced to retire also in the course of the year the worn French and Belgian coins at assay standard.

Complaints on the subject of worn, mutilated, or uncurrent coins have been very rare; the treasury is compelled, in exchanges, to give satisfaction to the demands of the public.

The retirement of worn pieces of 50 centimes is always on the decrease, in retaliation, that of 1-franc pieces tends to increase. By way of reference, we give the following statement of worn French and Belgian 1-franc and 50-centime pieces which have been retired from circulation and returned to the country of their origin:

Year.	50-centime pieces returned—		1-franc pieces returned—
	To France.	To Belgium.	To France.
1899	80,000	.....	.....
1900	80,000	.....	.....
1901	76,000	.....	.....
1902	120,000	.....	.....
1903	160,000	.....	.....
1904	208,000	.....	.....
1905	400,000	200,000	.....
1906	344,000	.....	.....
1907	208,000	.....	508,000

The stock of silver divisionary coin on December 31 last still amounted to 620,000 francs. The cashiers hope that the provision to increase the output of new coinages, the invoices of the pay offices of the district, the post-offices, the custom-houses, and also that of deliveries made at the wicket (gate) will be sufficient to respond to the needs of 1908.

ECUS OF 5-FRANCS.

There has been delivered to the federal mint in the last year the total sum of 1,085,000 francs of old Swiss ecus of 5 francs with the effigy of Helvetia seated. These ecus, which were required to be melted and recoined, had been delivered to the federal treasurer of the State by the public treasurer in Paris in exchange for worn silver divisionary coins returned to France, their country of origin.

MONETARY REVIEW.

GOLD MOVEMENTS FOR THE YEAR.

[From the Bankers' Magazine, London, January, 1908.]

The turnover in gold at the Bank of England during 1907 must, we fancy, have been almost the largest on record. It is striking, however, to note that, notwithstanding the huge exports to New York, the net movements up to December 20 actually showed an increase on balance of no less than £5,406,000. This was partly due to the "unearmarking" of some 4,500,000 of Indian gold and the large purchases of bar gold early in the year. In fact, the net amount imported is even greater than in the previous year, the shipments in 1906 to Egypt having been about £7,000,000 against only £4,580,000 in the past year, while the withdrawals of gold for America in 1906, though not so great as in 1907, were on no mean scale.

GOLD MOVEMENTS AT THE BANK OF ENGLAND FROM JANUARY 1 TO DECEMBER 20, 1907.

Bar gold sold to United States	£6,930,000	Bar gold bought	£19,676,000
French gold coin sold	271,000	United States gold coin bought	3,530,000
To South America	7,054,000	French gold coin bought	600,000
To Egypt	4,580,000	German gold coin bought	3,962,000
To United States (United States coin)	4,263,000	Austrian gold coin bought	14,000
To India ("unearmarked")	[a]3,375,000	From Egypt	[b]2,659,000
To France	2,468,450	From India ("unearmarked")	4,420,000
To Turkey	1,150,000	From Continent	1,827,000
To Italy	500,000	From Australia	[b]1,198,000
To Continent	445,000	From Turkey	154,000
To Singapore	345,000	From Sweden	150,000
To Roumania	180,000	From Denmark	125,000
To Holland	179,000	From Norway	125,000
To South Africa	130,000	From South America	101,000
To Java	107,000	From France	66,000
To Batavia	100,000	From Montevideo	25,000
To Malta	80,000	From Malta	20,000
To Buenos Aires	80,000	From Germany	17,000
To New York (sovereigns)	67,000	From Portugal	16,000
To Brazil	57,000	From Gibraltar	15,000
To Gibraltar	42,000	From Switzerland	10,000
To Canada	25,000		
To Peru	25,000		
To Guayaquil	15,000		
To Mexico	11,000		
To Callao	10,000		
To Bermuda	5,000		
	32,604,450		
Net amount imported	5,406,550		
Total	38,011,000	Total	38,011,000

[a]Including this sum and deducting the amount noted in the table as having been released, the total at present "earmarked" at the Bank of England on account of the Indian currency reserve reaches approximately £3,750,000.
[b]On Indian account.

THE SILVER MARKET.

The record of silver in the year 1907 that has just come to an end has been one of persistent depreciation. The year opened with the metal standing at about 32¾d. per ounce, and it closes with the quotation at 24½d. The fall of nearly 8d. in the time has not been evenly distributed throughout the year, as the greatest depression took place in the last three months. Early in the year it was clear that the market had been somewhat inflated by the efforts made by the Indian government to increase its reserves of silver, but although no firmness was shown there was no depreciation of importance until last October, at the beginning of which month the price stood at a little over 31d. per ounce. Soon after that date it was recognized that India would have to undergo in some form or shape the ordeal of another famine, and within a month or two the perception of this fact caused quite a change in the condition of the market. The whole matter came really very suddenly upon dealers, as the monsoon in India opened rather favorably, and for sometime the rainfall was quite normal. Then, however, a complete change took place, and over a large area of India the crops have been destroyed. At the same time the market has been troubled by offerings of silver from China, where a portion of the silver purchased during the Russo-Japanese conflict would seem to have settled down in the ports, and the banks have felt compelled to ship moderate amounts from time to time. Evidently the market must have been in a weak condition and this circumstance coinciding with the high value of money caused heavy sales, with the result that quotations have fallen to 24½d. per ounce for immediate and 24⅝d. for forward delivery. Since the outbreak of the crisis in America the United States Government has been a much heavier purchaser of silver, presumably for its subsidiary coinage, although some is believed to be wanted for the Philippines. At the same time the future of the market depends almost entirely on the Indian demand, and should the position improve there a smart recovery might easily be seen, but if no such relief is afforded it is to be feared that the early part of next year at least will see considerable dullness. The effect of the restriction of business in India has been to make the demand for money rather less than usual, and both Indian bank rates stand at only 6 per cent.

The following table gives comparisons of leading eastern exchanges, and some of the speculative currencies:

Country and coin.	December, 1907.	December, 1906.	December, 1905.	December, 1904.	December, 1903.
	s. d.	s. d.	s. d.	s. d.	s. d.
India, pence per rupee	3 3⅜	1 4⅝	1 4⅝	1 4⅛	1 4⅝
Shanghai, pence per tael	2 5½	3 0½	2 10½	2 8½	2 4½
Hongkong, pence per dollar	1 10½	2 2⅜	2 0⅛	1 11½	1 8½
Brazil, pence per milreis	0 15⅜	0 15½	0 16⅝	0 13⅛	0 12⅛
Chile, pence per dollar	0 8⅛	0 14⅛	0 14⅛	0 16⅜	0 16⅛
Portugal, pence per milreis	0 47½	0 52½	0 50⅛	0 45⅜	0 42⅜

HAITI.

Answers to interrogatories, 1907.

(1, 2, and 3) No gold or silver was coined, recoined, or melted during 1907. There is no mint in Haiti.

(4 and 5) There are no statistics showing the amount of fine gold or fine silver used in the arts. Other than in photography there seems to be no industrial use of gold or silver.

(6) It is impossible to state the imports and exports of gold during the year 1907, as no statistics are available.

(7) No silver was imported during the year 1907. Some Haitian silver coins were exported as bullion, but it is impossible to give value.

(8) There was a considerable importation of United States gold in 1907, but the amount can not be ascertained.

(9) No gold coin has been melted. There is no mint in Haiti.

(10, 11, 12, and 13) There was no gold or silver produced either from the mines of the country or refined during 1907.

(14 and 15) No statistics are kept as to the stock of gold and silver in the country, in public treasuries, banks, or in circulation. There is no gold or silver bullion in Haiti.

(16 and 18) Government notes outstanding: On December 31, 1907, there was outstanding 7,495,248 gourdes, paper. The whole of the 7,495,248 gourdes, paper, which is outstanding is not covered by gold or silver coin or bullion.

(17 and 19) There are no bank notes in Haiti.

(20) The actual currency of the country is inconvertible paper.

(21) Gold is at a premium as compared with the actual currency of the country. The highest premium during 1907 was 496 per cent; the lowest premium was 337½ per cent, with an average premium of 407 per cent.

(22) Authority was given by the law of August 20, 1907, for the coinage of 1,000,000 gourdes in 20-cent nickel pieces, and 1,000,000 gourdes in 50-cent nickel pieces. These were coined in the United States in 1907 and immediately put in circulation. (Copy annexed.)

(23) There is neither mint nor department of mines in Haiti.

AMERICAN LEGATION,
Port au Prince, March 6, 1908.

[Translation.]

LAW.

Considering that because of lack of surplus receipts, the supplementary credit for the fiscal year of 1906–7 has not been met, it is therefore necessary to provide ways and means to meet it;

Considering that it is also necessary to meet the expenses at the end of the said fiscal year;

The house of representatives, in view of the power granted it by article 69 of the constitution, has proposed, and the legislative corps has sanctioned the urgency of the following law:

Article 1. The secretary of state for finance is authorized to have coined nickel pieces to the amount of 2,000,000 gourdes, 1,000,000 in pieces of 20 cents and 1,000,000 in pieces of 50 cents. One million five hundred thousand gourdes for the current fiscal year, and 500,000 gourdes for the fiscal year 1907–8.

Article 2. The pieces shall bear on one side the coat of arms of the Republic, the figure 20 and the figure 50 below; on the other side the effigy of the President of Haiti and the year of coinage.

Article 3. The amount of this coinage shall be employed to meet the expenses above mentioned.

Article 4. The present law abrogates all laws or provisions of laws contrary thereto. It shall be executed under the supervision of the secretary of finance.

Given at the house of commons August 19, 1907; one hundred and fourth year of independence.

The president of the house.

S. ARCHER.

The secretaries:

G. DESROSIERS,

LOUIS BRUTUS.

Given at the national house, Port au Prince, August 20, 1907; one hundred and fourth year of independence.

The president of the senate.

T. A. DUPITO.

The secretaries:

E. CINÉAS;

DIOGÈNE LEREBOURS.

In the name of the Republic the President of Haiti directs that the above law of the legislative body shall be vested with the seal of the Republic, printed, published, and put into force.

Given at the national palace, Port au Prince, August 28, 1907; one hundred and fourth year of independence.

NORD ALEXIS,
By the President.

The secretary of state for finance and commerce:
F. MARCELIN.

HONDURAS.

Answers to interrogatories, 1907.

(1 and 2) No gold was coined during the year 1907. No silver coined either at home or abroad, except an insignificant amount, perhaps $3,000.

(3) No coinage executed for other governments.

(4 and 5) No data as to gold used in the arts, probably none. Amount of silver used, no data, amount insignificant.

(6) No gold imported. Exports for year ending August 1, 1907, value in United States currency, $10,000.

(7) No silver imported. Exports as above, $250,000.

(8 and 9) Amount of United States gold coin imported and deposited at mint and melted: None.

(10 and 11) Gold and silver produced from mines of the country during 1907: None.

(12 and 13) Output of gold and silver from refineries of the country during 1907: None.

(14 and 15) Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1907: No gold; no data as to silver.

(16 and 18) Government notes outstanding at the end of 1907: None.

(17 and 19) Bank notes outstanding at the end of the year 1907: Reduced to United States currency, about $60,000.

(20) Actual currency of the country: Silver.

(21) Premium on gold during 1907: From 130 to 155 per cent.

(22) No laws were passed during 1907 as to coinage, etc.

(23) No reports of mine published.

AMERICAN CONSULATE,
Tegucigalpa, March 17, 1908.

INDIA.

IMPORTS AND EXPORTS OF GOLD AND SILVER DURING THE YEAR 1907–8.

During the year 1907–8, from April 1 to March 31, according to official statement, the total imports of gold into India amounted to 3,380,405 ounces, valued at $69,175,469, estimated at 15 rupees to the pound sterling. Of the total gold imported 1,675,690 ounces represented bullion. The value of the bullion gold was $35,796,227 (nearly); 1,645,176 ounces represented British gold coin. The value of these coins was

$32,229,166 (nearly); 59,539 ounces, valued at $1,150,075 came in the form of other coined gold.

Exports of gold.—The exports of gold from India during the year aggregated 599,065 ounces, valued at $11,283,042 (nearly). Of this total 584,658 ounces represented bullion, valued at $11,002,369 (nearly); 3,026 ounces represented sovereigns and other British gold coin, valued at $59,415 (nearly), and 11,381 ounces in other gold coins valued at $221,257.

Imports of silver.—During the year the total imports of silver amounted to 106,291,860 ounces, valued at $71,733,286 (nearly). Of this total, 85,795,355 ounces represented bar silver, valued at $57,520,964 (nearly); 1,004,228 ounces represented other kinds of uncoined silver, valued at $615,771 (nearly); 4,529,432 ounces in government of India rupees, valued at $4,027,976 (nearly), and 14,962,845 ounces in other coins, valued at $9,568,554 (nearly).

Exports of silver.—The total exports of silver from India during the year 1907–8 amounted to 8,442,915 ounces, which was valued at $6,878,624 (nearly). Of this total, 302,264 ounces represented bullion and was valued at $222,932. The silver representing rupees weighed 5,988,221 ounces, and was valued at $5,411,893 (nearly). The silver representing British dollars weighed 1,681,831 ounces, and was valued at $951,454. The silver representing Straits dollars weighed 341 ounces and was valued at $225. Other silver coins imported weighed 470,258 ounces and were valued at $292,120 (nearly).

The net imports of gold in 1907–8 were less than in 1905–6 and exceed those of 1906–7, and the amount of silver imported in 1906–7 exceeds the imports of 1905–6 and 1907–8, as the following table will show:

Year.	Gold.	Silver.
1905–6	$1,526,666	$357,333
1906–7	495,000	800,000
1907–8	575,333	648,333

Imports and Exports of Gold and Silver during March, 1908.

The total imports of gold into India during the month of March, 1908, amounted to 260,906 ounces, valued at $5,459,662, of which 163,570 ounces was in the form of bullion, valued at $3,536,883. The weight of sovereigns and other British gold coins was 90,568 ounces, valued at $1,792,824. The small balance was in the form of other coins.

The exports of gold during the month aggregated 48,591 ounces, valued at $921,702 (nearly). The exports were made up of gold bullion weighing 48,575 ounces, valued at $921,402; sovereigns and other British coin weighing 2 ounces, valued at $30, and 14 ounces of other gold coins, valued at $270 (nearly).

Imports of silver.—During March the total imports of silver amounted to 67,022,764 ounces, valued at $4,444,174 (nearly). This total was made up of bar silver weighing 6,165,190 ounces, valued at $3,681,964 (nearly). The rupees and other silver coins imported weighed 857,574 ounces and were valued at $762,209 (nearly).

Exports of silver.—The total exports of silver during the month amounted to 522,755 ounces, valued at $513,048. This was made up thus: 7,861 ounces in bullion, valued at $6,460 (nearly); 381,203 ounces in rupees, valued at $427,736 (nearly); 95,867 ounces in British dollars, valued at $51,645 (nearly), and other silver coins weighing 37,824 ounces, valued at $27,206.

Net imports of gold and silver.—The net imports of gold and silver during the month amounted to $4,536,666 gold, and of silver $3,930,000, showing an excess of imports of gold over silver for the month amounting to $606,666.

Government Reserves.

The total balance in the reserve treasuries of the government of India in the evening of April 7, 1908, amounted to $18,355,687. Of this amount Calcutta held $12,224,794, Madras $3,918,011, and Bombay $2,212,882.

Indian Finances.

The amount of silver coin held in the paper currency reserve in India on May 31, 1908, was $87,600,000; gold coin and bullion, $6,760,000, and silver bullion under coinage $23,620,000. The coin and bullion held in the paper currency reserve in England was $13,366,666. There was no transfer of gold between the paper currency

reserve and the gold standard reserve during the week ending May 31, 1908. The silver held in the gold standard reserve on the same date consisted of $20,000,000 (the permanent nucleus of its silver branch) and $9,566,666 paid into the reserve out of the proceeds of sterling bills drawn on the secretary of state for India, exclusive of $7,200,000 held in deposit on account of further bills drawn but not yet presented for payment in London.

AMERICAN CONSULATE GENERAL,
Calcutta, May 7, 1908.

GOVERNMENT OF INDIA,
FINANCE DEPARTMENT,
Calcutta, February 5, 1908.

WORKING OF THE MINTS AT CALCUTTA AND BOMBAY DURING THE YEAR 1906–7.

RECEIPTS OF GOLD.

The tenders of gold by the public at the mints exceeded in value those of the preceding twelve months by about 2 crores of rupees.

The following statement compares the value and nature of the tenders with those of past years:

CALCUTTA MINT.

Year.	Value of sovereigns and half sovereigns of current weight.	Value of light and uncurrent sovereigns and half sovereigns.	Value of bullion.	Total.
	Rupees.	*Rupees.*	*Rupees.*	*Rupees.*
1904–5	67,450,230	444,830	.....	67,895,060
1905–6	30,572,790	108,555	104,485	30,785,830
1906–7	49,638,547	779,963	.....	50,418,510

BOMBAY MINT.

Year.	Value of sovereigns and half sovereigns of current weight.	Value of light and uncurrent sovereigns and half sovereigns.	Value of bullion.	Total.	Total value of gold tendered.
	Rupees.	*Rupees.*	*Rupees.*	*Rupees.*	*Rupees.*
1904–5	49,315,410	981,735	590,846	50,887,991	118,783,051
1905–6	14,381,790	240,028	659,424	15,281,242	46,067,072
1906–7	14,520,000	5,840	187,422	14,713,262	65,131,772

The bullion received during the year under review consisted mainly of gold from Indian mines.

COINAGE OF SILVER.

The silver coinage was as follows:

Denomination.	Calcutta.	Bombay.	Total value.
	Value.	Value.	
	Rupees.	*Rupees.*	*Rupees.*
Rupees	98,172,018	160,531,265	253,703,283
Half rupees	1,518,054	200,002	1,718,056
Quarter rupees	2,667,985	.....	2,667,985
One-eight rupees	2,768,081	.....	2,768,081
Total	100,126,138	160,731,267	260,857,405

The outturn of rupees during the year 1905–6 exceeded by 2½ crores the maximum number previously turned out in any one year. The large figure then reached was exceeded during the year under review by more than 5¾ crores. A portion of this heavy coinage was required in connection with the formation of the silver branch of the gold standard reserve, which government decided to establish during the year. This was built up from the profits on coinage during the course of the year to 600 lakhs of coined rupees, of which 200 lakhs are held at the Calcutta mint and 400 lakhs at the Bombay mint.[a]

A portion of the coinage represented the recoinage of 1,835 and 1,840 rupees and uncurrent coin, but by far the greater number of rupees coined were struck from bullion, this being for the most part purchased by the secretary of state in England, but partly also through local banks. A small amount of coinage was undertaken on behalf of the Tonk Durbar, which has adopted British Indian silver currency in place of Mahomed Khani currency in the Sironj pargans.

No dollars were coined during the year at either mint.

CALCUTTA MINT.

Withdrawn and uncurrent silver coins were received for recoinage, of the nominal value of 15,289,282 rupees, classified as shown below:

	Rupees.
Government rupees and half rupees of—	
1835	987,000
1840 (first issue)	3,485,100
1840 (second issue)	8,988,100
Government rupees—	
Shroff marked, defective, and dumb coins	7,800
Worn coins	1,778,900
Reduced rupees and half rupees	26,300
Soldered coins from railways	16,100
Total	15,289,300

Mahomed Khani coins of the Tonk Durbar of the exchange value of 990 rupees and yielding 1,011 standard tolas were received for recoinage into government rupees in connection with the conversion of the currency of the State.

The silver coinage was 129,024,714 pieces, valued at 100,126,137½ rupees, against 95,241,111, valued at 78,291,213½ rupees in the previous year, and was in excess by 33,783,603 pieces, valued at 21,834,924½ rupees. The most noticeable increase occurred in the case of small silver, for which there was a steady demand throughout the year. In addition to the rupees and small silver coined during the year, 40 lakhs of tolas (4,000,000 rupees) of silver were converted into blanks and then remitted to Bombay to be finally coined into rupees there.

A portion of the heavy rupee coinage of the year was required in connection with the formation of the silver branch of the gold standard reserve which government decided to establish during the year.

This silver reserve consists for the present of 600 lakhs of coined rupees, of which 200 lakhs will be held at the Calcutta mint. The building up of this reserve was commenced from the beginning of the year and was completed shortly before its close.

BOMBAY MINT.

Withdrawn and uncurrent silver coins were received for recoinage of the nominal value of 11,787,522 rupees, classified as follows:

	Rupees.
Government rupees and half rupees of—	
1835	657,131
1840 (first issue)	1,928,540
1840 (second issue)	7,788,351
Government rupees—	
Shroff marked, defective, and dumb coins	499,948
Worn coins	874,580
Reduced rupees and half rupees	38,881
Arcot coins	32
Confiscated coins	59
Total	11,787,522

Mahomed Khani coins of the Tonk Durbar of the exchange value of 172,884 rupees, 10 annas, 3 pies, and yielding 176,395½ standard tolas were received for recoinage into British India government rupees in connection with the conversion of the currency of the State.

[a] A lakh of rupees is 100,000, and a crore is 100 lakhs, or 10,000,000 rupees.

The government coinage for the year consisted of rupees and half rupees, and amounted in value to 160,731,267 rupees, being the largest silver coinage on record for the Indian mints, the next highest figure being 121,723,238 rupees, which was the coinage of the Bombay mint for 1905–6.

The amounts coined were distributed as under:

	Rupees.
On government account (including 400 rupees lakhs for the gold standard reserve)	160,558,382
On account of native States (Tonk Durbar)	172,885

No coinage was undertaken for any other government during the year.

A portion of the heavy rupee coinage for the year was required in connection with the formation of the silver branch of the gold standard reserve which government decided to establish during the year. This silver reserve consists for the present of 600 lakhs of coined rupees, of which 400 lakhs will be held at the Bombay mint.

IMPORTATION.

[From Bulletin de Statistique, Paris, June, 1908.]

Classification.	Importation.		Exportation.	
	1906.	1907.	1906.	1907.
Coins and ingots:				
Gold	£11,743,028	£13,406,849	£3,595,061	£2,172,915
Silver	5,665,037	7,174,840	1,422,960	1,205,239

NOTE.—The rupees (of India) are converted into pounds sterling at the rate of 15 rupees to the pound, conforming to the law upon the coinage of 1899.

JAPAN.

Answers to interrogatories, 1907.

(1) Kinds and amounts of gold coined and recoined, as well as gold melted, during the calendar year 1907:

Pieces.	Yen.
Coined:	
20-yen	16,380,000
10-yen	1,580,000
Total	17,960,000

Recoined: None.

Melted: Domestic ancient gold coins, 2,283 yen.

(2) Kinds and amounts of silver coined and recoined, as well as silver coins melted, during the calendar year 1907:

Pieces.	Yen.
Coined:	
50-sen	12,039,905
20-sen	4,002,402
10-sen	1,200,663
Total	17,242,970
Recoined:	
50-sen	97,703
20-sen	7,633
Total	105,336
Melted:	
Domestic ancient coins	1,057
Domestic old coins	4,500,000
Domestic new coins	116,753
Total	4,617,810

Foreign silver coins: None.

There was no coinage executed at any foreign mint during the calendar year 1907.

(3) Coinage executed for foreign governments during the calendar year 1907:

FOR KOREA.

Pieces.	Yen.
Half yen, silver	500,000
20-sen, silver	353,787
10-sen, silver	243,066
Total	1,096,853
Nickel	800,000
Bronze 1-sen	100,000
Bronze half sen	8,599
Total	908,599
Grand total	2,005,452

(4) Weight of fine gold used in the industrial arts is unknown.
(5) Weight of fine silver used in the industrial arts is unknown.
(6) Gold exported and imported during the calendar year 1907:

Items.	Exports.		Imports.

(8) Gold coins of the United States of America imported during the calendar year 1907, 10,205 yen.

(9) Gold coins of the United States of America melted at the Japanese mint during the calendar year 1907, none.

(10) Gold produced from mines in Japan, excluding Formosa, 735,708 momme.[a] Japan has no colony.

(11) Silver produced from mines in Japan, excluding Formosa, 23,519,189 momme.

(12) Gold refined in all refineries during the calendar year 1907, unknown.

(13) Silver refined in all refineries during the calendar year 1907, unknown.

(14) Gold coins and bullion in the country at the close of the calendar year 1907:

	Yen.
Gold coins	53,176,655
In Bank of Japan as reserve for convertible notes	29,008,244
In circulation	24,078,411
Gold bullion	139,154,699
In Bank of Japan as reserve for convertible notes	132,643,887
Others	6,510,812

(15) Silver coins and bullion in the country at the end of the calendar year 1907:

	Yen.
Silver coins	96,133,357
In national treasury	5,599,699
In circulation	90,533,658
Silver bullion	13,043,603
In national treasury	12,457,738
In circulation	585,865

[a] A momme equals 2.41 pennyweights.

(16) Government notes in circulation at the end of the calendar year 1907, none.
(17) Convertible notes of the Bank of Japan in circulation at the end of the calendar year 1907, 369,984,111 yen.
(18) Government notes not covered by reserve fund in circulation at the end of the calendar year 1907, none.
(19) Notes of the Bank of Japan not covered by reserve fund in circulation at the close of the calendar year 1907, 208,241,980 yen.
(20) Actual currency of the country: Gold coins and notes convertible into gold.
(21) The actual currency is gold coins and convertible notes, and therefore there is no difference in value between currency and gold.
(22) Law No. 6, March 5, 1907. The coinage law is amended as follows:
Item 2 of Article V is amended to read as follows: 2. Silver coins, 50-sen and 20-sen; 800 parts pure silver to 200 parts copper; 10-sen, 720 parts pure silver to 280 parts copper.
Item 6 of Article VI is amended to read as follows: 6. 10-sen silver coins, 6 momme (2.25 grammes).

SUPPLEMENTARY CLAUSES.

This law shall take effect on April 1, 1908.
The 10-sen silver coins previously issued shall remain in circulation as before.

AMERICAN EMBASSY,
Tokyo, June 1, 1908.

MEXICO.

[Translation.]

Answers to interrogatories, 1907.

Coinage of gold, silver, nickel, and bronze coins in and for the mint of Mexico during the calendar year 1907:

Denomination.	Number of pieces.	Value.
Gold:		
Pieces of $10	1,589,000	$15,890,000.00
Pieces of $5	1,088,000	5,440,000.00
Total gold	2,677,000	21,330,000.00
Silver:		
Pieces of 50 cents	18,920,000	9,460,000.00
Pieces of 20 cents	4,000,000	800,000.00
Pieces of 10 cents	5,950,000	595,000.00
Total silver	28,870,000	10,855,000.00
Silver:		
Coinage of silver made in the mint at San Francisco, Cal.: Pieces of 50 cents	8,642,000	4,321,000.00
Coinage of silver made in the mint at Denver, Colo.: Pieces of 50 cents.	6,199,239	3,099,619.50
Coinage of silver made in the mint at New Orleans, La.: Pieces of 20 cents	5,434,619	1,086,923.80
Total	20,275,858	8,507,543.30
Nickel:		
Coinage of nickel made in the mint at Birmingham, England: Pieces of 5 cents	4,000,000	200,000.00
Bronze:		
Coinage of bronze made in the mint at Birmingham, England:		
Pieces of 2 cents	900,000	18,000.00
Pieces of 1 cent	2,150,000	21,500.00
Total	3,050,000	39,500.00

AMERICAN EMBASSY,
Mexico, March 30, 1908.

NOTE.—The mint of Mexico having had to coin an enormous amount of fractional silver coin, and as it was impossible within the limited time which the necessities of the circulation demanded, desiring also to provide for the demand for gold coin, decided to have coined in the mint at Philadelphia gold pieces of 10 and 5 pesos, of which the receipt and putting into circulation in Mexico commenced in February, 1906; afterwards, for similar reasons, they had coined in the mint at Birmingham,

England, pieces of nickel and bronze, and pieces of silver in the mints of San Francisco, New Orleans, and Denver.

Coins retired from circulation and recoined were as follows:

Description.	Nominal value.	Value of gold contained.
Gold:		
Old Mexican coins	$9,556	$18,685.59
American dollars	3,564,785	8,096,501.23
Pounds sterling	11,000	107,220.46
Francs	16,300	6,295.45
Spanish pesetas	7,000	2,705.69
Total gold	3,608,641	8,231,408.42
Silver:		
Old Mexican coins	.....	6,003,000.00
Guatemalan coins	82,178.75	69,954.75
Total silver	82,178.75	6,072,954.75

The amount of gold and silver recoined as above is included in the statement of the coinage.

There were retired from circulation copper centavos of the value of $97,963.83.

No nickel and bronze coins are coined in the Mexican mint.

The production of gold and silver during 1907 was as follows:

Metal.	Kilograms.	Value in Mexican pesos.
Gold	28,108.834	37,478,363.09
Silver	1,901,934.789	83,044,907.21
Total value	.....	120,523,270.30

1. The production of gold and silver is calculated by the amount exported less coin, and the said metals obtained by the commission of exchange and coin for the purpose of coinage.

2. The quantities corresponding to the gold and silver are expressed in kilograms of pure gold and pure silver.

3. The values of the gold are calculated at the rate of 75 centigrams to a peso or, say, $1,333.33 per kilogram, according to the law of March 25, 1905, which established the new monetary régime of the United States of Mexico.

4. The values of the silver are calculated according to the arrangements relative to the average price of silver in London each month.

Importation of gold and silver during 1907: It is impossible to determine the quantities and values of gold and silver by countries, because the statistical reports are made out according to the nomenclature of the ordinance for the customs tariff, and this embraces gold, silver, and platinum all together, and that is the way in which they import the different species of said metals.

IMPORTATION OF GOLD AND SILVER DURING THE CALENDAR YEAR 1907.

[From Estadistica Fiscal, Mexico, 1907.]

Classification.	Value.
	Pesos.
Gold, silver, and platinum in bullion, dust, etc.[a]	991,465.85
Gold, silver, and platinum used in arts and manufactures	17,817,510.97
Legal-tender gold and silver coins of all countries[a]	16,788,550.06
Mexican silver coin (1-peso pieces)	510.20
Gold beaten into leaves for gilding	8,360.20
Silver beaten into leaves for plating	704.15
Total	35,607,101.43

[a] Free of duty.

The importation of gold and silver can not be determined separately, because the reports relating to the same are made up according to the nomenclature of the customs tariff, which embraces as a whole gold, silver, and platinum; therefore it is not possible to give the data relative to each metal.

EXPORTATION OF GOLD AND SILVER DURING 1907.

Classification.	Gold.		Silver.	
	Weight.	Value in Mexican pesos.	Weight.	Value in Mexican pesos.
	Kilograms.		*Kilograms.*

Total	17,701.166	28,624,911.22	2,428,634.894	104,701,337.71

[a] Free of duty.

NETHERLANDS.

Answers to interrogatories, 1907.

(1) In 1907 no gold was coined.

(2) Silver pieces were coined to a nominal value of 9,250,000 florins ($3,718,500) as follows:

Denomination.	Florins.	United States equivalent.
Guilders (for the Netherlands)	4,600,000	$1,849,200
For the Netherlands Indies:		
Guilders	500,000	201,000
½-guilders	1,650,000	663,300
¼-guilders	1,100,000	442,200
1/10-guilders	1,400,000	562,800

The silver required was obtained by the melting down of recalled Netherlands Indies small coins to the value of 719,707.24 florins ($288,519.11), and further melted down large coins to the value of 8,500,000 florins ($3,417,000).

(3) Coinage executed for other governments during 1907: None.

(4 and 5) The quantity of gold used in industrial arts may be estimated at 950 kilograms of fine gold and the quantity of silver at 12,611 kilograms of fine silver. Whether this was obtained from new gold or silver or coins can not be stated.

(6 and 7) Imports and exports of gold and silver during 1907:

Description.	Imports.		Exports.	
	Florins.[a]	United States equivalent.	Florins.[a]	United States equivalent.
Gold coin	28,800,500	$11,577,801	305,100	$122,560
Gold in bars, etc	1,963,480	789,319	26,680	11,529
Gold ore	438,958	176,461	125,278	50,362
Silver coin	1,056,182	424,585	12,746,772	5,125,207
Silver in bars, etc	1,069,459	429,922	3,565	1,433
Silver ore	4,200	1,688	9,700	3,699

[a] These figures are taken from official statistics in regard to which, however, especially as far as exports are concerned, little reliance is to be attached.

(8) Total import of United States gold coin during 1907: Not known.

(9) Amount of United States gold coin deposited at mint and melted during 1907: None.

(10) The gold production statistics are sent to the American legation by the minister of colonies, and have not as yet been furnished.

(11) The silver production is not known.

(12 and 13) Output of gold and silver from refineries of the country during 1907: None.

(14) Approximate stock of gold coin and bullion in the country at the close of the calendar year 1907: It is estimated that there are 47,800,000 florins, or $19,2[illegible]15,600, in gold 10-guilder pieces, of which 30,773,000 florins ($12,370,746) were at the Netherlands Bank on the 31st of December, 1907. At that time there was gold coinable material in bars and foreign coin to the value of 61,019,000 florins ($24,529,638) at that establishment.

(15) Approximate stock of silver coin and bullion in the country at the close of the calendar year 1907: It is estimated that of large coins there were 121,500,000 florins ($48,543,000) in circulation, and of small coins 11,540,000 florins ($4,639,080). Of this amount, 54,804,000 florins ($23,031,208) were at the Netherlands Bank in December, 1907.

(16 and 18) Government notes outstanding at the end of the year 1907: None.

(17 and 19) Netherlands Bank notes represented the sum of 272,547,000 florins ($109,562,890) on December 31, 1907. According to the octroi accorded to the Netherlands Bank, notes must be covered to 40 per cent of their value by coin and coinable material. At the end of 1907 there was against 272,547,000 florins ($109,562,890) worth of bank notes in circulation 164,596,000 florins ($58,931,592) worth of metal in stock.

(20) Actual currency of the country: The Netherlands coinage circulation consists of gold and silver. Gold is the standard coin. Large silver coin is legal tender to any amount. There is no unchangeable paper in the country.

(21) There is no premium on gold in this country.

(22) Laws passed during 1907 affecting the currency: None.

(23) The report of the mint is sent annually to the Director of the Mint at Washington.

LEGATION OF THE UNITED STATES,
The Hague, August 7, 1908.

MONETARY LEGISLATION.

[From Report of the Minister of Finance, Paris, 1907.]

LAW OF DECEMBER 31, 1906.

Having for its object the substitution of a nickel piece of 5 cents for the silver piece of the same value.

We, Wilhelmina, etc., To all whom these presents concern, greeting. Know ye:

Having taken into consideration that it is desirable to replace the present 5-cent piece for another 5-cent piece of larger size;

For these reasons, our council of state ordered and in common accord with the states-general, have resolved as we resolve by these presents:

Article 1. The second paragraph of article 2 of the monetary law of 1901 shall be as follows:

(a) In silver: 25-cent piece, 10-cent piece.
(b) In nickel: 5-cent piece.
(c) In bronze: 2½-cent piece, 1-cent piece, ½-cent piece.

Article 2. Article 5 of the monetary law shall be as follows: "No one is obliged to accept in payment the odd silver coin for an amount above 10 florins; for more than 1 florin of the nickel, and for more than 25 cents of the bronze."

Article 3. The table contained in article 6 of the monetary law is as follows:

Denomination.	Fineness.		Weight.		Diameter.
	Legal fineness.	Tolerance.	Legal weight.	Tolerance.	
Gold:	*Thousandths.*	*Thousandths.*	*Grammes.*	*Thousandths.*	*Thousandths.*
10 florins	900	1.5	6.720	2	22.5
Ducat	983	1.0	3.494	2	21.0
Silver:					
2½ florins	945	1.5	25.000	2	38.0
Florin	945	1.5	10.000	3	28.0
½ florin	945	1.5	5.000	5	22.0
25 cents	640	4.0	3.575	6	19.0
10 cents	640	4.0	1.400	10	15.0
Nickel:					
5 cents	*a* 250 / *b* 750	*a* 10 / *b* 10	4.500		18.0
Bronze:					
2½ cents	*b* 950	*b* 10	4.000	1 piece in a hundred.	23.5
Cent	*c* 40	*c* 5	2.500		19.0
½ cent	*d* 10	*d* 5	1.250		14.0

a Nickel. *b* Copper. *c* Tin. *d* Zinc.

Article 4. In the first part of the sentence of article 9 of the monetary law of 1901, the words "on the reverse the indication of the value, 25 cents, 10 cents, and 5 cents," shall be replaced by "on the reverse, the indication of the value, 25 cents, 10 cents."

Article 5. At the foot of article 9 of the monetary law of 1901 there shall be inserted:

Article 9, second. The type of the odd nickel coins is the following: On the obverse the royal crown and name of the country "Nederland" over a ribbon between two branches of oak; below is the date. On the reverse they bear the indication of their value, 5 cents, between two branches of orange tree. These pieces are coined with a collar and have a smooth edge.

Article 6. Article 12 of the monetary law of 1901 shall be as follows: The bureaus for the exchange of the odd coins against rix-dollars, florins, and half-florins providing that the amount offered is not less than 50 florins in silver or 10 florins in nickel or in bronze.

Article 7. The decisions of the Government demonetized the 5-cent silver pieces struck in execution of the law of November 26, 1901. These measures shall not be taken until after a delay of not less than three months shall have been given for the exchange of these coins. With that demonetization the pieces remaining in circulation lost the character of a medium of legal payment which was conferred upon them by articles 5 and 12 of the monetary law of 1901.

Coinage and Currency of the Grand Duchy of Luxemburg for the Year 1907.

Answers to interrogations of January 2, 1908, relating to the same contained in a note from the Luxemburg governor, as follows:

In simplification of the replies to questions put it is necessary to give a short explanation of the monetary state of affairs in this country.

1. The Grand Duke has the right to make new coins. Such is the principle laid down in our constitution, although up to the present he has not availed himself of his power except in the striking of small coins of 10, 5, and 2½ centimes. These small pieces are current legal tender for every payment to the amount of 5 francs between private persons. The government offices have to accept larger quantities in payment of taxes.

According to the laws of 1852, 1854, 1864, 1869, and 1870 there have been brought into circulation in the Grand Duchy bronze moneys to the amount of 600,000 francs. A law of December 29, 1900, authorized the withdrawal of all bronze coins with the exception of the 2½-centime pieces, and the supplementing of the same to the amount of 500,000 francs in nickel pieces of 10 and 5 centimes.

The Grand Duchy not having a mint of its own, the making of these coins in 1870 and 1900 was effected by the mint in Brussels. The rest have been furnished by the managers of the mint at Paris.

In the absence of gold and silver coins, currency has been given to the moneys of the Latin Union at their nominal value.

German pieces which have been brought in on account of commercial and financial relations are accepted at the rate of 1.25 francs to a mark. Gold and silver pieces of

the United States are seldom met with and only in solitary cases in our public treasuries. To complete this information on legal tender it becomes necessary to add that in 1839 the numerical value was expressed in Netherlands florins in all public and administrative acts. By the law of December 20, 1848, a franc was adopted as the monetary unit. In the execution of obligations prior to January 1, 1849, stipulated in florins, the value of the franc had been fixed at 47½ centimes of a florin.

The Luxemburg franc does not exist. It is not represented in metallic circulation. It is normal value, the unit adopted in commerce and public administration in the maintenance of the accounts. The value of the franc of the Grand Duchy, which custom has fixed, is eight-tenths of a German mark, or 80 pfennig. Except in the case of special convention stipulating that the payment shall be made in francs, the payments of the treasury are made in German money. Finally, the free admission of all moneys into our country the same as in the countries of origin.

2. Information received in regard to the use of gold and silver in the industrial arts has shown that it is worthy of note that no rings, bracelets, or chains are made in this country. The importation of this metal is hardly anything. Fine jewelry is imported from France and ordinary jewelry from Germany.

3. The importation and exportation of gold and silver ingots are insignificant; that is to say, in regard to the public treasury they remain the same and may be stated approximately as follows:

Gold of the Latin Union	francs..	80,000
Silver	do....	60,000
German gold	do....	8,000,000
German silver	marks..	700,000

As I have already had the honor to say, the importation of gold and silver from the United States is hardly anything.

The Grand Duchy has no gold and silver mines, and consequently no refineries of these precious metals.

The amount of gold and silver stored in the treasury, the banks, and in circulation may approximately be estimated at 10,000,000 marks.

4. The government of the Grand Duchy does not issue bank notes. However, the bank notes of the Belgium National Bank, the Bank of France, the Reichs Bank at Berlin, and the International Bank of Luxemburg are generally accepted and in our public treasuries at their gold value. The treasury is authorized to accept and give bank notes. Private persons are not obliged to accept them in the public treasuries.

The financial establishment at Luxemburg, under the name of the Bank Internationale, is only authorized to issue bank notes to bearer, guarantee being given for repayment. The Bank Internationale should at all times change bank notes, on intimation of the number thereof. In order to insure the exchange of these bank notes the bank shall always have at its disposal for this purpose to the amount of one-third of the sum of all the bank notes in circulation. The sum of the bank notes in circulation in the Grand Duchy (this always according to the report of the circulation in the state treasuries) may approximately be established as follows:

	Francs.
Bank of France	250,000
National Bank	300,000
Reichs Bank	20,000,000
Internationale Bank	3,000,000

In conclusion I would add that as to the increase in the value of gold compared with the rate of actual exchange in the country, there has been no fluctuations for a number of years.

LEGATION OF THE UNITED STATES,
The Hague, August 4, 1908.

NEW ZEALAND.

Answers to interrogatories, 1907.

(1, 2, and 3) Gold and silver coined during 1907: There is no mint in New Zealand.
(4 and 5) Gold and silver used in industrial arts, during 1907: Not ascertained, but insignificant.
(6 and 7) Imports and exports of gold and silver during 1907, by countries:

Classification and country.	Imports.		Exports.	
	Quantity.	Value.	Quantity.	Value.
Gold specie:	*Ounces.*		*Ounces.*	
Victoria		£257,000		
New South Wales		395,050		
Friendly Islands		750		£1,900
Society Islands		500		
United Kingdom				81
Hongkong				1,770
Total		753,300		3,751
Gold bullion:

Ceylon			1,036,224	111,370
Total	6,128	733	1,562,603	169,484

(8 and 9) No gold coin of United States used in New Zealand.
(10, 11, 12, and 13) The export figures of gold and silver represent the output.
(14 and 15) Approximate stock of gold and silver coin and bullion in the country at the close of 1907: On December 31, 1907, the banks held gold and silver bullion to the value of £4,984,566.
(16 and 18) No government notes issued in New Zealand.
(17 and 19) Notes on banks of issue outstanding on December 31, 1907: £1,641,858.
(See answer to 14 and 15.)
(20) Actual currency of the country: English money.
(21) Premium on gold: New Zealand has the gold standard.
(22) Laws passed in 1907 affecting the currency: None.
(23) Report published on operations of mint: No mint. Parliamentary report of mines department, 1907, herewith.

AMERICAN CONSULATE-GENERAL,
Auckland, April 27, 1908.

NORWAY.

Answers to interrogatories, 1907.

(1) No coinage of gold was performed during the year 1907.

(2) Of silver there have been coined about 365,400 kroner, whereof 309,300 kroner under the form of general commemoration 2-kroner pieces intended to perpetuate the memory of events which took place in Norway in 1905, and 56,100 kroner under that of other commemoration 2-krone pieces, of particular design, intended for distribution among such military persons as were, in 1905, detached for the guard of the frontier, etc. For this purpose Norwegian coins were remelted to a total amount of about 55,400 kroner, whereas no foreign coins were employed. No coinage was executed at foreign mints.

(3) No coinage was executed for foreign governments.

(4 and 5) As to the weight and value of any gold and silver employed for industrial purposes, information is not available.

(6) Import and export of gold during 1907: According to statistical reports gold (unmanufactured) was, during 1907, imported as follows:

	Kroner.
From Sweden	43
From Denmark	10
From Germany	735
From France	72
From United States	1
Total	861

Coin and medals during the year were imported to a total amount of 4,007,234 kroner, of which 4,000,760 kroner in gold coin was from Denmark:

	Kroner.
From Russia (Baltic ports)	24
From Germany	5,170
From Holland	360
From Belgium	433
From Great Britain and Ireland	80
From France	263
From China	144
Total	6,474

Gold coin was, during the year, exported to the following amount:

	Kroner.
To England	4,478,400
To France	2,537,100
To Germany	620,200
To other countries	5,100
Total	[a]7,640,800

(7) Import and export of silver during 1907: Silver (unmanufactured) was imported as follows:

	Kroner.
From Sweden	250
From Denmark	657
From Germany	682,431
From Great Britain and Ireland	30
Total	683,368

Coin and medals were imported to a total amount of 277,380 kroner, whereof—

	Kroner.
From Sweden	107,157
From Denmark	167,061
From Russia (Baltic ports)	110
From Germany	286
From Holland	747
From Great Britain and Ireland	637
From France	612
From Austria	400
From Hungary	50
From United States of America	320

On the other hand, unmanufactured silver was exported to Germany to a value of 40,400 kroner and, respectively, 182,500 kroner and 90,500 kroner of silver coin were exported to Sweden and Denmark.

[a] An additional statement gives 2,346,000 kroner as exported to Sweden in gold coin.

(8 and 9) No coined gold was imported during the year to the realm from the United States (vide as per No. 6).

(10) The production of native gold during 1907 is supposed to have been insignificant. Statistics are not available on this point.

(11) The Kongsberg silver mines produced, from April 1, 1906, to March 31, 1907, 6,268 kilograms of fine silver. No other mines have, as far as it is known, been under regular exploitation of any significance.

(12 and 13) Output of gold and silver from refineries of the country during 1907: No reliable information is available on this point (vide as per No. 10). The produce of the Kongsberg silver mines (mentioned under No. 11) brought in by sale 518,524.15 kroner.

(14) Approximate stock of gold coin and bullion in the country at the close of the calendar year 1907: The only information available on this point is that at the expiration of 1907 the stock of gold of the "Norge's Bank," deposited within the realm, amounted to about 27,367,800 kroner. Besides this, the bank had claims to the amount of about 3,531,000 kroner on the Copenhagen "Nationalbank" and the "Riksbank" of Sweden, and, moreover, about 17,552,900 kroner in values deposited with agents abroad. The total stock of gold of the "Norge's Bank" amounted, accordingly, on December 31, 1907, to about 48,451,700 kroner. At this same date the quantity of coined gold amounted to 17,117,120 kroner, whereof 2,430 kroner were called in as depreciated by wear and other injury.

(15) Approximate stock of silver coin and bullion in the country at the close of the calendar year 1907: The only information available on this point is that, apart from the above-mentioned 2-krone pieces, the value of silver coin in circulation amounted to 11,407,564.20 kroner, whereof, on December 31, 1907, 1,222,370 kroner were in deposit in the head office of the treasury.

(16 and 18) The government does not issue notes.

(17 and 19) Of the notes issued by the "Norge's Bank" 73,483,100 kroner were in circulation on December 31, 1907. The notes of the "Norge's Bank" current on December 31, 1907, represented an amount of 25,031,400 kroner in excess of the metallic substratum.

(20) Actual currency of the country: Gold is at present the standard currency of the realm.

(21) Premium on gold: The monetary unit is 1 kroner, corresponding in point of value to a weight of $\frac{4}{31}$, or 0.40323 of a gram of fine gold.

(22) Laws passed in 1907 affecting the currency: In 1907 a particular design was (as mentioned under No. 2) adopted for a military commemoration 2-krone piece. A new design to be adopted for all coin (gold, silver, and bronze) was furthermore sanctioned by order in council, conforming in all essentials with the sketches recommended by the experts appointed for the purpose by the department of finance and customs.

(23) Report published on operations of the mint during 1907: With regard to this point, vide the above-mentioned Storthing's proposition No. 1 for 1908, principal item X, chapter 6, in which is contained a report on the working of the state's mint establishment at Kongsberg for the period April 1, 1906, to March 31, 1907.

[Translation.]

STORTHING'S PROPOSITION NO. 1. PRINCIPAL ITEM X.

Chapter 6. Mint regulation at Kongsberg.

His Majesty the King's proposition to the Norwegian legislature concerning the approval, in due season, of the coining of fractional or change money.

We, Haakon, Norway's King, makes known by the accompanying copy of a regulation, upon the finance and customs' recommendation, regarding the certain obligation of His Majesty to invite the Norwegian legislature to make the following resolution:

The Norwegian legislature to agree, in due season, according to the King's previously higher determination, to the coining of fractional or change money up to an amount of 265,432 kroner.

Given at Christiania Palace, on December 30, 1907, under our hand and imperial seal.

HAAKON. [L. S.]

PANAMA.

[Translation.]

OFFICE OF THE SECRETARY FOR FOREIGN AFFAIRS,
Panama, April 24, 1908.

Mr. MINISTER: Referring to the esteemed note of your excellency of the 8th of February last, it gives me great pleasure to transmit herewith the information rendered by his excellency the secretary of the treasury regarding the matter mentioned in said note:

"The Republic of Panama has no gold in circulation of national coinage.

"The circulation of Panama silver is about the sum of 2,000,000 balboas, of the denominations of $1, $0.50, $0.20, and $0.10, coined of the United States.

"The nickels in circulation reach the sum of 25,000 balboas, as follows: 20,000 balboas in denominations of 2½/100 of a balboa, and 5,000 balboas in the denomination of 1½/100 of a balboa; also coined in the United States.

"It is not definitely known how much is actually produced by the producing mines of the Republic."

I again avail myself of the opportunity to assure your excellency of my highest consideration and deferential esteem.

RICARDO ARIAS.

To His Excellency the AMERICAN MINISTER.

PARAGUAY.

[Translation.]

PAPER MONEY IN CIRCULATION IN PARAGUAY.

[From L'Economiste Europeen, Paris, October 23, 1908.]

The paper money in circulation according to the authorization by the law of July 14, 1903, amounted to 35,000,000 pesos. That sum has been increased, by virtue of the law of July 6, 1905, by the issue of new bills to a value of 4,850,632 pesos to meet their expenses, as follows:

	Pesos.
Agricultural bank	2,602,827
Construction of a barracks (law of September 30, 1903), and repairing of damages caused by the revolution (law of May 30, 1905)	1,247,805
National college	500,000
Penitentiary and jail	500,000
Total	4,850,632

The following table gives the amount of bills in circulation during the last ten years:

Years.	Amount of bills in circulation.	Years.	Amount of bills in circulation.
	Pesos.		*Pesos.*
1897	8,676,785	1902	12,789,999
1898	9,785,000	1903	15,779,600
1899	9,855,000	1904	30,149,367
1900	11,291,325	1905	30,850,632
1901	10,966,171	1906	30,850,632

It may perhaps be of interest to give the value of the gold with relation to the paper money. To that effect the table following gives the fluctuations of exchange during the last nine years:

VALUE OF 100 GOLD PESOS IN PAPER PESOS FROM 1898 TO THE END OF 1906.

Years.	Paper pesos.	Years.	Paper pesos.
1898	700	1903	875
1899	820	1904	1,120
1900	804	1905	1,087
1901	921	1906	1,116
1902	899		

During the first nine months of 1907 the rate of exchange has varied from 1,116 to 1,240 per cent.

The Gold Standard in Paraguay.

[From The Economist, London, January 25, 1908.]

The Board of Trade Journal of January 9 referring to the establishment of a new bank at Asuncion states that His Majesty's consul there (Mr. C. Gosling) reports that for the present the bank will only place $6,000,000 gold in Asuncion, and of this the Government may take a share of $2,000,000. The bank will make a fresh issue of paper, the old government issue, amounting to $30,000,000, being redeemable by them at the rate of 10 paper dollars to the gold dollar. The Government is to receive 10 per cent of the total profits of the bank, and this sum, together with the export duty on hides, amounting perhaps to $300,000 paper, will be devoted to the amortization of the government emission. It is calculated thus that within eight or ten years the whole of this issue will be called in, the intention being then to place the country on a gold basis.

PERU.

Answers to interrogatories, 1907.

(1) The coinage of gold during the year 1907 was as follows:

Denomination.	Pieces.	Value (Peruvian pounds).
1 pound	123,150	204,667,900
½ pound	120,479	
¼ pound	106,392	

There was no recoinage of national coins.

Recoinage of foreign coins, 953,081 kilograms, in various coins of different countries which can not be detailed.

During the year 1,683.156 kilograms of gold have entered the mint and were coined, as follows:

	Kilograms.
Foreign coins	953,081
Ingots for dressing	678,013
Wrought silver	52,062

of which the total value is 210,366 in Peruvian pounds 9 soles 58 dineros.

(2) The coinage of silver being prohibited since the gold standard was established in the year 1897, in 1907 the Congress authorized the coinage of a million and a half of soles in subsidiary coins, the coinage during the year being as follows:

Denomination.	Pieces.	Value (in soles).
½ sol	1,000,038	853,852.50
¼ sol	1,369,113	
1 dinero	500,036	
½ dinero	600,066	

(3) There has been no coinage on account of other governments during the year. During 1907, 465 silver ingots were bought and entered the mint with a gross weight of 21,635,790 kilograms (standard of 993 marks), 88,329,470 of which the total value in soles is 951,976.94.

(4 and 5) No reply.

(6) In 1907 the import of gold to Peru was 609,206 Peruvian pounds in coin, without any distinction of denomination; no ingots or ores were imported. The export was 1,960 Peruvian pounds in coin, and 1,298 Peruvian pounds in ore weighing 5,839 kilograms.

(7) During the same year there was no import of silver in its various forms. The export was 19,969 Peruvian pounds in coin, and 95,170 Peruvian pounds in ingots and sulphurets, weighing 207,308 kilograms; 208,216 Peruvian pounds in ore, weighing 1,067,522 kilograms.

(8 and 9) No reply.

(10 and 11) Peru produced in 1907 the following quantity of monetary metals:

Gold:	Kilograms fine.
To metallic conditions	630.071
In veins and raw metallurgic products	144.122
Total	774.193

Calculating the value of this production at the price of our coined gold (136.574 pounds per kilogram) it is worth 105,735 Peruvian pounds.

Silver.	Kilograms.
To metallic conditions	7,842.773
In metallurgic products from lixiviation and smelting	206,786.009
In raw veins	82,917.660
Total	297,546.442

Calculating in detail the value of this production at the rate of 4.370 pounds per kilogram, the total value of it is 1,245,814 Peruvian pounds.

(12 and 13) No refineries exist in Peru.

(16, 17, 18, and 19) The consolidation law of June 12, 1899, recognized as a national debt the total sum of the government notes, including those issued by banking institutions whose responsibility the supreme government assumed.

According to that law the government notes have been converted into bonds of the home debt, so that at present the government note has no value as currency, and although, according to probable calculations, the conversion of the total amount has not been reached, those which are not yet converted have no value whatever, because the time fixed for their conversion has expired. This being the legal state of the government note, for the purpose of the referred interrogatories, it is sufficient to know that at present there are not any notes existing in Peru.

QUEENSLAND.

Answers to interrogatories, 1907.

(1 and 2) There was no gold or silver coined in this State in 1907. There is no mint in the State.

(3) No coinage executed for other governments.

(4 and 5) There is no information available to cover the weight of fine gold or fine silver used in the industrial arts during the year 1907.

(6 and 7) The imports and exports of gold and silver for the year 1907 were as follows:

Classification.	Country.	Imports.		Exports (oversea).		Exports (interstate).	
		Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
Gold:		*Ounces.*		*Ounces.*		*Ounces.*	
Bullion	British New Guinea	4,177	$67,585.79				
	New South Wales					8,797	$70,374.46
Gold in matte	United Kingdom			6,576	$116,927.40		
	United States			52,005	989,005.20		
Ores and concentrates	British New Guinea	a 1,108	5,781.40			a 371,278	1,225,530.70

a Hundredweight.

(8) No gold coin was imported from the United States during the year 1907.

(9) Amount of United States gold coin deposited at mint and melted during 1907: There was no gold coined in this State in 1907. There is no mint in this State.

(10) Fourteen thousand five hundred and nine kilograms of fine gold were produced from the mines of Queensland during the year 1907, the value of which is $9,642,790.

(11) Twenty-eight thousand six hundred and sixty-six kilograms, fine, of silver was produced from the mines of Queensland during the year 1907, the value of which is $547,676.

(12 and 13) There was no output of gold or silver from refineries in Queensland during the year 1907.

(14 and 15) Approximate stock of gold and silver coin and bullion in the country: The amount of gold coin in the treasury of Queensland at the close of the year 1907 was valued at $3,312,938. The gold and silver coin and bullion held by the banks of Queensland at the close of the year 1907 was valued at $10,987,992.50.

(16 and 18) The amount of Queensland government notes outstanding at the end of the year 1907 was valued at $7,880,297. All the government notes outstanding are covered by gold coin in treasury, fixed deposits in government banks, and government securities.

(17 and 19) There are no bank notes outstanding or issued by the banks of Queensland.

(20) The actual currency of Queensland consists of gold, silver, and bronze coin and treasury (government) notes.

(21) There was no premium on gold at any time during the year 1907.

(22) There were no laws passed during the year 1907 affecting the coinage, issue, or legal-tender character of the metallic or paper currency.

(23) A copy of the report of the department of mines accompanies this report.

AMERICAN CONSULAR AGENCY,
Brisbane, July 27, 1908.

RUSSIA.

Answers to interrogatories, 1907.

(1) Amount of gold coined during calendar year 1907, 545 rubles in 5-ruble pieces. No recoinage.

Russian gold melted to value of 5,407.50 rubles. Foreign gold melted to value of 17.38 rubles.

(2) Amount of silver coined during calendar year 1907:

Denomination.	Pieces.	Rubles.
1 ruble	400,209	
50 kopecks (½ ruble)	200,009	
20 kopecks		4,000,001.80
15 kopecks		4,500,001.35
10 kopecks		2,000,000.90

In 1907 the amount of silver coin melted was 165,191.30 rubles, in pieces of 0.900 standard and 1,487,489.50 rubles, in pieces of 0.500 standard. The silver thus obtained was recoined to the sum of 1,723,265.20 rubles (20, 15, and 10 kopeck pieces).

The total Russian money melted in 1907 at the St. Petersburg mint was rubles and half rubles (0.900), 196,099.75 rubles; 20, 15, and 10 kopeck pieces (0.500), 2,348,625.25 rubles. No Russian money struck abroad.

(3) Coinage executed for other governments during 1907: None.

(4) Amount of gold used in industrial arts during 1907: There were presented for stamping at the mint in 1907 gold objects weighing 502 poods 19 pounds 21 zolotniks. The objects were watches and watch cases of gold, 65,720 pieces.

The amount of fine gold used at the mint for the manufacture of medals, etc., was 21 poods 5 pounds 80 zolotniks.

(5) Amount of silver used in industrial arts during 1907: There were presented to the mint for stamping, 245,665 silver watches and watch cases weighing 7,385 poods 18 pounds 63 zolotniks.

The amount of silver used in the manufacture of medals, etc., was 48 poods 38 pounds 62 zolotniks.

(6 and 7) Exports and imports of gold and silver:

Items.	Poods.	Rubles.
Exports of gold:		
Ingots	581.8	12,256,000
Russian coins	4.9	93,000
Foreign coins	1.3	26,000
Imports of gold:		
Ingots	70.1	1,478,000
Russian coins	17.7	335,000
Foreign coins		430,000
Exports of silver:		
Ingots	760.1	629,000
Russian coins	11.9	7,000
Foreign coins	310.2	194,000
Imports of silver:		
Ingots	9,169.6	6,382,000
Russian coins		53,000
Foreign coins	3,571.9	2,237,000

(8) The custom-house report for 1907 does not show that any United States gold coin was imported.

(9) No United States gold coin was deposited or melted at the St. Petersburg mint during the year 1907.

(10) In 1907 the amount of fine gold produced at the Russian mines was 2,450 poods 36 pounds, of which—

Items.	Poods.	Pounds.
Government refineries produced	1,759	25
Private refineries produced	564	22
The imperial cabinet produced	126	29

(11) The weight of fine silver produced from the Russian mines in 1907 was 250 poods 35 pounds.

(12) Output of gold from refineries of the country during 1907: The output of gold from the mint at St. Petersburg in 1907 was 1,844 poods 21 pounds 34 zolotniks 56 doleis.

(13) The output of fine silver from the St. Petersburg mint in 1907 was 505 poods 37 pounds 63 zolotniks 83 doleis.

(14) On January 1, 1908, the stock of gold coin and bullion in the country was: In ingots, 1,157,479,447 rubles 98½ kopecks.

(15) On January 1, 1908, the stock of silver coin and bullion in the country was 32,462,783 rubles 20 kopecks (0.900 standard).

(16 and 18) There are no government notes; the only notes in circulation are issued by the Imperial Bank of Russia, which has the exclusive right of issue of notes.

(17 and 19) The amount of bank notes issued by the Imperial Bank of Russia at the end of the year 1907 was equal to 1,155,100,000 rubles; the total of the issue of notes at the same time being 1,260,000,000 rubles, and the reserve of notes, 104,900,000 rubles (1,260,000,000 less 104,900,000=1,155,100,000).

There are no bank notes outstanding not covered. The gold stock of the Imperial Bank of Russia on January 1, 1908, was equal to 1,161,000,000 rubles, whereas, at the same time, the amount of outstanding bank notes requiring to be covered (in accordance with the monetary law of August 29, 1897) was equal to 855,100,000 rubles only, this latter figure being the result of subtraction of the amount of bank notes which do not in accordance with the above-mentioned law require to be covered, namely, 300,000,000 rubles from the total amount of outstanding bank notes—1,155,100,000 rubles (1,155,100,000 less 300,000 equals 855,100,000). It will be seen from the above that the gold stock exceeded the outstanding notes, as in accord with the monetary law, to the amount of 305,900,000 rubles.

(20) On January 1, 1908, there was in circulation the sum of 621,700,000 rubles in gold, 119,300,000 rubles in silver coin (0.900 standard), and 1,155,100,000 rubles in bank notes.

(21) There was no premium either on gold ingots or gold coin in 1907.

(22) No new laws were passed in 1907 touching the monetary circulation.

(23) No report as to the operations of the mint is published.

NOTE.—1 pood is equivalent to 16.380496 kilograms; I pood is equivalent to 40 Russian pounds; 1 pound is equivalent to 96 zolotniks; 1 zolotnik is equivalent to 96 doleis.

AMERICAN EMBASSY,
St. Petersburg, August 5, 1908.

SERVIA.

[Translation.]

PAPER MONEY IN SERVIA.

[From L'Economiste Europeen, Paris, October 23, 1908.]

The National Bank of Servia has been authorized to make a new issue of paper money. In consequence, the circulation of paper money is found to be increased by 10 per cent.

We recall to recollection that at the end of business for 1907 the metallic reserve of the bank was composed of 14,105,842 dinars of gold, and 7,434,967 dinars of silver; in addition they had a foreign holding of 3,439,753 dinars. The circulation of notes resting upon their reserve amounted to 37,362,927 dinars.

SIAM.

Answers to interrogatories, 1907.

(1) Amount of gold coined during 1907: Nil.
(2) Amount of silver coined during 1907:

Items.	Pieces.	Ticals.
Ticals	3,554,357	3,554,357
Salungs	282,216	70,554
Fuangs	434,953	54,369
Total value		3,679,280

Of the total value, 62,112 ticals were coined from bar silver, 829,689 ticals from British (Hongkong) and Mexican dollars, and the balance from older issues of domestic coin.

(3) No coinage was executed for other governments during 1907.

(4 and 5) Amount of gold and silver used in industrial arts during 1907: No information.

(6) Imports of gold during 1907:

	Ticals.
Coin, from Singapore	25,388
Bullion (all in the form of gold leaf)—	
From Hongkong	6,639,979
From the United Kingdom	14,000
Ore, from China	16,000

There were no exports of gold.

(7) Imports of silver coin during 1907:

	Ticals.
From Singapore	992,138
From Hongkong	2,094,732
From India	573,405
From Cochin-China	56,991
From China	306,222
From Malay States	1,517
From Cambodia	11,539

Exports of silver coin during 1907:

	Ticals.
To Singapore	301,275
To Hongkong	1,332,514
To Cochin-China	292,800

(8) There were no imports of gold coin direct from the United States of America in the year 1907.

(9) United States gold coin deposited in mints and melted during 1907: Nil.

(10 and 11) Gold and silver produced from mines of the country during 1907: Weight of gold produced, approximately, 250 kilograms; this estimate is very rough, as no returns are made to the Government, no royalty being collected in Siam. No silver is produced.

(12 and 13) No gold or silver is refined in Siam.

(14 and 15) No information as to stock of gold coin and bullion in the country at the close of 1907. The treasury held about 29,734 ticals' worth of gold bullion.

No information as to stock of silver coin and bullion in the country at the close of 1907. The treasury held 20,704,276 ticals in coined silver 0.900 fine, besides 259,677 ticals in silver bullion.

(16 and 18) Amount of government notes outstanding at the end of the year 1907: 15,164,435 ticals. Amount not covered by legal-tender gold and silver coin or bullion, 5,792,566 ticals.

(17 and 19) Bank notes are now almost entirely withdrawn; no definite figures are obtainable.

(20) Actual currency of the country: Silver and convertible paper. The metallic currency is on a gold basis, the exchange value of the tical being approximately one-sixth of a shilling.

(21) Premium on gold: Not applicable.

(22) No laws were passed during 1907 affecting the currency.

(23) No report is published of the operations of the mint nor of the department of mines.

AMERICAN LEGATION,
Bangkok, May 15, 1908.

SOUTH AFRICA—THE TRANSVAAL.

Answers to interrogatories, 1907.

(1, 2, and 3) Amount of gold and silver coined and coinage executed for other governments during calendar year 1907: There is no mint in the Transvaal; the one formerly used by the South African Republic has been lying idle since the British occupation.

(4 and 5) It is understood that a certain amount of current coinage is utilized in the industrial arts of this colony. No information as to the amount of coinage so absorbed can be given, however, as the laws of the Transvaal do not require any return to be made on this point. It may be safely asserted that very little gold is used in the industrial arts.

(6 and 7) Amount of gold and silver imported and exported during 1907: The imports were, coin (gold and silver), £573,878 ($2,789,047.08). There was no bullion or ore imported into the Transvaal. Total exports of bullion were 7,397,106 ounces, valued at $132,892,524.26. The amount of coin exported was $922,666.20. No gold ore was exported.

(8 and 9) Import of United States gold coin and amount of United States gold coin deposited at mints and melted during 1907: Nil.

(10) Amount of gold produced from mines of the country during 1907: The total production of gold in the Transvaal during the calendar year ending December 31, 1907, was 200,640.595 kilograms; value, £27,400,992 ($133,168,821.12).

(11) Amount of silver produced from mines of the country during 1907: No silver was produced direct from silver mines during the year 1907. The total quantity contained in the gold bullion produced by the gold mines was 22,560.219 kilograms; commercial value, £93,947 ($456,582.42).

(12 and 13) There are no gold or silver refineries in the Transvaal.

(14 and 15) Approximate stock of gold and silver coin and bullion in the country at the close of the calendar year 1907: (*a*) The stock of gold and silver coin and bullion in the hands of the banks at the end of 1907 was £3,450,632 ($16,770,071.52). (*b*) There is no gold coin and bullion in the public treasury of the Transvaal and it is impossible to secure the amounts separately that are in banks and circulation.

(16 and 18) There are no government notes issued. There are no legal-tender notes issued in the Transvaal.

(17 and 19) The amount of bank notes in circulation at the end of the year 1907 was £53,548 ($260,243.28).

(20) Actual currency of the country: £3,965,660 ($19,274,204.80).

(21) Gold is not at a premium as compared with the actual currency of the country.

(22) No laws were passed during 1907 affecting the currency.

(23) No report published on operations of mint (have no mint). The annual report of the government mining engineer for the year ending June 30, 1907, is forwarded under another cover.

SOUTH AUSTRALIA.

Answers to interrogatories, 1907.

(1, 2, and 3) Amount of gold and silver coined, or coinage executed for other governments during the calendar year 1907: No mint in South Australia.

(4 and 5) Amount of fine gold and fine silver used in industrial arts during 1907: No record kept by manufacturers.

(6 and 7) Imports and exports of gold and silver during 1907:

IMPORTS AND EXPORTS OF GOLD AND SILVER (COIN, BULLION, AND ORE) DURING THE YEAR 1907.

Classification and country.	Imports.		Exports.[a]

[a] Exports to countries beyond the Commonwealth. The exports to the States of the Commonwealth for 1907 are not yet available.
[b] Hundredweight.
[c] Practically the whole of these items were reexported.

(8) Total import of United States gold coin during 1907: Nil.
(9) Amount of United States gold coin deposited at mint and melted during 1907: No mint in South Australia.
(10) Amount of gold produced from mines of the country during 1907, £36,602 (8,617 ounces, fine).
(11) Amount of silver produced from mines of the country during 1907: Nil.
(12 and 13) Output of gold and silver from refineries of the country during 1907: No refineries.
(14) Approximate stock of gold coin and bullion in the country at the close of the calendar year 1907: Treasury, £5,443; banks, £1,803,002; equals, £1,808,445.
(15) Approximate stock of silver coin and bullion in the country at the close of the calendar year 1907: Treasury, £1,114; banks, £79,753; equals, £80,867.
(16 and 18) No government notes issued.
(17 and 19) Amount of bank notes outstanding at the end of 1907, £523,996.
(20) Actual currency of the country: Can not be stated.
(21) Gold was not at a premium during 1907.
(22) No laws were passed during 1907 affecting the currency.
(23) No mint in South Australia.

ADELAIDE, *June 5, 1908.*

SPAIN.

AMERICAN LEGATION,
Fuenterrabia, July 20, 1908.

The SECRETARY OF STATE,
Washington.

SIR: I have the honor to report a recent decree of the minister of hacienda affecting the illegal silver coinage now in circulation.

For many years there have been circulating in Spain, alongside of the legal "duros" (5-peseta pieces), many illegally issued silver "duros," known as "duros sevillanos" because supposed to be manufactured in Seville. These coins are of a weight and fineness equal to that of genuine coins, and the profit to the manufacturer in issuing them consists in the seigniorage, i. e., the difference between the face value of the coin (5 pesetas) and the bullion value of the silver therein contained, which is much less than 5 pesetas.

These illegal "duros" are very difficult to distinguish from the genuine, for although they have less finish and sharpness of outline than the new genuine coins they bear a great resemblance to those old genuine coins which have been somewhat worn by use. As a result there has practically been no distinction between the genuine and the "sevillano" coinage, though the bank or postal officials have sometimes rejected an alleged "sevillano" piece. The quantity of these illegal coins in circulation has been so great that no ministry has hitherto attempted to get rid of them.

In the Gaceta of the 16th instant, however, appeared a royal order of the minister of hacienda providing that:

(1) All coins of illegal coinage presented at the Bank of Spain or at public offices shall be retained and canceled with a special stamp.

(2) The offices receiving such coins shall give to the holder, if he holds them in good faith, a receipt for the same, upon which receipt he can obtain payment for the value of pure silver therein as fixed by the London market, less the cost of melting down said coins into silver bars.

(3) The treasury shall sell the silver bars thus obtained, and thus reimburse to itself the amounts paid to said holders.

(4) The mint shall determine and publish the main points of difference between the legal and illegal coins, in order that the public may have due notice of the same.

The newspapers of the following day (the 17th instant) criticised this order very strongly, and the public indignation, especially among the poor and in the markets, was very great in consequence of the general refusal to accept "duros" of any kind for fear they should be illegal.

The minister was therefore induced to issue on Saturday, the 18th, an explanatory order pointing out that the first, second, and third provisions of the previous order will not and can not be carried out until its fourth provision has been complied with; that is, until the mint has determined and published the points of distinction between the good and bad "duros."

It is too soon as yet to say what will be the effect of this last order, but since it still leaves the loss to be borne by the bona-fide holders of "duros sevillanos," it does not seem likely that this order will allay the popular indignation.

The minister of hacienda recently stated that the Government had coined to date 1,000,000,000 "duros," 600,000,000 of which were now held by the Bank of Spain. This total amount of coinage would not, of course, include the illegal "sevillano" issues.

It is popularly supposed, and was recently stated in the senate, that a considerable amount of the silver held by the Bank of Spain consists of "sevillano" coins.

In the criticisms of the Government's order by prominent financiers, which have been appearing in the press, there is an unanimous feeling that the proper method of dealing with the alleged coinage is for all the existing issues of "duros" legal and "sevillanos" to be withdrawn from circulation and recoined at the expense of the state. This remedy, however, is now rejected by the minister of hacienda on account of its expense.

I have the honor to be, sir, your obedient servant,

WM. MILLER COLLIER.

AMERICAN LEGATION,
Fuenterrabia, July 24, 1908.

The SECRETARY OF STATE,
Washington.

SIR: I have the honor to report that, with a view to allaying the popular resentment aroused by the royal order, the Government introduced in the Cortes on the afternoon of the 20th instant a bill, which it is believed will soon become a law, the main provisions of which are as follows:

(1) The Government is authorized to withdraw from circulation silver coins of any year, whether legally or illegally issued.

(2) In the case of silver 5-peseta pieces of illegal issues, the Government shall fix a very short period during which they may be exchanged for coins of equal face value and of legal coinage. Upon the expiration of the said period the existing regulations respecting illegal currency shall be strictly enforced.

(3) Thereafter public offices and the Bank of Spain, when illegal coins are tendered to them, shall report the fact to the treasury, which shall investigate and publish the points of difference distinguishing such coins.

(4) The illegal silver coins withdrawn from circulation by virtue of this law shall at once be melted down into bullion, which the Government may sell, and the difference between the value of such bullion and the face value of the coins so withdrawn shall be met by a supplementary chapter in the present and in future budgets.

It will be seen that the proposed law constitutes a reversal of the Government's recent action, since in lieu of throwing upon the holders the loss resulting from withdrawal of the illegal "duros" it is now proposed that this loss shall be borne by the State.

I have the honor to be, sir, your obedient servant,

WM. MILLER COLLIER.

AMERICAN LEGATION,
Madrid, February 21, 1908.

Answers to interrogatories, 1907.

(1, 2, and 3) No gold was coined, no silver was coined or recoined, and no coinage was executed for other governments during 1907.

(4 and 5) Amount of gold and silver used in industrial arts during 1907: Not known.

(6) Import and export of gold during 1907:

IMPORTATION.

(8 and 9) Import of United States gold coin and United States gold coin deposited at mint and melted during 1907: None.

(10 and 12) No gold was produced in Spain in 1907.

(11 and 13) The silver produced in Spain in 1907 amounted to 127,435 kilograms. Its value at the mines was 14,264,852 pesetas. Of this production 7,016 kilograms came from the silver mines Hiendelaencia (Guadalajara), the balance from argentiferous lead mines in the provinces of Cordoba, Guipuzcoa, Murcia, and Jaen. From the Spanish possessions in Africa no production of silver is reported.

(14) Approximate stock of gold coin and bullion in the country at the close of the calendar year 1907: Gold does not circulate in the country, owing to the fact that it is at a premium over silver and bank notes. The Bank of Spain keeps in reserve, as a guarantee for its notes, 400,841,802.84 pesetas in gold and 52,963,190.24 pesetas belonging to the public treasury. The other banks have this metal only in amounts of trifling importance.

(15) Approximate stock of silver coin and bullion in the country at the close of the calendar year 1907: The silver which circulates in the country in money (coin) and in bars, deposited as guarantee, amounts approximately to 900,000,000 pesetas, of which the Bank of Spain keeps in its vaults as a guarantee of the notes it has issued 641,986,343.95 pesetas.

(16 and 18) No paper money has been issued by the Government.

(17 and 19) Bank notes outstanding at the end of the year 1907: 1,556,070,500 pesetas, issued by the Bank of Spain, which alone has authority to issue notes. The amount of bank notes in circulation exceeds by 513,242,353.21 pesetas the metallic reserves (gold and silver), but the securities on deposit more than cover this amount.

(20) Actual currency of the country: Over 2,900,000,000 pesetas.

(21) Premium on gold during 1907: The highest was 14.75 per cent, the lowest 7 per cent, and the average 10.80 per cent.

(22) Laws passed during 1907 affecting the currency: None.

(23) No report of the mint has been published.

STRAITS SETTLEMENTS.

Answers to interrogatories, 1907.

(1) No gold coined during the year 1907.

(2) Silver coined during the year 1907, 10,767,000 new Straits dollars, valued at $10,767,000; all recoined from old Straits dollars and reminted at English mints.

(3) Coinage executed for other governments during 1907: No mint in this colony.

(4 and 5) Amount of gold and silver, new and old, used in industrial arts during 1907: Both gold and silver coin and bullion are used in the industrial arts, and no statistics whatever are kept of the amount; hence it is impossible to answer the question.

(6) Import and export of gold during 1907: There was imported gold bullion to the amount of $6,208,211; gold coin, $4,525,145. Exported, gold bullion, $2,255,849; gold coin, $2,093,141. Weight of bullion not obtainable. Practically all the transactions in gold bullion and coins were between Hongkong, India, and Great Britain, and a large amount of the gold given as bullion was gold leaf.

(7) Import and export of silver during 1907: There was imported in silver coins, $16,644,031; exports, $19,495,564. The recoinage of the Straits dollar is responsible for the movement of so large an amount of silver coin. Outside of exports and imports for recoinage, the movement of silver was largely for trade purposes between the following places: Hongkong, India, Java, British North Borneo, Dutch Borneo, Sumatra, and Siam.

(8 and 9) No gold imported from the United States during the calendar year 1907, and no United States gold deposited at the mints and melted during the year 1907.

(10 and 11) Gold produced from the mines of the colony during the year 1907: The production of gold in the Federated Malay States during the year was 435,645 kilograms, valued at £59,495. No silver mines in the colony.

(12 and 13) Output of gold and silver from refineries during 1907: No refineries in the colony.

(14) Stock of gold coin and bullion in the colony at the close of the year 1907, £316,470. Of this amount, £180,587 was held by the currency commissioners and the balance by the banks. There was practically none in circulation.

(15) Stock of silver coin and bullion in the colony at the close of the year 1907, $28,886,781, as follows: In public treasuries, $10,273,240; in banks, $2,104,666; and in circulation, $16,508,875, all coins.

(16 and 18) Amount of government notes outstanding at the end of the year 1907, $22,444,970. The treasury keeps a reserve in gold and silver of at least one-half of

its issue. Amount of government notes outstanding not covered by legal-tender gold and silver coin or bullion, at the end of the year 1907, $7,672,341, covered by investments.

(17 and 19) Bank notes outstanding at the end of the year 1907, $1,716,125, as follows: Chartered Bank of India, Australia, and China, $1,532,353; Hongkong and Shanghai Banking Corporation, $183,771. This is covered by securities held in London by the crown agents and not by legal-tender gold and silver coin and bullion.

(20) Actual currency of the country: Silver coins. The value of the dollar having been fixed by the Government at 2s. 4d. ($0.5677583) on January 29, 1908, which has since been maintained.

(21) Premium on gold: The highest rate at which Singapore banks sold on New York last year was $0.57; the lowest, $0.55½, and the average, $0.56½. The highest on London was 2s. 4½d., lowest, 2s. 3.11/16d., and the average, 2s. 4.1/16d.

(22) There was no legislation during the year 1907 affecting the coinage, issue, or legal-tender character of the metallic or paper currency.

(23) No report published on operations of mint. No mint in the colony.

AMERICAN CONSULAR SERVICE,
Singapore, May 9, 1908.

SWEDEN.

Answers to interrogatories, 1907.

(1) No gold was coined at the royal mint, neither was any old gold coin melted.

(2) During the same year the following amounts of silver were coined:

Denomination.	Pieces.	Value.
		Crowns.
2-crowns	551,573	1,103,146
1-crown	733,128	733,128
50-öre	319,484	159,742
25-öre	1,217,536	304,384
10-öre	3,653,750	365,375
Total	6,475,471	2,665,775

During the year the following amounts of worn and mutilated Swedish silver coins were melted:

Denomination.	Value.
	Crowns.
2-crowns	1,240.00
1-crown	4,333.00
50-öre	2,407.50
25-öre	26,105.25
10-öre	15,266.70
Total	49,352.45

(3) No coinage was executed for foreign Governments.

(4 and 5) At least 700 kilograms of fine gold and 8,000 kilograms of fine silver was used in Sweden in the industrial arts during 1907, but the exact quantity can not be stated. It is impossible to state how much of this was old gold and old silver or gold and silver coin.

(6) Imports and exports of gold during 1907:

Denomination.	Import.		Export (weight).
	Weight.	Value.	
	Kilograms.	*Crowns.*	*Kilograms.*
Gold coin	748	5,003,767	
Unwrought gold	3		311
Scrap gold	328		
Wrought gold			

No import or export of gold ore has taken place in 1907.

(7) Imports and exports of silver during 1907:

Description.	Import.		Export (weight).
	Weight.	Value.	
	Kilograms.	*Crowns.*	*Kilograms.*
Silver coin		193,306	
Unwrought silver	18,411		
Scrap silver	20		295
Wrought silver	4,466		359

No import or export of silver ore in 1907.

(8 and 9) No import of gold coin from the United States in 1907, and no gold coin from the United States has been deposited at the mint for melting.

(10) During 1907 28.1 kilograms of gold was produced from the mines of Sweden. Sweden has no colonies.

(11) During 1907 928.8 kilograms of silver was produced from the mines of Sweden.

(12 and 13) There are no refineries of any significance in Sweden.

(14) The approximate stock of gold and silver in Sweden at the close of the year 1907:

	Crowns.
Gold coin struck in Sweden since the introduction of the coin reform of 1873	85,383,095
Gold (Scandinavian) coin held by banks at close of 1907	43,900,000
Gold coin in circulation at close of 1907	12,000,000
Sum total of all current gold coin in Sweden, December 31, 1907, about	55,900,000
Foreign gold coin not current in Sweden, and gold bullion held by banks, December 31, 1907	26,800,000
Approximate value of Sweden's stock of gold, coined or uncoined, December 31, 1907	82,700,000

(15) The stock of silver in coin and bullion, at the same date, may be estimated thus:

	Crowns.
In circulation	27,600,000
In the banks and the mint	3,000,000
In mint (silver bullion, etc.)	400,000
Total	31,000,000

(16 and 18) The Government issues no notes.

(17 and 19) At the close of the year 1907 the outstanding bank notes issued by the Swedish Riksbank amounted to 190,100,000 crowns. The amount of uncovered bank notes in circulation, that is to say, bank notes over and above the value of the stock of gold in the vaults of the Riksbank, amounted on December 31, 1907, to 119,800,000 crowns. In this amount are included the bank notes which the Riksbank is entitled to issue against balances on running accounts with foreign banks and other securities.

(20 and 21) The standard currency of Sweden is gold. Subsidiary coin of silver or bronze is legal tender only for very small amounts. All notes issued by the Riksbank are redeemed in gold on demand.

(22) No law was passed in 1907 affecting the coinage and currency of Sweden.

(23) The annual official report of the director of the mint is not printed. The report of the board of trade in regard to mining has not yet appeared for 1907.

AMERICAN LEGATION,
Stockholm, September 28, 1908.

TASMANIA.

Answers to interrogatories, 1907.

(1, 2, and 3) No mint in this State.

(4 and 5) Amount of gold and silver used in industrial arts during 1907: No means of ascertaining quantities, but probably insignificant.

(6 and 7) Not any gold or silver was imported, except transfers from other States of the Commonwealth.

(8 and 9) Import of United States gold coin and United States gold coin deposited at mint and melted: Not any.

(10 and 11) Recently issued returns as to quantity and value of gold and silver for the State of Tasmania during the year ended December 31, 1907, as follows:

Metal.	Quantity.	Value.
Gold[a] ..... ounces..	65,345,252	£277,607
Silver-lead ..... tons..	89,762½	572,560

[a] Fine gold, including gold contained in blister copper and silver-lead bullion.

(12 and 13) No refineries.

(14 and 15) Stock of coin and bullion in the country is known only from figures supplied by the banks, and the amount held by them at the close of 1907 was £744,730. A leading local banker approximately estimates the amount in Tasmania at that date at £850,000. The amount of silver coin is included in these figures, and there is no means whatever of ascertaining the separate items of gold and silver.

(16, 17, 18, and 19) The note currency is entirely what is issued by the banks. At the close of 1907 the notes in circulation totaled £161,016.

(20) The actual currency of the country is gold, silver, and bank notes circulating at a parity with gold. The unit is the pound sterling.

(21) Gold is not at a premium.

(22 and 23) No state laws have been passed affecting the coinage and issue of metallic or paper money. The coinage of metallic money is under regulation now of the Australian Commonwealth.

AMERICAN CONSULATE,
Hobart, July 31, 1908.

AUSTRALIAN COINAGE.

PROFITS FOR COMMONWEALTH.

[From Hobart Mercury, June 13, 1908.]

Among the important matters brought before the imperial cabinet by the prime minister (Mr. Deakin) last year, says the Argus, was the question of coining silver for Australia. Hitherto the royal mint has supplied Australia with silver coin and has received all the profit on it. The prime minister asked for some new arrangement which would enable Australia to receive the profit on the coins issued for use in the Commonwealth. This profit is large, though it varies according to the price of silver, being greatest when silver is lowest in price.

Canada has had a subsidiary coinage of its own for some years. It pays the royal mint 3 per cent for the cost of minting the coin. Until January 1 of this year the coining was done in England, but since that date it has been done at a branch of the royal mint in Ottawa.

Mr. Deakin wished last year to obtain some similar concessions. At the conference Mr. Asquith offered the whole business to the Commonwealth. He said to Mr. Deakin, "If you like to coin for yourselves we can offer you that." The prime minister obtained estimates of the cost of establishing an Australian mint, and decided that for the present at least he would not embark on that undertaking. He accordingly, after his return to Australia, communicated with the chancellor of the exchequer, asking on what terms the royal mint would mint a coinage for Australia. Replies were received that they would charge the bare cost of the work, which would amount to about 2½ to 3 per cent. The next question was the rate at which the imperial authorities would agree to withdraw the existing coinage. After a good deal of correspondence the mint authorities declined to allow more than £100,000 a year to be withdrawn.

These terms it was decided to accept, provided that it was approved by Parliament, and the treasury officials were instructed by Mr. Deakin to prepare a full report on the question. In this report the total value of the coin in circulation is estimated at £2,000,000. It will be seen, therefore, that at the rate of £100,000 a year it would be twenty years before the whole issue was withdrawn. The mint authorities calculate the average annual issue of new coin at £76,480. The average profit on this is £41,461. But an average amount of worn coin is withdrawn every year to the value of £11,706; that gives an actual issue of £64,774, and the profit on this is estimated at £35,115. On the £11,706 worth of coin withdrawn there is, however, a loss calculated at 10 per cent, which comes to £1,170, leaving a net profit of £33,945. The withdrawal of £100,000 per annum, however, will mean the coinage of £100,000 of Australian cur-

rency, and that will cost Australia about £3,000, while the cost of coining the natural demand will be nearly £2,000 more. This total cost of £5,000 must be subtracted from the net profit, leaving £26,945 clear profit to Australia.

It must be remembered that the population and the trade of Australia will increase during the next twenty years, and so the demand for silver coin will increase. On all this the Commonwealth will receive a profit of from 35 to 50 per cent, according to the price of silver.

Consideration of the question in Australia has been hampered by the cry for a decimal coinage, and this was one of the reasons which actuated the prime minister in deciding not to have an Australian mint. It was admitted at the imperial conference, however, that the overseas dominions would be doing an unwise thing if they rushed into a decimal system of coinage before the mother country.

Had Mr. Deakin been able to deal with this coinage question himself, it is probable that a bill authorizing the new proposals would have been passed by Parliament during the session just closed. But the treasurer (Sir William Lyne) heard of the matter and sent for the papers. For some weeks he has had charge of the whole question. Coinage and currency are two of the many financial subjects connected with the treasury which he does not readily grasp, and the whole proposition is accordingly hung up. This means that until the treasurer either decides to go on with the matter or allows somebody who understands it to deal with it, the Commonwealth will practically be losing £26,000 a year.

TURKEY.

Answers to interrogatories, 1907.

N. B.—Only those questions to which answers can be given are mentioned in this report.

(1) Gold coined in 1907:

	Piasters.[a]
500-piaster pieces	17,191,000
250-piaster pieces	2,345,500
100-piaster pieces	195,014,100
50-piaster pieces	2,400,000
25-piaster pieces	2,702,500
Total	219,653,100
Ornamental pieces:	
500-piaster pieces	763,000
250-piaster pieces	736,000
100-piaster pieces	4,145,900
50-piaster pieces	1,407,000
25-piaster pieces	1,221,750
12½-piaster pieces	356,175
Total	8,629,825

There have been melted 1,810,950 pounds sterling, 547,800 roubles, 129,500 marks, 470,000 francs, and $3,400 United States twenty-dollar pieces. (See answer to No. 9.)

(2) Silver coined in 1907:

	Piasters.
10-piaster pieces	3,470,000
5-piaster pieces	20,550,000
2-piaster pieces	4,660,000
1-piaster pieces	1,430,000
Total	30,110,000

There have been melted 4,580,526 piasters of native fractional worn currency and 14,090,000 of medjidies (20-piaster pieces). There have also been melted 77,466 dollars and 132,060 Maria Theresa thalers. There has been no foreign coinage.

(3) No coinage has been executed for foreign countries.

(4 and 5) Gold and silver used for industrial purposes during 1907: The total amount of metal used is unknown. The weight of articles presented at the imperial mint to be stamped was 3,945,870 kilograms.

(9) Amount of United States gold coin deposited at mint and melted during 1907, 170 twenty-dollar pieces.

(10) There are no gold mines in operation; the amount of gold found mixed with silver extracted from the mines of the country was only 6,719 kilograms.

(11) The weight of silver produced is 2,094,887 kilograms; the price at which this metal was sold is unknown.

[a] 1 piaster equals $0.044.

(12 and 13) There is no refinery except at the mint; the gold output of this refinery is indicated above. This is also the case as to silver.

(14) The country's stock of native gold coin can be estimated at over 30,000,000 Turkish pounds (1 Turkish pound equals 100 piasters). Foreign gold coins exist in very small quantities. There are no data as to the bullion in the country.

(15) The country's stock of native silver coin is from 6,000,000 to 6,500,000 Turkish pounds. There is no foreign silver coin. The amount of silver bullion is unknown.

(16 and 18) There are no government notes in the country.

(17 and 19) Bank notes of the Imperial Ottoman Bank in circulation, about 1,270,000 Turkish pounds.

(21) The variation of the price of gold very closely follows the variation of the European markets.

(22) Laws passed during 1907 affecting the currency: On May 26, 1907, it was ordered that the worn 20-piaster pieces should be withdrawn from circulation and replaced by 5 and 10 piaster pieces, coined from the metal furnished by the melting of these 20-piaster pieces.

(23) Report of mint published during 1907: There is only one table giving the coinage of different years, but this has not yet been completed. Application has been made to the department of mines for their report, but it has not yet been furnished.

AMERICAN EMBASSY,
Constantinople, May 8, 1908.
